U. S., Europe off, while Japan chalks up gain

World car production dips in 1980

By Richard A. Wright
Asst. Managing Editor

The U. S. didn't have a very good automotive year in 1980, but neither did Europe. Most European producers experienced declines, as did American makers. Only the Japanese made gains.

While car production was down both in North America and Western Europe, Japanese output jumped almost 14 percent to 7,040,000.

The Japanese total topped the U. S. for the first time. The U. S. makers turned out 6,416,885 cars, down almost 24 percent from 1979. Added to Canadian output of 846,777, the North American producers barely topped the Japanese with a total of 7,263,662.

Production in Western Europe in 1980 totaled 10,444,375, down about 11 percent from the preceding year. Only Renault scored a significant gain in 1980, although Fiat was up slightly. In fact, Renault moved ahead of Peugeot-Citroen to first place among European car producers. And, in cars alone, Volkswagen also edged Peugeot-Citroen in 1980.

The Eastern Bloc countries were largely unaffected by the economic downturns plaguing the West and output was off by less than 2 percent to 2,110,000. The Communist world's biggest producer, the Soviet Union's Lada, diverted some of its capacity to light trucks and its car output slipped a bit, but overall vehicle production was up.

Coming on strong in 1980 was Latin America, which defied the world trend by boosting car production by more than 6 percent to 1,522,000.

Leading the way in Latin America was Brazil, where the four largest-volume producers in that part of the world were Volkswagen, General Motors, Ford and Fiat.

World car production in 1980 totaled 29,357,000, down almost 7 percent from 31,540,000 in 1979.

A number of trends which have been developing in recent years continued in 1980. Once the leading car producer, the U. S. appeared unable to shake itself out of its continuing doldrums. Despite the apparent intention of the new Reagan Administration to back away from the adversary government-industry situation which has prevailed in the U. S. for years, the U. S. makers still appeared to have trouble competing with the Japanese.

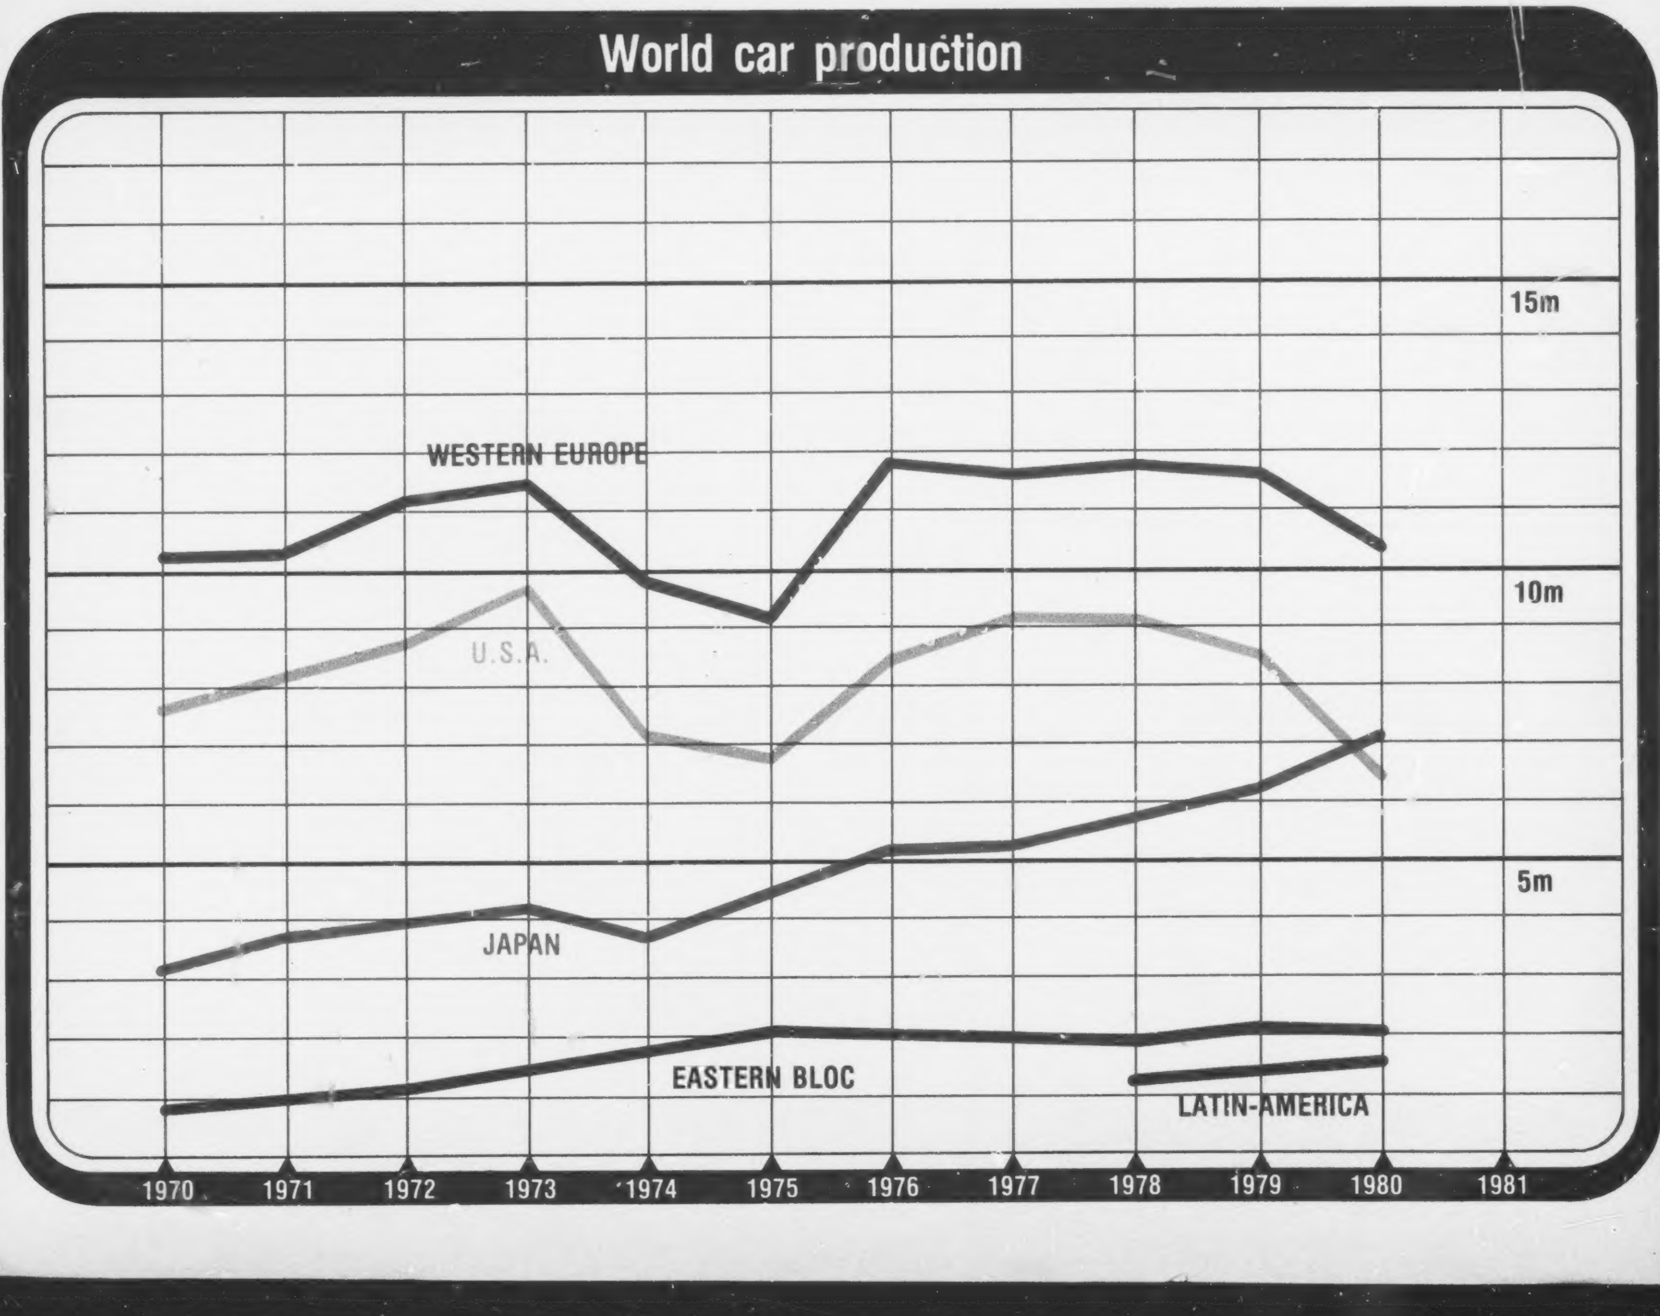
In fact, the Japanese approach to the world automotive market has long been a government-industry partnership and this seems to be paying off, not only in the U. S., but also in Europe.

Some observers are beginning to wonder if the U. S. can compete with the Japanese in the U. S., let alone worldwide, or whether it will go the way of the British industry, gradually withering away as volume producers, subsidized by government.

The Japanese dominate the huge world market for well-built low-priced, high-mileage cars, while the Europeans have been moving strongly into the higher-priced markets with cars that stress luxury, sportiness and advanced engineering.

The U. S. makers have not as yet moved into a niche of their own as they busily continue switching from the traditional but now obsolete U. S. product to smaller cars, many of which compete directly with Japanese offerings—and often come off second best.

When the U. S. industry can pull itself up from the mire of government regulation and complete its enormously expensive shift to smaller, more fuel-efficient cars, perhaps it will then again seek the lead in technology. And the world car market will be better off for it.



World car production

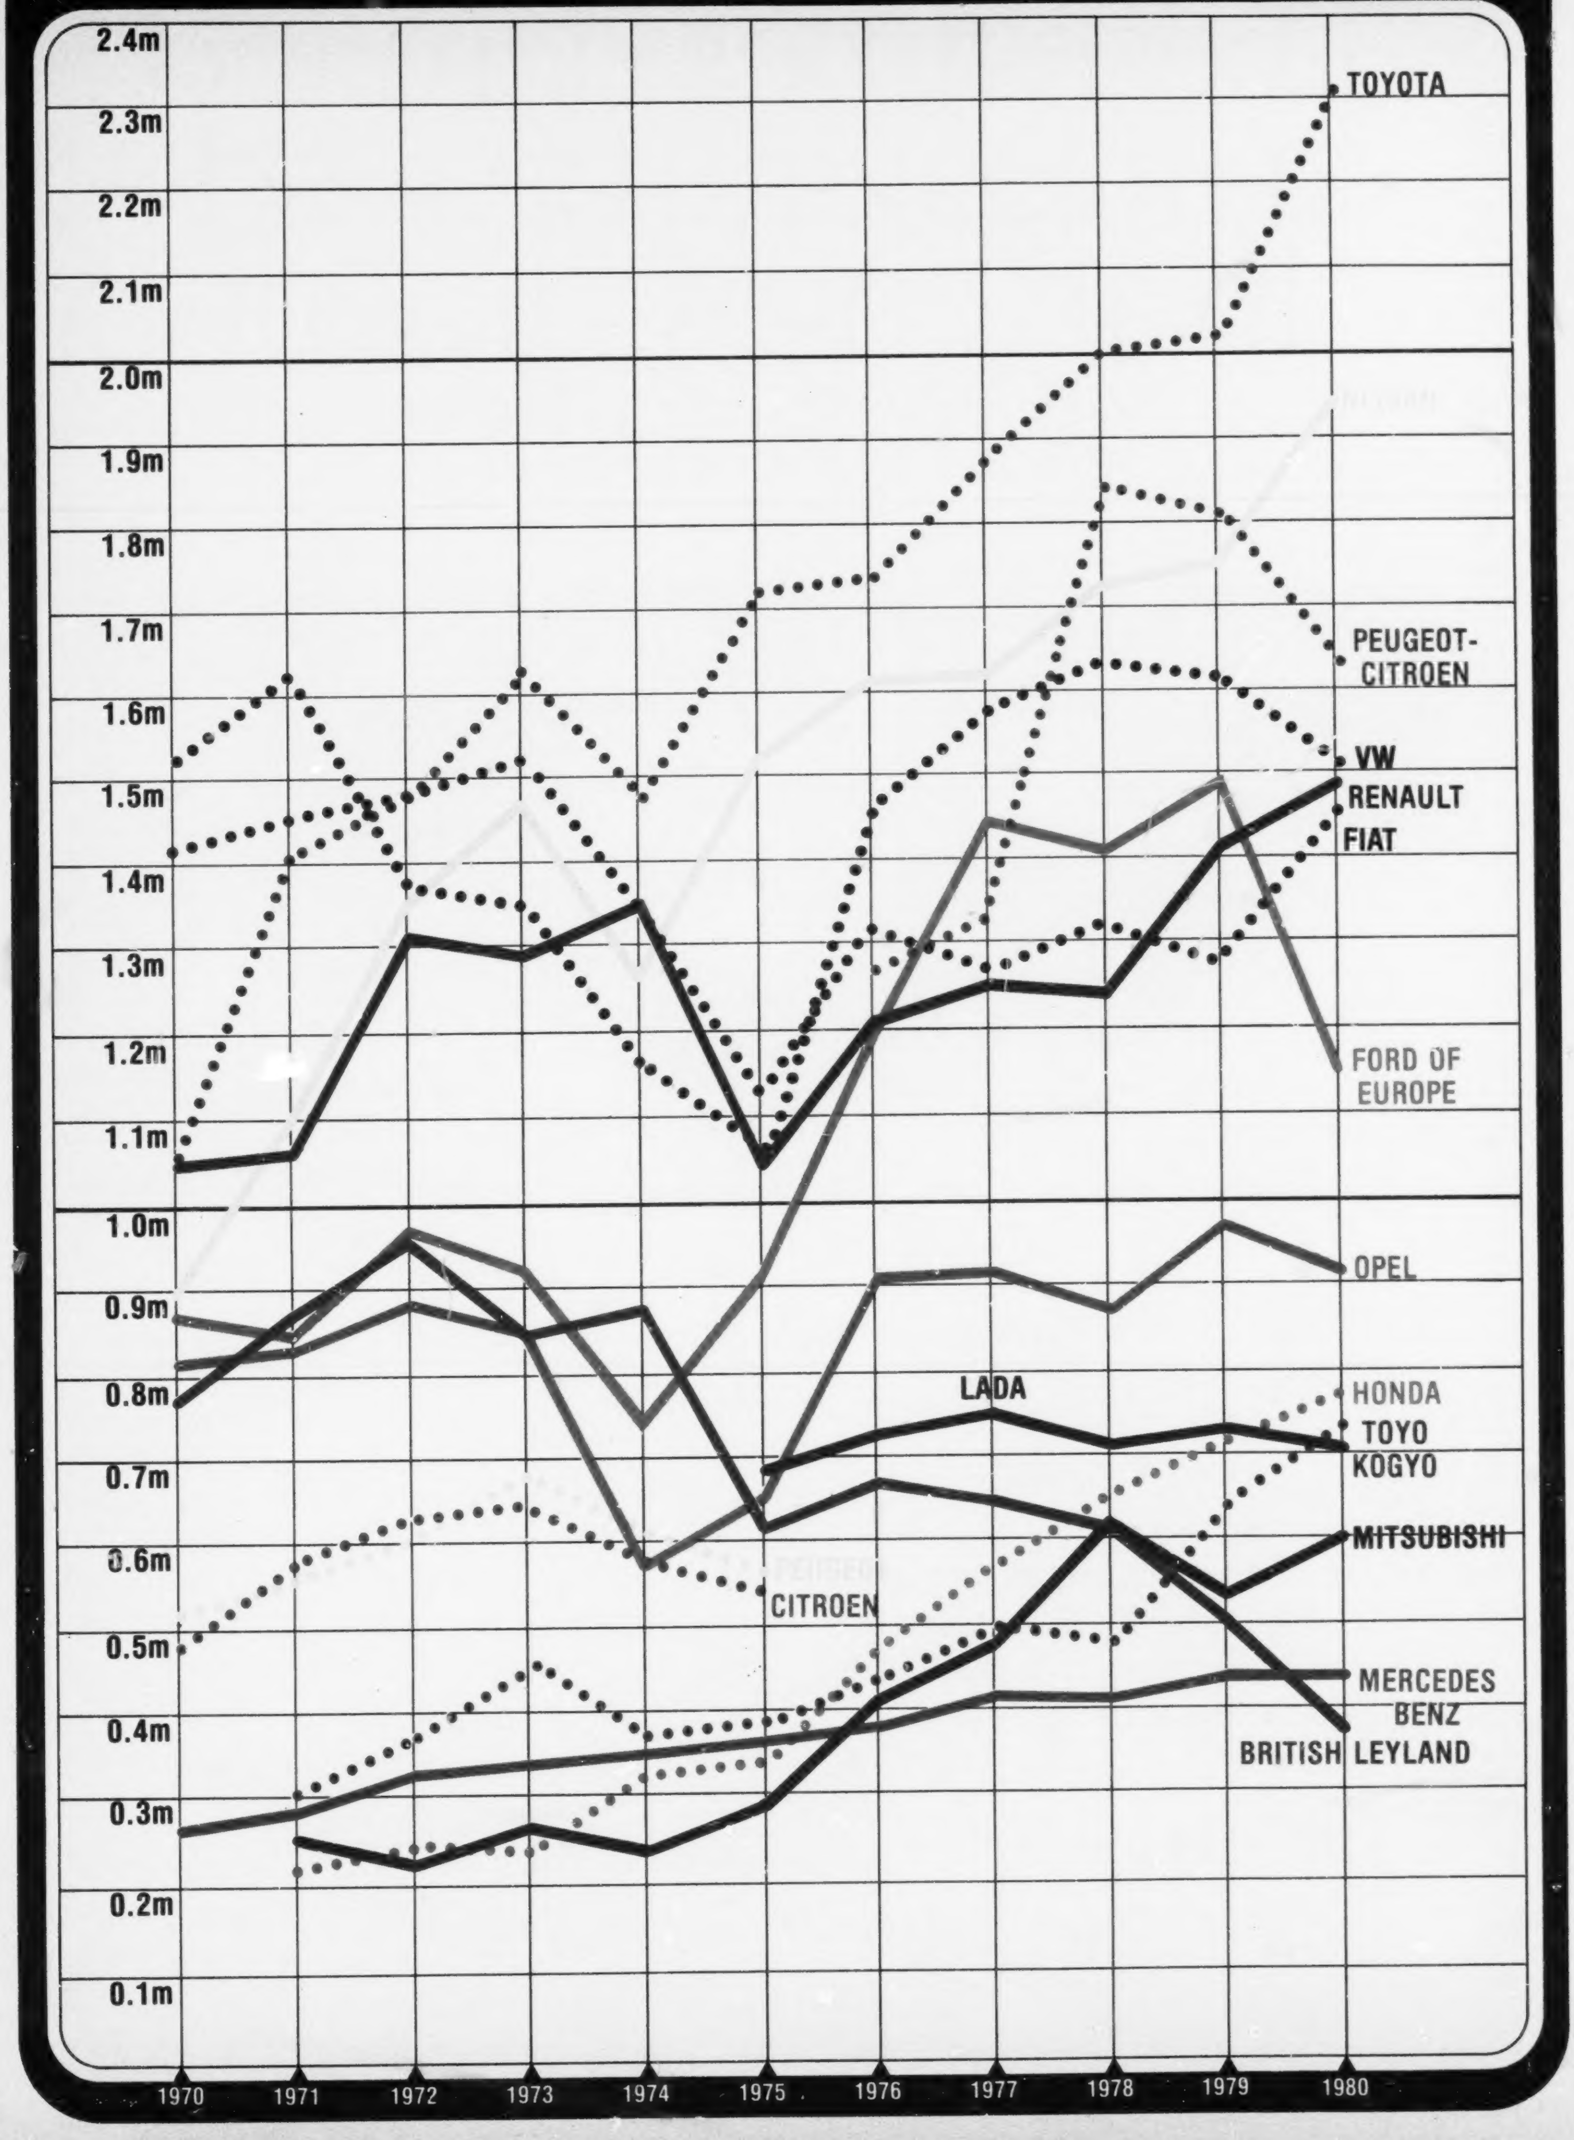
Compiled by MVMA

Car production by major makers outside North America



1980 registration lowest since 1975

But domestic total is the worst in almost 20 years

By Jenny King
Staff Writer

Whether measured by registrations or new-car sales reports, 1980 was a bad year, the worst since the recession year of 1975.

Registrations totaled 8,760,937, according to figures supplied by R. L. Polk & Co., down 15.41 percent from 10,356,695 in 1979. The 1980 total included a record 2,469,180 imported cars, which exceeded the previous record set in 1979 of 2,351,053 set in 1979 by 5.02 percent.

So the picture for the domestic auto industry was even worse than the registrations total indicated at first glance. Domestic registrations were 6,291,757, lowest since 1961, when domestic registrations totaled 5,476,125.

Registrations are collected by R. L. Polk from state vehicle registration offices (except for Oklahoma, which does not permit reporting of vehicle registrations). Sales are reported by the factories every 10 days (except for American Motors, which reports once a month).

So sales and registrations are counting the same thing, but by different methods.

Sales in 1980 totaled 8,973,345, compared with 10,641,679 in 1979. Of these totals, a record 2,395,036 were imports in 1980, compared with 2,326,057 the preceding year.

Perhaps the most important market development in 1980, aside from the sharp downward slide, was the increase in the share of sales taken by subcompact, compact and imported car sales, compared with sales of larger cars. Together, they accounted for 62.67 percent of new-car registrations, compared with 54.02 percent in 1979.

1980 New-Car Registrations Market Shares

*—Adjusted to reflect transfer of 1,310,918 passenger vans to truck total.

(1)—Each year many trucks are issued passenger car license plates due to their intended usage or local state laws. Beginning in 1966 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.

(2)—Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 approximately 181,000 passenger cars registered to fleets at out-of-state addresses have been included.

Adjustments for the absence of Oklahoma and other states have been made where applicable.

Production: Recession year is reflected in sharp decline of auto output

By Patricia Hoffman
Staff Writer

While U. S. auto production fared better in the first half of 1980 as compared to the last six months, sagging car sales put the auto makers into another recession year, and the total output for 1980 fell substantially below the 1979 level. The total was also the lowest output in 19 years.

In 1980, the makers completed 6,416,885 units, down 23.77 percent from the 8,418,369 cars assembled in 1979, and the total for the year is the lowest output since 1961 when the makers completed 5,522,004 units.

Although the first quarter output in 1980 was an improvement over the other three periods, all four of the quarter totals fell below the 1979 period levels.

In the first three months of 1980, the auto makers completed 1,799,171 units, a drop of 25.51 percent from the 2,415,422 units assembled in the comparable 1979 period.

The second quarter was down 33.91 percent from the period year's total with an output of 1,642,293 units from the 2,485,124. Third quarter totaled 1,264,276 units, a decline of 23.46 percent from the 1,651,965. The final period showed the smallest percentage change from the comparable 1979 period with an output of 1,711,145 units, a decrease of 8.29 percent from the 1,865,858 units assembled in the final quarter of 1979.

Due to the continued rate of inflation and the high cost of gasoline, the Compact, Intermediate, Standard and Luxury cars all suffered a decline in production last year. Only the Subcompact class showed any kind of increase in output for 1980, and even that was by a very small percentage.

Of the six auto makers, Volkswagen of America was the only one to show any improvement in production for 1980. VWoA jumped 13.81 percent last year with a total of 197,106 units from the 173,192 in 1979. It was the second year in a row that VWoA showed an increase in output.

Breakdown for the 1980 calendar year by company was: GM, 64 percent; Ford, 20.36 percent; Chrysler, 9.95 percent; AMC, 2.57 percent; VWoA, 3.07 percent, and Checker, 0.05 percent.

But pickup revival is expected this year

Truck sales on down slope

By Jack Walsh
Truck & RV Editor

Sales of new trucks of all types in the U. S. have been declining steadily since the Iranian revolution and the resultant explosion in fuel prices and shortages which precipitated a buyer switch to more fuel-efficient vehicles in the first quarter of 1979. No significant upturn in deliveries is anticipated before the final quarter of 1981.

The industry is anticipating a big revival in compact pickups when General Motors introduces its all-new compact vehicles at the start of the 1982 model year this fall. Production of Ford's new compact pickup is scheduled to start next January. A rebound in medium, heavy-truck hinges on an upturn in the general economy.

SALES OUTLETS FOR TRUCKS

Retail Outlets*

	Jan. 1, 1981	‡ Jan. 1, 1980

*—Adjusted to reflect transfer of 1,310,918 passenger vans from passenger car total to truck total.

1.—Each year many trucks are issued passenger car license plates due to their intended usage or local states laws. Beginning in 1966 VIN prefixes were utilized to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.

Note: Adjustments for the absence of Oklahoma and other states have been made where applicable.

Imports notch biggest sales year ever

By Richard A. Wright
Asst. Managing Editor

The one strong area of the generally soft 1980 market in the U. S. was the import-car segment. New records were set by the imports for new-car registrations and sales during the year and sales per dealer, a strong indicator of dealer health, were up in almost all lines.

Sales of new imported cars were a record 2,396,934, up from the previous record of 2,327,708 in the previous year.

Biggest selling import model in the U. S. was the Toyota Corolla—also the biggest selling model in the world—followed by the Honda Accord, the Datsun 210, the Toyota Celica and the Honda Civic.

Import penetration of the U. S. market also rose to record levels in 1980, topping 30 percent in several months. The Japanese makers tightened their grip on the U. S. import market, accounting for almost three-quarters of it.

List of abbreviations:
A.S.—Automatic transmission std.
A.T.—Automatic transmission.
N.A.—Information not available.
F.I.—Fuel injection.
O.D.—Overdrive
S.A.—Semi automatic.
A.O.D.—Automatic Overdrive.
H.O.—Horizontally opposed.

Car prices climb, dealer margins cut

Despite sluggish sales—or perhaps because of them—new-car prices have marched steadily upward in the domestic auto industry during the 1981 model year.

The continued upward movement of stickers and an alteration in dealer discounts by the Big Three have been the highlights of this season in the pricing arena.

As of April 1, General Motors had had three price increases since the end of the 1980 model year. GM prices were up an average of $553 over final figures for '80 models.

Ford Motor Co. also hiked prices three times for a total of $564, and American Motors had posted four raises for a total of $670.

Chrysler Corp. hasn't followed suit. Chrysler boosted prices an average of $295 at introduction time last fall. In January, the company raised some prices, reduced others and added equipment here and there (sometimes at less than the option price). The result was a $21 reduction in the price of an average-equipped Chrysler car.

So Chrysler is up $274 for the model year.

Volkswagen hasn't tinkered with the prices of its U.S.-built Rabbits since introduction time last fall. On intro day, the base Rabbit rose $500 and others climbed $615 to $630 with new standard equipment a factor.

The April 1 date mentioned above is important. There's been a lot of activity since then. GM hiked prices a substantial $351 effective April 13, bringing its 1981-model-year

Continued on Page 51

COMPARING PRICES—1981 vs. 1980

Comparison of selected 1981 and 1980 domestic models by market class. Prices are Manufacturer's Suggested Retail Prices. The 1981 prices are those in effect April 10, 1981. The 1980 prices are those in effect at the end of the model year. No adjustment has been made for year-to-year equipment changes or for standard-equipment variations among competing models. If there is no entry in the 1980 column, it means the specific model is new for 1981.

retail prices, U.S. models

This table presents 1981 domestic prices in effect April 10, 1981, and rounded off to the nearest dollar. All prices are Manufacturer's Suggested Retail Prices. They do not include destination charges, state and local taxes, optional equipment or any other charges that may be passed along to the local buyer. In the equipment section, "Std." means standard equipment; "N.A." means the item is not available on the model mentioned.

average to $914 and pushing the average price of the average-equipped GM car above ten thousand dollars. It became $10,200 on that date.

Then came a couple of surprises. Ford, which almost always follows GM in such matters, said it would not hike prices before the end of April. And Chrysler said it would make no increase "until absolutely necessary."

But GM wasn't about to stay that far out on a limb all by itself. The company announced that it would not increase prices again on 1981 models, thus eliminating its usual July 1 boost.

That's how things stood as the Automotive News Market Data Book went to press.

The revision of the dealer discount structure is another important part of the 1981 pricing picture. GM started it. GM left discounts unchanged on subcompacts and compacts and cut them from one to six percentage points on other models. A discount cut reduces the dealer's trading margin. Dealers don't like it. It affects the customer because the wholesale and sticker price are closer together and the dealer cannot offer the savings which customers have come to expect.

Import prices

Prices in effect April 6, 1981

The following are Manufacturers Suggested Retail Prices. They include ocean freight and import duty. They do not include inland transportation fees, state or local taxes, optional equipment or special equipment required by state laws. Where East Coast and West Coast prices differ, East Coast prices are used. Prices are for 1981 models unless otherwise indicated.

Product Data

MATERIALS IN AVERAGE CAR

A projection by Union Carbide indicates that the amount of steel will stay about the same in the car of 1984 as it was in 1978. But plastic and aluminum will gain, mainly at the expense of cast iron.

Glass, rubber and lead are pretty well locked in and will change very little, according to Union Carbide.

Much of the expected growth in plastics is in increased use of urethane elastomers in fenders and body panels, which will more than offset a decreased use of foam for seating, because of smaller sizes of cars.

Options: Installations trimmed by decline in sales, shift to small cars

By Joseph Bohn
Marketing Editor

Optional equipment sales got double-whammied in 1980, as the overall decline in car sales, coupled with a greater cost consciousness by consumers in what they picked, reduced levels for most equipment surveyed by AUTOMOTIVE NEWS.

The changing shift toward small cars also cut into sales of various optional equipment, including larger engines, automatic transmissions and many power equipment items.

Of the six power equipment items surveyed, only rear window defoggers/defrosters increased penetration in 1980. On the wane were power brakes, power seats, power steering, power side windows and speed regulating devices.

Rear window defoggers/defrosters ended up on 50.68 percent of domestically-built cars, up from 47.60 percent in '79. The industry installed 3,621,119 of these options on cars, down from 4,448,179 because of the overall slump in car sales.

Chrysler Corp. led the way in boosting defogger/defroster penetration. It installed them in 68.73 percent of its cars, up from 60.69 percent penetration in '79. At AMC, they had a 52.63 percent penetration, up from 45.43 percent in '79.

General Motors installed them in 47.98 percent of its cars, up from 45.51 percent in '79. Ford Motor installed them in 42.94 percent, down from 43.85 percent in '79. And Volkswagen installed them in 90.00 percent of its domestic Rabbits, down from 96.90 percent in '79.

Power steering, still the most popular option in the group of six, nonetheless was down for the year.

Industrywide, 83.83 percent of cars had power steering, equal to 5,989,989 units. That was down from 89.46 percent, or 8,360,703 in '79.

American Motors equipped 90.61 percent of its cars with power steering, compared with 89.41 percent in '79.

General Motors had an 87.55 percent installation rate, down from 91.96 percent in '79.

Ford Motor had an 87.49 percent installation rate, compared with 91.68 percent in '79.

Chrysler Corp. had an 77.67 percent installation rate, compared with 83.20 percent in '79.

Volkswagen didn't offer power steering on its domestic Rabbits.

Power brakes, which rival power steering's popularity, also recorded a decline.

Industrywide, 81.87 percent of

Continued on Page 72

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 model year production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Continued from Page 70

cars had power brakes, equal to 5,850,171. That was down from 85.49 percent, or 7,989,472 in '79.

Volkswagen equipped 100 percent of its Rabbits with power brakes.

However, at GM power brakes ended up on only 84.95 percent of cars, down from 90.10 percent in '79.

At Ford Motor, the item was installed in 83.34 percent of cars, compared with 83.19 percent in '79.

At Chrysler Corp. it was installed in 62.09 percent of cars, down from 74.37 percent in '79.

At AMC, it was installed in 56.51 percent of cars, up from 49.89 percent in '79.

Speed regulating devices and power side windows were similarly off.

Industrywide, speed regulating devices ended up on 2,286,091 cars, equal to 31.99 percent of production. That compared with 3,612,300, or 38.65 percent in '79.

Industrywide, power side windows ended up on 1,536,314 cars, equal to 21.50 percent of production. That was off from 2,636,050, or 28.21 percent in '79.

Powertrain options

Automatic transmission popularity dropped sharply in '80. The decline of exactly 7 percentage points was the sharpest yet, and signaled the growing preference for manual transmissions on new small cars.

Among various manual transmissions, the four-speed was far-and-away the most popular. It jumped 6.7 percentage points in penetration. The three-speed and five-speed manuals played an inconsequential role in demand.

Judging by Volkswagen's Rabbit, however, there is a place for the five-speed manual, if the Big Three manufacturers can come up with a good one. GM's five-speeds, which were phased out in '79, were hard shifting and generally lacked quality.

GM, as well as Ford and Chrysler, are expected to come up with improved versions in the future.

Meanwhile, the '81 model year is seeing a continued growth of manual transmissions as a result of new small Detroit cars like the Escort/Lynx and the GM J-models coming on stream.

Ford Motor particularly is experiencing a sharp jump in demand in manual transmissions on its new small cars in view of their smooth shift—equal in ease of operation to the best European models' manuals.

A brief rundown of transmission trends for '80 shows:

- Automatic transmissions ended up on 5,884,326 cars, equal to 82.36 percent of production. That was down from 8,351,220, or 89.36 percent in '79.
- Four-speed manuals ended up on 1,205,115 cars, equal to 16.87 percent of production. That was up from 948,239, or 10.15 percent.
- Five-speed manuals climbed to

Total Cars, U. S.	5,884,326	82.36	18,412	0.25	1,205,115	16.87	37,503	0.52

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Cor.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

NOTE: Installation numbers are based on U.S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U.S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Continued from Page 72

0.52 percent of industry production, equal to 37,503 units. That was up from 0.26 percent, or 24,313 in '79. Volkswagen accounted for most of the increase.

- Three-speed manuals, which were just about dead, accounted for 0.25 percent of industry production, equal to 18,412 units. That was down from 21,734, or 0.23 percent in '79. All the companies are phasing them out.

Engine installations

The shift toward small cars affected V-8 engines more than any other option.

Volume and penetration of V-8s dropped in half, while the six-cylinder engine temporarily emerged as the most popular powerplant.

That is changing, however, as new and higher-volume four-cylinder cars, like Escort/Lynx, Chrysler's K-cars and the GM J-cars, promise to push four-cylinder engines into the lead in '81.

As it was, four-cylinder engines ran a close second behind sixes last year.

Diesels continued increasing in popularity. But GM's decision to gamble on large V-8 diesels, like the 350 V-8, slowed what could have been a real diesel explosion.

Volkswagen, in contrast to GM, equipped half of its '80 Rabbits with the highly fuel efficient, highly popular four-cylinder diesel powerplant.

Turbochargers continued gaining ground at GM, but fell flat at Ford Motor where they ran into certification problems. Ford cancelled them on early '81 models, but is still hopeful of offering them.

A rundown on engine/powertrain options for '80 shows:

- Industrywide, V-8s accounted for 2,121,560 cars, equal to 29.69 percent of production. That was less than half the '79 total of 5,457,038, or 58.39 percent of production.
- Six-cylinder engines accounted for 37.13 percent of domestic car production, up from 24.01 percent in '79. A total of 2,652,644 U. S.-built models carried them, up from 2,243,736 in '79.
- The number of four-cylinder power plants on domestic cars jumped to 2,371,152, or 33.18 percent of production, up from 1,644,731, or 17.60 percent in '79.

At the same time, diesels continued to catch up, acounting for 316,377 domestic models, or 4.43 percent of production. That was up

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Continued from Page 75

sharply from 203,338, or 2.18 percent in '79.

General Motors' diesel engine car production totaled 196,661, equal to 4.29 percent of its production. That was down from 203,338, in '79 —but penetration was up from 3.95 percent.

VW diesel Rabbit production by contrast jumped to 109,401, or 49 percent of its production. A year earlier VW hadn't yet started building diesel Rabbits in the U. S.

Turbochargers have been slower to catch on.

Industrywide, GM installed turbos on 50,371 cars, equal to 1.10 percent of its production. That was up from 36,938, or 0.72 percent in '79.

At Ford Motor, turbos ended up on 18,901 cars, equal to 1.38 percent of production. That was down from 38,832 or 1.41 percent in '79.

Decorative roof options

Car buyers still want fancy looking cars, but they are getting them

*—Voyager, Sportsman, Club Wagon and Sportvan are still in production. However, they began being counted by their respective manufacturers as trucks in '80, and so are excluded from the tally of '80-model car output.

Installation numbers are based on U. S. production only, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 model-year production total was 7,144,528 cars. This included 4,585,387 for General Motors, 1,373,582 for Ford Motor, 765,258 for Chrysler Corp., 199,613 for American Motors and 223,267 for Volkswagen.

Chrysler total includes 57,479 Cordobas and 34,214 Miradas built in Canada. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Pontiac's production of 678,596 was used in computing GM's total. This excludes 19,651 Pontiac Acadian models, built in the U. S. but sold only in Canada.

NOTE: Installation numbers are based on U. S. car production, with the exception of Chrysler's Cordoba and Mirada which were sourced only in Canada. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Continued from Page 76

mostly without the aid of various kinds of optional roofs.

Pop-up sunroofs and manual sliding sunroofs are still holding their own generally because they are an inexpensive way to add something extra.

But vinyl roofs, electrically controlled sunroofs and T-roofs were down sharply on '80 model domestically-built cars.

Vinyl roofs in particular suffered a decline with the increasing popularity of two-tone paint combinations such as Cadillac Seville offers.

Last year, industrywide, only 1,717,050 vinyl roofs were installed in cars, accounting for 24.03 percent penetration. That was down sharply from 3,346,118, or 35.80 percent in '79.

Meanwhile, Volkswagen was the only domestic to offer a manual sliding roof, which accounted for 46,886 cars, or 21 percent of its production. It accounted for 0.66 percent of total industry output.

In '79, the option, offered by Oldsmobile and VW, accounted for 13,672 units, 0.03 percent of industry production.

Electrically operated sunroofs took a big beating, dropping to 88,649, or 1.24 percent of industry production, against 166,593, or 1.76 percent in '79.

While the option was offered by General Motors, Ford Motor and Chrysler Corp., it was not available on AMC or Volkswagen models.

Pop-up sunroofs showed a slight penetration increase, particularly at Ford Motor, though they were down on a volume basis.

Industrywide, they ended up on 132,703 cars, equal to 1.86 percent of production. That was up slightly from 1.61 percent in '79 on a volume of 150,836.

T-roofs are still fairly strong on selected sporty models, like Corvette where they accounted for 100 percent of production. But, by their nature, they continue to have a limited market.

Industrywide, T-roofs ended up on 121,987 cars, equal to 1.71 percent of production. That compared with 198,071, or 2.12 percent in '79.

General Motors and Chrysler offered T-roofs in '80, but they were not available on Ford Motor, American Motors or Volkswagen models.

Air conditioning installations too were down, and sales are still fairly strong, considering the economy.

Altogether, domestic car firms installed 5,181,365 air conditioning units in domestic cars, down sharply from the 7,449,352 units installed in '79 domestic models.

Penetration was off, with air contioning units accounting for 72.52 percent of industry output, compared with 79.71 percent in '79.

Generally, penetration figures were off for all makes except Volkswagen.

VW's penetration, still lowest among domestic producers, climbed to 41 percent from 36.50 percent a year earlier. Altogether, VW installed air in 91,539 units, compared with 48,496 in '79.

American Motors installed air in 103,848 cars, or 52.02 percent of its production. Volume was up from 93,414 units, but below the 55.13 percent penetration of '79.

Chrysler Corp. installed air in 489,092 cars, equal to 63.91 percent of its production. That was down from 814,958, or 71.74 percent of

Total Cars U. S.	4,927,895	68.97	1,891,158	26.47	326,303	4.56	6,140,605	85.94

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Continued from Page 78

output in '79.

Ford Motor installed air conditioning in 964,613 cars, equal to 70.23 percent of output. This was down from 2,127,902 units, or 77.29 percent in '79.

General Motors installed 3,532,273 air conditioners, equal to 77.03 percent of production. That was off from 4,364,582, or 84.51 percent in '79.

Of the total air conditioners installed industrywide, GM's share was 68.17 percent, up from 58.59 percent in '79; Ford Motor's share was 18.62 percent, down from 28.56 percent in '79; Chrysler's share was 9.44 percent, down from 10.95 percent in '79; American Motors' share was 2 percent, compared with 1.25 percent the previous year; Volkswagen's share was 1.77 percent, up from 0.65 percent.

COST OF OPERATING CARS IN U. S. AREAS

	Fixed Per Day	Running Per Mile
Portland, Oregon	$6.69	8.40c
San Francisco, California	7.38	9.85
Spokane, Washington	6.62	8.95
Sacramento, California	6.59	9.80
Boise, Idaho	6.21	8.85
Butte, Montana	6.59	8.85
Denver, Colorado	6.39	8.95
El Paso, Texas	6.22	8.10
Omaha, Nebraska	6.34	8.80
Dodge City, Kansas	6.23	7.45
Corpus Christi, Texas	6.06	7.40
Duluth, Monnesota	6.15	8.50
Des Moines, Iowa	6.20	7.50

Syracuse, New York	6.37	8.65
Elmira, New York	6.22	7.50
Pittsburgh, Pennsylvania	6.45	8.60
Williamson, West Virginia	6.11	8.75
Chattanooga, Tennessee	6.15	8.75
Saratoga Springs, New York	6.46	8.50
New York, New York	7.39	8.85
Chelsea, Massachusetts	7.12	7.45
Bayonne, New Jersey	6.53	7.55
Norfolk, Virginia	6.21	7.75
Charleston, South Carolina	6.80	8.75
Miami, Florida	7.23	7.60

FOOTNOTES:

1. Costs based on representative 1981 Ford, Chevrolet, Plymouth-intermediates-6 cylinder-4 door sedan equipped with standard accessories, radio, automatic transmission, power steering and power disc brakes.

2. Per Day costs include depreciation (predicated on a 4 year trade-in cycle), state license fees and taxes, state sales and use taxes, financing costs and insurance premiums on $100 deductible fire and theft, $250 deductible collision, $100/300M bodily injury and $50M property damage—all based on a commutation category, where the vehicle is driven less than 10 miles to or from work and there is no youthful operator.

3. Per Mile costs include gasoline (based on no-lead regular), oil, normal preventive and repair maintenance, washing, greasing and tires.

4. Add a further depreciation allowance of four and four tenths cents (4.4c) per mile on mileage over 1,250 monthly.

NOTE: Installation numbers are based on U. S. car production only, with the exception of Chrysler's Cordoba and Mirada which were sourced in Canada only. The '80 production was 7,145,356. This included 4,585,387 for General Motors; 1,373,582 for Ford Motor; 765,253 for Chrysler Corp.; 197,867 for American Motors and 223,267 for Volkswagen.

The Chrysler total includes 34,214 Miradas and 57,479 Cordobas. It excludes 7,846 Caravelles, sourced in the U. S. but sold only in Canada.

Similarly, the GM total excludes 19,651 Acadians, sourced in the U. S. but sold only in Canada.

The Plymouth Voyager, Dodge Sportsman, Ford Club Wagon and Chevrolet Sportvan are no longer included in domestic production, since manufacturers began counting them as trucks in '80.

Dealers: Squeezed by high operating costs and soaring interest rates in 1980

By Francis J. Gawronski
SERVICE EDITOR

Although there are some indications that new-car sales may be on the upswing in the coming months, new-car dealers may still be hard pressed to show any great improvement in profits, especially with the continuing high cost of borrowing money and steadily increasing operating costs.

Dealers must turn to other segments of the dealership, such as service, parts and accessories, and leasing, and develop them into revenue producers in a determined effort to bolster sales and profits in the coming years.

The automobile manufacturers, realizing the plight of new-car dealers, are encouraging them to reexamine their service and parts departments and not to look upon them as profit drains but as profit builders and centers that will carry them not only over the current economic crisis but also through the ensuing years.

Some factories are pushing programs that help dealers take a new, serious look at other areas of their dealerships.

One such program recently announced by an auto maker is targeted at improving a dealership's parts sales volume, cash flow, profits and return on investments.

Dealers also should give serious thought about penetrating the automotive aftermarket where overall growth is projected at 10 percent annually, climbing from $175. 4 billion in 1981 to $256.4 billion in 1985.

As of Jan. 1, 1981, there were 21,772 franchised dealerships in the U. S. These dealers did $23,629 million in service and parts business in 1980, an increase of 6.4 percent over the previous year.

NUMBER OF AUTO REPAIR FACILITIES

1980

Dealers	26,600
Auto Repair Shops*	170,000
TBA	18,850
Other Auto, Home Supply Stores	1,860
Gasoline Stations	70,000
General Merchandise Stores	3,500
All Others	1,430
TOTAL	292,240

*—Includes independent and franchised repair shops.

NOTE: In all categories other than Dealers and Auto Repair Shops, the number of establishments selling auto parts and accessories exceeds number selling service. When the difference is added to the above total, the resulting figure is 331,090.

NAFA Car Categories

Sub-Compact: Wheelbase of less than 100 inches and a curb weight of under 2,500 pounds.

Compact or Small: Wheelbase between 100 and 106 inches and a curb weight of between 2,500 and 3,000 pounds.

Mid-Size: Wheelbase of between 106 and 114 inches with a curb weight of between 3,001 and 3,500 pounds.

Large: Wheelbase of more than 114 inches and a curb weight of more than 3,501 pounds.

An analysis of manufacturers' specifications reveals that almost all cars fall completely into one of these categories. However, if both wheelbase and weight do not fit a category, the determining factor is the car's weight.

U.S. new car inventories

Used-car scene mixed

Prices continue upward climb, but sales volume drops in 1980

By Richard A. Wright
Assistant Managing Editor

Used car sales declined during 1980 as new-car dealers received far fewer tradeins because of the decline in new-car sales. As a result, used-car prices gathered strength through the year and into 1981.

The average sold price at wholesale auctions in March, 1981, was almost $1,000 more than it was a year earlier. Interestingly, the biggest gains were not in late-model cars, but in three and four-year-old units. This could mean the price on clean late-model units was getting too close to the level of new cars.

The NADA says that the used vehicle department accounts for almost 20 percent of the average new-car dealers' total sales volume.

An estimated 32 percent of the total used car market is accounted for by franchised new-car dealers, with independent used-car dealers accounting for about 13 percent and the remaining 55 percent private transactions.

U. S. government figures indicate that private transactions are taking a growing share of the used-car market. The U. S. says private deals accounted for only 43 percent of the retail used-car market in 1973.

In addition to an estimated 7.3 million used cars retailed by new-car dealers in 1980—in 1979, they retailed more than 8.8 million — franchised dealers wholesaled some 2.7 million units, most of them through auctions. In 1970, members of the National Auto Auction Assn. moved only about one million cars through their lanes.

While the average selling price of used cars was rising during 1980, gross profits realized by dealers remained about the same. In December of 1979, for example, the average used unit sold by a new-car dealer cost $3,269, compared with $3,133 a year earlier. But the gross profit was $444, just $2 more than a year earlier.

USED VEHICLE RETAIL SALES BY NEW AND USED-CAR DEALERS

Year	New-Car Dealers	Used-Car Dealers	Total
1970	9,250,000	2,950,000	12,200,000

Auto advertising: Rebates revived in 1981 in battle against sales slump

By Joseph Bohn
Marketing Editor

There was no lack of advertising/marketing effort in '81, as domestic car firms fought off high interest rates and a recession in an effort to get things rolling.

The anticipated upturn, which was supposed to begin with introduction of the '81s in fall never materialized.

As a result, Chrysler's K-car, billed as "The American Way to Beat the Pump," began slipping in sales within a month after introduction, along with other car lines.

Chrysler's strategy was to put almost all its advertising effort on the Ks, using their showroom traffic appeal to help sell other models.

But, with Ks beginning to slip by November, Chrysler quickly switched to rebates, which were tied to the interest rate. At first, Chrysler's rebates were 6 percent, then 7 percent, and finally reverted back to 6 percent by March.

The "interest allowance" rebate program, as Chrysler billed it, proved successful enough to bolster its market share at the expense mainly of Ford, General Motors and American Motors.

The latter companies tried to hold off against rebates as long as possible, but eventually succumbed.

American Motors was the first to jump in with a 10 percent price reduction, which amounted to AMC's lowering its prices by 6⅔ percent and squeezing the other 3⅓ percent from smaller dealer discounts.

Ford and General Motors jumped in with rebates in February, though both shunned the particular word "rebate" which presumably has become worn out through

Figures compiled by a major advertising agency based on generally available information.

*—Pontiac spent $20,000 in direct mail on full-sized Pontiac and another $20,000 on Grand Prix in the first quarter.

†—Ford Motor spent $15,000 on corporate product direct mail in the second quarter.

‡Chrysler spent $159,000 on direct mail for St. Regis in the first quarter.

Continued from Page 90

considerable overuse in the industry.

Ford, instead, called its program a 10 percent price adjustment and GM used the phrase "bonus."

All these programs stirred up sales, since price resistance was at the heart of much of the industry's problem in '81.

However, following a discontinuance of rebates in spring, sales fell off as they were expected to do.

Among newly introduced models, Ford's Escort/Lynx were well received, and there was little question of their selling out the 500,000 production capacity for '81.

As one astute dealer put it, people had waited a long time to buy a small front-wheel-drive Ford. But the trick, from Ford's standpoint was to continue the momentum of these highly critical cars for '82, when they faced stiffer competition from GM and when most of the Ford-loyal buyers who wanted a little car like this had already bought one.

Ford Division used the line "built to take on the world" to promote its Escort, while Lincoln - Mercury used the tag, "starting today . . . the world belongs to Lynx." The idea was to tie into a "world car" corporate campaign which preceded individual introductions by the divisions.

Apart from Escort/Lynx, however, Ford found itself with a relative flop in the Granada/Cougar, which were newly restyled for '81.

Biggest complaint was price. Dealers pointed out that customers coming into the showrooms to look at $9,000 - $10,000 Granadas and Cougars still remembered this car as being only $5,000-$6,000 a few years earlier.

Chrysler's K-cars, aided by rebates, were a qualified success. The company didn't achieve the 550,000-sales goal it hoped for, but was looking at closer to 300,000 sales by spring. Chrysler had addressed the problem of pricing, however, with lower cost, specially-equipped models in the K cars, as well as L-body Omni and Horizons. The Horizon Miser marketing gambit, particularly, proved highly successful.

Biggest news of '81 though was General Motors' introduction of its J-cars.

These small, front - wheel - drive subcompacts, were the most import-like yet introduced by GM (official introduction was May 14) and were clearly counted on to roll back the Japanese tide.

Production capacity from May to October, 1981, was highly constrained.

The cars' real impact was expected to be felt in '82, when GM improved capacity to the point of making the cars plentiful at all car dealerships.

The Js represented a new marketing effort for GM.

Cadillac, for example, spent months doing its homework in order to reach a buying audience it had never really had a chance with before. It was pitting its Cimarron directly against cars like Audi, BMW and Volvo, with a theme line to the effect of "A new kind of Cadillac for a new kind of Cadillac buyer."

Other GM divisions were equally determined to conquest import buyers feeling that for the first time they had the high MPGs to do it.

U.S. automaker ad chiefs and advertising agencies

AMERICAN MOTORS CORP.
Thomas A. Staudt, vice president of marketing group; David J. Van Peursem, general marketing manager; Eugene Richmond, director of advertising; Robert Wheat, manager of AMC car advertising; Ray Avedian, manager of Jeep advertising; Marvin Klein, Renault ad manager.

AMC and Renault car agency, Grey Advertising; Jeep and Eagle agency, Compton Advertising, New York.

CHRYSLER CORP.
John Naughton, executive vice president of sales and marketing; Jerry H. Pyle, vice president of sales; Thomas R. Gibson, director of marketing operations; Joseph A. Campana, director of marketing plans and programs; John K. Givens, director of sales operations; Bud Liebler, director of merchandising; Jeffrey Elpern, manager of advertising, Chrysler Corp.

CHRYSLER-PLYMOUTH
Jeffrey Elpern, manager of advertising.

DODGE
Jeffrey Elpern, manager of advertising.

Agency: Kenyon & Eckhardt handles all Chrysler-Plymouth, Dodge, corporate and import advertising for Chrysler.

FORD MOTOR CO.
Arthur B. Connors, vice president-marketing staff; Raymond Ablondi, director of marketing research; Bernard Restuccia, director of marketing operations; G. M. Heffernan, marketing plans director; John Bowers, director of advertising services, North American Auto Operations; Ronald Reynolds, advertising programs manager, NAO.

FORD DIVISION
Lee R. Miscowski, general marketing manager; Douglas T. McClure, advertising manager; R. J. Gillooly, manager of car advertising; R. O. Davis, manager of truck advertising.

Agency: J. Walter Thompson, Dearborn.

LINCOLN-MERCURY DIVISION
Joseph E. Cappy, general marketing manager; John B. Vanderzee, advertising manager.

Agency: Young & Rubicam, Detroit.

GENERAL MOTORS CORP.
Gail Smith, general director of advertising and merchandising; Donald J. Teasdale, manager of advertising-marketing staff; George H. Pruette Jr., public affairs ad manager—public relations staff.

Agencies: D'Arcy-MacManus & Masius, Bloomfield Hills, Mich. N. W. Ayer-ABH International, Philadelphia.

BUICK DIVISION
John Dabels, director-market planning and distribution; Harold E. Savage, director of advertising; Thomas M. Edwards, advertising manager—special projects.

Agency: McCann-Erickson, Detroit.

CADILLAC DIVISION
Gordon Horsburgh, director of marketing; Richard Welday, national merchandising manager; Frank Cadicamo, assistant national merchandising manager.

Agency: D'Arcy-MacManus & Masius, Bloomfield Hills, Mich.

CHEVROLET DIVISION
E. P. Feely Jr., director of marketing; Carl O. Uren, director of advertising; H. J. Cordes, truck and station wagon ad manager; T. R. Chick, car ad manager.

Agency: Campbell-Ewald, Detroit.

OLDSMOBILE DIVISION
David L. Neisch, assistant general sales manager-marketing and dealer activities; Charles Strong, advertising manager; Raymond R. Juracek, assistant ad manager.

Agency: Leo Burnett Co., Detroit.

All 5 U. S. makers lost money totaling more than $4 billion

1980 was worst financial year ever

By Edward Lapham
Financial Editor

Last year was the worst financial year in the history of the U. S. automobile industry.

All five major U. S. auto makers reported losses for 1980, with the total net loss for the industry in excess of $4 billion, and the immediate outlook for 1981 only marginally better.

There were several problems which, oddly enough, analysts, industry executives and government officials agreed were the main cause of the financial devastation.

First, and most obvious, was the lagging sales which were depressed due to consumer uncertainty about the economy, which did not improve, a larger market share by imported makes and record level interest rates which restricted the availability of credit at non-captive sources.

The second reason, which related to the first, was the massive capital outlays required during the year to not only redesign product lines, build new plants and refurbish older ones, but to meet the requirements of certain regulatory mandates.

Chrysler Corp. during the year arranged for $1.2 billion in federally guaranteed loans, although $400 million was not granted until February, 1981.

For the entire year, the financially beleagured auto maker reported the largest net loss by any U. S. industrial concern, although the new model year sales uptick spurred by introductory sales of the K-cars, did allow the company to briefly experience the long-forgotten thrill of black ink for the month of October.

All of the auto makers looked for ways to abate the financial problems, finance capital spending plans and reverse negative cash flow.

The AMC/Renault partnership tightened in 1980 as the French auto maker acquired additional AMC shares, pushing its ownership to nearly 50 percent.

Chrysler continued to search for marriage or joint venture partners. General Motors and Ford looked enviously at the concessions the UAW gave Chrysler in its loan guarantee survival plan and decided they too might like the union to rollback some labor costs won in the last round of collective bargaining.

Several prestigious studies, including one by the Big Eight accounting firm Arthur Andersen, showed that in 1980 the Detroit financial disease spread to the industry's suppliers and that, in fact, the malaise was expected to linger beyond whatever recovery began with the 1982 model year and coincidental benefits of Reagonomics late in 1981.

Said one Wall Street analyst: "This is a watershed period for the auto makers and their suppliers. The only way to survive is for the car makers to find joint ventures and for the suppliers to find countercyclical, non-automotive business to hedge their bets."

Baby Maserati

Luxury in a small package

All-new small Maserati, due out in Europe later this year, is expected to debut in the U. S. by '82 or '83. The 2+2 coupe reportedly will be powered by a V-6. mounted in front and driving the rear wheels. Price is expected to be between $20,000 and $25,000. Unofficial photos were snapped during factory test runs.

Domestic-car dealer total down 221 in 1st quarter

By John K. Teahen Jr.
Managing Editor

There was discouraging news again for the domestic dealer population in the first quarter of 1981. The latest AUTOMOTIVE NEWS census shows a decline of 221 outlets for the January-March period.

The domestic dealer count was 21,551 on April 1, compared with 21,772 on Jan. 1.

The dip of 221 locations was not as bad as the 258-outlet drop in the first quarter of 1980. That was encouraging.

But the falloff was worse than the 173 outlets that left the field in the fourth quarter of 1980. That was *not* encouraging.

Each of the four manufacturers shared in the first-quarter dip. American Motors was down 17 outlets, and the Big Three were about on a par with slips of 63 for Ford Motor Co., 55 for General Motors and 51 for Chrysler Corp.

That amounts to 186. The industry loss was expanded to 221 by a change in the number of intercorporate duals. An intercorporate dual boosts the total for the company involved, but it does not help the overall count because the dealership was already in business before taking on the additional line.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

- The departure of 221 outlets was the second highest for the first quarter in the 20 years AUTOMOTIVE NEWS has been compiling census figures on a quarterly basis. Only last year's 258 was more severe.

The current quarter will tell a lot about what kind of a year it's going to be in the domestic dealer field. Last year, the second quarter brought a staggering loss of 672 outlets (highest ever for a three-month span), and that was followed by a dive of 507 in the third quarter as the industry lost 1,607 for the year.

If the decline moderates a bit this quarter, it will be a heartening sign for the domestic industry. If it approaches last year's figure, another disastrous year could be in store.

In the first quarter, Chrysler Corp. and Ford Motor fared better than in 1980, while GM and AMC had bigger losses than a year ago.

Chrysler's dip of 51 was only one-third as bad as last year's 152, and Ford Motor's 63 was

Ford to offer propane option in '82

DEARBORN.—Ford of Canada will offer a factory-engineered propane fuel system for some Granadas and Cougars in the 1982 model year. It is expected the option will be priced at about $600. Ford expects to sell about 20,000 systems in Canada in calendar 1982. Production started last month at Louisville of a propane option for Ford medium/heavy-duty trucks for sale in the U. S. and Canada.

Chevy buildout, startup dates set

DETROIT.—Chevrolet has told its dealers to expect Malibu, Citation, Camaro and Celebrity to be in short supply during the rest of the calendar year because of changes in car-line programs and startup dates. Camaro will build out earlier than usual, July 10, and start up later than usual, Oct. 5. Monte Carlo and Malibu buildouts are scheduled for the week of July 31. Citation buildout is set for Sept. 4, with startup Sept. 14. Celebrity is slated for a late startup on Sept. 28.

J-car to be built in Brazil

SAO JOSE DOS CAMPOS, Brazil. — General Motors do Brasil will begin production of the J-car here this month. At first, total output will be exported. Sales in the domestic market will be held off until 1982. Export models will have four-cylinder gasoline engines of 1.6 and 1.8 liters. Cars for the domestic market will also be available with an alcohol engine running on a 12:1 compression ratio. Eventually, export models may be built equipped with diesels imported from Germany.

Chrysler price hike averages $194

DETROIT. — Chrysler Corp. has raised new-car prices an average of $194, or 2.6 percent, for the average-equipped vehicle. This compares with boosts of $178 for Ford Motor last week and $351 for General Motors on April 13. Chrysler's hikes generally ranged from $91 on the Omni/Horizon four-door to $348 on the Chrysler Cordoba, although the Imperial went up $801. The base K-car two-door was raised $115. Like GM and Ford, Chrysler said it plans no further price increases for the remainder of the 1981 model year.

Issue still very much alive in House hearing

Air-bag rhubarb goes on and on

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The fight over passive restraints — especially airbags — is not yet over, although the standard was a major item on the Reagan Administration hit list and although large cars already have a one-year reprieve.

The action may be in Congress, which has on several occasions taken the matter into its own hands. In fact, the battle has started

The standard is not a "Loosey-goosey/consumer - flaky" issue. So said Rep. Tim Wirth, the Colorado Democrat who heads the new House subcommittee, looking anew at the 10-year-old controversy.

Nor is it "just a minor nuisance regulation, like the height of toilet seats or the temperature at which live animals must be transported." So said Yale Professor William Nordhaus, formerly the member of the President's Council for Economic Advisers in charge of regulations.

"Why can Toyota design something that doesn't strangle my wife and General Motors can't?" So asked Rep. Al Swift, Washington Democrat.

- Sound like 10 years ago, the height of the consumer activist period when Detroit was the target? Well, it was last week.

The scene was the startup of House Energy and Commerce subcommittee hearings on passive restraints in the 97th Congress — just 19 days after the Reagan Administration gave the makers of large cars a one-year reprieve on restraints. It was standing room only and TV lights.

Many of the Congressmen were different, but with the exception of the new NHTSA head Ray Peck, the witnesses were the same ones who have appeared over many years. Joan Claybrook was in there pitching.

Many arguments were the same, although the numbers used for costs and benefits were updated.

The twist added at the end of the last Congress — how to equalize treatment of import companies, most of whose cars are smaller than domestics—was again debated.

The upshot is that even with an Administration devoted to deregulation and sympathetic to Detroit, the issue of air bags is very much alive. Indications are that Congress—as it has in the past—will decide the issue rather than the bureaucrats.

And with that, certainty — which the companies like most, next to profits—is gone.

- Mercedes - Benz, which had planned air bags as well as three-point belts for front seats on all its cars sold in the U. S., has changed its mind. It will not even offer air bags as options.

"Mercedes - Benz has never considered the airbag as the ultimate occupant crash protection solution in the first place," the company said. "The air bag, for us, has always been a supplement for an otherwise actively safe car equipped with three-point belts."

Mercedes-Benz, which had one model affected by the start of the phase-in for large 1982-model cars, added it will "honor the postponement of the passive restraint rule which is based on American social, political and economic considerations."

In Germany, which has mandatory belt use, Mercedes is offering a driver air bag mainly to prevent facial lacerations. It is advertising, "A good idea must not be given up."

Volvo, which had talked of air bags on some 4,000 cars

First quarter results up from $155 million a year ago

GM reports profit of $190 million...

By Edward Lapham
Financial Editor

General Motors reported first quarter 1981 net earnings of $190 million (63 cents a share), up 22.6 percent from $155 million (52 cents a share) in the 1980 period. Sales for the January-March period rose less than one percent to $15.724 billion from $15.713 billion.

GM Chairman Roger B. Smith and President F. James McDonald issued a statement which said the first-quarter results continued the gradual recovery begun in the final quarter of 1980. GM had a fourth-quarter profit of $62 million but suffered a loss of $763 million for the year.

"This improvement is encouraging and reflects intensive efforts to reduce costs," they said.

The two GM executives also said "prospects for a good spring selling season" will be aided by the May 21 introduction of GM's new J-cars.

They also said "the U. S. economy has rebounded considerably" and "the consumer's financial position has improved significantly" since last spring, which should aid the U. S. recovery. They did say, however, that non-North American economies are not recovering as quickly, which will continue to hamper overseas operations.

"Certainly this will be no record year for GM or the auto industry, nor even an outstanding year," they said. "But despite the uncertainties, we do expect 1981 to be a year of improvement and progress."

• GM reported that in the first quarter, worldwide factory sales of all vehicles declined 16.9 percent to 2,034,000 from 1,690,000. In the U. S., factory sales of cars declined 18.1 percent to 957,000 from 1,169,000 while factory sales of trucks fell [illegible] percent to 205,000 from 228,000.

Factory sales of all vehicles manufactured in Canada were off 12.2 percent to 187,000 from 213,000 and overseas factory sales dropped 19.6 percent to 341,000 from 424,000.

The average number of employes worldwide was 758,000 in the first quarter, off 4.9 percent from 797,000 last year. Total worldwide payroll last quarter was $4.81 billion, compared with $4.57 billion in the same period last year.

The total cost of an hour worked by U. S. hourly employes rose 13.5 percent over the past year to $19.70 in January-March this year from $17.35 in the period last year, GM said.

Working capial at March 31 totaled $2.440 billion, down from $3.148 billion at Dec. 31 and $6.256 at March 31, 1980.

GM's income statement for the first quarter listed a combined total of $1.136 billion for depreciation and amortization, compared with $1.056 billion last year.

GM's current assets to current liabilities ratio deteriorated further in the first three months of the year to 1.19 to one from 1.26 to one at Dec. 31 and 1.58 to one at March 31 last year.

Smith and McDonald said the current earnings "are well below the level" needed to fund GM's "aggressive product and facility programs" of the 1980s.

$439 million in red for first 3 months

...But Ford suffers 6th straight loss

By Edward Lapham
Financial Editor

DETROIT. — Ford Motor Co. reported its sixth consecutive quarterly loss for the first three months of 1981.

The company said it incurred a net loss of $439 million ($3.65 a share) in the period, up from the $164 million ($1.36 a share) the auto maker lost in the first quarter of 1980 despite a relative improvement in U. S. operations.

Worldwide sales in the period were off 3.1 percent to $9.3 billion from $9.6 billion.

Ford said that in the U. S. in January-March, it sustained an after-tax loss of $395 million ($3.28 a share) compared with $473 million ($3.94 a share) last year.

A statement by Chairman Philip Caldwell and President Donald E. Petersen said "major reductions in operating costs" were offset by lower sales, a less favorable product mix, spiraling labor and material costs plus higher interest expense.

Ford said its largest year-to-year deterioration of operations was in the overseas markets. The auto maker said it had an after-tax loss of $44 million (37 cents a share) outside the U. S. in the period, including a $61 million loss in Canada. In the year-ago period, the company's non-U. S. operations contributed after-tax earnings of $309 million ($2.58 a share).

The overseas profit decline "reflected principally lower industry volume and lower dealer stocks in Europe because of a cyclical weakening of some economies," the Ford statement said.

• Ford's financial situation did not deteriorate as much as the results might have indicated.

In fact, the auto maker's current assets to current liabilities ratio actually improved slightly to 1.05 to one at March 31 from 1.04 to one at Dec. 31. However, it was well below the 1.19 to one ratio at March 31, 1980.

Working capital increased $10.3 million during the period to $497.3 million at March 31, due to a reduction in dividend payments and other reduced dispositions.

Working capital, which started 1980 at $2.3 billion, decreased by $479.2 million in the first quarter last year and by additional amounts in successive quarters for a total erosion of about $1.8 billion last year.

Ford's statement of operations listed depreciation at $273.7 million in the first quarter compared with $242.3 million last year. Amortization of special tools was listed at $261.2 million compared with $212.5 million.

"A substantial improvement in Ford's operating results" is expected in the second quarter of 1981, the statement said, based on a recovery in industry car and truck sales and dealer inventory expansion in the U. S., as well as "gradual improvement" in vehicle demand in "most major markets."

...And Chrysler drops another $298 million

By Edward Lapham
Financial Editor

Chrysler Corp. reported a net loss of $298.4 million ($4.56 a share) for the first fiscal quarter of 1981. It was a marked improvement over the $449 million ($6.84 a share) net loss reported the year earlier, but generally a bigger loss than Wall Street analysts had anticipated.

In a report to shareholders, Chrysler Chairman Lee Iacocca said the company "is on schedule in its rebuilding program." He also said Chrysler "exceeded the sales objectives established in the operating plan so far in 1981."

Net sales in the January-March period rose slightly to $2.428 billion from $2.347 billion in the 1980 period. Iacocca said that despite "the economic factors which depressed the automobile industry," Chrysler's "costly package of sales incentives and rebates" was successful in giving Chrysler sales momentum.

He said Chrysler's share of the U. S. car market in the quarter was 10.6 percent compared with 9.5 percent in the first three months of 1980. Worldwide factory sales of motor vehicles declined 7.2 percent to 305,133 from 328,917 last year.

"Even though Chrysler incurred a loss for the quarter, operating results improved month by month and approached break-even in March," Iacocca said.

"With a continuation of our sales momentum, the increasing benefits from our restructuring program and a moderation of interest rates, Chrysler's operating results are expected to improve dramatically in the second quarter and the balance of the year."

Chrysler's financial position improved somewhat during the period. Its current assets to cur-

Toyota's new 4WD entry in Europe

Toyota and Datsun are bringing new models in the growing 4WD field in Europe. The Datsun Patrol, and the Toyota Land-Cruiser (above) feature a clean design and they are lower-priced than the American 4WD models AMC Wagoneer and Cherokee. Due to the high value of the U. S. dollar, prices of the U. S. cars are increasing in most European countries.

Chevrolet, Ford launch sales incentive plans

Consumer rebates may have ended, but Chevrolet and Ford are still using cash incentives to move cars and trucks.

Chevrolet launched a sales manager's cash incentive, paying bonuses up to $3,000, to managers, plus a $50 override on each additional light - duty truck once they hit the top objective.

Meanwhile, Ford Division launched a dealer cash incentive, paying up to $200 per Granada, $500 on Thunderbird and $500 on light-duty conventional pickup trucks.

The Ford program is called "Spring Green." It runs from April 27 to June 27.

Dealers are assigned a total car objective. If they hit 0 to 69 percent of it, they receive $100 retroactively for every Thunderbird they sell. Again, 70-99 percent pays $300 on every Thunderbird, retroactively; and 100 percent and above pays $500 per Thunderbird, retroactively.

There is a separate contest on Granada, during the same time frame.

Dealers get a flat $200 for every Granada they sell, beginning with the first unit. However, only Granadas released prior to May 1 and sold from stock are eligible for the money.

• In another phase, Ford has an incentive on light-duty conventional pickup trucks from the F-100 to F-350 series. Broncos, vans and Courier are excluded.

The truck incentive is set up so dealers earn $100 per truck for hitting 20 to 39.9 percent of objective; $150 for 40 to 59.9 percent; $200 per unit for 60 to 79.9 percent; $300 per unit for 80 to 99.9 percent and $500 per unit for 100 percent and above. Payments are non-retroactive.

Ford dealers will carry the load in terms of advertising Thunderbird and Granada values, but Ford Division will do factory advertising to highlight special truck values.

A Ford spokesman said the truck ads encompassed 30-second TV and 60-second radio spots, breaking last Friday, along the lines of "Now's the time to get the jump on prices, and Ford's special incentives to dealers can save you hundreds of dollars." J. Walter Thompson is the agency.

Chevrolet's contest is called "Big Bonus Time."

It covers new '80 and '81 pickups and vans, excluding the LUV and the medium - duty truck series. The contest runs from April 21 to May 31.

Payments vary according to dealership objective.

If a sales manager had an objective to 4 to 10 trucks, he would get a $500 bonus by hitting his objective, plus receiving $50 for each additional unit over 10 that he sells.

If a manager had an objective of 11 to 20 units, he would receive a $1,000 bonus for reaching it, plus the $50 override on every additional sale over 20.

Similarly, objectives of 21 to 30 units pay $1,500; 31 to 40 units, $2,000; 41 to 50 units, $2,500; and 51 and over, $3,000. Managers reaching their objectives in each of these categories get the $50 - per - unit override, once they reach their goal.

Ford is eying a return to ragtop market

DEARBORN. — Ford Motor Co. may be scurrying to catch up to Chrysler Corp. and pass it in one area at least.

Ford is evaluating convertible versions of the EXP/LN7 and Mustang, and, according to one report, a soft top Ford may be available in the fall of 1981.

Earlier this year, Chrysler showed the press a convertible K-car it will put on the market next spring.

Auto makers' first-quarter results

PROFITS (LOSSES) IN MILLIONS

	1981	1980
GENERAL MOTORS	$190	$155
FORD MOTOR CO.	(439.5)	(163.6)
CHRYSLER CORP.	(298.4)	(448.8)
AMERICAN MOTORS	(52.7)	1.3
	($600.6)	($456.1)

Domestic count slips to 21,551

Dealer total down 221 for quarter

Continued from Page 1

down from 97. On the other hand, GM was off 55 this year, compared with 30 a year ago, and AMC's loss of 17 outlets compared with a gain of 36 in 1980.

In the franchise area, totals held rather steady in the first quarter except for Ford Division and Chevrolet. Ford was off 53, and Chevrolet was down 45.

At Chrysler Corp., franchises were down 17 for the Chrysler marque, seven for Dodge car and three for Plymouth. Imperial was up six.

Lincoln has one less franchise than at the beginning of the year, and Mercury is down 11. Cadillac was unchanged for the first quarter, and there were dips of five for Pontiac and 10 apiece for Buick and Oldsmobile.

AMC had 1,646 domestic-car outlets on April 1, compared with 1,663 at the beginning of this year. AMC's duals with Big Three makes of cars climbed to 729 from 706 on Jan. 1. That's a 10-year high for AMC duals.

Chrysler Corp. opened April with 3,772 car locations, a decline of 51 from Jan. 1. As noted, Chrysler showed a big improvement over the first quarter of 1980 when it lost 152 spots.

Franchise totals for April 1 were: Chrysler, 2,651; Plymouth, 2,479, Dodge car, 2,344, and Imperial, 417.

Chrysler Corp. also has 10 dealers that handle only trucks. They are not included in the corporation's car - dealership total or in the Dodge car-franchise total.

Ford Motor's dealership count on April 1 was 5,898, compared with 5,961 at the beginning of January, a drop of 63.

FRANCHISE TOTALS

	April 1, 1981	Jan. 1, 1981
AMERICAN MOTORS	1,646	1,663
CHRYSLER CORP.		
Chrysler	2,651	2,668
Dodge	2,344	2,351
Imperial	417	411
Plymouth	2,479	2,482
FORD MOTOR CO.		
Ford	5,017	5,070
Lincoln	1,476	1,477
Mercury	2,705	2,716
GENERAL MOTORS		
Buick	2,975	2,985
Cadillac	1,605	1,605
Chevrolet	5,630	5,675
Oldsmobile	3,240	3,250
Pontiac	3,110	3,115

Copyright 1981, Automotive News

Franchise totals are Ford, 5,017; Mercury, 2,705, and Lincoln, 1,476.

There are 91 dealerships that handle only Ford heavy - duty trucks. They are not included in the company's car-dealership figure or in Ford Division's car-franchise tally.

At GM, the car dealership figure slipped to 11,005 at the beginning of April, down 55 from 11,060 on Jan. 1.

Car franchise totals are: Chevrolet, 5,630; Oldsmobile, 3,240; Pontiac, 3,110; Buick, 2,975, and Cadillac, 1,605.

Looking back a year, the current domestic dealer count of 21,551 is down 1,570 from the 23,121 establishments in operation on April 1, 1980.

The 12-month period has seen declines of 519 for Ford Motor Co., 495 for Chrysler Corp., 390 for General Motors and 91 for American Motors. That's an aggregate drop of 1,495. There are 75 more intercorporate duals than there were a year ago, so the industry's net loss is 1,570 outlets.

But complaints still plague Cadillac engine

Delco stands by V-8-6-4 computer

By Marjorie Sorge

DETROIT. — The Delco Electronics Division of General Motors, sole supplier of the computers for the Cadillac V-8-6-4 engine, is standing behind its product, although some dealers and consumers consider it unreliable and a possible safety hazard.

In last week's AUTOMOTIVE NEWS, numerous consumers interviewed said the car can die on the road without warning. Others said it slows down as if to stall and then jerks forward unexpectedly, while others reported engine fires. A common complaint was the engine light, which consumers say comes on often and then blinks off.

Many dealers questioned said there were some problems at the beginning of the model year but those had been fixed, others called the car a "joke" and still others while indicating they had problems would not make any official comment.

There is currently a class-action lawsuit pending in New Jersey charging that the device is "experimental" and a safety hazard. Adrian I. Karp, originator of the suit, said he has had many calls from customers who want to be part of the action.

The V-8-6-4 and the digital fuel injection, both in the 1981 Cadillacs, are run by a computer and are interrelated, a Cadillac spokesman said. Parts of the DFI are made by the Rochester Products Division of GM.

A spokesman for that division referred any inquiries back to Cadillac, and Cadillac said an engineer could not be questioned about the DFI because of the pending litigation.

Mike Pung, Pung Motors Sales, Alma, Mich., said the two systems, the V-8-6-4 and the DFI offer two separate problems. He said the V-8-6-4 gives a rough ride and passengers can feel the changing modes. He said the stopping may be due to the DFI.

He said the problem began about two years ago. In 1979, GM brought the DFI production in-house, according to a company official.

• The computer which controls the system is one item in question by dealers and consumers. Many say it is too sophisticated for the car and others say dealership mechanics have trouble fixing it.

R. J. McMillin, director of engineering for Delco Electronics, said the computer improves the driveability of the cars and "it's funny people don't notice the improvement." He said Delco has had good success with the computer introduced in 1979.

He compared the computer to having a "spare can of gas in the trunk" because of its fail-safe capabilities. He said the system can change into a backup mode if something fails on the car. Those problems would be indicated by the check-engine light, which he said will remain on even if the computer has switched to the back-up system to correct the failure.

Pung says the light goes off when the computer goes into the back-up mode and he said it doesn't always correct itself and is "too sophisticated for the car."

Some customers also say the check - engine light comes on often. McMillin said the light should be visible only when the engine is started or when there is something wrong with the car.

He suggested that if the warning light comes on, the car should be taken to the dealer.

McMillin said there is a problem at the dealerships because many times the mechanic doesn't have enough training to work with the computer. GM

LN7s on their way

The first Mercury LN7 sport coupes in Los Angeles were driven to home cities by 35 L-M dealers. Ready to leave the point of departure — the Disneyland Hotel, Anaheim — are, from left: Jan Silletto, University Lincoln-Mercury, West Covina; Bob Rewey, L-M general sales manager; Stan Miller, Western regional sales manager, and Dennis Clements, Los Angeles assistant district sales manager.

News roundup

Boniface succeeds Dial at Ford

PARIS.—Victor Dial, former president of Ford of France who defected to Peugeot in March, has been named commercial director for Europe and North America. A former General Motors executive, Rudolph H. Boniface, who has been with Ford since June, 1978, takes over as head of Ford of France. Boniface is a graduate engineer from Syracuse University. He worked for GM in France, Portugal, Brazil, Germany and Italy for seven years before going to Ford.

Record sales seen for South Africa

JOHANNESBURG, South Africa.—A survey of the South African auto industry conducted by Sigma Motor Corp., predicts that new-car sales this year will reach a record 288,000. Sigma, one of the nation's top two auto producers, warned in its survey that the local market has more models and manufacturers than it can support.

Auto trade deficit rises in Canada

TORONTO.—Canada's auto trade deficit for the first two months of the year rose to $493.1 million from $344.9 million in the year-earlier period, according to preliminary figures compiled by Statistics Canada. It said the main reason for the increased deficit was a sharp decline in the number of completed vehicles shipped to the U. S. Ford Motor Co.'s plant in Oakville was closed for much of this period in preparation for production of the EXP and LN7.

VWoA opens Atlanta HQ

ENGLEWOOD CLIFFS, N. J.—Volkswagen of America held a grand opening of its new Atlanta headquarters for its Volkswagen Atlanta Region and its Porsche Audi Southern Region. The 19,850-square-foot, two-story building will feature a training center for dealership service personnel.

Guardian wins glass-plant suit

NORTHVILLE, Mich. — Guardian Industries Corp. said that its Luxembourg subsidiary has won from the Luxembourg Court a dismissal of a suit by Pilkington Brothers, Ltd., of England. Guardian is the majority owner of Luxguard, S.A., which is building a float-glass plant in Luxembourg. Pilkington had sought to enjoin completion of the Luxguard plant. Production is expected to begin in the fourth quarter, supplying glass to the automotive and construction industries in Western Europe.

Hinrichs named to Mercedes board

STUTTGART, West Germany. — Hans J. Hinrichs has been elected a deputy member of the board of management of Daimler-Benz AG, effective July 1. Hinrichs, 48, is vice president for passenger-car sales and marketing for Mercedes-Benz of North America, with headquarters in Montvale, N. J. Hinrich's primary responsibilities with Daimler-Benz will also be in the areas of sales and marketing. Heinz C. Hoppe, the member of the management board in charge of these areas, will become 65 next February.

Virginia probes Mid-Atlantic Toyota

WASHINGTON.—The State of Virginia has joined the list of those investigating Mid-Atlantic Toyota Distributors, Inc., Glen Burnie, Md. Its president, Frederick R. Weisman, and his port-handling agent, Carecraft Industries, Ltd., and approximately 102 Mid-Atlantic Toyota dealers for allegedly coercing customers to buy "protection package" add-ons for their new cars. Maryland, Delaware, Pennsylvania, West Virginia and Washington, D.C., have already filed suit against the parties, who maintain they have done nothing wrong and that the protection package was like any other option.

GM honors Hamill for quality

WASHINGTON, Mich. — Hamill Mfg. Co. has been honored by Fisher Body Division of General Motors for the high quality of seat belts manufactured by Hamill during 1980. GM gave Hamill a quality index rating of 140, which qualifies Hamill for GM's "140 Club."

New Chevy deal in Detroit zone

NOVI, Mich.—Construction has begun on Marty Feldman Chevrolet here, which Chevrolet said will be the first completely new dealership in its Detroit zone since 1971. The dealership is scheduled to open this fall. It is headed by Marty Feldman, formerly a partner in James-Martin Chevrolet, Detroit.

MVMA recalls when cars carried 2 spares and 58 tools

15-mile oil changes in good old days

DETROIT. — Americans have had a lifelong love affair with the automobile, and, like most love affairs, the road has often been a rocky one, the Motor Vehicle Manufacturers Assn. reports.

Today's cars are expected to run reliably and efficiently. And they usually do. When they don't, thousands of service outlets across the country are available to put them back in shape.

This was not true in the "good old days" when the infatuation with the motorcar was put to the most rigorous tests. Cars were temperamental and demanded constant attention.

A popular book of the day, Diseases of the Gasoline Automobile and How to Cure Them, sternly admonished would-be owners that the servicing of a horseless carriage was no trifling matter.

"When you buy an automobile, there is formed an unwritten agreement between you and the machine," the book said. "You expect to receive certain benefits from its possession. It, likewise, exacts a penalty from you in direct proportion to your own demands."

This sage advice, designed to bring the love stricken back to earth, was rooted in the harsh reality involved in the care and feeding of the early flivvers.

• The average 1981 car requires an oil change about every 7,500 miles. This is a far cry, noted James W. Wren, manager of the MVMA Patent Library, from 1905 when the Pierce Motorette demanded an oil change every 15 miles.

"Few cars risked more than 200 miles without new oil," he said.

Today's tires give many maintenance-free miles and are designed to last for years. But tires of yesteryear punctured at the slightest provocation.

"Motorists didn't dare venture out without at least two spares and a tire repair kit," Wren said. "When they were stuck without spares, many drivers stuffed the punctured tire with rags."

Gas stations? No such places back then. "Autoists," as they were called, bought fuel in tin drums from retail stores. While funneling it into their tanks, they poured it through chamois or gauze to filter out impurities. Many manufacturers recommended draining the tank and refiltering the gasoline before every trip.

Modern electronic ignition systems start engines instantly at the flick of a key. The hand crank was the common method of persuading engines to kick over in the early cars.

• A stubborn and merciless implement, the crank often kicked backward wihout warning, causing injury to hapless operators. Broken forearms and jaws were common maladies among misusers of the tool.

"The few dealerships that existed in the pioneer days of automobiling were located mainly in the big cities," Wren said.

"For the buyer who lived in less-populated areas the car was shipped in a crate aboard a freight train and dumped off at a siding. It was left to the ingenuity of the purchaser to unpack it, fuel it and get it home."

One of the "pleasures" of driving was a jaunt in the country. But these could be turned into nightmares. Many early cars had no tops or windshields. Sudden downpours soaked the occupants and turned the country roads into seas of mud.

Even if the weather was clear and sunny, breakdowns were likely to occur. Extra tires had to be stacked on and a tool box secured to the running board. The owner's manual for the 1904 Chadwick Roadster recommended no less than 58 different tools and spare parts to be carried at all times aboard the car, Wren said.

Many a budding romance ended in tears and recriminations because of breakdowns. An advertisement in The Horseless Age, a popular magazine of the day, depicted a comely damsel standing alongside an automobile while her frowning swain stared dejectedly at a punctured tire. The caption read:

Miss Commonsense: "I'll never ride with you again until you use Swinehart Clencher Tires."

Charley Wokeup: "I will forward my wheels to their nearest branch tomorrow."

If these hardships weren't enough, motorists also had to be wary of angry farmers who saw these new-fangled machines as urban invaders intent upon scaring their horses and livestock and ruining their quiet way of life.

Some farmers were devious and greedy. They deliberately flooded roads, causing cars to be mired in the muck. Then they innocently arrived with a team of horses and offered to pull the cars out—for a reasonable fee, of course.

For high-altitude standards in 1982, '83

EPA approves self-certification

WASHINGTON. — Auto makers have been given the OK by the EPA to self-certify that their vehicles meet 1982 and 1983 high-altitude emission requirements and to sell such vehicles without prior EPA approval.

The change in procedures, made in "response to unanticipated delays some manufacturers are experiencing," is part of the Administration's effort to reduce the testing and regulatory burden on the auto companies.

Previously, EPA had sought to ease the time burden by exempting certain proportions of manufacturers' light-truck fleets from the high-altitude emission requirements. Low-performance vehicles that would not be sold in high altitude areas also got exemptions.

While eliminating these vehicles from the test requirements helped, delays are still occurring, EPA said. It decided that allowing makers to self-certify would be prudent.

The agency said it will re-evaluate the whole of its high-altitude compliance testing regimen as part of its development of 1984 high-altitude regulations.

These are supposed to require that all cars meet the low-altitude emission standards at high altitudes, but the EPA has said it wants this changed because of the expense and questionable practicality.

Moss resigns from White; finance man Askins at helm

Continued from Page 10

F. Seminatore, a Cleveland attorney whom the bankruptcy court in Cleveland named examiner to oversee White's reorganization plans.

Seminatore said he was "pleased with (the directors') decision," and that he would withdraw his request for appointment of a trustee. "Sometimes a new face is the best medicine for a company attempting to come out of Chapter 11," he said.

• In explaining the reason for his resignation, Moss said he felt that appointment of a trustee would impede progress in White's negotiations for a merger or some other arrangements.

Moss declined to name firms with which White has been negotiating, but one of them is Volvo of Sweden.

Volvo trucks have been distributed in the U. S. by Freightliner Corp., and this tieup is expected to end when and if Daimler-Benz of West Germany completes plans to buy Freightliner from the latter's parent firm, Consolidated Freightways.

White also had been talking with Daimler-Benz, but talks were discontinued — although not terminated—when Daimler-Benz and Consolidated Freightways announced an agreement in principle for the sale of Freightliner.

Consolidated Freightways had been discussing a deal with White prior to the announcement of the agreement with Daimler-Benz.

Sales, income at peak for Subaru of America

PENNSAUKEN, N. J. — Subaru of America reported record sales and net income for the first fiscal quarter ended Jan. 31, 1981.

Sales for the quarter were $222.3 million, an increase of 17 percent over $190.1 million in the first quarter of the prior fiscal year. Net income was $5,908,000 (98 cents per share), up 64 percent from $3,596,000 (60 cents per share) in the 1980 period.

Portland dealer ordered to pay in block switch

SALEM, Ore.—Punitive damages against a Portland automobile dealership that put a rebuilt instead of a new engine block in a service customer's car have been restored by the Oregon Court of Appeals.

The appellate court restored $5,500 in punitive damages in the Multnomah County Circuit Court case against Mike Salta Pontiac.

The jury awarded Richard Abrams $2,500 in actual damages, $5,500 in punitive damages and $5,000 in lawyer's fees for breach of contract and for violation of the Unlawful Trade Practices Act.

The Circuit Court had struck the punitive damages award but the Court of Appeals, in an opinion by Judge William Richardson, restored them.

The appellate court said the plaintiff had gone to the automobile dealer in May, 1978, to have a new engine placed in his 1972 Pontiac Grand Prix. He was told new engines were not available. The court said he therefore asked Salta employes to install a new short block. The court said Abrams specifically said he did not want a rebuilt block.

The court said a rebuilt engine block was installed, apparently without the knowledge of the employe who wrote out the order and without telling Abrams. The court said Abrams had "immediate and continuing problems" with the car.

Lunn and Sehn to speak at Automotive News seminar

4WD, robots World Congress topics

Future of four-wheel drive in the U. S. market will be the topic of Roy Lunn, vice president, product engineering for American Motors, and Francis J. Sehn, chairman of Robogate Systems, Inc., and Robogate Machine Tool Group, Detroit, will talk about the use of robots in the automotive industry at the sixth annual Automotive News World Congress to be held at the Hyatt Regency Hotel, Dearborn, July 19-22.

Automotive News World Congress opening night speakers are Donald E. Petersen, president and chief operating officer, Ford Motor Co., and William M. Agee, chairman of Bendix Corp.

Lunn, 46, who was born and educated in England, studied engineering at Kingston College, Leeds and Birmingham universities. He graduated with degrees in mechanical and aeronautical engineering.

Lunn began his automotive career in 1946 after serving in the Royal Air Force. His creative talents in design credited him for the DB2 sports car at Aston Martin and for the Jupiter series at Jowett Car Co.

In 1954, Lunn joined Ford of England and established the Birmingham car research facility where he directed the development of the 105E Anglia. In 1958, Lunn moved to the U.S. and joined Ford Motor Co. in Dearborn, where eventually he was responsible for design and development of various vehicles including the 12M Taunus, Mustang I, the Super Highway Truck and others.

In 1963, Lunn helped create the Ford GT series of vehicles which won world championships at LeMans, Sebring, and later developed the MK11 sports car and the Presidential Limousine.

Roy Lunn

Francis J. Sehn

In 1971, Lunn moved to American Motors where he has been partly responsible for development of Jeep vehicles and the Eagle series of 4WD automobiles.

• Sehn's career in the automobile industry began in tool and die work with Fisher Body Division of General Motors. During World War II, Sehn was chief die engineer at Fisher Tank Division.

Subsequently, he joined E. W. Bliss Co. and then founded Press Automation Systems, Inc., and Coilfeed Systems, Inc. Later, the two merged into U. S. Industries, P.A.S. Artco Stamping and Body Assembly Group where he served as group executive.

Since 1971, Sehn has been chairman of Robogate Systems, Inc. and Robogate Machine Tool Group, Detroit, chairman of Di-Dro Systems, Inc., and chief executive of Fran Sehn Co., an international consulting service, Bloomfield Hills, Mich.

Sehn serves on various international professional, educational and institutional boards. He was honored by the Society of Manufacturing Engineers in 1975 for development of the society's Die Design Handbook.

The Automotive News World Congress will present 34 speakers in a four-day symposium. Registration includes a comprehensive workbook, three dinners, two lunches and three scheduled cocktail receptions. Turn to pages. 48-49, in this issue for detailed information on the Automotive News World Congress.

The registration fee is $425. In the event a registrant's plans change, the name of another individual can be substituted at any time prior to the World Congress. There is a service charge for complete cancellation. All cancellations must be submitted in writing.

Information about the Automotive News World Congress can be obtained by contacting Cynthia Radom, director of special projects, 965 E. Jefferson Ave., Detroit, Mich. 48207. To register by phone, call collect (313) 567-9520.

AN '81

Professor sees imports as most threatening to recovery

U. S. auto's home at depression low

LANSING, Mich. — A cyclical drop in auto sales, import-car competition and inflation have combined to plunge Michigan into the most severe economic depression in 40 years, according to the University of Michigan Finance Department chairman.

"Even for those who can recall the miseries of the 1930s, this is a new experience, for the 1930s represented a depression which extended over the length and breadth of the U. S.," Thomas G. Gies told the Michigan Chapter of the American Assn. of University Professors here.

"But today's depression, the most severe in the modern history of Michigan, is largely a regional affair, concentrated heavily in this state and in four sister states—Ohio, Indiana, Illinois and Pennsylvania. Traveling through the rest of the nation, it is difficult to find evidence of serious recession."

The regional depression, according to Gies, "represents a combination of three forces, independent of each other, but running concurrently."

"The first," he said, "is the most prolonged, extensive inflation in the history of the U. S. The second is the intrusion of an extremely vigorous foreign competitor for what we have long regarded as our local monopoly — the U. S. automobile market. The third is a cyclical drop in the demand for automobiles.

• "The cyclical recession problem is the least of the three, although at the moment it appears to be the most serious," Gies continued. "Without diminishing the problem of periodic unemployment, the majority of automobile industry forecasts anticipate that automobile sales will rebound from the depressed 1980 level around 9 million units.

"The current year is expected to be substantially higher—around 9.9 million units—and, further, it is expected that sales will return to 11.5 to 12 million annual rates by mid-1982, one year from now. "So much for cyclical declines; they are followed by cyclical recovery in the normal course of events.

"The second problem, new aggressive foreign competitors, is something else," Gies said. "If foreign-car penetration continues to enlarge, or even remain stable at present levels, Michigan has a serious problem.

"Here is the way it shapes up: For 1982-83, with 73 percent of an 11.5-million-car market, we will sell less than 8.5 million automobiles. By comparison, we sold more than 9 million domestic cars in 1977-78, our best recent model year.

"Combine this statistic with the nearly certain probability that there will be a decrease in labor per unit of car in coming years, and it is clear that employment in autos is not going to return to the levels of three to four years ago. Those jobs are gone," he said.

5 district offices for Ford Division, FPSD to close

DEARBORN. — Ford Motor Co. plans to close five district offices housing both Ford Division sales and Ford Parts and Service Division (FPSD) parts/service representatives.

The district offices are those located in Davenport, Ia.; Lansing; New York; Richmond, Va., and Salt Lake City. Earlier, Ford announced the closing of the parts distribution center in Cleveland.

Ford Division said its Richmond district sales office will be absorbed by Washington, Charlotte and Cincinnati, while the New York office will merge with Newark. Absorption plans for the others have not been finalized.

FPSD said the Davenport office will be absorbed by those in Chicago, St. Louis and Omaha; Salt Lake City by Denver; Lansing by Cleveland and Detroit; Richmond by Washington and Charlotte, N. C.; and New York by Philadelphia, Boston and Newark.

The closings, according to a Ford spokesman, affects 170 positions, including 24 at the Cleveland parts center. Some of these positions will be transferred to other district offices.

Toyota leads with $30 million for 1980

Spot TV advertising rises for autos

By Joseph Bohn
Marketing Editor

Spot TV advertising among auto companies was up in 1980, with importers dominating this form of the medium.

While many industry observers have felt that imports were shifting away from spot into network TV as their market and volume have grown, the opposite is actually true.

Importers increased their spot expenditures during 1980 as a portion of their TV ad budgets and reduced reliance on network.

Toyota took a quantum leap in 1980, increasing spot TV advertising by 55.3 percent to $30,364,400.

Ford Motor was the second heaviest spot user, with expenditures of $28,146,500, up 19.8 percent.

General Motors' spot advertising declined 25.8 percent to $16,877,400.

With increased activity at Chevrolet this year, however, GM is expected to show a gain for 1981. Chevrolet has had special truck marketing programs in Florida and Texas.

It reduced its list of top markets for spot truck advertising to about 30 or 40 last year, pulling back to concentrate only on markets where it felt it had the greatest potential.

Other GM divisions, like Oldsmobile and Cadillac, have been fairly consistent, if not overly heavy, users of the medium.

• Dodge dealer association advertising, which doesn't show up in the report on the major automotive spot advertisers is expected to increase sharply this year.

Dodge began a heavy dealer association effort on cars in the 21 DDAs in April. It runs for six weeks and is reportedly about 80 percent TV.

Among dealer groups, only Ford and Toyota associations made it into the top nine automotive users. Ford dealer groups spent about $6,865,800, up 4.8 percent; Toyota dealers about $6,580,900, up 3.0 percent.

Last year, many car dealer groups reduced their advertising after facing high money costs and low sales.

The spot advertising numbers are compiled by Broadcast Advertiser Reports (BAR) for 75 markets which it monitors on a monthly basis.

BAR adjusted its figures for 1979 and 1980 and has gone to a different system whereby it more closely approximates the level of dollars reported by the Federal Communications Commission.

BAR has had problems in previous years trying to differentiate between advertising run by dealers, dealer associations and the car divisions, sometimes confusing them in its reports.

It is seeking greater accuracy with the revised numbers and new procedure.

VW veteran

Robert Holbert, right, dealer at Holbert's Volkswagen, Warrington, Pa., receives an award in recognition of his 25 years as a VW dealer from Thomas Dietzlen, Valley Forge regional manager.

Spot TV expenditures by top auto advertisers

	1980	1979	Pct.of change
Toyota Motor	$30,364,400	$19,551,800	+55.3
Ford Motor	28,146,500	23,501,200	+19.8
General Motors	16,877,400	22,738,300	−25.8
American Motors	13,908,000	13,333,000	+4.31
Nissan Motor	13,840,500	9,277,300	+49.2
Volkswagenwerk A. G.	11,673,600	7,180,000	+62.6
Chrysler Corp.	10,405,800	10,410,700	− 5.3
Ford Auto Dealers Assn.	6,865,800	6,549,100	+ 4.8
Toyota Auto Dealers Assn.	6,580,900	6,388,600	+ 3.0

Note: These groups made it into the list of the top 100 spot TV advertisers nationally.

Data is based on Broadcast Advertiser Reports. The spot TV figures for 1979 and 1980 were adjusted by BAR to closely approximate the level of Federal Communications Commission spot dollars for the 75 monitored BAR markets. They are not comparable to previously published data and reflect the new method to be used in the future.

EXP for briefing and driving

Dealers from Washington, Oregon and Idaho, numbering more than 100, gathered for an orientation session on Ford's new EXP. Participants had hoped to form an impressive 105-EXP caravan as they left the center, but rain and staggered departure times thwarted their plan.

Volvo to study building complete buses in U. S.

GOTHENBURG, Sweden. — America's interest in European bus design and construction has reached Volvo, which is responding by undertaking a major study aimed at building complete buses in the U. S.

The study group will be headed by 58-year-old Rolf Soderhielm, who engineered the explosive rise in production as chief of the Bus Division since 1973. He leaves this post to set up a new office in the U. S. on July 1, at his own request, which emphasizes the importance he attaches to this market.

He will make recommendations to the board and prepare detailed plans for both production and marketing. Soderhielm has been with Volvo since 1944.

The new boss of the Bus Division is Stig Arne Olson, who is currently serving as managing director of Volvo Trucks (GB), Ltd. in the UK. Olson is 52, a graduate engineer with long experience in Swedish industries. After an early start with Volvo, he left to work for Forss-Parator AB, and returned to Volvo in 1975 to take charge of truck and bus production at Irvine in Scotland, a plant that makes special models for the British market (8-wheel trucks, double-decker buses).

Volvo sold 600 buses in Sweden in 1980, 850 in the other Scandinavian countries, and 1,005 in the rest of Europe. Other markets accounted for 1980's remaining 1,500 units, with the most important increases coming in Brazil, Singapore and Pakistan.

IRS loses on investment tax credit issue

Tax court decision favors leasing

By Francis J. Gawronski

The automotive leasing industry received some encouraging news when the U. S. Tax Court in San Francisco ruled in favor of Swift Leasing Co., a subsidiary of Swift Dodge, Sacramento, in the case where the lessor appealed a decision by an Internal Revenue Service (IRS) examiner involving the lease vs. conditional sales issue.

The issue for decision in the Swift Leasing case was whether, for the calendar years involved in the IRS audit, the lessor is entitled to the investment tax credit with respect to vehicles acquired by the lessor for use by other persons pursuant to the terms of an agreement entitled "Lease Agreement."

In its argument, Swift Leasing contended the lease was valid and cited several tax case decisions as precedent.

The court ruled that Swift Leasing "retained sufficient investment and ownership benefits and burdens to resolve the issue in its favor"—namely that the transaction was a lease and not a sale.

In a newsletter to its members, the American Automotive Leasing Assn. (AALA), Milwaukee, noted that several of its members have been examined by the IRS, and further action in their cases has been held up until the decision in the Swift Leasing case was filed.

AALA also cautioned the industry to treat the information on the Swift Leasing case with discretion "because there is no way at this time that anybody can predict the plans of the government in relation to any appeal effort that may be mounted."

The Swift Leasing decision is important to the leasing industry. Many leasing companies have set aside thousands of dollars to cover back taxes in the event the IRS eventually wins the case.

AALA said the tax court, in its decision, made some "very telling arguments, which explain the leasing business quite well," particularly the type of leasing business engaged in by AALA members. The association cited the following excerpts to prove the point:

"In considering the economic substance of the transactions in dispute, we are of the opinion that petitioner was in fact a lessor and that the users were lessees.

"Petitioner's leasing operations were encouraged by the economic realities of business. By transacting business through lease arrangements, petitioner was able to make larger profits in the years in issue than if it had operated solely as a sales business.

"Reasons for this profit structure included payments made to petitioner by Chrysler Corp. under a lease incentive program, the profit structure built into the 'Lease Agreements,' and the ability to make profitable sales on the cars formerly covered under the 'Lease Agreements.'

"On the basis of this record we conclude that the petitioner retained risks and responsibilities commensurate with the status of a lessor. Petitioner was responsible for the monthly repayments on its loans from the banks regardless of whether vehicle users timely paid petitioner or whether the users defaulted.

- "In the years in issue petitioner maintained contingent bodily injury and property damage insurance with respect to the leased vehicles, and during the last three months of 1975 it also maintained contingent physical damage insurance. Petitioner would not have purchased this insurance had it not had an interest in the vehicles.

"Petitioner assumed the risks attributable to default by users, namely non-recovery of the owed monies in the event of insolvency of the lessee, and, in addition the risk of a negative cash flow in default occurred within the first half of the lease. Petitioner also assumed the risk [illegible]ving at termination of the lease a vehicle not subject to resale at the previously anticipated retail price."

The court also said that, as in the cases cited by Swift Leasing, the petitioner's bookkeeping procedure "supports our determination."

"Petitioner's separate records for the sales and Swift Leasing Co. divisions, method of paying its personnel, and detailed separate records on each of the leased cars indicates that the leasing operations of Swift Leasing Co. had economic substance," court said.

"Finally, in making this determination we also have noted such factors as: The reasonableness of the monthly rental payments in light of the market and the type of property leased, the lease provision that no title passed to the lessee, the lease provision allowing petitioner to assign to third parties the right to receive rents from the leased vehicles, and the fact that in 29 instances the terms of the original lease were extended.

"The contract provisions utilized by petitioner were an attempt to minimize its business risks. While some of the ownership burdens were shifted to the vehicle users, this shift does not raise the presumption of a sales instead of a lease," the court said.

The court said it was of the "opinion that the petitioner retained sufficient investment and ownership benefits and burdens to resolve the issue in its favor."

Rohrer Chevy closes doors after 52 years

CAMDEN, N. J. — Rohrer Chevrolet, new car dealership which has been an institution on the city's Admiral Boulevard for 52 years and the first Chevrolet dealership in the Camden area, went out of business on April 24.

William G. Rohrer, owner, told his 68 employees that the dealership was a victim of the decline in the automobile business and of Camden's urban problems.

Operation of the dealership was turned over to a general manager years ago. Mr. Rohrer said the decision to close was made because a buyer for the dealership, which had been up for sale for more than a year, could not be found. Rohrer Chevrolet has also been regional distributor for Chevrolet parts, a function which will have to be turned over to another dealership in the area.

Rohrer's father, William G. Rohrer Sr., founded the dealership in 1929 and operated it until his death in 1935. His son took it over then and operated it until he became president of the First Peoples National Bank of New Jersey. Rohrer also is the mayor of Haddon Township and, in addition to the dealership, heads a variety of business enterprises.

Court tosses out efforts to ease, tighten them

Bids to alter diesel rules fail

Continued from Page 2

granted in the case of General Motors, Mercedes-Benz, Volkswagen of America, Peugeot and Volvo, the NRDC said. It argued that their diesel technology cannot meet two of the statutory criteria for the waiver: "The public health standard and the air quality benefit standard."

The court decided with EPA, however. It ruled "the NOx waiver was not intended as an opportunity to decide the ultimate fate of diesel technology, but rather meant to offer temporary encouragement to further development of diesels, so long as the public interest would not be unduly endangered."

In deciding to grant NOx waivers to the diesel makers, the EPA balanced less NOx control for more particulate control (at the present state of development exhaust gas recirculation, necessary for NOx control, tends to increase diesel particulate emissions).

Given that the NRDC itself has stressed the respiratory and carcinogenic dangers of particulates, "We cannot say that the EPA was arbitrary in concluding that the benefits of reducing particulate levels outweighed the dangers of slightly increased NOx levels," the court said.

GM, Mercedes-Benz, VWoA and Peugeot had argued before the court that EPA's particulate standard for 1985 was unreasonable, since the necessary trap-oxidizer technology had not been developed. As a result, the makers said, "Any particulate standard which contemplates use of a regenerative trap-oxidizer must be judged premature [illegible] not technologically feasible."

But the court rejected [illegible] argument, too, noting that "EPA is not obliged to provide detailed solutions to every engineering problem posed in the perfection of the trap-oxidizer and that it need only identify the major steps necessary for development of the device, and give plausible reasons for its belief that the industry will be able to solve those problems in the time remaining before 1985."

EPA has done that, Judge Abner Mikva said in writing for the majority of the three-judge panel.

Circuit Judge Roger Robb, in dissent, said "EPA's exhortations to the manufacturers, and its vaguely articulated faith that a design can be optimized to control particulate emissions soon, do not amount to plausible reasons for believing that each of the necessary steps can be completed in the time available.

"Pious hope and speculation cannot take the place of evidence," he said.

Ironically, the decision by the Appellate Court may become a moot point, since the Reagan Administration wants to take another look at diesel particulate standards.

Chrysler drops $298 million in first quarter

Continued from Page 3

rent liabilities ratio at March 31 pulled very close to even, at 0.99 to one compared with 0.94 to one at Dec. 31 and a devastating 0.83 to one at the height of the company's liquidity crisis last March 31.

The auto maker's working capital actually increased in the period by $142.9 million due to the receipt of federally guaranteed loans and smaller operational losses. In the first quarter last year, working capital decreased by $464.5 million.

Chrysler's statement of operations listed depreciation of plant and equipment at $60 million in the first quarter compared with $52.8 million last year. It listed amortization of special tools at $44.4 million compared with $65.6 million last year.

U. S. makers schedule 163,050 cars

Week's output is 14-month high

By Patricia Hoffman
Staff Writer

U. S. auto production last week reached its highest point in over a year, and output for the week rose considerably above the comparable 1980 week. Last year, there was downtime at seven Ford and two General Motors assembly plants.

Production last week was slated at 163,050, up 1.90 percent from the 160,006 units assembled in the previous week and up 29.07 percent from 126,331 completed in the comparable 1980 week. Output was also the most for any week since the 164,799 units built in the week ended Feb. 23, 1980.

So far this year, the auto makers have completed 2,254,906 units, down 6.87 percent from 2,421,162 assembled in the comparable period last year.

Breakdown for the week by company is: General Motors, 63.39 percent; Ford, 21.24 percent; Chrysler, 11.41 percent; Volkswagen of America, 2.55 percent, and American Motors, 1.41 percent.

Checker Motors, down since April 6, will resume operations today (May 4).

Last Friday, (May 1) production of the 1981 Dodge Diplomat, Chrysler LeBaron and Plymouth Caravelle ended at the Chrysler St. Louis assembly plant for changeover into the 1982 model front-wheel-drive Chrysler and Dodge Super K-cars. The plant is scheduled to resume operations at the end of August.

Overtime was scheduled last week at 11 assembly plants.

Ford's Kansas City point worked 10 additional hours for the week on each of two shifts, and assembly at the Ford Atlanta point was increased to 10 additional hours on one shift.

Also working overtime last week at Ford were Wayne, Metuchen, Louisville and Wixom.

Chrysler slated overtime last week at its Newark and Belvidere assembly plants, which operated on daily nine-hour schedules. Both plants will remain on overtime schedules this week.

General Motors slated Saturday overtime last week at its Pontiac, Lakewood and Willow Run points.

This week, overtime is slated at Chrysler's Jefferson assembly plant. The point will work two daily-nine-hour shifts.

AMC pins financial hopes on new front-drive '83s

By Edward Lapham
Financial Editor

DETROIT.—American Motors new line of '83 front-drive models developed in conjunction with Renault will allow AMC to capitalize on the coming auto market rebound, Chairman Gerald C. Meyers told shareholders at the 65th annual meeting held here last week.

At a press conference following the 79-minute annual meeting, Meyers told reporters the company is on an uphill track, but that losses should subside over the next two years, allowing "sustained profitability" in 1983.

Meyers told the sparsely-attended annual meeting that he prefers to emphasize the present, not the past or the future. He said the 10 percent price rollback has been a "great success" in boosting floor traffic and sales.

However, Meyers and W. Paul Tippett Jr., president, broadly hinted the company may be forced to raise prices in the near future, perhaps as soon as the May 15 termination date of the price rollback.

Meyers said "the time has come" for reopening the AMC-UAW contract. He said he believes that paid personal holidays, upcapped cost-of-living adjustments and "maybe COLA itself" are likely areas of negotiation. Even levels of supplemental unemployment benefits and the annual improvement factor are not sacrosanct, he indicated.

Meyers said the company has not contacted the union but said he thinks "it's got to happen" before the next regular contract talks. AMC will "have an open mind" about what its concessions might have to be, he said.

- On the subject of the new family of front-drive cars, Tippett said it will obviously be "an American car of Renault parentage." He said it will be a version of a world car. The French version will be built in the plant currently building the Renault R-14, although Tippett stopped short of confirming it is the replacement for the venerable R-14.

Meyers, who seems more relaxed with each successive annual meeting he chairs, had very few difficult questions posed to him by the 200 shareholders who attended the meeting.

All of the directors nominated by management were elected, and Touche Ross & Co. was ratified as independent auditor.

The shareholder proposal made by Harry Korba, which would have required cumulative voting for members of the board of directors, was defeated. It received 3.48 percent of the votes cast. The shareholder proposal submitted by Evelyn Y. Davis, which would have required disclosure of additional information about legal fees and outside law firms retained by the corporation, also was defeated.

Truck production rises for week to 33,703 units

U. S. truck production last week fared better than the previous week, but output fell below that of the comparable 1980 week.

Last week, truck production was slated at 33,703 units, up 7.91 percent from 31,232 completed in the previous week, but down 13.15 percent from 38,804 built in the comparable week last year.

Year-to-date, the truck makers have completed 600,042 units, a drop of 5.19 percent from the 632,876 trucks assembled in the comparable 1980 period.

Downtime was slated last week at General Motors Flint point (Line Two) and at GMAD's St. Louis truck point and Lordstown van plant.

Also down last week was International Harvester's Springfield truck plant.

Overtime was slated last week at Chrysler's Warren truck assembly point. The plant will remain on overtime this week (May 4).

Ford scheduled overtime last week at it's Lorain and Kentucky truck plants.

Canadian output drops for week but tops 1980

Canadian auto production last week rose above the comparable 1980 week's level, but the total fell below the previous week's output.

Last week, the auto makers slated production at 22,301 units, a drop of 2.75 percent from the 22,932 cars assembled in the previous week, but up 32.37 percent from the 16,847 completed in the comparable week last year.

So far this year, the auto makers have completed 281,562 units, down 8.71 percent from 308,431 assembled in the comparable 1980 period.

Canadian truck production last week also showed a drop from the previous week's level.

Truck output for the week was 12,118 units, down 4.63 percent from 12,706, but up 13.39 percent from 10,687 trucks assembled in the comparable 1980 week.

Year-to-date, the truck makers have completed 191,919 units, down 3.79 percent from 199,485 built in the comparable 1980 level.

Meet the 'J' family

New GM subcompact available in four body styles

Chevrolet Cavalier, Pontiac J2000 and Cadillac Cimarron—GM's 1982 front-wheel-drive subcompacts — will bow at dealerships around the country May 21. The Cavalier (shown) and J2000 are offered in coupe, four-door sedan, two-door hatchback and four-door wagon models. The Cimarron is offered only as a four-door sedan. Standard powertrain is a 1.8-liter inline four and four-speed transmission. Other stories on Pages 2 and 38; pictures on Page 38.

New system will tell driver when to shift

VW shoots for 50-MPG Rabbit

WASHINGTON.—Volkswagen of America, in an effort to stay ahead in the fuel economy derby, will try to market in 1982 special versions of its gasoline and diesel Rabbit that will tell the driver when to shift, either by a warning light or possibly by a taped voice command.

According to reliable sources, the company is now trying to get EPA to approve the system as a fuel economy device and allow its use during the EPA fuel economy test cycle.

Should EPA give VW the go-ahead, it is expected that fuel economy in the blinking or talking diesel Rabbit should improve by as much as 15 percent, bringing its city fuel economy number into the 50-MPG range. The gasoline version would experience a somewhat smaller increase.

Other manufacturers have used devices of this nature previously, but none has utilized a system designed specifically to have the operator keep the engine operating in its most efficient range. The signal VW plans to use would be keyed by certain engine parameters, primarily engine load and air-fuel ratio, but would not be so keenly attuned to maximum engine efficiency that a reserve for acceleration would not be available.

EPA's decision on whether to allow the device is expected soon. One of the issues it has yet to decide is what percentage of drivers will obey the shift command.

• VW has yet to decide whether to go with a signal light or voice command. It is concerned that drivers might pay more attention to the signal light than the roadway, thereby creating a safety hazard. The voice command would eliminate that worry, but there are cost considerations.

Volkswagen has been producing the Rabbit since 1975 and hopes to get at least three more years out of it before bringing on its successor. Continued boosts in fuel economy of the vehicle will allow it to do that.

There had been speculation Volkswagen would turbocharge the Rabbit diesel in 1982—it has a critical waiver from the EPA that would allow it to do so — but it has delayed that approach in favor of the shift-signal device and also to keep from competing with itself.

In 1982 the company wants to introduce its redone Dasher and offer a turbocharged diesel engine as an option. Turbocharging the diesel Rabbit is a move that would likely boost its fuel economy near to, and possibly in excess of, 60 MPG in city driving, and would steal the thunder of the new Dasher, or more accurately, the Quantum.

Announcement of the Quantum is expected at the Frankfurt Auto Show this fall.

Turbocharged diesel Rabbits remain in VW's plans but likely will not make an appearance in the U. S. until 1983 at the earliest.

Chevrolet may join Pontiac and drop big cars in 1982

By Richard A. Wright
Assistant Managing Editor

Chevrolet will drop the B-body—its full-sized Impala and Caprice lines — from its lineup, probably during the 1982 model run.

Chevrolet would not comment officially on the report, but sources at General Motors confirmed that Chevrolet and Pontiac will both get out of the big-car business.

Pontiac will not have a 1982 B-body entry (Catalina and Bonneville), but will retain the Bonneville name this fall on a revised version of the current rear-wheel-drive LeMans four-door and wagon. The LeMans two-door will be dropped, as will the LeMans name. Replacing it will be a downsized front-drive car called the A6000.

It is necessary to use the body designations used within the corporation because some of the names will be changed and others, such as Bonneville, will be used on smaller cars.

Chevrolet will reportedly drop the B-body during the '82 model run. It will retain its current Malibu four-door and wagon. The name Caprice may be used on a luxury version of the downsized front-drive A-body to be called Celebrity.

• GM calls its intermediates A-bodies, and its Grand Prix, Monte Carlo, Regal and Cutlass Supreme are designated A-special. The downsized front-drive A-bodies to be introduced this fall as '82 models will continue to carry the designation A-body, but the current A-body and A-special, which will not be downsized until '84, will be called G-bodies.

B-bodies are Impala, Caprice, Bonneville, Catalina, Olds 88 and Buick LeSabre, while C bodies are the larger Olds 98, Buick Electra and Cadillac deVille.

Toronado, Riviera, Eldorado and Seville are called E-bodies, while Chevette and the Pontiac T-1000 are T-bodies.

The X-bodies are, of course, GM's front-drive compacts and their introduction marked the emergence of the factory designations on the public consciousness. Last week, GM introduced its J-cars, which are front-drive high-line subcompacts.

Chevrolet still sells well in the B-body class and there is speculation that the decision to drop the B-body was a corporate one, not Chevrolet's.

The product moves may be tied in with reported intentions of GM to revamp its franchise agreements. There has been speculation that Chevrolet dealers would be offered Oldsmobile B-cars and Pontiac dealers could get Buick B-cars.

NADA officials warn GM of dealer unrest

NEW YORK. — At a meeting here last week, NADA warned General Motors officials of growing dealer concern about pricing practices and worsening dealership cash-flow problems.

NADA President Wendell H. Miller led a delegation from the association which told GM President F. James McDonald, Marketing Vice President Robert D. Burger and Dealer Relations Director William J. Atkinson that dealers specifically need help in the following areas:

1. Additional floorplan assistance to cover the high costs of dealership inventories.
2. Extension of price protection to all units on preference.
3. Rapid payment of 5-percent carryover allowance on all 1981 models as soon as the 1982 replacement is introduced.

The NADA representatives told GM officials that GM dealers, particularly Chevrolet dealers, are increasingly concerned that GM must be extremely sensitive to the needs and problems of dealers in the current market.

They added that this top-level meeting was initiated to communicate these dealer concerns directly to senior GM management.

In addition to Miller, NADA representatives attending the meeting at the GM Building in New York were First Vice President George W. Lyles, Industry Relations Committee Chairman Joseph A. Barry, GM Line Group Chairman Anthony Ursomarso, and Executive Vice President Frank E. McCarthy.

Common market to seek limit on Japanese cars

BRUSSELS, Belgium. — Protectionist fever regarding Japanese automobiles is spreading. The Common Market Commission, meeting here, has decided it must seek an agreement with Japan on limiting exports of Japanese cars to Europe. Several European countries already limit the number of Japanese cars allowed to enter their countries.

Ford sells New York office building

NEW YORK.—Ford Motor Co. last week sold a 19-story office building on W. 57th St. to two real estate investors for a reported $40 million. Manhattan Ford-Lincoln-Mercury, a company-owned dealership, will continue to occupy eight floors of the building.

Volvo to buy White truck business

FARMINGTON HILLS, Mich. — White Motor Corp. and AB Volvo have reached preliminary agreement for the sale of White's heavy-duty truck business to Volvo. The proposed sale includes White's manufacturing facilities in three states and parts and branch distribution facilities and inventories. Bankruptcy Court must approve the sale.

Continued from Page 8

is that importers sell unemployment and export dollars and jobs.

Some misguided souls feel buying an import will get back at Detroit. True to a point, but when the unemployment goes full circle the import buyer may one day be unemployed because he bought the foreign car in the first place.

Remember, 29 percent of the cost of an American car is tax. Only 2.9 percent of the cost of an import here is tax. No wonder imports put more in for the same price, they have a 26.1 percent price/tax advantage, thanks to Uncle Sam.

Here we are with unemployment, arguing pro-con among ourselves about Japanese imports while the Japanese sit back and laugh at us, merrily doing overtime while we are preoccupied fighting among ourselves.

The misguided import people have no pride in their country, so they sell someone else's products — keeping a tight grip on the benefits of being an American.

One of the reasons the Japanese and Germans put so much pride into their work is their society. Their way of life and the people of their country all show up in their industries. The Japanese and Germans are races of people. Here in America we have loads of ethnic groups, some don't get along, many don't even speak English. We're trying to drive this country with a tower of Babel under the hood, sans harmony.

Japan in particular survives on exporting and their work life depends on exporting with quality, cooperation and aggressiveness. Their gasoline has always been imported and expensive so the automobiles had to be fuel efficient for home and for export.

No yen for apathy.—**Andrew H. Klein**, Colorado Springs, Colo.

Reply to Holden

In response to the very comprehensive and articulate article of John S. Holden, of Dearborn, in your March 30 issue, I am going to try and answer as concisely as possible.

1. There is no cheap labor in Japan. The employes are very productive.

2. Our domestic auto industry had ample time to attune to the wants and needs of the motoring public.

3. In my opinion, the crux of the problem may be the labor leaders. I believe that they should meet with their members and remind them that they are paid well and that they in turn should reciprocate by being more productive and also produce a quality product, which they are capable of doing.—**M. Bass**, Midwest Toyota, Chicago.

Industry tallies 750,977, up slightly over last year

Import sales reach '81 high; domestic total dips

By Jenny L. King
Staff Writer

New-car sales in April were again unspectacular in terms of numbers for the domestic auto industry, while the imports pushed ahead of their year-ago total by 7.56 percent and captured 28.93 percent of the April market, highest yet this year.

U. S. auto makers reported sales of 533,724 new cars for the month, down a scant 1.29 percent from last year's depressed total of 540,680. Foreign companies combined forces to sell 217,253 units, up 7.56 percent from 201,980 a year ago. The domestic four-month total was 2,266,193, down 5.17 percent from 2,389,830 last year; import sales year-to-date numbered 861,080, down 0.33 percent from 863,942.

Grand total for the industry in April was 750,977, up 1.12 percent from 742,660 in 1980. The year-to-date cumulative was 3,127,273, down 3.89 percent from 3,253,772 a year ago.

While several of the imports were notching record April sales, the domestic auto makers were exchanging market shares as Chrysler Corp. and Ford Motor Co. reported important sales increases for the month, with General Motors, American Motors and Volkswagen of America all down.

Chrysler had the best growth news of the five: Its sales zoomed 51.34 percent, to 71,843 from 47,470 last year, and Chrysler's third-period sales leaped 69.48 percent, to 31,183 from 18,399. It was the company's fourth consecutive monthly increase this year and its 13.64-percent share of the domestic market was its largest monthly share in 1981. Chrysler has been on a monthly winning streak since last October and claims the K-car is largely responsible for its success.

Ford Motor Co. boasted its first monthly increase of the year, and first such increase since February of 1979 — 26 months ago.

Ford April sales totaled 123,807, up 10.69 percent from 113,682 last year. Ford's Escort was the best-selling nameplate for the month and the newly introduced front-drive EXP is credited with bringing more buyers into Ford showrooms.

General Motors sales tumbled 10.71 percent. to 309,666 from 346,812 last year. VWoA reported sales of 13,894 U. S.-built Rabbit sedans, down 21.35 percent from 17,666, and AMC sold 14,514 units in April, down 3.56 percent from 15,050.

GM's sales decline cost the corporation eight percentage points in the domestic market. Its April share was 58.02 percent, down from 64.14 percent. Ford improved its position, going to 23.20 percent from 21.03 percent. Chrysler earned its highest monthly percentage of the year in April, expanding to 13.46 percent from 8.78 percent. AMC dipped to 2.72 percent from 2.78 percent, and VWoA slipped to 2.60 percent from 3.27 percent.

The imports' sales increase included records for BMW, Peugeot and Saab plus healthy gains for Audi (up 35.65 percent), Mazda (up 40.01 percent), Volvo (up 67.22 percent) and Toyota (up 17.15 percent).

Japanese-built cars accounted for 77.74 percent of the import total and 22.49 percent of the industry total. Last April, the Japanese auto makers captured 81.10 percent of the import segment and 22.06 percent of the grand total.

The 28.93-percent share of the market earned by imports was highest thus far in 1981 and the largest since 28.98 percent in August of 1980. Imports plus U. S. subcompacts and compacts accounted for 64 percent of the market for the month.

• Seven of the U. S. makes reported increased sales this April compared with the month a year ago. Plymouth was up 88.42 percent, Dodge was up 59.40 percent, Cadillac was up 35.55 percent, Mercury was up 23.16 percent, Buick was up 12.92 percent, Ford was up 5.85 percent and Oldsmobile was up 3.73 percent.

Behind the number-one-selling Ford Escort's sales of 27,473 were Chevrolet Malibu at 24,178, Chevrolet Chevette at 23,531, Oldsmobile Cutlass at 19,945 and Chevrolet Citation at 19,487. A year-ago the top five for April were: Citation, Chevette, Ford Fairmont, Malibu and Cutlass Supreme.

Domestic third-period sales were up 5.46 percent, to 218,383 from 207,071. With nine selling days both years, the daily rate climbed the same amount, 5.46 percent, to 24,265 from 23,008.

For the April 21-30 span, GM was down 4.66 percent, Ford was up 19.86 percent, Chrysler was up 69.48 percent, VWoA was down 28.65 percent and AMC was down an estimated 18.00 percent.

GM earned 58.46 percent of the third-period market, Ford had 22.54 percent, Chrysler cornered 14.28 percent, VWoA had 2.84 percent and AMC earned 1.88 percent.

Where Auto Market was in April

	Total Sales	Pct. of Total

Chrysler names 4 vice presidents

DETROIT. — Chrysler Corp. last week elected four new vice presidents. They are:

E. O. Grote, 57, president and chief executive of Chrysler Financial Corp.

M. J. Closs, 53, president and chief executive of Chrysler Canada, Ltd.

Charles J. LaBelle, 41, named vice president marketing. He had been executive director, marketing, since March. Labelle joined Chrysler last September, coming from Ford of Europe.

Charles T. Cudlip, 40, was named vice president, Washington office. Cudlip joined Chrysler in April after serving five years in government positions and on the staff of the Republican National Committee.

Best month since October

April auto production tops last year

By Patricia Hoffman
Staff Writer

U. S. auto production last month rose above the 1980 April total. Output for the month was the highest since 1979, and the most for any month since October, 1980.

In April, the auto makers completed 653,863 units, up 12.57 percent from 580,855 in the comparable 1980 month. In 1979, the makers assembled 723,248 cars in April, and in October of 1980, output was 675,001.

Auto production last week was slated at 163,800 units, up 1.53 percent from 161,331 the previous week, and up 32.58 percent from the 123,551 assembled in the comparable 1980 week.

Production for April by company was: General Motors, 398,644 cars, up 8.27 percent from the 368,185 completed in April, 1980; Ford Motor, 142,077, up 13.47 percent from 125,216; Chrysler Corp., 83,540, up 67.26 percent from 49,947; Volkswagen of America, 17,590, down 17.09 percent from 21,125, and American Motors, 11,957, down 25.18 percent from 15,981.

Checker Motors, working only the first three days in April, produced 55 units, down 82.32 percent from 311 last year. Checker resumed full production last Monday (May 4).

Breakdown from last week by company is: GM, 64.42 percent; Ford, 19.85 percent; Chrysler, 11.23 percent; VWoA, 2.79 percent; AMC, 1.65 percent, and Checker, 0.06 percent.

Ford scheduled 10-hour work days last week at its Kansas City, Atlanta, Louisville and Wixom assembly points. Saturday overtime was also scheduled last week at Kansas City, Atlanta and Louisville.

Chrysler has scheduled nine-hour daily shifts for six days this week at all of its front-wheel-drive facilities. They are Jefferson, Newark and Belvidere.

General Motors has slated overtime this week at Flint, Oklahoma City and Tarrytown.

GM also scheduled downtime this week for one shift at its Detroit (Cadillac) plant.

It's Penske Cadillac

DOWNEY, Calif. — The name of Bob Spreen Cadillac has been changed to Roger Penske Cadillac. Roger Penke purchased the dealership in November, 1979, but kept the Spreen name until February of this year.

Pontiac says J-car orders run ahead of X-car pace

Continued from Page 2

supply situation. Pontiac's 3,200 dealers will divide a total of about 5,500 cars at introduction day, almost half of what was originally planned. As of the middle of last week, Lordstown had built about 4,600 of the J2000 models.

- The low production, as well as the two-week postponement of the introduction day, were the result of Pontiac's desire to build the J-car right, Hoglund said. Cars and components that did not meet tolerances were rejected, he said.

"In the short run, we have not met our production schedules on the J-car because we have held to the discipline that the car will not go unless it's right," he said.

Hoglund said he expected 35 percent of total J2000 sales to be sedan models, 30 percent to be hatchbacks, 20 percent to be wagons and 15 percent to be coupes.

"I think the coupe will be a bit higher than that, but we have good flexibility in our assembly plant to meet whatever the market demands," he said.

The EPA has classified the subcompact J2000 as a compact, based on its average interior volume of over 100 cubic feet. The J2000 base drivetrain — a 1.8-liter four and four-speed transmission — earned an EPA mileage rating of 26 city, 43 highway. Automatics are rated at 25 city, 41 highway.

A specially certified federal car without air conditioning was rated at 30 city, 47 highway. Hoglund said that during a recent 2,000-mile engineering trip, the J2000 yielded "real-world" mileage of 32-34 MPG.

The J2000, Hoglund said, fits Pontiac's new strategy of going after a more youthful market, similar to the market Pontiac excelled in during the '60s.

"What we decided is that we have to get back to the audience we had when we were strong, the buyers under 44 years old," he said.

Truck production for April rises 18 pct. above '80

U.S. truck production in April rose above the comparable 1980 month, and truck output last week jumped above the totals for the previous week and the 1980 week.

The truck makers completed 153,941 units in April, up 18.66 percent from the 129,728 assembled in the comparable 1980 month. Truck output for April was the most for the month since the 256,090 units completed in 1979, and the total was the highest for any month since the 179,888 units built in October, 1980.

Truck output for the week was slated at 36,923, up 11.67 percent from 33,064 the previous week, and the total was a substantial jump of 60.22 percent from the 23,045 trucks assembled in the comparable period last year.

So far this year, the truck makers have completed 636,236 units, down 4.36 percent from the 665,314 trucks assembled in the comparable period last year.

Ford Motor scheduled overtime last week at its Ohio truck point. The plant worked 10-hour days.

Chrysler has slated overtime this week at its Warren truck point. It is the third consecutive week of overtime at the plant.

International Harvester's Springfield assembly point, down since April 27, will remain idle until May 11.

Also at International, the A-line at Fort Wayne, which closed May 4, will remain idle this week. Operations will resume May 18.

April car output in Canada climbs to 3-year high

Canadian auto production for April jumped ahead of the 1980 level. April output was the highest for the month since 1978 and the highest for any month since May, 1979.

The auto makers assembled 94,298 units in April, up 24.11 percent from 75,977 built in 1980, and the most for that month since the 106,210 units completed in 1978. It was the highest for any month since the 99,878 cars built in May, 1979.

Auto production last week was slated at 24,117 units, up 2.90 percent from 23,438 completed in the previous week, and up 5.12 percent from 22,943 units assembled in the comparable 1980 week.

Canadian truck production for April totaled 47,724, a drop of 3.80 percent from the 49,607 trucks assembled in the comparable 1980 month.

The truck makers slated 12,322 units last week, up 4.57 percent from the 11,783 units completed in the previous week, but down slightly from the 12,409 trucks assembled in the comparable period last year.

So far this year, the truck makers have built 203,906 units, down 4.03 percent from the 212,460 trucks completed through May 10, 1980.

1.3 million new cars on hand

Stockpile rises to 66 days

By Jenny L. King
Staff Writer

Increasing production levels coupled with flat April sales left the domestic industry with a slightly bloated 66-day supply of new cars as of May 1, up dramatically from the spartan 44-day supply on hand April 1. It was an improvement over the year-ago 76-day level, however.

The industry had 1,348,836 new cars in its domestic stockpile May 1, compared with 1,236,074 a month earlier and 1,584,804 a year earlier. The bigger year-ago May 1 count represented a 76-day supply at the then-current selling rate.

Of the U. S. makers, only American Motors managed to trim its inventory in terms of days-supply figures from the April 1 level, although in raw numbers it had more cars on hand at the beginning of May than a month earlier. Volkswagen of America had slightly fewer cars in inventory the first of the month but a larger days-supply figure because of the slowed selling rate of Rabbits in April.

AMC had a 48-day supply on May 1, down from 49 days a month earlier. Eagles, with strong April sales, were down, while Spirit and Concord increased. VWoA jumped to 72 days from its month-earlier 44-day supply.

Table on Page 62

Chrysler Corp. watched its supply climb to 58½ days from 45 days. Imperial and Mirada were in heaviest supply; K-cars stayed at fighting weight, about 55 days combined average, but up from 35 days a month earlier.

Ford Motor Co. opened May with a 68-day stockpile, up considerably from 44 days the first of April. Ford's Thunderbird and its Mercury twin, XR-7, nearly tripled their days-supplies to over the 100-day mark while the corporation's other lines grew during the month but managed to stay at healthier levels.

General Motors presented a mixed bag of nameplate days-supplies as of May 1, with some of its best-sellers in heavy supply, perhaps in anticipation of a late-spring selling boom. The corporation's days-supply figure shot up to 67 days from just 39 days a month earlier.

GM, assisted by an extensive rebate program in March, enjoyed sales that month which brought its inventories to the 39-day level. Its April sales failed to show the same kind of growth. GM's total May 1 days-supply includes early-production J-cars not yet on sale.

The May 1 domestic inventory was divided this way: GM, 58.78 percent; Ford Motor Co., 24.38 percent; Chrysler Corp., 11.98 percent; VWoA, 2.86 percent, and AMC, 2.00 percent.

A month earlier, the new-car inventory was divided as follows: GM, 57.54 percent; Ford, 24.27 percent; Chrysler, 12.91 percent; VWoA, 3.18 percent, and AMC, 2.10 percent.

- By size class, three segments of the market were in much heavier supply May 1 while two—standard-size and luxury—were down slightly. The great disparity that has persisted, that is, an imbalance between numbers of smaller cars and big cars on hand, was smoothed out by May 1.

At the beginning of this month, the industry had a 78-

No new rules, and no nit-picking, Lewis vows

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — If the auto industry needed any reassurance that the Reagan Administration is on its side in the battle against government regulations, Transportation Secretary Drew Lewis gave it straight last week.

Lewis told a House Government Operations subcommittee that he will not "nit-pick" the industry and "I don't see any regulations coming out of my department in the next four years."

This followed assurances that there would be further deregulation after more cost-benefit studies are completed. This, in turn, prompted a remark from California Rep. John Burton, who was chairing the hearing, that like the Red Queen in Alice in Wonderland, the Administration might be arriving at the verdict first and then looking at the evidence.

But Lewis, as head of the Auto Task Force which announced sweeping deregulation moves in April claiming no significant adverse safety or health effects, said the most important thing was the "spirit of letting the industry know we're here to work with them, not against them."

However, Lewis repeated that there will be "no more Chryslers." Pressed to comment on a recent article recommending a merger of Ford and Chrysler (authored by the former head of the Chrysler Loan Guarantee Board and a staffer for the Senate Banking Committee), Lewis refused comment although he said he could look into it and give advice if requested by the companies.

In general, the Administration position remains the same — no bailouts, no special help aimed directly at the auto industry like refundable tax credits or special depreciation or tax credits for buying domestic cars. Lewis admitted, however, that 10-5-3 depreciation schedule was of limited help to the industry and still under consideration is a proposal to allow longer carry-forward and carryback provisions to help companies that are losing—not making—money.

The thrust is still on improvement in the total economy, on getting high interest down. It was admitted that deregulation helps imports as well as domestics and that car prices may rise, but it was also asserted that consumers will benefit because the companies have said they will pass along savings from deregulation to the marketplace.

As for wage and price restraints, that is up to the companies and the union.

breaking news

DeLorean to realign

NEW YORK.—DeLorean Motor Co. plans to organize its auto-making operations under a new corporation to be named DeLorean Motor Holding Co. The new firm plans to offer shares to the public for cash and to offer shares in exchange for shares in DeLorean Motor Co. held by DeLorean dealers. It will also offer shares and notes in exchange for certain limited partnership interests in a partnership that owns technology related to the DeLorean auto.

Support for IH

CHICAGO.—International Harvester said last week that lenders accounting for about 90 percent of the funds involved in forming new $3.4 billion revolving credit facilities have approved in principle their participation.

Tricycle

Kit car for commuting

The three-wheeled XK-1 commuter vehicle, from Kobel Enterprises, San Antonio, has a top speed of 55 MPH and claims fuel economy of up to 50 MPG. The body kit comes as a preassembled unit with hinged canopy, bulkheads and interior panels bonded in place, standard rear louver, integral wheel wells and air inlets for engine cooling. It uses parts from the Honda Civic and Toyota Celica. The vehicle can be registered in most states as a motorcycle, according to Kobel Enterprises.

Service Index climbs to high point for year

By Francis J. Gawronski
Service Editor

With three of the five indicators registering good increases and the other two just missing the plus side, new-car dealers' service and parts business rebounded in March to make its best showing of the year.

As measured by the Automotive News Service Index, March service and parts business amounted to 104.9 percent of the volume in the same month a year ago.

In February, dealers' shop volume dipped to 96.5 percent of the service and parts business recorded the year before.

March's showing was the best since December, 1979, when the Service Index showed service and parts business during that month was 108.6 of the volume done in the like month of 1978.

The leading indicator among the three showing increases in March was gross profit on all labor, parts and F&A sales — the most important factor from the dealers' viewpoint. This indicator was up 8.9 percent above the profit registered in the same month a year ago.

Total labor sales, both customer-paid and warranty, increased 7.1 percent, while sales of all parts and accessories in March topped the total from last year by 6.0 percent.

Indicators on the down side were shop parts sales, those used in the dealer's shops on both customer-paid and warranty jobs, down 0.5 percent, and repair orders written, down 1.6 percent. Repair orders in March made their best showing since July, 1980, when the volume was 0.8 percent below the year-ago orders.

However, March marked the 14th consecutive month that repair orders written in the nation's new-car dealerships failed to show a gain over the like month the year before.

Figures used in the Service Index are averages compiled from reports on backshop operations from a cross-section of the nation's new-car dealerships.

The March upturn also brought a rise in the figures for the first three months of the year. The Service Index showed that the volume for this period amounted to 101.3 percent of the business done in the corresponding period a year ago. The two-month index amounted to 99.4 percent.

For the three-month period, gross profits was the top indicator with an increase of 7.0 percent, followed by sales of all parts and accessories, up 5.2 percent. Shop parts sales were up 1.2 percent.

On the down side for the first three months, repair orders dipped 9.7 percent and labor sales declined 0.2 percent.

SERVICE INDEX
104.9*

	Mar., '81 vs. Mar., '80	3 mos., '81 vs. 3 mos., '80
Gross Profit on All Labor and P&A Sales	+ 8.9%	+ 7.0%
Repair Orders Written	— 1.6%	— [illegible]
Total Labor Sales (Customer & Warranty)	+ 7.1%	— 0.2%
Shop Parts Sales (Customer & Warranty)	— 0.5%	+ 1.2%
Sales of All P&A	+ 6.0%	+ 5.2%

*—Survey by Automotive News shows that dealers' service and parts business in March, 1981, was 104.9 percent of business in March, 1980. Service business in the three months of 1981 was 101.3 percent of business in the corresponding period in 1980.

Gains achieved in all three market segments

April sales highest since last July

April sales of new trucks in the U. S. were up 4.2 percent over a year ago, marking the first time since February 1979 that the monthly domestic total was higher than that for the corresponding month the previous year.

During the month, according to preliminary reports, franchised dealers and factory outlets retailed an estimated 211,536 units, compared with 202,969 a year ago.

The April count also was the highest for any month since last July, when 233,687 units were sold.

Sales for the first four months, however, were off 14.6 percent from a year ago. The total through April was 778,846 units, compared with 912,003 in the same period in 1980.

There were increases in all three market segments in April, with light trucks achieving the largest unit gains and the big trucks scoring the greatest percentage improvement.

Retailers sold 186,070 light vehicles during the month, including the non-captive imported pickups, an increase of 2.8 percent over last year's 181,033.

Medium-truck sales were 16.7 percent higher than a year ago, rising from 7,577 units in 1980 to 8,841. Heavies sold during the month totaled 16,625, an increase of 15.8 percent over the year-ago 14,359.

Sales of the imported compact pickups, which have been hurting since the increase in the tariff last year, were down slightly in April from a year ago.

Dealers retailed 41,882 of these vehicles during the month, off 0.09 percent from the year-earlier 41,921. But sales of the non-captive units—Toyota, Datsun and Mazda—were up 1.6 percent, from 20,862 a year ago to 21,190.

For the four months, sales of the compacts were down 11.2 percent from the corresponding period in 1980. The total was 170,211, compared with 191,789 last year. The non-captives were off 7.3 percent, from 95,469 to 88,532.

Four-month sales were down from a year ago in all three market segments.

The light-truck total through April was 695,766, off 15 percent from last year's 818,343. Mediums were down 14.4 percent,

Volvo eyes assembly of its trucks in the U.S.

DETROIT.—Volvo and White trucks could be assembled in the same U. S. plant if White Motor Corp. and AB Volvo of Sweden can complete the proposed sale of White's truck-manufacturing operations to the Swedish builder of cars, trucks and buses.

When the two companies announced preliminary agreement on the acquisition, Sten Langenius, Volvo Truck Corp. president, called White's New River Valley (Va.) facility one of the most modern truck-assembly plants in the U. S., and added:

"In addition to being well-suited for manufacture of White trucks, it would make a fine facility for assembly in the U. S. of Volvo trucks."

Volvo's Class 6, 7 and 8 trucks sold in the U. S. now are imported from Sweden and distributed by Freightliner Corp. through its nationwide dealer network.

Volvo's move to acquire White's truck-building facilities followed a bid by Daimler-Benz AG of West Germany to purchase Freightliner Corp. from Consolidated Freightways, Inc.

Daimler-Benz and Consolidated Freightways earlier this month signed a contract finaliz-

Calif. certifies IH's 9.0-liter mid-range diesel

CHICAGO. — The California Air Resources Board (CARB) has certified the International 9.0-liter diesel engine for use on that state's highways.

The mid-range diesel, in a 175 HP version, met CARB's rigorous emission standards of six grams per-brake horsepower-hour, or less, of nitrous-oxide and carbon-monoxide in a 125-hour emission test, according to A. A. Ambrosini, product marketing manager, for International Harvester's Engine Division.

The engine previously had met all federal standards, which demand a total of 10 or less grams per brake horsepower-hour of the two basic air-pollution emissions, and has been available in the other 49 states for more than a year.

Ambrosini said the California engine design incorporates modifications in the fuel-injection system and timing to meet the CARB standards.

The 9.0-liter diesel is designed primarily for city and suburban pickup and delivery service, with its heavy traffic, start-and-stop, low mileage, and high idling time characteristics.

"This engine has found particularly strong acceptance among such vocations as parcel delivery, beverage and grocery route operators, refuse collection, and similar applications," said George D. Aravosis, Engine Division marketing vice president.

The engine also is available in 165 and 180 HP configurations for 49-state use, and features a regrindable, forged steel crankshaft, a highly sophisticated fuel-injection system, cross-bolting of main bearing caps for greater bottom-end strength and rigidity, and other design features normally found only in big-bore diesel engines.

'Fine tuning' helps Paystars get Wisconsin job done

How mixers meet stiff weight law

MADISON, Wis. — Because of proper planning and setup of its trucks, Wingra Redi-Mix, Madison, is able to operate 72,500-pound GVW concrete mixer trucks within that state's complex and strictly enforced truck weight limits.

Wisconsin law specifies a maximum of 73,000 pounds for straight trucks, and Wingra's five new International Paystar 5000 concrete mixers come in at 72,500 pounds when fully loaded.

Wisconsin's bridge laws include complex formulas to determine distances between front and rear axles, then specify how weight is to be distributed on auxiliary/quad rear axles — pusher, tag or air-bag actuated auxiliary axles.

Working with East Side International Corp., International truck dealer in Madison, Wingra set up the Paystar trucks with two air-bag actuated auxiliary axles, properly spaced in front of, and behind, the tandem rear axle, to meet Wisconsin formulas for carrying loads on state highways.

As a result, the Wingra units can operate 500 pounds under the limit, said Rush Watson, Wingra sales and production manager. When loading in the Wingra yards, the Paystar 5000 auxiliary axles are lifted and the trucks are driven on high-floation "super single" tires.

The auxiliary axles are dropped for movement on the highways to construction sites. Once at the job, the auxiliaries are lifted again and concrete delivered from 10-cubic-yard concrete mixers. When running empty, the trucks operate with the auxiliaries lifted to minimize tire wear.

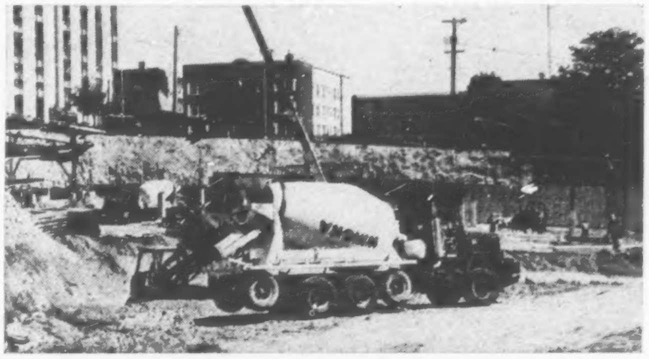
• Watson said the Paystar mixers are equipped with 335-HP diesel engines and eight-speed (dual range) transmissions.

"Some people say a concrete mixer with the 10-yard drum turning in transit is running the engine and drive train at about three times the miles that show on the speedometer," Watson said. "Yet these International trucks get almost 5 MPG with an average local haul of 10 miles."

At the Wingra Redi-Mix plant a few miles south of Madison, the mixers take on their 10-yard load of concrete and 125 gallons of water to maintain consistency and spray down the equipment after the wet cement has been poured.

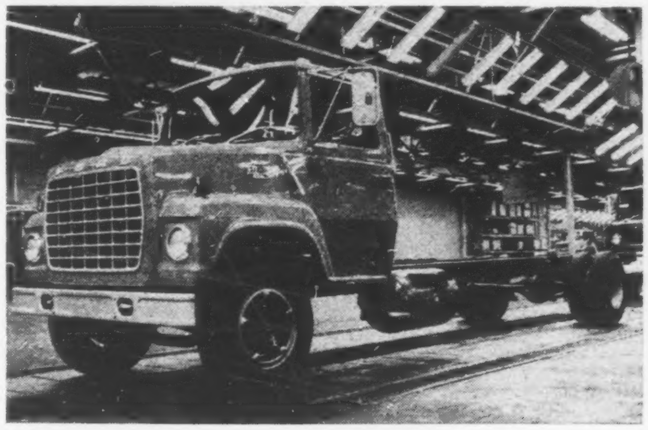
Moving across town and pouring for construction requires close supervision, and continued

Continued on Page 39, Col. 5



Auxiliary axles 'at rest'

Once on the construction site, the auxiliary axles of this International Paystar concrete mixer are lifted, and the truck maneuvers to proper pouring position on its high-flotation "super single" tires.



Propane-powered Ford rolls off line

The first Ford truck built with a complete factory-installed propane or LPG fuel system rolls off the line at Ford's Kentucky Truck Plant. The 59-gallon LPG tank is mounted to the frame of an LN-600 directly behind the cab. The system is available on all Ford gas-powered medium and heavy trucks.

Ford's big trucks get factory-installed LPG

DEARBORN. — Medium and heavy Ford trucks are now available with a complete factory-engineered and installed liquid petroleum gas fuel system. Previously, trucks with an LPG power plant had to be sent to a modification center for installation of the fuel tank.

James A. Capolongo, general manager, Ford Truck Operations, cited these advantages for propane: There's an ample supply in North America, the cost is about a third less than diesel fuel or gasoline, and the LPG system costs about 70 to 80 percent less than a typical mid-range diesel engine.

"Small fleet operators or rural users, the truckers who drive about 15,000 miles or less a year and buy their fuel in bulk, will be the largest beneficiaries of the LPG fuel system," he said. "This group represents a large chunk of the medium/heavy-truck business."

With the addition of a factory-installed 59-gallon LPG tank, Capolongo said, Ford will be able to deliver complete, ready-to-roll, LPG-powered units direct from the assembly plant in Kentucky.

Besides the special pressurized tank, LPG units differ in several ways from conventional gasoline-powered trucks.

• Ford-built Lima 370 and 429-cubic-inch gasoline engines include a unique distributor, design changes to the intake manifold, hard-faced alloy valve-seat inserts, low-temperature thermostats and special piston rings for better seating.

"Because propane vaporizes at atmospheric pressure, a simple mixing device replaces the conventional carburetor," Capolongo said. "With the fuel under pressure within the sealed system, the need for a fuel pump is eliminated.

"In addition," he continued, "LPG's inherent clean-burning characteristics eliminate the need for emissions-control equipment and reduce maintenance costs.

"Clean burning also reduces carbon deposits, engine-oil contamination and spark-plug deposits," he said. "Maintenance costs are reduced further by the relative simplicity of the LPG's carburetion and fuel-flow system."

Ford has been building LPG engines since the mid-1960s on a special-order basis. The availability of the factory-installed tank eliminates the customer-modification requirement.

To help customers determine which fuel is best for their needs—LPG, diesel or gasoline—Ford's computerized Value Analysis program has been modified to examine the benefits of all three fuels.

A description of the customer's duty-cycle is phoned to a Dearborn computer for an analysis of the after-tax annual cost savings, cash flow, payback period and the return on investment which can be expected with each fuel.

Kennard sets targets for J-car

Cimarron: Cadillac import fighter

By Jim Plegue
Staff Writer

MILFORD, Mich. — "A new kind of Cadillac for a new kind of Cadillac buyer," is how Edward Kennard, Cadillac general manager, described his division's new J-body car, the Cimarron, at the national press preview here.

But it also represents a new kind of challenge to Cadillac dealers, long accustomed to selling large luxury cars to traditional Cadillac buyers.

The Cimarron, which debuts May 21 at 242 select Cadillac dealerships, is aimed directly at the upscale import buyer, the young and affluent customer who normally would purchase a BMW 320i, an Audi or a Datsun 810 Maxima.

It's an entirely new market for Cadillac and its dealers, which might explain why officials were somewhat reluctant to issue solid sales targets.

"We're not starting with a predetermined number," Kennard said.

Kennard said Cadillac can build about 15,000 Cimarrons through the '81 model year. Cimarrons are assembled at the Southgate (Calif.) plant, where Cadillac currently receives about 11 percent of total production it shares with Chevrolet and its J-car, the Cavalier.

By the end of July, Kennard said, Cimarron output will be boosted to about 50 percent of total Southgate output, or about 4,000 to 4,500 cars per month. A second shift may be added at Southgate in October.

Cimarron is available only as a four-door sedan, in one well-equipped model. Standard drivetrain is a 1.8-liter four-cylinder engine and four-speed manual transmission. An automatic three-speed transmission with lock-up torque converter is optional.

Kennard said Cadillac may eventually replace the 1.8-liter engine with a 2.0-liter powerplant equipped with throttle-body fuel injection, and that a diesel engine — either turbocharged or supercharged — may be added as an option.

• Kennard said each Cimarron dealer will have two cars on introduction day. The 242-member Cimarron dealer body is comprised of single-line Cadillac dealers and some duals who are not offering a car equal in size or smaller than GM's X-body compact. They are large dealers, accounting for 60 percent of Cadillac's annual sales volume.

Another, 1,300 Cadillac dealers will receive the Cimarron franchise at the start of the '82 model year, according to Chuck Chynoweth, assistant general sales manager-East for Cadillac. Chynoweth said a small number of Cadillac dealers, including some single-line dealers, have elected not to accept the Cimarron franchise because they feel the car is not marketable in their areas.

Kennard said public acceptance of Cimarron "depends on the kind of job our dealers and our salesmen do in explaining the car to customers."

To that end, Kennard said Cadillac is conducting an "extensive" sales/service training program for Cimarron, and that 1,300 of the 1,600 Cadillac dealers have already opted to buy the sales/service tools and participate in the training.

Initially, Kennard said, Cadillac is building 90 percent of its Cimarrons with automatic transmissions, but the division is encouraging dealers to have at least one manual transmission model on the showroom floor.

"We think the dealer will take care of his oldtime customers first," he said, referring to existing Cadillac owners looking for a second car with an automatic transmission. "We believe that's where the first demand is."

But when the Cimarron sales push begins this summer, Kennard said he expects 50 percent of Cimarron sales to be conquest sales, mostly from potential import buyers. Average age of the Cimarron buyer is expected to be 35 to 40, as opposed to mid-50s for the traditional Cadillac customer.

Cadillac has no plans to build Cimarron in other countries, Kennard said. He added that engineering work for export versions has not been done, though there is desire by overseas franchises to sell the car.

Weight cutters have busy time on Cimarron

MILFORD, Mich. — Weight-saver engineers at General Motors pulled all the stops when it came to getting the weight out of Cadillac's new little car, the Cimarron.

"The content of the car is so high weight is a critical thing," said Robert J. Templin, Cadillac's chief engineer.

Even the front armrests had to go and that popular item was something that had become synonymous with luxury and a standard in plush cars. One story making the rounds is that with the armrest Cimarron missed its EPA inertia weight category by 0.7 kilograms.

Templin said every item in the car was important as efforts were made to keep weight as low as possible while retaining Cadillac's luxury.

Everything used selectively on any of the J-car versions is 100 percent on Cimarron, Templin told AUTOMOTIVE NEWS.

Those J-car weight-savers used selectively on various Chevrolet and Pontiac versions, include aluminum wheels, hoods and deck lids.

Of course, it takes an exception to prove any rule and the 100 percent rule with Cimarron can bend a little.

When the car is ordered with a luggage rack, the deck lid is of steel. Aluminum tends to flutter when the luggage rack is attached, so steel is used, Templin said.

Runs by burning gaseous methanol

The six-cylinder pancake M 407 hGO engine burns gaseous methanol, with heat for evaporation recuperated from the cooling and exhaust systems. It delivers 200 HP at 2,200 RPM from a displacement of 11.4 liters, giving the Mercedes-Benz bus equal performance with a diesel engine of the same size.

In Mercedes-Benz test

Diesel engine changed to methanol

STUTTGART. — Mercedes-Benz is demonstrating a new type of methanol-gas engine in a city bus, using fuel about 10 percent more efficiently than previous methanol-burning spark-ignition engines.

This engine is based on a production-type diesel engine, converted to spark ignition.

Methanol evaporates at temperatures as low as 65°C (149°F), and this fact gave rise to the idea of burning evaporated fuel (gasified methanol) in a diesel-type engine, with high compression, so as to obtain some of the diesel engine's advantages.

The energy required for evaporation is derived from the engine heat, which normally is dissipated via the radiator and the exhaust system to the environment, without being used. Even more energy is saved because the fan consumes less power than that of a diesel engine.

Depending on the engine temperature, one of three different energy sources is used for evaporating the alcohol in the Mercedes-Benz methanol-powered bus. For cold-starting, the required heat is supplied by the heater unit for the bus's passenger compartment which also runs on methanol.

Even at temperatures as low as —20°C (—4°F), pure alcohol can be used without any one of the cold-starting additives usually required. Warming up only takes a few minutes.

During the warmup period, a heat exchanger extracts the necessary energy from the exhaust gas in the exhaust pipe. This also happens when the heat dissipated by the engine cooling water is required for heating the passenger compartment.

When the engine has warmed up, the heat required for evaporation is extracted from the engine's coolant.

The new alcohol-gas engine is based on the M 407 hG, a gas engine developed by Daimler-Benz some time ago from a six-cylinder diesel engine. It was designed for natural gas, propane or butane.

Several components from the original diesel engine, such as the pistons, cylinder heads, valves and the exhaust manifold, as well as the combustion chambers have been redesigned for gaseous fuels, with spark ignition.

The ignition unit has also been adapted to allow combustion of gaseous methanol. Its output is similar to that of the diesel engine.

Combustion does not produce any smoke and is particularly quiet over the whole engine speed range. Due to the gas engine principle, emission levels are very low.

In contrast to conventional methanol-powered vehicles, the new engine does not need an exhaust gas catalyst.

In Predicasts' forecast of 15-year world market

U. S. projected as No. 1 car maker through 1995

CLEVELAND.—The U. S. will regain its position as the world's largest vehicle producer and will continue to be the largest market for motor vehicles during the next 15 years, according to Predicasts, Inc., the market research firm here.

Although the U. S. was overtaken in vehicle production during 1980 by Japan, Predicasts projects a relative strengthening of the U. S. against Japan in vehicle output during the 15-year period.

It forecasts imported vehicles will comprise only 15 percent of the U. S. market by 1995, chiefly because of fuel-efficient cars that are being developed by domestic makers.

The U. S. will take a smaller share of the world market by 1995—26 percent, compared with the 36-percent share during the 1976-78 study period, Predicasts says.

But its population, economic maturity and sophisticated road network will keep the U. S. as the world's biggest car buyer.

As an exporter, Predicasts projects the U. S. will fall from fifth position to seventh by 1995, overtaken by the U.S.S.R. and Brazil, the latter to become a major Latin American supplier because of its alcohol-car program.

• Predicasts expects Japan to remain the biggest exporter, with more than 6 million vehicles shipped out in 1995. But a sluggish world economy, uncertain oil situation and competition from fuel-efficient U. S. cars will all be barriers.

"The low wages, inexpensive raw materials, extremely favorable exchange rates and other factors responsible for the earlier phenomenal growth in Japanese exports are now gone," Predicasts says in its 162-page report, World Motor Vehicles.

It expects the U. S. will become the site of many foreign firms' vehicle manufacturing operations. The Germans and Japanese are expected to be the most likely, because of the strength of their currencies relative to the dollar.

Meanwhile, European firms are expected to continue to seek joint ventures to defray capital investments. There will be fewer but larger firms building vehicles, Predicasts says.

Although the world cars being brought out by Ford Motor Co. and General Motors are meant to capitalize on economies of scale, their cost advantage is sliced by their cost of development, Predicasts says.

5 branch managers appointed by GMAC

NEW YORK.—General Motors Acceptance Corp. has appointed five branch managers. They are:

Dillard C. Robison, Springfield, Mo.; Don E. Echols, East Birmingham, Ala.; Ronald L. Johnson, Maywood, Ill.; Billy L. Peters, Greenwood, Miss., and Jimmy A. Tilger, Waco, Tex.

Chrysler and AMC improve share

Registrations skid to 62-month low

U. S. new-car registrations in January slumped to a 62-month low, according to figures compiled by R. L. Polk & Co.

The tally was 636,488, the lowest monthly total reported since November, 1975, when the count was 632,639.

The January total compared with 710,821 a month earlier and 753,106 a year earlier. It was the smallest tally recorded for a January since 1975, when the figure was 570,392.

In the 62 months since November, 1975, there have been only three months to show fewer than 700,000 registrations. January, 1981, was one of them. January and February, 1976, were the other two.

Chrysler Corp. and imports improved their market shares in January, as compared with the year-earlier month. Chrysler rose 2.30 percentage points to a share of 9.10 percent. Imports were up 0.38 points to 27.38 percent.

Chrysler's market share was the best compiled by that corporation since November, 1979.

Imports' market share was the highest recorded since last September.

• Ford Motor Co.'s market share in January declined 0.09 percentage points to 17.55 percent. American Motors had an identical loss of 0.09 points, settling to 1.80 percent.

The big loser was General Motors, which fell 2.49 points to 44.14 percent. It was GM's shallowest penetration since September, 1977.

Market share table, Page 44

Although both Ford and AMC saw shares eroded from year-earlier levels, both held above their month-earlier figures.

Excluding imports, domestic-only new-car registration shares in January were: GM, 60.78 percent; Ford Motor, 24.17 percent; Chrysler Corp., 12.52 percent; AMC, 2.49 percent, and miscellaneous domestic, 0.04 percent.

A year earlier, domestic-only registration shares were: GM, 63.90 percent; Ford Motor, 24.14 percent; Chrysler Corp., 9.31 percent; AMC, 2.59 percent, and miscellaneous, 0.06 percent.

By market segment, smaller cars and imports demonstrated the greatest strength. As compared with year-earlier shares, subcompacts increased their share 2.89 points to 15.11 percent and compacts rose 0.57 points to 21.10 percent. Imports were up 0.54 points to 27.38 percent.

Luxury cars saw their share trimmed by 1.05 percentage points to 4.71 percent. Intermediates were off 1.22 points to 20.01 percent. Standard cars fell 1.73 points to 11.69 percent.

• The top 20 domestic nameplates in January registrations were:

1—Chevrolet Chevette	27,098
2—Chevrolet Citation	24,412
3—Ford Escort	23,238
4—Olds Cutlass Supreme	18,153
5—Ford Fairmont	18,127
6—Chevrolet Malibu	17,453
7—Standard Chevrolet	16,330
8—Olds Cutlass	15,259
9—Standard Oldsmobile	15,217
10—Buick Regal	14,395
11—Buick Skylark	13,786
12—Ford Mustang	13,095
13—Chevrolet Monte Carlo	12,107
14—Plymouth Reliant	11,624
15—Buick Century	10,110
16—Standard Buick	10,066
17—Cadillac	9,919
18—Plymouth Horizon	9,543
19—Dodge Aries	9,316
20—Pontiac Grand Prix	8,952

Horizon joined the Top 20 in January, ousting standard Ford.

Chevette, as the best-seller, succeeded Citation, which had held the No. 1 spot a month earlier. Chevette had ranked first two months earlier.

GMAC income climbs 67 pct. in first quarter

NEW YORK. — General Motors Acceptance Corp. said its first quarter consolidated net income rose 67.1 percent to $64.5 million from $38.6 million last year.

Retail and lease receivable acquired in the period were up 21 percent to $5.8 billion from $4.8 billion in the year-ago period, the financing unit of General Motors said.

Total retail and lease receivables outstanding at the end of the period were $26.9 billion, up 12.1 percent from $24.0 billion at March 31, 1980.

Wholesale receivables outstanding, primarily GM dealer floor planning, were off 12.8 percent to $8.9 billion at March 31 compared with $10.2 billion one year earlier.

GMAC said income from finance operations rose 88.1 percent to $50.6 million from $26.9 million in the January-March period last year.

Income from insurance operations rose 18.8 percent to $13.9 million from $11.7 million a year earlier.

Robert F. Murphy, GMAC president, said the improvement in financing income and retail and lease receivables outstanding "primarily reflects the withdrawal by many banks from automotive financing in the United States."

In the January-March period, GMAC financed about 25 percent of all new passenger cars sold by GM dealers. The normal penetration is generally closer to 20 percent.

35 years for Dyer

DYER, Ind.—Dyer Auto Auction observed its 35th anniversary May 15. A birthday luncheon was served at that day's sale, and $2,150 in cash prizes were given away.

To Presidential Task Force

NADA suggests list of regulations to kill

WASHINGTON. — NADA has submitted a series of further recommendations for regulatory relief to franchised dealers to the Presidential Task Force on Regulatory Relief.

The NADA recommendations were supplemental to a list of 13 regulatory issues submitted to DOT Secretary Drew Lewis on Feb. 24.

On regulatory issues, NADA made the following recommendations:

1. The FTC used-car rule, as approved in concept, continues to be unnecessary and unworkable, particularly provisions for disclosure of "known defects in components of major systems."

2. Provisions of the proposed FTC credit practices rule, which require "fair market retail value" of repossessed collateral to be credited to satisfy the outstanding debt should be withdrawn.

3. The NHTSA passive-restraint standard should be eliminated.

4. EPA hazardous waste regulations should be amended to establish exclusionary limits which exempt small business concerns such as franchised dealers.

5. The NHTSA proposal for crashworthiness rating should be withdrawn.

6. The OSHA lead standard should be amended to replace blood testing with a more economical and less intrusive test to eliminate costly work practice and engineering control compliance standards.

The NADA submission is part of a continuing effort to work with the Administration to "free the industry from the stranglehold of federal regulation."

"We are encouraged by Administration efforts to ease regulation, but feel that much more need be done to provide truly significant relief to both franchised dealers and consumers," NADA said.

NEW-CAR MARKET SHARES IN U. S.

EPA rule change helps dealers of high-altitude cars

WASHINGTON.—Car dealers in higher-altitude areas of the country are going to get a break from the EPA.

Under a ruling issued last week, they will be allowed to sell vehicles that meet high-altitude requirements for 1982-83 to all customers, not just to those who will use the vehicles in high-altitude areas.

The change will benefit primarily those dealers in the "fringe elevations" who sell to customers in both high and low altitudes. Previously, EPA had banned the sale of high-altitude cars to low-altitude customers because the use of such vehicles at lower altitudes causes substantial increases in NOx emissions, a major component of smog.

As a result of the rule change, "fringe-elevation" dealers will no longer need to stock both high- and low-altitude vehicles.

Ford Motor Co. had petitioned EPA for the rule change, saying the ban was an unwarranted hardship, particularly in the present economic atmosphere.

Given that relatively few of these types of sales occur, the economic hardship the regulations had imposed on "fringe-elevation" dealers and the limited impact that the regulation had on air quality, EPA decided to change its rule, effective immediately.

Japanese ship fewer autos to U.S. and Europe

TOKYO.—Despite lower shipments to the U. S. and Europe, exports of automobiles from Japan reached a record high in March.

The Japanese Automobile Manufacturers Assn. said exports for the month totaled 536,411, including 334,720 passenger cars, 193,207 trucks and 8,484 buses.

Passenger-car shipments to the U. S. numbered 127,699, down 24.7 percent from the year-earlier total. Shipments to Europe fell 4.5 percent.

Shipments to developing nations around the world made up for losses in the U. S. and Europe.

Exports to South America were up 93.1 percent; to Africa, 82.5 percent, and to Southeast Asia, 42.0 percent.

Continued from Page 10

injury is indeed material and whether it was inflicted by less-than-fair-value pricing will be raised at that time. The investigation and the arguments presented during the final injury determination will be more rigorous than in the preliminary ITC investigation.

With respect to the data concerning the decline in commercial shipments by U. S. trailer axle manufacturers, it is incorrect to imply that the ITC found that this decline was due to the imported axles. Specifically, for example, the ITC staff reported that "the decline in demand for truck/trailers has been a major factor contributing to the sharply curtailed shipments of domestic trailer axles" and that ". . . the large decline (in trailer axle shipments) is largely attributable to a 'depression' in the truck/trailer market." 1980 was an abnormally poor year for the trailer industry and the transportation industry as a whole.

The 1980 sales of Hungarian-made trailer axles represents less than 5 percent of the domestic trailer axle consumption in a normal production year, and any impact of these sales on the 1980 performance of the domestic trailer axle industry has certainly been overwhelmed by the impact of the 45-percent reduction in trailer sales suffered from 1978 to 1980. — **James C. Pruneski,** General Manager, Brake Divison, Eaton Corp., Galesburg, Mich.

Rates not comparable

I read with concern the letter to the editor (AUTOMOTIVE NEWS, April 20) by a GM dealer who questioned the difference between the GMAC floor-plan rate and the GMAC commercial paper rate.

The dealer asked why the GMAC floor-plan rate was 18.00 percent to 19.00 percent when the GMAC 30-day commercial paper rate was 11.50 percent to 12.50 percent; this spread of 6.50 percentage points (plus flat charges) led the dealer to conclude that this represented a 40 percent gross profit to GMAC.

GMAC's need for new funds fluctuates from day to day, therefore, on any particular day, the rates GMAC is willing to offer for new funds are not necessarily representative of general money market conditions.

For example, when additional operating funds are required, GMAC's commercial paper rates are competitive with other commercial paper issuers; conversely, when GMAC's needs diminish, the company will offer lower rates.

Using March, 1981 (the period cited by the dealer in his letter) as an example, the average daily cost to GMAC of new commercial paper borrowings ranged from a low of 12.93 percent on March 24, to a high of 16.51 percent three days later. The average rate paid for the entire month was in excess of 14.50 percent.

The true cost of the funds supporting wholesale financing is calculated by computing the average rate being paid on all short-term borrowings then outstanding, not by using the rates offered for new funds. In March, the average cost of GMAC commercial paper outstanding was approximately 15⅝ percent. Thus, what appeared to be a spread of 6.50 percentage points was, in reality, a difference of about 3.00 points.

This demonstrates that it is not meaningful to compare GMAC's wholesale financing rates and the rates offered for new commercial paper sales at any particular time.

GMAC's practice is to adjust wholesale financing rates on the 1st and 16th of the month. We believe that the semi-monthly adjustment of wholesale financing rates is a fair and reasonable approach considering the cyclical nature of short-term borrowing costs.

To provide equitable treatment both to dealers and GMAC, we adjust wholesale rates in the same manner for both increases and decreases in the prime rate.

I trust this demonstrates that GMAC does not achieve a gross profit of 40 percent on its wholesale financing service to dealers.—**Charles A. Krauss, Jr.,** director of public relations, General Motors Acceptance Corp., New York.

Ford sales include Fiesta; VWoA includes VW and Porsche-Audi; Plymouth includes Arrow, Champ and Sapporo; Dodge includes Colt and Challenger; Fiat includes Lancia.

New-truck sales during April are highest since last July

Continued from Page 18

from 33,155 units in 1980 to 28,376, while the heavies dropped from 60,505 a year ago to 54,704, off 9.6 percent.

• Big Three truck builders reported that their dealers and factory outlets retailed 166,642 units in April, an increase of 1.7 percent over last year's 163,932.

The four-month total, however, was down 16.5 percent, from 733,517 units in 1980 to 612,139.

Chevrolet moved ahead of Ford in April for the first time since January, outselling the latter by almost 6,400 units in April. Through April, the Chevrolet total was 241,084, compared with 240,923 for Ford.

In April, Chevrolet dealers retailed 67,215 units, an increase of 12.4 percent over the year-earlier 59,807. The tital included 7,888 LUV compact pickups, up slightly from the year-ago 7,756.

For the four months, the Chevrolet total of 241,084 units was down 14.9 percent from last year's 283,411. LUV sales dropped from 35,454 in 1980 to 29,191.

Ford sales during the month were off 12.4 percent, from 69,469 last year to 60,846. Courier deliveries were down more than 1,000 units, from 6,346 in 1980 to 5,377.

The four-month Ford total of 240,923 sales was 15.4 percent lower than the previous years' 284,762. The Courier count dropped from 29,028 a year ago to 24,174.

• Chrysler-Plymouth and Dodge dealers retailed 19,297 trucks during the month, off 2.5 percent from the year-ago 19,783 units. The total included 3,032 Ram 50 compact pickups and 1,071 Arrow compacts, compared with 2,807 and 1,372 a year ago.

The four-month Chrysler total was 67,122, a decline of 29.8 percent from the year-earlier 95,653. Ram 50 sales dropped from 15,862 to 12,140, and the Arrow count was down from 7,689 to 4,138.

April was the best month for GMC in the last 19 with sales totaling 19,284 units, an increase of 29.7 percent over last year's 14,873. The four-month total, however, was off 9.6 percent, from 69,691 in 1980 to 63,010.

Jeep dealers retailed 5,696 of the four-wheel-drive vehicles in April, an increase of 4.4 percent over last year's 5,455. Through April, the total was 18,444 units, down 37.5 percent from the year-ago 29,494.

Volkswagen's April sales were almost 20 percent higher than a year ago, rising from 2,778 to 3,324. The four-month count was up 45.3 percent, from 8,281 units in 1980 to 12,036.

Mercedes-Benz dealers retailed 336 of the mid-range diesel trucks during the month, a decline of 8.2 percent from last year's 366. The four-month total was off 1.4 percent, from 1,246 a year ago to 1,229.

• Sales of the Toyota and Mazda compact pickups were higher for the month, while the Datsun total was down from a year ago.

Toyota dealers retailed 9,974 units in April, up 1.4 percent from last year's 9,837. But the four-month total was down 18 percent, from 51,161 units last year to 41,161.

Datsun's April total was off 6 percent, from 10,483 units a year ago to 9,853. Through April, however, the count was 41,794 units, an increase of almost 2 percent over the year-earlier 41,031.

Mazda sales were up for both the year and the month. During the month, 1,363 units were retailed, a gain of 151.5 percent over last year's 542. The four-month total of 4,763 units was 45.3 percent higher than the year-ago 3,277.

Makers should share dealers' risks, he says

Mullane urges 60-day free flooring

STOWE, Vt.—In the face of escalating interest rates, Ed Mullane, president of the Ford Dealers Alliance, has called for 60-day free floor planning by manufacturers for dealers to solve the increasing problem of interest rates and inventory.

Speaking at a meeting of the Vermont Automobile Dealers Assn. here, Mullane stressed that he was calling for "true 60 - day free floor - planning by camouflage, without Mickey Mouse options and without any leveraging of our money."

Mullane said this type of free flooring would force the manufacturer to accept responsibility for the product.

"If he's built the car the market wants and priced it right, he has no problem," Mullane said. "If he hasn't . . . isn't it right that he, not the dealer, gets stuck with the turkey?"

In giving his rationale for the proposal, Mullane said "the full threat of that sword of Damocles hanging over our head has been revealed . . . the high cost of money—18 to 20 percent interest rates."

The industry economics, he said, was based in part on 6-percent interest. "We can't survive at 20 percent interest—not under the present franchise system," he said.

Record numbers of dealers, confronted with dropping sales, are going out of business, he said, forcing a change in the way business is conducted.

It will mean more affiliations between auto companies, and the retail sector will also undergo change, he said.

He stressed that dealers have no voice in pricing or the product.

Mullane said that under the Ford sales agreement, the company has the obligation to make available marketable, competitively priced products.

"When the company imposes a responsibility for sales upon a dealer," he said, "the law implies a correlative obligation upon the company to provide competitive products in a timely fashion to enable the dealer to meet his obligations. We think we're entitled to redress . . . in a number of ways."

With the 60-day free floor planning, Mullane said the factory would assume its responsibility for product.

"After all," he said, "the dealer has no input into the styling, the product quality, the model mix or the pricing. Why should we have to gamble? If the manufacturer wants to make these decisions, then let him take the risk."

Mullane said there are precedents for 60-day free flooring. White Motor Corp. tractor dealers, he said, get their products on consignment for eight months.

"Ford heavy-duty dealers get 120 days' floorplan assistance and General Electric sells refrigerators and ovens with a 90-day free consignment. How come these are affordable?" he asked.

Mullane said these examples counter what he assumed would be the factory argument—that it could not afford this concept.

Early-May car sales plunge to 23-year low

By Jenny L. King
Staff Writer

In the first 10 days of May, the domestic auto makers recorded their lowest daily selling rate since early January, and sales for the period were lowest in 23 years.

First-period May sales totaled only 134,823 units, down 5.29 percent from the year-ago count of 142,352, and the poorest since the 123,345 new cars sold during the period back in 1958.

There were eight selling days this year compared with nine a year ago, yielding a daily selling rate of 16,853, up 6.55 percent from 15,817 last year. For this year, the 16,853 topped only the 16,005 average for Jan. 1-10.

Two of the domestic auto makers reported sales increases on a year-to-date basis; there were three increases on a daily-rate basis. Chrysler kept up its forward movement with a sales jump of 23.38 percent, to 15,662 from 12,694 in 1980. That was an increase of 38.87 percent on a daily-rate basis.

Ford, too, enjoyed improved sales, climbing 8.87 percent, to 33,356 from 30,638 last year (up 22.50 percent on a daily-rate basis). The company's Escort was the top-selling nameplate for the period, and its recently introduced EXP and LN7 sport coupes were beginning to pull their weight. The EXP outsold Dodge Aries for the period. EXP sales were 2,101 compared with Aries' 1,799.

Estimated sales of American Motors passenger cars totaled 3,600, off 7.69 percent from 3,900 a year ago, but up 3.93 percent on a daily-rate basis.

- General Motors sales plunged 13.19 percent, to 79,600 from 91,695 last year. They were off 2.34 percent on a daily-rate basis. Volkswagen of America reported a 23.94-percent decline, to 2,605 from 3,425 (down 14.44 percent daily-rate).

GM's share of the early-May market slipped back to 59.04 percent from 64.41 percent last year. Ford climbed to 24.74 percent from 21.52 percent. Chrysler earned 11.62 percent, up from 8.92 percent. AMC sales accounted for 2.67 percent of the market, down from 2.74 percent, and VWoA had 1.93 percent, down from 2.41 percent.

On a year-to-year basis, seven U. S. makes were up for the period. Plymouth was 45.54 percent ahead of last year; Mercury was up 28.98 percent; Oldsmobile was up 25.08 percent; Dodge was up 22.49 percent; Cadillac was up 7.99 percent; Ford was up 3.87 percent, and Lincoln was up 1.70 percent.

Chevrolet reported a 32.01-percent decline from a year ago. Pontiac was down 24.07 percent; Chrysler dipped 18.99 percent, and Buick fell 16.85 percent.

The top five nameplates for the period were: Ford Escort at 7,057, Oldsmobile Cutlass at 6,526, Chevrolet Chevette at 6,157, Cutlass Supreme at 6,125, and Chevrolet Citation at 4,849.

Year-to-date sales totaled 2,401,016, down 5.18 percent from 2,532,182 in 1980.

With her are, from left: Dianna Varie Valdez, El Monte; Loretta Giese, Los Angeles; M Jay Jefferson, Los Angeles, and Judi Evans, Monterey Park.

Volvo contemplates assembly of its trucks in U. S. plants

Continued from Page 18

ing the agreement in principle reached in March.

Under the Volvo proposal, it would acquire White's manufacturing facilities at New River Valley, where White and White Western Star trucks have been assembled; Ogden, Utah, where the Autocar is built, and Orrville, O., where the cabs and other components are produced.

Terms of the transaction were not announced, but a White spokesman noted that the contemplated price is "significantly below" the book value of the assets.

White earlier disposed of its farm-equipment operations worldwide and its truck operations in Canada and Australia. It will continue, through subsidiaries, the operations of the finance companies in the U.S. and Canada.

"Completion of this sale will assure a continuation of the White family of heavy - duty trucks in the marketplace and strengthen White's distribution network," said Wallace B. Askins, White chairman. "It will be another very important step in White's Chapter 11 reorganization proceedings."

The sale is subject to negotiation of definitive contracts, approval by directors of both firms and approval by the U. S. bankruptcy court in Cleveland, where White has been in Chapter 11 proceedings since last September.

Volvo's Langenius said it is anticipated that a contract will be signed by early June and that the purchase will take place after its approval by the bankruptcy court.

- Under the terms of the Freightliner sales contract, the amounts to be paid by Daimler-Benz, on closing and in future installments, have an estimated current value of more than $260 million, with the exact amount subject to a detailed audit by representatives of both companies.

Originally, the amounts to be paid by Daimler-Benz had been placed at about $225 million.

The CF companies being sold to the West German firm are Freightliner, headquartered in Portland, Ore., and its subsidiaries—Freightliner Market Development Corp., Portland, and Freightliner of Canada, Ltd., Vancouver, B. C.; Freightliner Financial Services, Ltd., Vancouver, and Freightliner Credit Corp. and Consolidated Metco, Inc., both of Portland.

Not included in the transactions are Road Systems, Inc., CF trailer-building subsidiary in Fontana, Calif., and the Freightliner factory at Chino, Calif., which ceased production in July 1980.

Cadillac V-8-6-4 problem diagnosed by chief engineer

Continued from Page 3

said the three-way catalyst feedback control system used on the vehicle cannot meet the CO emissions standards during the transition stages when the engine switches modes. The company said that granting the waiver would have given it time to further refine the electronic controls and the catalyst technology for the fuel-efficient variable displacement concept so it would meet the 3.4 gpm standard in the future.

The EPA refused the request and, according to a GM spokesman, recalibrations were made in the amount of fuel economy gain the engine would provide to bring it to the 3.4 gpm. Originally, GM had projected the V-8-6-4 engine would provide a 7 percent increase in fuel economy, but some customers and dealers report no increase in fuel economy.

- According to Templin, the EPA is supposed to reply to a waiver request within 60 days, but did not respond to the Cadillac question for 101 days. He said the EPA verbally OK'd the waiver, but when the letter came in June, 1980, it was not granted.

Cadillac then decided to produce a new engine for the 1982 model year which would be fuel-efficient. According to sources, the new engine is an aluminum-alloy small V-8 that may be turned into a V-6 in the future.

With the rough ride complaints about the V-8-6-4, customers have said some dealers are telling them how to unhook the system, allowing the cars to run on all eight cylinders eliminating the change in modes.

According to a Cadillac spokesman, "disabling any design feature in the Cadillac is construed as a vehicle alteration. Altered vehicles as such are not warranted by Cadillac."

However, he said Cadillac would judge each vehicle in question to see if the alteration had affected the car or if workmanship or something else caused the problem for which the customer was seeking warranty coverage.

Dodge-Mazda deal fined in Washington

OLYMPIA, Wash. — Doug's Lynnwood Dodge/Mazda has been fined $300 for two violations of state law, according to John Gonsalez, director of the State Department of Licensing.

Ikegami Enterprises, Inc., doing business as Doug's Lynnwood Dodge/Mazda, was cited on two counts of failure to promptly transfer vehicle titles to retail buyers and for not having the title to one of the vehicles sold. State law requires that dealers transfer title to retail buyers within 10 days.

1.3 million new cars in stock

Inventory rises to 66-day supply

Continued from Page 1

day supply of domestic subcompacts, up from 37 days a month earlier. The 66-day supply of compacts compared with a 39-day figure on April 1, while intermediates jumped to 74 from 46½. Standards dropped to 65 days from 67, and luxury units dipped to 56½ from 60.

The May 1 inventory was divided this way among the size classes: Subcompact, 19.42 percent; compact, 27.78 percent; intermediate, 31.95 percent; standard, 14.64 percent, and luxury, 6.21 percent.

A month earlier, the inventory was divided as follows: Subcompact, 17.52 percent; compact, 28.82 percent; intermediate, 31.15 percent; standard, 15.71 percent, and luxury, 6.80 percent.

The May 1 days supply figures by market class were:

Subcompact—Bobcat, 32; Monza, 38; Sunbird, 41; Chevette, 43½; T-1000, 52; Spirit, 54; Omni, 56; Pinto, 56; Lynx/LN7, 56; Escort/EXP, 59; Horizon, 62½, and Rabbit, 72.

Compact—Aspen, 22; Volare, 24; Eagle, 37; Skylark, 44; Capri, 53; Reliant, 54½; Concord, 57; Aries, 57; Zephyr, 61; Firebird, 62; Camaro, 63; Omega, 64½; Fairmont, 68; Mustang, 71; Phoenix, 95, and Citation, 111.

Intermediate—Cutlass, 42; Century, 57; Malibu, 61; LeMans, 67; LeBaron, 71; Diplomat, 75; Regal, 76; Supreme, 77; Cordoba, 78½; Monarch, 79; Granada, 84; Mirada, 88; Grand Prix, 110; XR-7, 113; Thunderbird, 114, and Monte Carlo, 127.

Standard—St. Regis, 35; Olds 98, 41; Gran Fury, 41; LeSabre, 48; Olds 88, 49; Chrysler, 50; Electra, 57; Mercury, 76; Chevrolet, 80½; Ford, 85, and Pontiac, 89.

Luxury—Corvette, 50; Riviera, 51; Lincoln, 53; Eldorado, 53½; Cadillac, 54; Toronado, 61; Mark VI, 65; Seville, 77, and Imperial, 81½.

Chevy extends LUV bonus, adds truck incentive

By Joseph Bohn
Marketing Editor

Chevrolet has begun another dealer incentive program on light-duty pickup trucks and has extended its LUV consumer rebate in an effort to generate dealer orders and retail sales in the slow-moving truck market.

The newest program is called "Chevrolet's Truck Extravaganza." It runs from May 11 to June 10 and covers '80s and '81s.

Payments to dealers are based on the C (two-wheel-drive) and K (four-wheel-drive) pickups and chassis cabs, in the 10-30 series.

Payments to dealers are as follows: 0-19.9 percent of objective pays nothing; 20-39.9 percent pays $100 per unit; 40-59.9 percent pays $150 per unit; 60-79.9 percent pays $200 per unit; 80-99.9 percent pays $300 per unit and 100 percent and over pays $500 per unit.

The payments are nonretroactive.

Chevrolet also extended its $350 consumer rebates on Series 11 (1981) LUV pickups through May 31. The earlier program had covered both series 10 and 11 LUVs and was to have ended May 8. Series 10 (1980 models) was dropped from the extension.

As previously reported, Chevrolet also has a sales managers' cash incentive on light-duty trucks, paying from $500 to $3,000, depending on the manager's objective, and a $50 override on each unit once he reaches it.

This program covers '80 and '81 pickups and runs through May 31.

Allegheny eyes robot field with French connection

PITTSBURGH. — Allegheny International, formerly Allegheny Ludlum Industries, said it is going into the industrial robot business.

The company is making its entry into that fast-growing aspect of manufacturing from two angles.

It is talking with a privately held French firm, Sciaky, SA, about a licensing agreement under which it will build Sciaky robots. It also is negotiating to buy 53 percent of Sciaky Brothers, Inc., of Chicago.

The French company is a leading developer of robots, including types used on automotive assembly lines. The Chicago operation markets automated welding equipment.

Allenghey changed its name in April. It primarily is a producer of stainless steel and steel alloys.

Anniversary dealers

Delbert O. Childers, left, owner of Childers Chevrolet Co., Nitro, W. Va., and Joseph B. Holland, right, owner of Joe Holland Chevrolet, Inc., South Charleston, W. Va., receive Chevrolet's 25-year dealer plaque. Presenting the anniversary awards is Lester P. Schinzing, Charleston zone manager for Chevrolet.

Labor crisis solved at last minute

Sweden barely escapes shutdown

By Stig Bjorklund
Staff Correspondent

GOTHENBURG, Sweden. — Sweden was threatened with a devastating national labor conflict last week, but escaped relatively unscathed.

Volvo lost 4,000 cars, with 11,000 workers laid off for a week and Saab-Scania escaped with only some problems in car shipping. A strike did affect aircraft production.

Auto production, shipping and all industry were threatened with a complete shutdown, but a settlement was reached just three hours before the general strike was scheduled to take effect.

It all started when the confederation of 21 unions representing some 550,000 white-collar workers didn't agree with the Swedish Employers Confederation about salary terms for the coming two years.

The basis was there in the shape of a February deal for the Swedish Trade Union Confederation, a deal always used as an example for other branches. But the problem was that since then the blue-collar workers of the STUC had already had their salaries "topped" by local employers to what in Sweden is referred to as "salary gliding."

White-collar workers wanted compensation for this in their two-year deal, and when the employers' confederation refused to give this compensation, they decided to show their strength to get something done.

Office workers at five of Sweden's biggest and most profitable companies, including Volvo, were picked out for a strike from May 5. The employers reacted by locking out even more people—and at Volvo 11,000 "innocent" production workers were sent home with nothing more than a promise of advance money to live on instead of their regular pay checks. The ones still working would get nothing at all, once the conflict, as could be expected, hit even them.

Following a traditional Volvo pattern, more than 1,000 angry truck and spare part workers in Gothenburg marched up to the head office with posters saying "This time Volvo has to pay" and shouting slogans like "Lay off Mr. Gyllenhammar."

In the meantime, the fighting confederations agreed to let a mediating committee try to solve their dispute. Finally, after three rounds and with just three hours to go, a deal was reached.

White-collar workers got a general wage raise of 8.8 percent, rather like the blue-collar workers already had. On top of that, they also got a guarantee for an extra 1.6 percent in 1983, should blue-collar workers by that time have had a "wage gliding" of 8 percent or more from the February, 1981, basis.

"It is a deal we really can't afford, but the alternative was just so much worse," said the chairman of the Swedish Employers Confederation.

With everybody going back to work and with Volvo paying checks for the laid-off production workers as a generous gesture, all at last ended well.

House group has questions on effects of deregulation

WASHINGTON. — The Reagan Administration's auto deregulation program will be the subject of intensive questioning Wednesday and Thursday by a House Government Operations Subcommittee headed by Rep. John L. Burton, California Democrat.

Transportation Secretary Drew Lewis, who headed the Auto Task Force which made the major White House deregulation announcement, will be the leadoff witness. Ray Peck, new NHTSA head, has also been asked to appear.

Although the witness list is not yet certain, invitations have gone to the domestic auto companies, major Japanese auto companies, the Manufacturers of Emissions Control Assn., the Insurance Institute for Highway Safety, the American International Automobile Dealers Assn. and a spokesman for the White House Office of Management and Budget.

Burton said the purpose of the hearing is to explore the likely effects of the deregulation and further actions considered by the Administration to help the industry and workers other than the recent voluntary Japanese import restraints.

This also includes the position taken against continuation of two provisions of the "smog conspiracy" consent decree recently remanded to a California district court.

The subcommittee is expected to ask what assurances the Administration has from the auto industry that savings from less regulation will be passed on to consumers or used to make needed investments to help the industry regain its competitive position in the world market.

NHTSA asks end of free plugs for Car Book

Continued from Page 2

safety campaign would be conducted not only by way of the mass media but through local jurisdictions and civic groups as well.

"We're going to be talking to judges, lawyers and educators," he said, "trying to get across to them the value of seat-belt usage and that it is negligent of vehicle occupants not to use them.

"Who knows," he said, "we may even have safety messages put in fortune cookies."

"We want to get to the point where people say . . . I am sick of hearing about using my seat-belt; I'll put it on," Pinto said.

The Car Book meanwhile still will continue to be sent to those requesting it, which about 6,000 to 7,000 people do each week. The safety agency has about 700,000 left.

Whether it will be republished when the current supply is gone remains to be seen.

Pinto said the safety agency is aware of the requirement that it publish some comparative data on automobiles but noted that if the Car Book is continued "it will be in a vastly different format." He would not elaborate.

Makers build 174,356 cars for week

Auto output highest in 17 months

By Patricia Hoffman
Staff Writer

U. S. auto production last week reached it's highest point for any week since December, 1979, and output took a 64 percent jump over the comparable 1980 week's total.

The auto makers slated 174,356 units for last week, up 21.21 percent from the 143,849 completed in the previous week, and up substantially from the 106,064 units assembled in the comparable week last year.

Breakdown for the week by company is: General Motors, 63.10 percent; Ford Motor, 21.04 percent; Chrysler Corp., 11.70 percent; Volkswagen of America, 2.33 percent; American Motors, 1.72 percent and Checker Motors, 0.06 percent.

So far this year, the auto makers have completed 2,571,372 units, a drop of 3.18 percent from the 2,655,902 cars completed in the comparable period last year.

Chrysler scheduled Saturday overtime last week at its Belvidere, Jefferson and Newark assembly points.

The three Chrysler plants are also slated to work two daily nine-hour shifts this week.

General Motors scheduled Saturday overtime on nine lines in seven plants last week. Two lines at the company's Flint and Lansing plants worked Saturday. Both build the intermediate and full-sized cars.

Other GM plants working overtime were Pontiac, Framingham, Oklahoma City, Tarrytown and Wilmington. Pontiac and Framingham also build intermediate and full-size cars, while Oklahoma City and Tarrytown assemble the X-cars and Wilmington, the Chevette.

In addition, for the second consecutive week, GM will cut one shift at its Cadillac Detroit plant, idling 1,900 hourly workers.

Ford expects second quarter to be near break-even point

By Edward Lapham
Financial Editor

DETROIT. — Ford Motor Co. expects its second-quarter performance to be "near break-even," Chairman Philip Caldwell announced at the company's annual meeting.

Caldwell said "the seeds for the future success" of Ford "have already been sown" and he expects a "sharp improvement" over the six consecutive quarters of after-tax losses reported by the auto maker, beginning with the October-December period in 1979.

He told a press conference following the annual meeting that he thinks U. S. car sales this year will total 9.5 or 9.6 million units (including imports) compared with a 9.9-million-unit rebate-aided rate in the first quarter. Sales last year were 8,973,000.

He said a near-term reduction in interest rates would improve the outlook, and that as yet the company hasn't noticed any "significant" car sales fallout due to the rising rates. He said he expects 12.5 million car and 4.0 million truck sales annually by 1985.

Caldwell also told the press conference the company probably will not have to borrow any money to meet its targeted $4.0 billion capital spending program this year. He said that, unlike General Motors, Ford has not considered deferring any expenditures.

The three-hour-four-minute annual meeting itself was a relatively calm, dull affair, punctuated by a handful of the usual product complaints and intermittent semi-relevant comments from a familiar cast of gadflies.

All of the company-nominated directors, including first-time candidates John B. Connally, former Texas governor and Nixon Administration official, and Michael D. Dingman, Wheelabrator-Frye chairman, were elected.

The single shareholder proposal, submitted by Evelyn Y. Davis, would have required disclosure of certain information about corporate employment of male secretaries and clerks. It was defeated, receiving just 1.61 percent of votes cast.

It also was disclosed at the annual meeting that corporate advertising expenditures last year totaled $335 million.

Truck production tops 40,000; up 10 pct. for week

U. S. truck production last week rose above the total for previous week and comparable 1980 week. Year-to-date, however, output continues to stay below last year's level.

The truck makers slated 40,160 units last week, up 10.32 percent from the 36,402 trucks completed in the previous week, and up 29.09 percent from the 31,111 assembled in the comparable 1980 week.

So far this year, the makers have completed 675,965 units, a drop of 2.88 percent from the 696,006 trucks assembled in the comparable period last year.

International Harvester's Springfield assembly plant, down since April 27, resumed operations last month.

Chrysler Corp.'s Warren truck assembly plant will work a single nine-hour day shift this week.

Beginning June 8, GMC's Pontiac point (heavy-duty trucks) will boost its daily output on one shift from 53 to 76 units.

The plant's assembly line building Brigadier models will increase production from 28 to 44 units a day, and line speed for GMC's Astros and Generals will increase from 25 to 32 units daily.

General Motors will close its light truck and Blazer Suburban lines at the Chevrolet truck plant in Flint for one week starting today (May 18) to balance inventories, affecting 5,500 hourly workers.

Canadian holiday trims production of cars, trucks

With all but one Canadian assembly plant down for the Victoria Day holiday last Friday May 15, Canadian car and truck output fell below the previous week's total. General Motors' St. Therese car point in Quebec was the only assembly plant working five days last week.

The Canadian makers slated 19,838 cars during the shortened holiday week, down 14.84 percent from the 23,296 units completed in the previous week, but up 20.72 percent from the 16,433 assembled in the comparable 1980 week.

So far this year, the auto makers have built 325,833 units, down 6.38 percent from 348,033 in the comparable period last year.

Canadian truck production last week was slated at 11,245, a drop of 16.47 percent from the 13,463 units completed in the previous week, but up 6.05 percent from the 10,603 assembled in the comparable week last year.

Year-to-date, the truck makers have produced 216,292 trucks, down 2.95 percent from 222,863 built in the comparable period last year.

All Canadian car and truck assembly points, except the St. Therese car plant, were down May 15, and will continue down today (May 18) because of the Victoria Day holiday. Operations are slated to resume at all plants tomorrow.

European Escort receives design award

DEARBORN.—The European Ford Escort has received a design award from the government-backed British Design Council. The award, presented to Ford of Europe, cited Escort's "elegance of engineering, detailed design and low-maintenance requirements." More than 250,000 European Escorts have been built since the car was introduced last September.

Triumph launches $1,000 rebates

LEONIA, N. J.—A $1,000 retail rebate program for 1980 Triumph TR-7 and TR-8 has been announced. The rebate applies to both the standard TR-7 coupe and convertible and the specially equipped, all black TR-7 Spider convertible. The program will be in effect through Sept. 30. Both cars are being phased out of production.

GM engine-switch ruling reversed

CHICAGO.—Frank J. McGarr, the federal judge in the General Motors engine-switch case, granted — and quickly withdrew — a GM motion for a directed verdict dropping 30,000 of 67,000 plaintiffs from the case. The judge initially dismissed from the action all who bought "Chevymobiles"

Chrysler's buildout offer is simplified, sweetened

By Joseph Bohn
Marketing Editor

Chrysler Corp. launched its traditional buildout incentive program which it offers each year in lieu of a 5 percent carryover allowance.

Chrysler has simplified this year's program and has made it more attractive than some of those in the past.

For one thing, dealers get their money — in the form of a discount off wholesale invoice—up front, beginning with June shipments, rather than having to wait several months to collect.

The discounts themselves lower the wholesale floor-planning costs to dealers and give them a greater bargaining latitude with customers.

Also, there are no complicated percent-of-achievement categories. Discounts begin with the first qualifying unit and remain the same for every unit, depending on the car or truck line involved.

Some dealers viewed it as a good, though not great, program and were waiting to see what their quotas were before they got in.

They saw its chief benefit as helping them sell K-cars. Miser models of the Omni/Horizon and 024/TC-3, for example, don't qualify for the special discounts.

The discounts also were not expected to do much more to move Cordobas and Miradas, for example, which haven't been very strong all year long.

However, most of its volume is in the Omni and Horizon and the K-cars, with relatively little production planned for the luxury intermediate models, Chrysler pointed out.

Psychologically perhaps, the program is coming at a bad time, since the prime rate moved to 20 percent last week. Some dealers said they wouldn't get into the program because the market has slowed and their inventories have started to build.

Those dealers felt they still had plenty of inventory at the old price—before the recent 2.6 percent price increase—and that the 5 percent discounts, for example, only gave them an extra 2 percent advantage on the new models they would be ordering.

Chrysler, looking at the program from the point of view of giving 5 and 3 percent discounts on upwards of 150,000 cars, considered it a rich program.

"You could have had a retail program with huge dollar amounts for the cost of this program," observed one analyst.

Whether they opt for the program or not, dealers will have to order cars for the summer, since at last report their days' supply of Aries (60) and Reliant (57), for example, was enough to last them through May and June, but leave them rather dry for July and August.

For its part, Chrysler added that this program is all it will be offering. There will be no 5 percent carryover granted at intro time, the company said.

• In essence, the program. as outlined by Chrysler to its dealers, is as follows:

Dealers must sign a participation agreement agreeing to accept shipments of domestic cars and trucks totaling 100 percent of a combined May-August buildout objective by vehicle line.

For that, they receive a 5 percent discount off the invoice of Reliant/Aries, Cordoba/Mirada, LeBaron/Diplomat and domestic truck models, beginning with June 1 orders. Omni/Horizon and TC3/024, excluding Miser models, get a 3 percent discount.

The 5 and 3 percent discounts are figured on the basis of the retail price of the vehicles, with the amounts deducted from the wholesale invoice.

Chrysler figures that on the

GM's pricing of J-cars turns back on tradition

John K. Teahen Jr.
Managing Editor

A Chevrolet that costs more than a Pontiac, a Cadillac with manual transmission and a four-cylinder engine and a bunch of little cars that are higher priced than their bigger brothers.

These were the highlights of the pricing acrobatics on the General Motors J-cars. The new subcompacts — the Chevrolet Cavalier, the Pontiac J2000 and the Cadillac Cimarron — went on sale last week.

Prices start at $6,966 for the Cavalier and $6,999 for the J2000. The Cimarron offered only as a four-door sedan, is $12,131.

Cimarron is the smallest Cadillac since 1905, the first Cadillac with a four-cylinder engine since 1914 and the first Cadillac without automatic transmission as standard equipment since 1953.

Automatic drive is $370 extra on the Cimarron, and Cadillac expects that about 90 percent of sales will have this feature, which brings the price to $12,501. Automatic is also $370 on the Cavalier and J2000.

Dealer discount is 15 percent on all three lines. That's the same as on the Chevrolet Chevette and Pontiac T1000 and the GM compact X-cars. (The base Chevette Scooter is a 12-percenter.) Cimarron's 15 percent discount is 4 percentage points lower than the 19 percent on other Cadillacs.

With Cavalier and J2000, GM is adopting a new pricing strategy — the extensively equipped

Problems abound as Shay plans switch to T-Bird

Repro Model A near end of line

By Edward Lapham
Financial Editor

BATTLE CREEK, Mich.—The nation's most successful and perhaps sole surviving quickie replicar company will end its first model run on June 10 and begin its second amid gushing television features, a series of unresolved dealer complaints and regulatory difficulties in two states.

Model A and Model T Motor Car Reproduction Corp. (MAMT), which began the quickie replicar cottage industry in 1978, will end output of its Model A replica and begin full-scale output of 1955 Thunderbird replicas as an established company.

MAMT is so well established, in fact, that it has virtually eliminated competition, claims to be the sixth largest U. S. auto maker and boasts of plans for a $5 million to $8 million public equity offering.

MAMT has managed to develop a very favorable public image in many sectors because of two completely complimentary features on national television within an eight-day period in April.

At the same time, the company and founder / president Harry Shay have left a trail of unresolved and semi-resolved problems through the startup process and along the corporate learning curve which are not offset by the PM Magazine and ABC Nightly News features.

These flattering national television features told of the company's $1.4 million profit in the fiscal year ended Mar. 31, showed the factory and the Model A replicars lined up and discussed Shay's plans to build replicars of other classics.

These features did not, how-

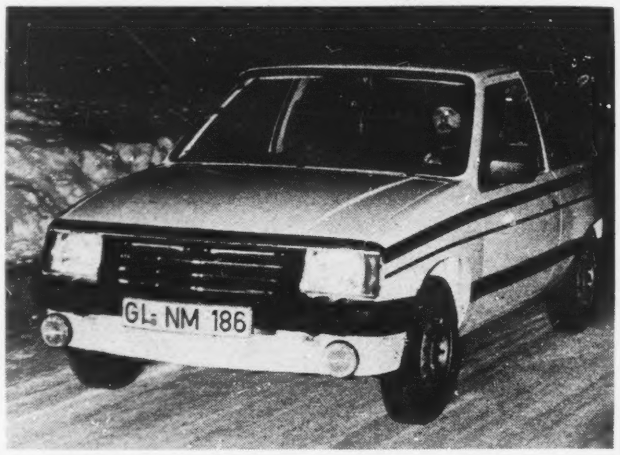
GM S-car caught



Next year's economy car

Unofficial photos, snapped in Northern Europe, capture test drivers wringing out the new General Motors S-car, a super-economy world car. Production in Europe is scheduled to begin in the fall of 1982. As an Opel the car has been called Junior, but it may have a different name when it goes to market. It will be built in Spain, rather than at Russelsheim.

LPG system now offered in IH trucks

CHICAGO. — A factory-installed liquified petroleum gas (LPG) or propane single-fuel system has been announced by International Harvester's Truck Group for its complete line of medium trucks and school bus chassis.

Production of LPG-fueled S-Series medium trucks and school bus chassis, as well as Cargostar low-front-entry models, began this month at International's medium-truck manufacturing facilities at Chatham, Ont., Canada.

International V-8 gasoline engines from 345 to 537 cubic inches, including the MV-404 and MV-446 power plants, are available for on-line conversion to LPG at Chatham.

Harold D. Dent, Medium Truck Division general manager, noted that LPG is less expensive and cleaner burning than gasoline, has a higher octane and results in lower maintenance costs.

"More than 300 orders for these LPG trucks have been placed in anticipation of Chatham's initial production," he said. "LPG has been used as a motor fuel since the 1930s, and International Harvester has offered LPG-powered trucks for more than 29 years, but this is our first factory-installed conversion."

- International's LPG carburetion system is simpler than gasoline, Dent said, consisting of three uncomplicated fuel-delivery components: Fuel lock filter, converter/regulator, and LPG carburetor.

The fuel-lock filter is a solenoid-controlled valve that permits fuel to flow when the ignition is turned on. The filter traps any contaminants and may be drained without disrupting the system.

The converter uses water from the engine's cooling system to heat the liquid propane and change it to a dry gas. The regulator controls the flow of the dry gas to the carburetor.

The LPG carburetor is a simple metering device which combines the lowest fuel/air mixture for proper combustion.

"There are more than 25,000 LPG dealers in the U. S.," Dent said. "Supply is no problem. Many dealers will make arrangements to have an LP stor-

An inspector checks the installation of a propane (LPG) fuel tank on an International S-Series medium truck at International Harvester's truck-manufacturing facilities at Chatham, Ont., Canada.

Duplex improves fire chassis

Nine major improvements as standard equipment, plus several new options, have been announced by the Duplex Truck Division, The Nolan Co., for its D-250 custom fire chassis. The new options include disk brakes, a broader engine selection and larger-capacity axles.

FBI moves in to halt 'rustling' of big trucks

By Robert H. Brown
Staff Correspondent

ATLANTA. — Big-truck "rustling" has become so prevalent among over-the-highway operators that the FBI and other authorities are moving in in an attempt to break up theft of the big rigs.

Because Atlanta is the gateway to the South, much of the thievery is centered here.

Theft is so great a threat to operators that many drivers now sleep in their cabs in an effort to protect them.

While the big rigs are being stolen throughout the country, Atlanta has become a hub for the thieves, according to the FBI and the Georgia Bureau of Investigation.

The National Auto Theft Bureau in Chicago said at least 4,323 tractor thefts were reported in 1979, a 51.9 percent increase over the previous year when 2,846 thefts were reported.

The figures, the NATB said, may be conservative because of the delay in reporting by some member insurance companies.

The FBI said 199 truck thefts in February now are being investigated, compared with 156 the previous February, an increase of 27.5 percent.

The FBI said it has 26,469 unsolved heavy-equipment thefts in its computer bank. Of this figure, 1,612 were reported in March, with only 1,239 listed as "cleared or canceled."

These figures do not tell the whole story, however, the FBI said. "Cleared or canceled" can mean that the vehicles either turned up or were burned, stripped or otherwise unidentified.

Just recently, a new 1981 Kenworth tractor disappeared from the parking lot of a suburban motel where the operator had checked in for a few hours sleep.

The operator said he checked on his rig several times during the night, once just before he arose at 6:20 a.m. to continue his trip. "I looked out the window and saw that the rig was gone, which meant it was taken sometime between 5 a.m. and 6 a.m.," he said.

What is happening to the vehicles is not known exactly, but authorities believe they are rushed to hidden shops where they may be "chopped up" or disguised and sold on the black market.

Adrian-McCravy, Georgia Bu-

Diesels save most in voluntary fuel curbs by truckers

WASHINGTON.—The trucking industry's nationwide voluntary fuel-conservation program resulted in savings of five million gallons a day during 1980, according to Lana R. Batts, director of energy and economics, American Trucking Assns.

She said the industry has saved more than five billion gallons of fuel since the program was begun in 1975.

The two main ingredients of this fuel economy, she added, were the changeover from gasoline to diesel engines, and the greater use of newer fuel-efficient diesels with high torque rise and lower RPM.

"As a matter of fact, the motor carrier's voluntary program has saved twice as much fuel as the EPA's mandatory fuel-economy standards for automobiles," Batts said.

She said even greater fuel savings would be possible if certain states modified their laws to allow truck operations that comply with federal laws on size and weight.

An estimated 93 million gallons could be saved if the 17

truck industry news

Declines hit all 3 market segments

3-month registrations down 42 pct. since '79

New-truck sales in the U. S. began to nosedive at the end of the first quarter two years ago after the surge in fuel prices and actual or threatened shortages in many areas of the land.

The extent of the downturn is borne out in new-truck registrations for the first three months of 1981.

Table on Page 30

R. L. Polk & Co. reported 500,730 units were registered in the January-March period, a decline of 42.7 percent from the 874,407 units tallied in the comparable period in 1979 and 24.5 percent under last year's 663,257.

Registrations this year were down in all three market segments through March. A year ago, only the heavy trucks did better in the first quarter than they did in the like period of 1979, when heavy-truck sales hit an alltime high of more than 200,000 units.

March registrations totaled 176,027 units, down 20.1 percent from last year's 220,186 but almost 45 percent under the 317,351 reported for March two years ago.

Light-truck registrations in the first three months dropped 24.5 percent below a year ago, with Group 3 the only one of the three in this market segment to show an increase over last year.

Through March, 452,061 light trucks were tallied, compared with 598,379 a year ago and 788,386 in the same period two years ago.

Registrations of Group 3 vehicles totaled 3,231 units, an increase of 62.6 percent over the year-ago 1,987. In 1979, the Group 3 total was 11,781 units, most of them recreational vehicles, which also began to

Continued on Page 36, Col. 1

HD registrations higher in March; off for quarter

March registrations of new heavy duty trucks in the U. S. were highest for any month since last December, but the total was down sharply from March a year ago.

During the month, according to R. L. Polk & Co. statistics, 12,197 Groups 7 and 8 trucks were registered, 2.3 percent higher than February and 4 percent more than January. But the count was 28 percent lower than the year-ago March 16,950 units.

For the first three months of 1981, the total of 35,845 tallies was 27.8 percent lower than last year's 49,557 and 26 percent

From this . . .

In 1930, van Doorne's Machinefabriek opened this new factory to produce lightweight trailers and semi-trailers in Eindhoven. The firm had been organized two years earlier. Note the Ford Model A at lower right.

. . . to this

Head office and factory showroom of Daf is this modern structure adjoining expanded factory in Eindhoven. Car production began in 1959, ended for Daf in 1972, when car operation was sold to Volvo.

Daf posts higher profit even though sales slip

Continued from Page 14

so gives the company control over design and production, but if the company is small it means costs on each unit are higher.

This is one of Daf's problems, and one which led it to Dodge. Daf must now be looking for someone else to walk it up the aisle now that Dodge has been whisked off by another partner.

This year's tough sales climate will be hard on all truck makers. Daf expects to return a loss in the first half of this year, and whether it turns in a year-end profit will depend on the second-half performance.

The company recorded losses in 1978, and the 1974-75 periods after the first economic crisis.

Its 9,000-plus employees are working a two-shift, five-day week, but it experienced periods of three- and four-day week working in recent times. Whether this can be avoided again will depend on European market conditions.

Western European heavy-truck demand this year will fall by maybe 7 percent to just under 300,000. And with around three-quarters of Daf output being sold within Europe, it is subject to the vagaries of the market.

- Positive steps are being taken to expand sales in the Middle East and African markets, to reduce dependence on Europe and to spread the risk of sales setbacks over a greater number of countries.

Last year, Daf took around 35 percent of the Dutch heavy-truck market with sales of 4,000. In Belgium it gained 18 percent (on sales of 1,200). The bigger French market accounted for in excess of 1,800 units (6 percent) and the UK for 1,700 (4.5 percent).

As far as Daf is concerned, it calls its market anything over 9 tonnes gross vehicle weight. Other makers and countries have different definitions.

Daf is now headed by Piet van Doorne, son of founder Hub van Doorne, who died in 1979. The co-founder, Wim van Doorne, died in 1978.

The management team comprises David Mansell (sales and marketing), Pieter Linnenbrink (financial and economic affairs), Rolf van Oorschot (product development) and Aard vander Padt (special products), in addition to chairman van Doorne.

Ford plant in Wales builds milestone engine

Ford Motor Co.'s engine plant at Bridgend in South Wales has produced 250,000 units since it opened less than a year ago.

Bridgend is the sole European source of the CVH engine, which powers most of the 1981 Ford Escorts in Britain and Europe. Approximately 70 percent of Bridgend's output is exported, with the majority of export production going to West Germany. A few hundred units are supplied to assembly plants in Portugal and Uruguay.

Will Talbot-Iran car deal survive turmoil in Tehran?

The delicacy of negotiations with current Iranian authorities has been underlined again by the recent experience by the UK Talbot Division of the Peugeot SA group.

The former Chrysler company had a thriving business supplying CKD kits of its Arrow sedan to Iran, where it was assembled as the Peykan. But that lucrative little sideline, reputedly worth some $250 million each year, fizzled up when the Shah was swept from power.

Talbot retained its links with the country, most notably through its chairman, George Turnbull, who had previously run the operation which put together those kits, the National Car Co., part of Iran National Industrial Manufacturing

Other manufacturers, however, were known to be keen to pick up the pieces when the revolutionary fervor in the country had subsided.

Then came Talbot's news at the end of April that it expected to sign contracts within weeks that would earn the company 1 billion pounds (around $2.1 billion) over a five-year period.

- A few days later came reports from Tehran's chief government spokesman that he knew nothing of the deal. He was quoted as expressing doubts that Iran possessed sufficient foreign currency reserves to finance the order.

All of which left observers wondering: Is there a deal or not?

Talbot says its negotiations with NCC centered around a $1.5 billion deal to supply 100,000 kits a year for five years. Additional spare parts for existing Paykans, Paykan pickup adaptations and drive-trains for locally assembled Mazda pickups would net an additional $500 million.

There seems little doubt, though, that anything NCC wishes to do would require the full blessing of the country's religious leaders.

Talbot is confident the much-needed order will go through. But an executive from a rival company—perhaps exhibiting a touch of jealousy — remarked, "I'll believe it when it happens, and only then."

More auto plants close in Belgium

British Leyland ended operations at the Senefie assembly plant on March 31, thus closing a period of industrial activity in Belgium that began with Standard Vanguard assembly in 1950.

It was the second severe blow to Belgium's auto industry, for in December, 1980, Citroen closed its assembly plant at Forest, Brussels, which had been opened in 1926.

Worse may be yet to come. Renault has a big factory at Haren and has told the Belgian authorities that operations cannot continue at the present rate unless Belgium takes effective action to reduce its imports from Japan.

GM to cut back product line at Delco in Britain

General Motors, Ltd., is abolishing production of spark plugs, alternators and air cleaners at its AC Delco operation in Britain, following sharply falling demand both for British and European GM cars.

Sales of vehicles by GM were off 14 percent on a retail basis in Europe in 1980. They continued to plummet, falling 17.3 percent during January-March, 1981, compared with a year earlier, a GM spokesman said.

The United Kingdom plant supplied both British and European-produced GM cars.

The drop in sales was further complicated by the strength of the British pound and a high 12.5 percent British inflation rate—both of which had been driving up the costs of British-produced parts vis-a-vis those in other European countries, a spokesman said.

GM said 1,000 workers would lose their jobs, equal to 13 percent of AC Delco's total employment in Britain, as a result of the move.

GM had previously trimmed 450 other jobs at the Delco operation and had announced plans to trim 5,700 out of 29,000 employes at Vauxhall Motors, another British subsidiary.

world news briefs

Ford in better shape

Ford's European sales in the first quarter of this year (346,000) equal the company's alltime record first quarter of 1979. The total European market has fallen by over 7 percent in the same period, reports Sales Vice President William P. Benton.

More for Fiat, less for Renault

Fiat is to buy Renault's 24.5-percent stake in the Sofim diesel business in Italy. It takes Fiat's share to 95 percent, the remainder being held by Alfa Romeo.

Iron Curtain parts for the Japanese

East Germany is about to buy 10,000 Mazdas from Japan worth an estimated $40 million. It represents a sales breakthrough in Eastern Europe by the Japanese.

Eaton goes to India

Eaton Axles is setting up a joint company with Wheels India and Sundaram Finance to manufacture medium and heavy-duty truck axles in India. Phase 1 comes into force within the year.

Alfasud's hatchback near

The hatchback version of the Alfasud sedan is to be launched next month. Meanwhile, last year's company report indicates that the Alfasud plant at Pomigliano d'Arco registered a loss of approximately $65 million, sufficient to offset profits at Arese, Milan.

UK unions say 'No' to Ford

Ford of Europe, trying to introduce Japanese-style quality circles in all its plants, has had the idea rejected by UK union leaders. The concept, part of what the company calls its "After Japan," or AJ, program, has been introduced in many of its German and Spanish factories.

Renault's new vans make gains

Renault's recently introduced Trafic and Master light vans have helped the company improve sales in the opening two months in France. Registrations were up 16 percent, on a market improvement of 3 percent. Trafic is being made at a rate of 220 a day, Master at 60 a day.

Fiat plans cutbacks

Fiat is to cut two separate weeks' production in June and July. A total of 68,000 workers will be affected. The only output not involved will be the economy Panda and Autobianchi A-112.

Scania lands Algerian order

Scania-Bussar has won a $53-million order for 457 intercity buses from Algeria's national bus company. A $5.5 million order for 100 Leyland Landtrains has been won in Nigeria. Leyland calls it a "major breakthrough" for its Third World export heavy truck.

BMW profits fall

BMW reported after-tax profits of DM160 ($71) million last year compared with DM175 million the previous year. Sales rose nearly 10 percent to $3.6 billion.

Renault men move in

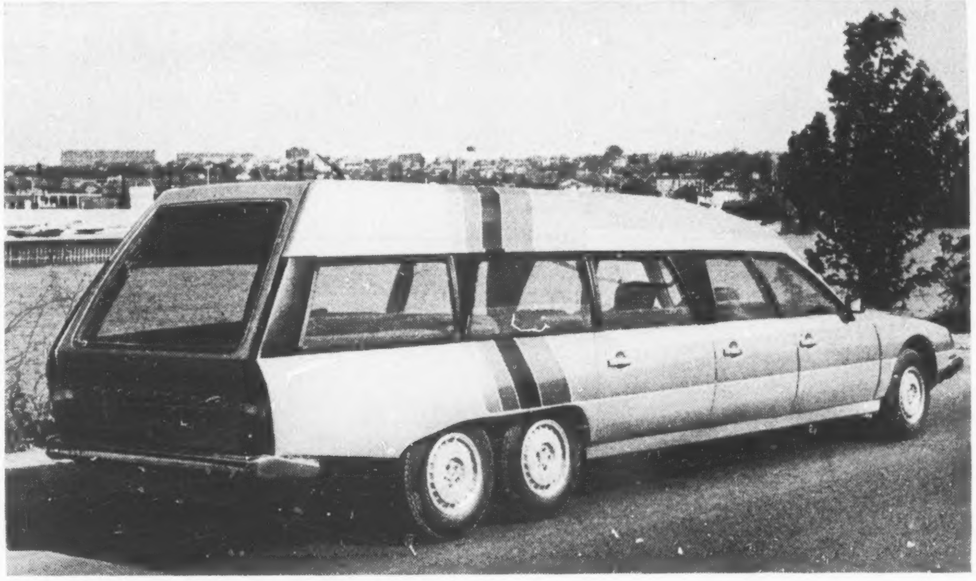
Following Renault's 50-percent acquisition of Peugeot SA's truck interests in Europe, new top men have been moved into the UK and Spanish manufacturing divisions. Laurent Brisset becomes chairman of what is now Karrier Motors in the UK and Jean Rigollet becomes managing director of Spanish Dodge operations.

Big dip in Belgium

New auto registrations in Belgium dropped 24 percent in the opening quarter of this year. To the end of March 100,737 cars had been registered, including 27.2 percent Japanese, compared with 20.5 percent in the year-earlier period.

Rennes assembles 2-CV

Citroen's Rennes factory will assemble an additional 60 2-CV models a day, beginning in June, following the closure of the company's Belgian factory.



When an auto becomes a bus

The French company Tissier has stretched a Citroen CX diesel station wagon to create a 14-seater coach. In addition to the extra pairs of wheels and doors, the 274-inch-long vehicle has a payload of 3,300 pounds and an all-up weight of 7,700 pounds. It was shown at the recent bus and coach exhibition in Nice.

They'll bow over next 24 months

Renault incubates new models

Renault plans to invest 3.7 billion francs (about $745 million) in new-model development and production facilities during the 1981 calendar year, and is budgeting a sum of 4.6 billion francs (about $935 million) for the same purpose in 1982.

New models of many types and sizes will make their appearance in the coming 24 months. First comes the car with the code name 142, a compact family sedan that will probably be marketed as the Sierra.

It is the European version of the car American Motors will build in 1983.

It has nothing in common with either the R-18 or the R-20, but is based on the R-14 concept, with transverse engine.

The Sierra can be regarded as a direct replacement for the R-16 that was discontinued a year ago, and as a direct competitor for the VW Passat, Fiat 131, Talbot 1510 and Peugeot 305. The 142 (Sierra) will make its debut at the Frankfurt Auto Show in September.

At the same time, the Turbo Fuego can be expected, sharing the power train with the R-18 Turbo.

About a year later, Renault will launch two new economy cars. Both are in a sense, replacements for the now-defunct R-6, one lower-priced hatchback and one up-market notchback, each planned with engines of 1,100 cc and 1,300 cc.

Renault's minicar project apparently continues on an open-ended schedule. Renault's marketing people report that there is a growing demand for a modern car, smaller than the R5, which should not be left to the Japanese (Daihatsu Cuore or Suzuki Fronte/Cervo are already on sale in Switzerland) to mop up.

Renault denies having an R-2 coming down the road, but admits that several small-car projects are under study.

The research branch is working on a multifuel two-stroke engine whose development has been farmed out to Moteur-Moderne, but that is clearly a long way from production.

Automotive News

But market penetration sets a record

Import registrations dip for month

Registrations of new imported cars in January were down from year-ago levels, but their market penetration was a record for the month. That happened because registrations of domestic cars declined at an even greater rate.

Registrations of new imported cars in January totaled 174,242, down 14.29 percent from 203,302 in 1980, according to figures compiled by R. L. Polk & Co.

Import penetration of the January new-car market was 27.38 percent, just edging by the former (1980) record of 27.00 percent. Total import and domestic registrations for the month were 636,488, compared with 753,106 the preceding year.

Four of the top five imports increased their shares of the imported-car segment of the market; Datsun was the only one to come up short.

Toyota, again number one, was up 0.23 percentage points to 23.78 percent from 23.55 percent, although its actual numbers were down to 41,427 from 47,887 last year. Second-place Datsun was down 2.52 percentage points, to 18.02 percent from 20.54 percent.

Honda helped itself to 16.52 percent of the import segment, up 2.61 percentage points from 13.91 percent. Volkswagen had 9.62 percent, up 0.60 percentage points from 9.02 percent, and Mazda was up 1.19 percentage points to 8.22 percent from 7.03 percent.

VW registrations include both imported cars and those produced in this country by Volkswagen of America.

Subaru's share increased to 5.40 percent in January from 4.90 percent a year earlier. Mercedes-Benz squeezed past its year-ago share, to 2.37 percent from 2.27 percent. Volvo, earning 2.14 percent, and Audi with 1.66 percent, were eighth and ninth in ranking this year whereas they were not among the top 10 in 1980. Arrow/Champ was 10th, with 1.57 percent of the import total, down 1.20 percentage points from 2.77 percent last year.

The top 10 imports accounted for 89.30 percent of the January registrations, compared with 89.85 percent a year earlier.

By country of origin, Japan continued its firm grasp of more than three-quarters of the import market segment, with 75.94 percent of the total, down slightly from 76.31 percent a year earlier.

German penetration remained stable, with 17.76 percent this January compared with 17.59 percent in 1980. France increased its share to 1.92 percent from 1.20 percent, while British imports slipped to 0.60 percent from 0.84 percent.

The Italian segment of the import market dropped to 1.09 percent from 1.52 percent a year ago. Passenger cars from Sweden accounted for 2.69 percent of import registrations, up from 2.54 percent.

Registrations by country of origin in January with year-earlier figures in parentheses were: Japan, 132,321 (155,130); Germany, 30,972 (35,770); Sweden, 4,684 (5,167); France, 3,335 (2,433); Italy, 1,887 (3,097), and Great Britain, 1,043 (1,705).

Registrations of imported light trucks in January totaled 31,587, down 27.50 percent from 43,574 a year earlier.

Registrations of imported trucks in January by nameplate with year-earlier figures in parentheses were: Toyota, 7,995 (11,341); Datsun, 6,495 (8,979); Chevrolet LUV, 5,134 (8,275); Ford Courier, 4,613 (6,640), and others, 7,350 (8,339).

IMPORT REGISTRATIONS SHARES IN U. S.

Jim Foreman expands

SPRINGFIELD, O.—Jim Foreman, president of Jim Foreman Pontiac-Datsun, has built a new showroom adjacent to his other facilities. The 1,200-square-foot, $85,000 structure will be used to display Datsuns.

Sale of 'as is' used cars proposed in Massachusetts

BOSTON. — Used cars could be sold "as is" if they cost $1,200 or less, under a bill filed in the Massachusetts Legislature by Senator Philip L. Shea, of Lowell.

But State Consumer Affairs Secretary Eileen Schnell is bitterly opposed to the proposal, noting that only four states allow the suspension of implied warranty in the sale of used cars. They are Kansas, Maryland, Mississippi and West Virginia.

"Why should we leave the company of those states that are in the forefront of protection of consumers in this area?" she asked during a hearing.

Shea has said that he hopes in future bills to increase the dollar amount to perhaps $3,000 under which a car could be sold "as is."

Shea's current bill is being supported strongly by the Massachusetts State Automobile Dealers Assn. in a plan under which a car would be clearly marked to be sold "as is" with no implied warranty.

Shea claimed the bill would benefit the consumer through an increase in affordable cars. He said it would help the dealers since they would not have to spend a lot of money reconditioning cars, and thus add that cost to the price of the vehicle.

Senator Samuel Rotondi, of Winchester, sought to have the bill killed or tabled. He said that to let the bill go through in its present state would give the dealers no incentive to take care of safety-related repairs.

Shea has been pushing his bill for several years, and each time it has failed to make the grade.

Plaza Motor Co. opens its doors

The opening of Plaza Motor Co. in Creve Coeur, Mo., was recognized officially as Mayor Dielman cut the ceremonial ribbon. Participants before the new showroom full of Mercedes-Benz, Porsche and Audi passenger cars are, from left: Fred Saur, Plaza Motor Co. president; Don Moeller, Graystone Construction Co.; Lou Chiodini, architect with Chiodini & Associates, and F. A. Pandjiris, dealership general manager.

42 pct. lower than 1979 levels

3-month truck registrations dive

Continued from Page 10

slump after the first quarter that year.

Group 1 tallies through March were down 14.8 percent, from 290,526 in 1980 to 247,400, while the Group 2 total of 201,430 units was off 34.1 percent from last year's 305,866.

In 1979, there were 299,041 Group 1 registrations and 477,564 in Group 2.

Medium-truck registrations in the first three months were down 15.9 percent from a year ago and 66 percent below the total through March in 1979.

This year, the count was 12,824, compared with 15,247 last year and 37,685 two years ago.

Only three Group 3 trucks were registered in the first three months, as against 95 a year ago and 3,899 in 1979. Again, the drastic downturn reflected the slump in the RV business.

Group 5 tallies totaled 349, down 41 percent from the year earlier 592, and the Group 6 count was 14.3 percent lower, 12,472 versus 14,560. Two years ago, there were 579 Group 5 registrations and 33,207.

Heavy-truck registrations for the three months totaled 35,845 units, a decline of 27.8 percent from the 49,631 tallied a year ago. In 1979, the total was 48,336.

Group 7 tallies were down 20.2 percent, from 19,791 a year ago to 15,799, and the Group 8 count was off 32.8 percent to 20,046 units, compared with 29,840 last year.

Two years ago, the Group 7 total was 10,852, and the Group 8 figure 37,484.

The era of

THE DATABANK HANDHELD F & I COMPUTER IS HERE

Databank Corporation has developed a line of handheld computer systems, including one for auto F&I calculations. The Databank computer is a FRACTION OF THE COST of previous F&I computers. It is also VERY SIMPLE TO USE.

What it is

About the size of a check book, the Databank computer lets you answer your customers' questions about monthly payments, interest, down payment, etc. anywhere an answer is required (on the phone, at your desk, or even at the car). The Databank is TOTALLY VERSATILE, ACCURATE, AND PORTABLE.

How it works

To enter $1,000 as a down payment, for example, simply push "1000" on the Databank number pad, then push the clearly labeled "down payment" key.

Once you have entered the desired combination of auto finance variables (such as down payment), just push the "monthly payment" key, and the Databank will produce an accurate monthly payment.

Customer change his mind? Want to rework a deal? No need to reconstruct the whole thing. Just enter the changed variable(s), push the "monthly payment" key, and let the Databank do the work.

Want to do a monthly payment rollback? It's easy. Just enter the desired monthly payment and let the Databank rollback into a complete disclosure.

When you're ready for a full disclosure, the first time on a deal or the tenth —simply press the "disclosure" key, and Databank will display a COMPLETE and ACCURATE DISCLOSURE, one item at a time.

Ferrari added

ST. LOUIS.—Brentwood Volvo has added the Ferrari line.

Exchanging views

Although they voiced some sharply contrasting views at a "grass roots" auto seminar in Elmira, N. Y., industry figures shared a joke, as well. From left, are NADA President Wendell Miller, AIADA President Robert McElwaine and Ford Vice President Wayne Smithey.

Rural N. Y. dealers stage day-long seminar

'Grass roots' hears industry issues

ELMIRA, N. Y.—Eleven dealers in rural, upstate New York attracted major auto industry figures and 140 participants for a one-day "grass roots" seminar on where the industry is headed.

The Chemung County Auto and Truck Dealers Assn. organized what it called The Elmira Conference, which attracted dealers, lessors, potential customers and industry representatives from New York and northern Pennsylvania.

NADA President Wendell Miller told the group the current auto trauma appears to be temporary, and he predicted the rest of the decade will be an "exciting and innovative period" because of new products. It will be very profitable for dealers who survive, he predicted.

Inflation and high interest rates are serious deterrents to his optimistic forecast, Miller said. He pointed to the sharp breach between dealers and factory over prices.

On the most recent General Motors price increase, Miller said: "It was totally irresponsible and the timing was ridiculous—coming just as the Administration was on the verge of announcing what it was going to do for the auto industry."

Robert McElwaine, president of the American International Automobile Dealers Assn., reported on the resentment he witnessed in Japan because the Japanese saw no evidence of the U. S. industry making sacrifices while it was demanding import restraints.

Wayne Smithey, Ford Motor Co. vice president of Washington affairs, outlined his company's stance on the Japanese issue and called for changes in the emissions regulations.

Barry W. David, manager — national dealer lease and finance, GMC Truck & Coach Division, outlined the pros and cons of leasing and truck rental.

Patrick A. Brescia, Northeastern Regional sales manager, Ford Division, took a look at the future of the auto and the demographics of auto buyers.

Truckers report on fuel savings

Continued from Page 10

states currently banning 65-foot twin trailers were to permit their operations, she noted, and savings of 51 million gallons would be possible if Arkansas, Illinois, Indiana, Missouri and Tennessee raised their weight limits to the 80,000 pounds that is the federal standard.

She said the ATA is completing a study that is expected to show that for comparable freight movements, the relative energy efficiency of rails to trucks is 1.3 to 1 for fuel-efficient tractor semitrailers at 80,000 pounds, and 1.2 to 1 for fuel efficient twin-trailers at 80,000 pounds.

Heavy-truck registrations rise, but not to 1980 level

Continued from Page 10

fewer than the 48,336 units registered in the first quarter of 1979, the best year ever for heavy trucks.

Group 7 tallies in March totaled 5,377 units, down 20.5 percent from the year-earlier 8,765. The three-month count was off 20.2 percent to 15,799 units, compared with 19,791 in the same period in 1980.

March registrations of Group 8 trucks were off 32.5 percent, from 10,111 units a year ago to 6,820. Through March, the total was 20,046, a decline of 32.8 percent from last year's first quarter.

International's three-month total of 9,306 registrations accounted for almost 26 percent of the industry total, compared with 17.92 a year ago on 8,880 tallies. International's share was up 8.04 percentage points over a year ago.

No. 2 Ford, the industry leader in 1980, had 7,850 tallies through March, down 26 percent from last year's 10,620 units. Despite the slump in registrations, Ford's penetration was up 0.47 points.

The biggest losses in penetration were suffered by GMC and Chevrolet.

GMC's share of the industry total in the first quarter dropped 3.59 points, from 16.56 percent in 1980 to 12.97 percent. Chevrolet acounted for only 6.66 percent of the total this year, down three points from the year-earlier 9.66 percent.

'Steal-on-order' ring broken in Boston

BOSTON.—Police have broken another "steal-on-order" car-theft ring in Boston.

Nine people, including two former federal police officers at the U. S. Capitol, were arrested after the Suffolk County Grand Jury handed down secret indictments charging them with participating in a luxury-car theft ring. Investigators recovered $130,000 worth of expensive cars, including a BMW, a Cadillac and a Mercedes-Benz.

Group calls for federal funds

Highway repair needed for growth, HUF says

WASHINGTON. — America can't have a first-class economy with a second-class highway system, a spokesman for the Highway Users Federation told House and Senate subcommittees.

Completion and preservation of the Interstate System and funding for primary highways and bridge repairs should be federal priorities, J. C. Landen, HUF chairman told a subcommittee of the House Public Works and Transportation Committee. His remarks, concerned HR 3210, a proposed one-year highway bill.

Limited dollars make it "essential to concentrate on those facilities of greatest use to the greatest number of travelers, shippers and carriers," Landen said.

He urged permanent extension of the Highway Trust Fund, which finances some federal-aid highway projects.

Landen said HUF supports proposed highway funding ceilings to help stabilize the national economy and reduce inflation.

He called the bill "a needed first step to keep the federal-aid program moving at a responsible level while long-range highway policy is reviewed in greater detail."

Landen expressed reservations over proposed changes to the Interstate 3-R apportionment formula, which provides funds to resurface, restore and rehabilitate deteriorated segments of the system.

"Changing the apportionment formula for a one-year period may prove counterproductive," he said.

Landen's remarks were expanded in testimony before the Transportation Subcommittee of the Senate Committee on Environment and Public Works, concerning long-term highway funding proposals.

Landen said "completing and preserving the Interstate System is the single most important federal highway obligation."

He supported stabilizing future cost estimates by adhering to the mileage, design concepts and other construction features in the 1981 Interstate Cost Estimate. He recommended Congress set a 1990 goal to fully repair all bridges on federal-aid highway systems.

Landen also testified in favor of more funding for Interstate upgrading and preservation, proposing that the federal share be increased from 75 to 90 percent.

Consolidated highway safety programs would simplify and streamline delivery of federal-aid funds, as well as provide more state flexibility in dealing with safety problems, Landen said.

HUF is a coalition of businesses, industries and associations.

DeLorean backs federal aid on R&D for small business

WASHINGTON.—John Z. DeLorean, a bit of an innovator himself, thinks Congress has a good idea in proposed legislation that would require federal agencies with research and development budgets of more than $100 million to earmark one percent of those funds for small business.

Introduced by Republican Senators Lowell Weicker Jr., of Connecticut, and Warren Rudman, of New Hampshire, the bill's intent is to use small, innovative firms more effectively in federal research and development and to attract private capital necessary to get new technologies developed with federal funds into the marketplace.

Robert Benjamin, a director of DeLorean Motor Co., said he had been asked by DeLorean to express to the Senate Committee on Small Business his strong support for the measure because "he fervently believes that small business holds the key to future innovation in this country."

Benjamin said innovators are frequently punished in large corporations for threatening the position of their bosses and frequently suffer in small businesses for lack of funds to carry their ideas to fruition.

"Inadequate access to private capital and delays in obtaining or unavailabiilty of government financing results in many of this country's most promising new ideas never being added to society's pool of industrial arts knowledge," Benjamin said.

"I believe this legislation is a step forward toward encouraging American small businessmen to bring into production innovations that might otherwise die on the vine," he said.

Insurer offers rewards for stolen-car recovery

HARTFORD. -- Aetna Life & Casualty Insurance Co., which was involved in auto theft in 1980 to the whopping total of $25 million, is offering cash awards to company employes identifying insured, abandoned vehicles that are recorded as stolen by the National Automobile Theft Bureau.

Any of Aetna's 38,000 employes providing information leading to recovery of a stolen vehicle insured for theft by AL&C will get a $50 reward. A reward of $25 will go to those involved in recovery of a stolen vehicle theft-covered by another insurance company.

EPA fuel snafu scratches '81 Volvo diesel for U.S.

WASHINGTON. — For want of a little extra time, Volvo will not have any diesels to sell in the U. S. this model year.

The company had wanted to certify its popular diesel model for all 50 states this year but ran into problems at the EPA testing facility in Ann Arbor, Mich., not for failing to meet the requisite emission standards but because of calibration problems.

The 1981 Volvo diesel met the emission standards at Volvo's laboratory and at an independent laboratory but not at EPA's. A lot of head scratching and refiguring eventually showed the problem to lie with EPA's test fuel but by then the company had missed the "build window" on the car for the 1981 model year.

Volvo of America sold approximately 5,000 diesel-powered models in the U. S. in 1980 despite entering the market late in the year. It has a few left over and is portioning these out to its dealers but concedes it will be out of diesels for some time.

According to a spokesman for the company, no new diesels will be available until late September or early October.

The company decided to skip the 1981 model year and introduce the cars as 1982 models. The new cars will be somewhat more fuel efficient and, while not drastically different from their predecessors, will be somewhat better appointed.

Domestic makers schedule 160,398 cars

Auto production declines for week

By Patricia Hoffman
Staff Writer

U. S. auto production last week slipped below the previous week's total, the first such decline this month. The week's total, however, remained above the comparable 1980 week's output.

The domestic manufacturers scheduled 160,398 cars last week, down 6.98 percent from the 172,443 built in the previous week, but up 33.86 percent from 119,827 completed in the comparable week last year.

So far this year, the makers have built 2,729,857 autos, down a slight 1.62 percent from the 2,774,920 assembled through May 24, 1980.

Breakdown for last week by company is: General Motors, 62.28 percent of production; Ford Motor, 22.29 percent; Chrysler Corp., 10.91 percent; Volkswagen of America, 2.59 percent; American Motors, 1.87 percent and Checker Motors, 0.06 percent.

Daily overtime was scheduled last week at Ford's Dearborn, Wixom, Metuchen, Wayne, Louisville, Kansas City and Atlanta plants.

The Louisville, Kansas City and Atlanta assembly plants also worked last Saturday.

Overtime is slated this week at 10 assembly plants.

Chrysler's Belvidere, Jefferson and Newark points will all work nine-hour shifts this week (May 25).

Ford's Atlanta, Dearborn, Metuchen, Wayne, Wixom, Louisville and Kansas City plants are on overtime schedules this week with Kansas City, Atlanta and Wayne also working Saturday (May 30).

VWoA has scheduled production cuts at its Westmoreland plant effective June 8. It will be the first production cut for the U. S. car plant since it began building Rabbits in 1979.

Output at the plant will be reduced from 1,120 units per day to 752 per day, and 240 workers will be put on indefinite layoff.

The plant will be down the week of June 1 in preparation for the cuts.

GM's Detroit (Cadillac) point will resume two-shift operations tomorrow (May 26).

Pirelli and Dunlop Tire split after years of drifting

By Jan P. Norbye
Staff Correspondent

The vagueness of their formula for cooperation, which is now in its 10th year, is perceived as the major cause for the split between Dunlop and Pirelli.

Their failure to have reached agreement in advance on how to deal with business setbacks, outside partners and financing of new product development always posed a grave menace to the stability of the union. In recent times, Pirelli's dissatisfaction with the arrangement led to new negotiations, which ended with the breakup of the partnership instead of its reinforcement.

One major point of contention of Dunlop's refusal to invest in the jointly owned Industrie Pirelli, leaving the Italian firm to shoulder the full financial burden of defending its place in the industry. As a result, Dunlop's share of the joint subsidiary dwindled from 50 to 19 percent.

The Dunlop parent company has also undergone something of an identity change. In September, 1980, Malaysian interests acquired Dunlop shares, giving them a 28-percent interest in the business (perhaps more), according to some sources.

Pirelli reacted by selling off a big part of its holdings in Dunlop, Ltd. The Pirelli parent company now owns 58 percent of Industrie Pirelli, having raised its capital stock a year ago by ceding a 23-percent stake to a consortium of creditors under Mediobanca leadership.

Now Pirelli will buy back Dunlop's share in Industrie Pirelli for an amount of 19.6 million pounds sterling, payable by the end of the 1981 calendar year.

Truck production declines but tops year-ago week

U. S. truck production last week fell below the previous week's output, but the total was substantially above that of the comparable 1980 week.

The truck makers slated 37,385 units last week, down 11.32 percent from 42,155 trucks completed in the previous week, up 46.30 percent from 25,544 units built in the comparable week last year.

So far this year, the truck makers have completed 715,345 units, down slightly from the 716,830 trucks built through May 24, 1980.

Downtime was slated last week (May 18) at two assembly plants. General Motors' Flint point was down for one week for inventory adjustments and American Motors' Toledo assembly point also was idle.

Chrysler's Warren truck plant will work a daily nine-hour shift this week (May 25).

Ford Motor scheduled daily overtime last week at its Kentucky truck point. The plant also is slated to work next Saturday (May 30).

Also at Ford, daily overtime is slated this week (May 25) at the Ohio truck plant.

Volkswagen of America has scheduled downtime at its Westmoreland truck assembly point for one week beginning June 1. When the plant resumes operations June 8, production of its pickups will be cut from 280 units per day to 188 per day. The production cut will put 60 workers on indefinite layoff.

Canadian output drops again in short work week

Canadian auto production during the shortened holiday week last week fell below the previous four-day week's output. The total for the week, however, rose above the comparable 1980 week's total.

The Canadian auto makers slated 18,219 units last week, a drop of 9.40 percent from the 20,109 built in the previous week, but up 19.71 percent from 15,219 completed in the comparable 1980 week.

The Canadian truck makers built an estimated 9,822 units during last week's holiday week, a drop of 12.90 percent from 11,276 in the previous shortened week, and down 1.96 percent from the 10,018 trucks completed in the comparable week last year.

Year-to-date, the truck makers have assembled 226,145 units, down 2.92 percent from the 232,951 trucks built through May 24, 1980.

Chrysler Corp.'s Windsor car assembly plant, down since May 11, will resume June 1, adding a second shift to begin production of the Chrysler LeBaron, Dodge Diplomat, and Plymouth Caravelle. With the additional shift, workers will be recalled from indefinite layoff.

American Motors scheduled overtime last week at its Brampton assembly point, making it the third consecutive week of 10-hour daily shifts at the plant.

Ford Motor scheduled daily overtime last week at one car and one truck assembly point.

Ford's St. Thomas car plant worked overtime last week and will continue on overtime schedules this week (May 25).

Also on overtime last week was Ford's Oakville truck point.

Stretched cab

Jim Piegue

Making the mini more maximum

Chevrolet has developed a crew-cab version of its new S-10 mini-pickup, caught in this unofficial photo. It is expected to reach the market some time after the introduction this fall of the 1982 Chevrolet S-10 and GMC mini pickups. Those trucks will offer 108-inch and 118-inch wheelbase models with a 1.9-liter four-cylinder engine and four-speed transmission as standard. A 2.8-liter V-6 and automatic will be option. A five-speed overdrive option will be added later in the model year.

Chrysler, AMC and VW in finance tieup

DETROIT. — Chrysler Financial Corp. will provide a "broad range of services related to automotive financing" for American Motors Financial Corp. and VW Credit, Inc. The Chrysler finance unit will make available automotive financing and insurance for the AMC and VW units through its home office and 100 branch offices. AMC and VW will fund and carry the receivables on their respective books. The new arrangement, due to be totally operational by the end of the year, will allow AMC, Renault, Jeep and VW dealers to have their own "in-house" finance sources. E. O. Grote, CFC president, said the company "is pleased" that it was "selected to provide the services for these two finance companies."

Early returns favor J-car; some sticker shock noted

By Joseph Bohn
Marketing Editor

General Motors' J-cars were greeted by a generally strong public reception, but some dealers reported spotty sales and price resistance, attributed principally to a sluggish economy.

The new subcompacts—Chevrolet Cavalier, Pontiac J2000 and Cadillac Cimarron — went on sale May 21.

J-car sales in the Great Lakes and Eastern states, for example, where the auto market is flat, appeared to be weaker than in the Western and Southwestern areas, though even there the economy appears to be slowing.

Dealers are generally holding out for full sticker price, but in Detroit, some dealers have already begun discounting the new cars from $100 to $300.

Dealers and shoppers like the styling, quality and overall appeal of the J-cars, and there were reports of more import-owner shoppers, with a heavier mixture of women than ever before.

The only complaints were of price resistance in some cases and overall shortages of product which afflicted most dealers.

One Pontiac dealer, who asked to remain anonymous, thought GM was somewhat "arrogant in its pricing of the car." He felt GM's pricing generally was "showing up in Chrysler and Ford gaining momentum."

"We've got better products, but we're being out-merchandised," he said.

Added a Detroit-area Chevrolet dealer, "It's a nice car (Cavalier), but I wish it were a grand cheaper. People are looking for something cheap, no matter how well loaded it is."

Alex Poirier, sales manager for Bob Sellers Pontiac, Farmington Hills, Mich., said, "People love the car. They're very impressed with the quality," but added that his dealership, too, had encountered price resistance.

"I lost more deals on opening day than I wrote," he said. "People put deposits on the car, pending price announcements, then cancelled after they announced the prices." He had delivered two out of 10 J-cars and had orders for two more, as of mid-week.

- Jim Fresard Pontiac, Royal Oak, Mich., which sold nine of its 10 J-cars and had orders for 45 more, also encountered price resistance.

But Sales Manager Jim Waldron said he saved some of the early cancellations by pointing out to people these were '82 models and "they accepted this as an '82 price."

Waldron was encouraged by the speed at which his cars were moving out, based on discounts of $100 to $300 in some cases, and also the fact that not one had been back for a minor adjustment.

"To me, that incredible," he said. "Based on history, if something's wrong, they're back the next day. It's a pleasure to have had no complaints."

Price resistance even showed up a bit in Dallas, but came mainly from domestic-car owners "who are used to buying full-sized cars and don't understand the price" on J2000, observed Ray Hubbard, sales manager for Eagle Pontiac.

"People buying imports don't give us any static . . . Import buyers think it (J2000) is a bargain," Hubbard added.

He said he'd had three or four

White House lethargy alarms Air Act movers

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Congress in general—and Michigan Rep. John Dingell in particular—are expressing concern about the speed and the way the Reagan Administration is going about its plans to change the Clean Air Act.

While meetings have been held with affected parties and more are to occur, there is no consensus and the Administration plan—set for the end of June—may come so late that Congress cannot complete its work before the act expires Sept. 30. What has been happening is that desultory oversight hearings in both House and Senate have been held with no input from the Administration or EPA.

The Senate Committee has now announced hearings on June 23 and 25 to deal with auto emission standards, ones which the industry wants eased. The National Commission on Air Quality recommendations—one of which is to relax carbon monoxide requirements—are all in place. So are the published desires of the industry to average emissions across the fleet—various "bubble" concepts.

Meanwhile, the Administration is considering some kinds of drastic overhauls — in opposition to statements from both Senate and House chairmen that the Act needs "fine tuning" but not major changes.

The Administration is considering a "two-car" strategy within the White House itself. Another group, headed by Interior Secretary James Watt, is addressing problems of the auto industry but so also is a group of deregulators headed by Vice President George Bush and so is yet another team within the Office of Management and Budget.

- All this confusion and delay has caused Dingell to complain that the White House is jeopardizing the Congressional schedule. Both stationary source industries as well as the auto industry, Dingell notes, have "serious time constraints placed on them which affect manufacturing and construction planning and costs and, of course, jobs."

He urges the Administration to make its proposals in early June, especially since new EPA head Ann Gorsuch has been confirmed. Dingell is also concerned about reports that the Administration's clean air pol-

With pact to buy diesels, develop new car for 1986

Chrysler moves a big step nearer to Peugeot

By Edward Lapham
Financial Editor

Chrysler Corp. last week took another step toward securing its future by agreeing to purchase Peugeot diesel engines and jointly develop a compact car for 1986 for the French auto maker.

The companies called the agreement "a further step in the implementation of the principles covered in the February, 1980, letter of intent to develop long-term industrial and commercial cooperation between the two groups."

The agreement, under which Chrysler will buy 450,000 high-performance 1.9-liter four-cylinder engines over a 5-year period beginning in the '84 model year, is in addition to an agreement to purchase 1.6-liter gasoline engines from Peugeot.

Chrysler sold its European subsidiaries to Peugeot in 1978 for $230 million cash plus 1.8 million shares of Peugeot stock. The stock is now security for a $100 million loan made by Peugeot as part of Chrysler's federally approved survival plan.

"Other than Ford and General Motors, Chrysler now becomes the first three-legged stool, with one leg in the U. S., one in Europe and one in Japan," said John Muir & Co. auto analyst Arvid Jouppi. "Chrysler, Peugeot and Mitsubishi have become world contenders.

"They have realized that if you're not strong enough to conquer the world yourself, you need to form an alliance."

The analyst said Chrysler, which has about a 15 percent equity in both Mitsubishi and Peugeot, is in a strengthened position because it will be acquiring product and technology from Europe and Japan.

"Chrysler is not only a leg on the stool, it also can play umpire and put Mitsubishi and Peugeot in head-to-head competition for access to the Chrysler dealer group," he said.

- He said he was "not surprised" that there was no mention of cash to Chrysler even though the U. S. auto maker did recently secure a pledge from Mitsubishi for cash plus technology and products in exchange for allowing the Japanese auto maker to establish its own U. S. marketing network while supplying cars to Chrysler dealers.

"The Peugeot-Chrysler car will be built here in Chrysler plants using Peugeot technology and perhaps capital," Jouppi said. "That's what Chrysler needed."

The car will be sold under separate marques by Peugeot and Chrysler.

One analyst said the Peugeot

Do-it-yourself certification possible

EPA mulls test-program changes

ANN ARBOR, Mich. — The first proposal resulting from a President Reagan Executive Order to reduce the regulatory burden on industry is one that effects most of the auto industry.

Making its way through the Office of Management and Budget, it is an EPA plan that includes changes in the fuel economy program and CAFE—Corporate Average Fuel Economy.

Michael Walsh, EPA deputy administrator, mobile source pollution control, discussed the proposal at a regular meeting with manufacturers here.

He said EPA's automotive program will be a vehicle for establishing a procedure for instituting changes such as those the President has ordered.

One technique for reducing the automotive regulatory burden may be self-certification of vehicles by their makers. Self certification is permitted already on high-altitude vehicles.

Any change from the current, highly formalized low - altitude certification procedure to a do-it-yourself method hinges on how in-use testing of vehicles shapes up, Walsh indicated.

If the agency becomes committed to in-use testing, it is possible the current certification program could be eliminated or made into a self-certification system.

• Walsh said EPA is evaluating proposals made by the Engine Manufacturers Assn., the Motor Vehicle Manufacturers Assn. and individual manufacturers such as General Motors and Volkswagen.

Walsh said he was not prepared to describe any self-policing setup in detail. However, he did say it would eliminate some requirements for testing and reporting. It also would cut costs and reduce paper work. The number of data vehicles needed per engine family also would be reduced, he said.

He said many of the moves EPA is considering are policy changes rather than regulation changes and rapid progress may be made on them.

Walsh said he has not yet had a chance to present proposals to Anne M. Gorsuch, who was sworn in May 20 as EPA administrator.

VW only maker to miss out on mid-month sales increase

By Jenny L. King
Staff Writer

The domestic auto industry showed surprising strength in mid-May, reporting a 22.63-percent sales increase compared with May 11-20 a year earlier, and a 42.24-percent jump compared with the first 10 days of the month.

U. S. auto makers sold 191,778 new cars during the nine-selling-day period, with a daily average of 21,309. That compared with 156,386 units a year earlier and a 1980 daily average of 19,548 based on eight selling days. Only 134,823 new cars were retailed in the first period in the month.

Four of the five major auto makers enjoyed mid-month sales gains while Volkswagen continued its two-month-long slide. General Motors sales rose 23.50 percent (9.77 percent on a daily-rate basis), to 117,074 from 94,798 last year. Ford sales were up 15.63 percent (2.77 percent daily rate), to 45,001 from 38,917.

Chrysler reported its 23rd consecutive period of improved sales. Chrysler sales numbered 20,226, up 45.85 percent from 13,868 last year (up 29.60 percent daily rate). American Motors' estimated sales of 5,000 units were up 19.05 percent over 4,200 (up 5.90 percent daily rate), while Volkswagen of America reported a 2.74-percent drop (13.57 percent daily rate), to 4,477 from 4,603.

GM earned 61.05 percent of the mid-May domestic market, up from 60.62 percent a year earlier. Ford's share was 23.46 percent, down from 24.88 percent. Chrysler sales accounted for 10.55 percent, up from 8.87 percent. AMC dipped to 2.61 percent from 2.69 percent, and VWoA had 2.33 percent, down from 2.94 percent.

Of the 14 U. S. makes, 11 reported increases over year-ago sales, and two were down. Imperial is new this year.

Plymouth sales zoomed up 78.35 percent, Dodge was up 46.42 percent, Ford was up 9.20 percent, Mercury was up 36.19 percent, Lincoln was up 29.91 percent, Buick was up 40.47 percent, Cadillac was up 6.64 percent, Chevrolet was up 0.41 percent, Oldsmobile was up 59.67 percent, Pontiac was up 32.84 percent and AMC was up 19.05 percent—all on a year-to-year basis.

Chrysler sales were down 20.07 percent, to 2,365 from 2,959, and Volkswagen was down 2.74 percent.

Ford's Escort was the best-selling U. S. nameplate during the period, with sales of 9,555 units. It was followed by Chevrolet Chevette at 9,457, Oldsmobile Cutlass at 8,587, Oldsmobile Cutlass Supreme at 8,293 and Chevrolet Malibu at 8,146.

A year earlier, the top five were: Chevrolet Citation, Chevette, Ford Fairmont, Ford Mustang and Malibu.

Year-to-date sales totaled 2,592,785, 3.60 percent below the 2,689,568 of a year ago.

Aftermarket air marketed by ARA in custom kits

GRAND PRAIRIE, Tex. — ARA Mfg. Co. announced it has developed a custom-fit air conditioning system specially designed for each model car.

All components for each vehicle — evaporator, condenser, compressor mount, hoses and fittings—come packed together, while interior parts — louvers, control panels and controls — are virtually identical in appearance and fit to factory air conditioning, ARA said.

The systems are tested in a wind tunnel at various speeds from idle to 60 MPH, and the major components—compressor, condenser and evaporator—are evaluated and sized to achieve maximum capacity. It is said to provide comfort at any speed and any temperature.

Condenser coils and brackets are tailor-made for each car model and are electrostatically painted black for long wear and a professional appearance. The refrigerant hoses are pre-cut to length for reduced installation time and include crimped on "O" ring fittings (except at compressor) for greater assurance of leak-free connections. Compressor connections have flare fittings which are also crimped on.

North Carolina OK's higher rate on auto loans

RALEIGH, N. C.—The North Carolina General Assembly has given final approval to a bill that will raise interest-rate limits on automobile and other installment loans.

The bill was enacted by the State Senate by a vote of 34-0. In North Carolina, the governor does not have a veto, so the bill will become law.

The bill raises by two percentage points the limits of interest rates on automobile and other loans.

The new limit will be 18 percent on loans of $3,000 or more; 20 percent on loans of $2,000 to $3,000, and 24 percent on loans of less than $1,500.

A light hauler from VW of Brazil

Volkswagen do Brasil has introduced the Gol Furgao, a commercial version of its small car. Rear side windows are filled in to create a small van-like vehicle. It is available with engines that burn gasoline or gasohol.

GM rips Michigan proposal on dealership locations

LANSING. — General Motors last week declared its opposition to a proposed Michigan law to allow auto dealers to challenge in court the establishment of new dealership locations and relocation of existing dealer locations.

Robert D. Burger, vice president in charge of the GM Sales and Marketing Staff, told the Senate Commerce Committee the bill is "special interest legislation which restricts competition at the retail level in the automobile industry—and it is always the consumer who ends up financing the cost of this type of protectionism."

He said similar laws have been found unconstitutional in three states and that by rejecting the bill, "the State of Michigan can be a leader in reversing the trend of unnecessary burdensome and costly special interest legislation that is hurting the unsuspecting automobile buyers of this country."

He said a study of this type of legislation in another state showed it led to a significant increase in vehicle prices to customers.

He said the bill would impede GM in serving its customers through its authorized dealers because:

1. It allows an existing dealer to prevent a manufacturer from adding an additional dealer, even where an increase in population requires the establishment of an additional dealer to provide for the needs of its customers.

2. It also would impede an existing dealer from relocating to a more convenient location if any of his competitors went to court and filed a complaint. The mere filing of the complaint would delay the action for a minimum of 18 months and probably more.

He declared the proposed law's provisions are "anti-competitive, monopolistic, needlessly expensive to manufacturers, prospective dealers, existing dealers, taxpayers and all consumers."

Burger said there are already both state and federal laws designed to protect dealers against unjust terminations or unfair practices on the part of manufacturers.

He called the proposed new Michigan statute "a burdensome over-regulation of an industry that can ill afford to be hampered in its attempts to survive the competition we are facing from abroad." And he added that "if we don't have people to sell cars, we can't hire them to build cars."

He said the proposed law would allow dealers to delay a competitor's relocation by requiring a trial.

"Given the delays inherent in litigation, very few prospective dealers have the financial resources to wait around for a couple of years while the existing dealers try to keep everyone else out," he said.

GM signs pact to build diesel plant in Mexico

DETROIT. — An agreement to build a heavy-duty diesel-engine manufacturing and assembly plant in Mexico has been signed by officials of the Mexican Somex Organization and Detroit Diesel Allison Division of General Motors.

The agreement establishes a joint venture company, Moto Diesel Mexicana, S.A., de C.V. (MDM), to manufacture DDA engines for Mexico's trucks, buses, marine and other industrial uses, beginning as soon as possible.

Signing the agreement were Mario Ramon Beteta, president and general director of Somex, a Mexican financial institution, and H. L. Smith Jr., general manager of Detroit Diesel Allison.

Partners in the enterprise will be Fomento Industrial Somex (Fisomex), the Somex enterprise handling industrial matters, and GM Fisomex will provide 60 percent of the capital. GM will furnish 40 percent.

Fisomex will have responsibility for supporting the direction and administration of MDM, with Detroit Diesel Allison providing technical support, quality control and application engineering expertise.

MDM will manufacture Detroit Diesel Series 92 heavy-duty diesel engines ranging from 230 to 460 horsepower. Various components for other DDA engines will be produced for export.

Construction of the plant will begin later this year in Aguascalientes. Full production will be under way in 1982. The plant is expected to employ nearly 900 workers, most of them from the local area. Smith said the new plant will not adversely affect DDA employment in the U. S.

New auto-parts plant to go up in Mexico

MEXICO CITY. — Officials of Motores y Refacciones, S.A., one of Mexico's principal producers of automotive parts and components, recently confirmed plans to invest $19.2 million in a new manufacturing facility in Aguascalientes.

The new Moresa plant will produce automotive motor valves. It will be Moresa's third plant in Mexico. It currently has plants in Mexico City and Cuernavaca.

A bureaucratic carrot-and-stick

How MITI calls shots in Japan

By Bob Hall
Los Angeles Staff Writer

LOS ANGELES. — MITI, the Japanese Ministry of International Trade and Industry, is supposed to work rather like the U. S. Department of Commerce.

Unlike the folks at Commerce, however, MITI is famous for spewing out so-called "policy guidelines" or "advisory notices" that are actually nothing more than suggestions that fit in with the government's policy on a certain trade or business related issue.

You don't have to follow the party line on this subject (whatever it may be) but the MITI people can be very persuasive if they want to.

You see, if Yamanashi Motors decided it didn't really want to reduce auto exports to the U. S. to 1980 levels and decided that it would increase U. S.-bound shipments by, say 85 percent, it might find it quite difficult to obtain capital improvement or whatever kind of loan from the Government - operated Bank of Japan.

MITI deals *very* intimately with the Ministry of Finance and it holds the purse strings.

MITI can also exert pressure on automakers to comply with its "suggestions" through the Ministry of Transportation's Traffic Safety and Nuisance Research Institute (that's *really* its name) by dragging bureaucratic feet on, if not withholding, vehicle type approval.

If Yamanashi Motors won't cut U. S. exports, and doesn't need any loans for plant improvement, the government can't do anything, right? Wrong.

If Yamanashi is introducing a new model to replace the maker's Gorgeous 1500 model range, MITI can *unofficially* request that the MoT ask the TSNRI to "be extra thorough" or "take extra time" with the type approval certification that is required before any car can go on sale in Japan.

If Yamanashi Motors has already tooled for and is producing the new model, but can't legally sell it, it will cost the firm a lot of money.

Better to cut exports to the U. S.

What makes all of this so insidious is that none of it is on paper. No laws are violated, because there are few if any laws written, to cover this sort of bureaucratic nightmare.

Dealer found flaws in Papal security

ST. LOUIS. — John H. Londoff, president of Johnny Londoff Chevrolet, landed on Page One of the St. Louis Globe-Democrat, in color, as a result of his recent audience with Pope John Paul II in Rome.

Londoff had attended a private and general audience with the Pope prior to the assassination attempt and had commented on the lax security in St. Peter's Square. Security during the Pope's Trinity College visit in Washington was much tighter, Londoff said.

Latest Lotus

Lotus Cars of England has produced a Series 3 version of its mid-engine two seater Esprit, which contains a number of technical improvements carried over from the Turbo Esprit. Lotus has produced more than 3,000 Esprits since the original was introduced in October, 1975. Price in its country of origin is approximately $28,300.

breaking news

Continued from Page 1

Frederick Weisman Co. Weisman owns Mid-Atlantic Toyota. Benton has been sales vice president for Ford of Europe since November, 1977. Earlier, he was general manager of Ford and LM divisions.

Low floorplan rate for GM dealers

PONTIAC. — Some 46 to 47 percent of General Motors dealers are taking advantage of a GM plan which provides them with 10.75 percent floorplan interest, according to GM President F. James MacDonald. The plan, whereby dealers pay a little extra on their invoice to get the special rate, runs out at the end of '81. MacDonald was noncommital about its renewal, saying only "it's costing us money."

Ford Germany lost $197 million in 1980

COLOGNE, West Germany.—Ford Werke AG reported a 1980 loss of $197 million compared with 1979 earnings of $206 million. Sales declined about 21 percent to $3.7 billion from $4.7 billion.

GM official to be named to U. S. post

WASHINGTON. — A General Motors official, W. A. Vaughan, is expected to be nominated by President Reagan for the job of Assistant Secretary of Energy for Environmental Protection, Safety and Emergency Preparedness. Vaughan, GM's director for energy management on the Manufacturing Staff, will report to the Undersecretary of Energy.

News roundup

AMC International and agency split

SOUTHFIELD, Mich. — American Motors International Operations and Chiat/Day Advertising, Los Angeles, jointly announced that they are ending their 14-year relationship.

Chiat/Day through its subsidiary Chiat/Day/Hoefer, had been the agency for AMC and Jeep vehicles outside the U. S. and Canada. Chiat/Day/Hoefer had been servicing the account through its San Francisco and Detroit offices.

AMC cited two reasons for seeking a new agency—growth in international markets requires an international advertising agency with branch offices in other countries, and a potential conflict from Chiat/Day's pending acquisition of a competitive automotive account, believed to be Mitsubishi.

AMC will be sending letters to a number of international advertising agencies, inviting them to make presentations.

Price fixing on repos ruled out

DETROIT.—In a consent judgment reached in District Court here, National Finance Adjustors has agreed to refrain from fixing any price schedule for repossession services, and from engaging in any conduct which would influence the formulation of any such price schedule.

Dealerships decline in England

LONDON.—The number of new-car dealerships in England declined last year to 8,884 from 9,018, according to the Financial Times. British-car networks fell 3 percent to 4,118 and imported-car dealerships were down 1 percent to 4,759.

Toyota production near record

TOKYO.—Toyota said it produced 304,152 vehicles in April 1, up 0.9 percent over the year-earlier month. Included were 212,052 passenger cars and 92,100 trucks. Passenger-car output was the second highest monthly figure in the company's history, trailing only July, 1980.

Car-price index rises 1.8 pct.

WASHINGTON.—The price index for cars rose 1.8 percent in April, according to the Bureau of Labor Statistics. This was due to the termination of rebate programs and price increases by makers, the bureau said. Auto finance charges rose 1.3 percent in April after declining 0.5 percent in March, the bureau said.

Japanese engines for Greece

OSAKA, Japan.—Daihatsu Motor Co. has started shipping its three-cylinder, one-liter Charade engines and transaxles to Automeccanica S.A. in Greece. The Greek firm is scheduled to complete a car plant near Athens this month and will receive the Daihatsu engines at a monthly rate of 100 to 200 units initially, according to the Japan Economic Journal.

Fiat outlines model plans

Vittorio Ghidella, managing director of Fiat Auto, has spoken of the new models his company will introduce between 1982 and 1984. They include a sedan Delta, Tipo 1 (baby car), Tipo 4 and the 149, which will replace the Mirafiori.

Child safety seats rejected

JEFFERSON CITY.—By a vote of 78 to 75, Missouri's House of Representatives has rejected a proposal that would have required parents or guardians to provide automobile safety seats for children under 4. Some of the opposition came from lawmakers who were worried about too much government interference and also were concerned about cost.

Hyundai, Dacia to enter UK

LONDON.—The new-car market is tough in the UK, but nevertheless new entrants are on the way. Hyundai, of South Korea, will start selling cars in Britain at the end of this year. The Romanian-built Dacia is scheduled for a fall introduction in the UK, too. Early this month, the first Yugoslavian-built Zastavas were marketed here.

No. 1 spot predicted for Renault

MEXICO CITY.—Renault will become the No. 1 producer this year among the 52 vehicle-producing companies in Europe, according to Renault President Bernard Vernier-Palliez. Visiting here, Vernier-Palliez said that of the 2,050,000 cars produced by Renault in France last year, 1,102,000 were sold abroad.

Firm offers franchises

Equipment brokerage suggested for dealers

By Jenny L. King
Staff Writer

Have some used oil field equipment to sell, or need to purchase some used diesel trucks? National Equipment-Finders, Inc., Wichita, Kans., says it can match buyers and sellers for all kinds of heavy equipment, from oil field hardware to big trucks to farm machinery, even yachts.

"We do for equipment people what Century 21 did for real estate," said John Harris, president of the four-month-old used-equipment brokerage firm. National Equipment Finders is patterned after its sister organization, National Auto Finders, which, as the name indicates, brokers used cars nationwide.

Sharing office quarters in Wichita, they also share an extensive Data Point computer system which keeps track of all the information on what's for sale where. They share some stockholders, too, but the newer NEF is not a division or arm of NAF, according to Harris. It is a separate operation.

"In these difficult times we think this is the sort of business that auto dealers can take advantage of," he said. "They can broker cars, trucks, even equipment on a local or national basis either at their present business sites or in a separate office. We're talking seriously with several dealers right now."

• NEF has sold area rights for one-third of the U. S. to date and envisions a goal of 200 experienced brokers throughout North America. The cost to the new broker is $40,000. He or she then has exclusive rights in a protected "location" (generally a large metropolitan area), and will receive from NEF a computer terminal, letterhead stationery and forms, a sign for the office and complete training — now in Wichita.

"So far, oil field equipment has been our best seller," Harris said. "The next logical growth area will be diesel trucks. We understand the problems truck dealers face now and think they could make good use of one of our franchises."

NEF will not offer a franchise to just anyone with $40,000 to spend. The company requires some kind of brokerage experience of its franchisee. And although the original franchise agreement is renewable at the end of 10 years, if the terms of the agreement have been met, it can be extended "forever," according to Harris.

Already operating is a franchise in Wichita, and offices in Denver, Calgary (Alberta), Charlotte (N. C.) and Tulsa will be in business by early summer.

"There is a constant flow of used machinery," Harris said. "And this type of product both holds its value and has a long life—equipment from 1950 is still worth a lot."

• NEF handles used pieces on an "as is, where is" basis. Although prospective customers travel at their own expense to view possible purchases, NEF attempts to expedite sales by assisting with local accommodations and, when needed, transportation from the airport to the site of the equipment.

The usual broker commission is between 5 and 10 percent of the sale price. When two NEF franchises are involved it is divided between them. The seller and buyer decide the price.

Equipment to be put on sale is photographed and its specifications recorded on NEF's standard fact sheets.

"A dozen questions can nail down much of the description," said Harris. This information is fed into the computer and stored for national recall.

To avoid misrepresentation problems, NEF insists the purchaser make a personal inspection of the equipment he wishes to buy, according to Harris.

"We are the first company we know of to do this sort of thing on a large scale," he said. "We presently are answering inquiries from South America and Mexico — after all, anywhere in the world is only as far as the telephone."

Imports up, domestics down for month

Car registrations lowest since 1976

By Jenny L. King
Staff Writer

U. S. new-car registrations in February were down from a year earlier and were the lowest for the month since 1976, but the numbers were up compared with January totals and reflected gains for imports and for Chrysler Corp., according to R. L. Polk & Co.

The February tally was 675,045, the lowest total for the month since the 634,481 recorded five years ago. Registrations were up 6.06 percent from 636,488 in January, but off 3.35 percent from 701,419 in February, 1980.

Registrations for the first two months of 1981 reached 1,311,533, down 9.83 percent from 1,454,525 for the comparable 1980 period. Domestic registrations through February numbered 937,216, down 11.17 percent from 1,055,101.

Domestic-only registrations in February were 474,970, down an even 6.00 percent from the year-earlier 505,297, and up 2.75 percent from 462,246 in January of 1981.

Imports accounted for 200,075, a record 29.64 percent of the February total, up from last year's record 196,122 (27.96 percent.)

Chrysler Corp. also was up compared with the year-earlier month. Chrysler rose 2.28 percentage points to a share of 9.39 percent of the grand total. Chrysler products represented 9.10 percent of the January total.

Ford Motor Co.'s market share in February declined 0.29 percentage points to 16.12 percent from 16.41 percent a year ago. It was a greater drop than the January difference of 0.09 percentage points. Ford had 17.55 percent of all January new-car registrations.

Again the biggest loser was General Motors, which fell 3.74 percentage points to 42.99 percent of the February overall total from 46.73 percent last year. GM was down 2.49 percentage points in January on a year-to-year basis.

American Motors edged up 0.08 percentage points to 1.84 percent from 1.76 percent.

Excluding imports, domestic-only new-car registration shares in February were: GM, 61.10 percent; Ford Motor, 22.91 percent; Chrysler Corp., 13.34 percent; AMC, 2.61 percent, and miscellaneous, 0.04 percent.

A year earlier, domestic-only registration shares were: GM, 64.87 percent; Ford Motor, 22.79 percent; Chrysler Corp., 9.86 percent; AMC, 2.44 percent, and miscellaneous (primarily Checker), 0.04 percent.

Registrations of new cars built and sold by Volkswagen of America, while included in the AUTOMOTIVE NEWS domestic sales totals, are part of VW's import total in the Polk registration breakdown.

By market segment, standards suffered the hardest blow, while intermediates were down and luxury models were off some. Domestic subcompacts and imports were quick to pick up the slack.

Subcompacts represented 16.33 percent of the February total, up 2.75 percentage points from 13.58 percent a year earlier. Imports cornered 29.64 percent, up 1.82 percentage points from 27.82 percent. Compacts were up 0.14 percentage points to 20.84 percent from 20.70 percent.

Standard-size domestic models dropped 3.25 percentage points to 9.19 percent from 12.44 percent in February, 1980. Intermediates accounted for 19.73 percent this year, down 0.98 percentage points from 20.71 percent, and luxury cars slipped 0.48 percentage points to 4.27 percent of the month's total from 4.75 percent.

Of the domestic-only market in February, subcompacts were 23.20 percent, compacts were 29.62 percent, intermediates were 28.05 percent, standards were 13.06 percent and luxury models were 6.07 percent.

The top 20 domestic nameplates in registrations in February were:

Holiday shutdown trims total

Week's auto production is 144,012

Due to the shortened holiday week last week, U. S. auto production slipped below the previous week's output. The total, however, stayed above the comparable 1980 week's level, and without the shortened holiday period, the makers would have finally overtaken last year's year-to-date figures.

Last week's production was targeted at 144,012 units, down 11.37 percent from 162,485 built in the previous week, but up 13.63 percent from 126,739 units assembled in the comparable 1980 week.

So far this year, the domestic auto makers have completed 2,875,956 units, just a fraction below the 2,902,834 cars completed in the comparable period last year.

Saturday overtime was scheduled last week at six General Motors, three Ford and one Chrysler Corp. assembly plants.

At GM, Flint, Oklahoma City, Pontiac, Lansing, Tarrytown and Wilmington all worked Saturday last week.

Ford's Kansas City, Atlanta, and Wayne points also worked last Saturday.

Chrysler Belvidere, worked two eight-hour shifts Saturday (May 30).

Daily overtime was slated last week at Ford's Atlanta, Dearborn, Metuchen, Wayne, Wixom, Louisville and Kansas City points.

Also working daily overtime last week were Chrysler's Belvidere, Jefferson and Newark points. The three plants will continue on daily overtime this week.

Ford said it will reinstate a production line speed of 68 jobs per hour at its Dearborn assembly plant beginning today (June 1) in order to accommodate strengthening sales of Mustang and Capri. The new production rate will result in the recall of 600 hourly workers from indefinite layoff.

There is no downtime scheduled this week at GM, Ford or Chrysler.

Truck production for year to date is ahead of '80

For the first time in 22 months, U. S. year-to-date truck production exceeded the comparable year-ago level.

The last time this happened was in the week ended July 28, 1979.

Domestic truck makers slated 34,137 units during the shortened holiday week last week, down 8.88 percent from the 37,464 trucks completed in the previous week, but up 32.83 percent from 25,700 in the comparable 1980 week.

So far this year, the truck makers completed 749,561 units, up 1.60 percent from 737,761 built in the comparable period last year.

Chrysler slated Saturday overtime last week at its Warren truck facility. The truck plant will begin daily overtime starting today (June 1).

Injured driver wins $650,000 for faulty latch on '67 Fiat

WASHINGTON. — A District of Columbia jury has awarded $650,000 to a driver injured when he fell into the street because of a post-collision failure of a door latch on his 1967 Fiat 600-D.

The car was manufactured a full year before the safety standard covering door latches (Standard 206) became effective.

In the trial before Judge Aubrey Robinson, Gerald Mitchell, of the law firm of Stein, Mitchell and Mezines, maintained the latch used on the Fiat 600-D posed an unreasonable risk because it was less than the state of the art.

For exhibits, Mitchell used latches from domestic makes, which had better door latches for at least a decade.

In the mid-1950s, Congressional hearings held by Connecticut Senator Abraham Ribicoff and Alabama Rep. Kenneth Roberts caused auto makers to improve door latches midway in 1955 models and across the board for '56 models.

The SAE upgraded its voluntary standard for '62 models. The first federal safety standard became effective for cars made on or after Jan. 1, 1968.

Wyllie Gatewood suffered moderately severe head injuries when the left door latch failed after a relatively minor collision and he fell on his head in the street. He suffered some brain damage and is performing less well on his job.

The jury accepted Mitchell's argument that the Fiat, which had been nine years in production and been imported since 1964, was below the state of the art and was unreasonably dangerous.

In effect, the Fiat 600-D was believed to be a foreign encroachment into the marketplace with a substandard product. Fiat said it has not decided whether it will appeal.

AM General will no longer be figured in with North American trucks.

Canadian makers work full week; production rises

Canadian auto and truck production rose sharply last week from the holiday-shortened previous week. Output was also up from the comparable 1980 week's level.

Auto production last week was targeted at 21,713 units, up 30.71 percent from 16,612 built in the previous four-day week, and an increase of 61.43 percent over 13,450 completed in the comparable 1980 week.

Year-to-date, auto production was 364,429 units, down 3.43 percent from the 377,392 units completed through May 31, 1980.

Truck production also rose last week with a slated output of 12,315 units, up 16.83 percent from 10,541 trucks completed in the previous holiday week, and up a substantial 73.97 percent from 7,079 trucks built in the comparable week last year.

So far this year, the truck manufacturers have assembled 239,179 units, only a fraction behind the 239,892 units assembled in the comparable period last year.

Daily overtime was scheduled last week at Ford Motor's St. Thomas car point.

Chrysler's Windsor car plant, down since May 8, resumes operations today (June 1) with the addition of a second shift. The plant will begin production of the Chrysler LeBaron, Dodge Diplomat and Plymouth Caravelle.

Reagan continues Carter moves to spur Japan trade

WASHINGTON. — The Reagan Administration said it will continue programs started under the Carter Administration to open markets, especially in Japan, for auto parts makers and suppliers.

Lionel H. Olmer, undersecretary of Commerce for International Trade, told the executive body of the Motor and Equipment Manufacturers Assn. that the Joint U. S.-Japanese Trade Facilitation Committee is looking into problems in selling auto parts in Japan, instances where de facto trade barriers may exist and specific complaints.

The committee was established in 1977 to identify and eliminate impediments to U. S. exports to Japan which result from Japanese trade practices.

Used cars robust as slow sellers return to health

By Roger Rowand

The used-car market in the U. S. has undergone another of its regular—but often startling—changes in health.

Once-sickly large cars are moving in a sprightly fashion. Prices are plump and the van and pickup markets, recently doing poorly, are rosy cheeked and robust.

From Connecticut to California, new-car dealers, used-car dealers and those in the auction business told of booming used-car activity, strong prices and, ironically, a return to popularity for the big automobiles.

"Chevettes? We can't keep them on the lot but the others are moving, too," said Paul Karl, sales manager of Karl Chevrolet, New Canaan, Conn. School's out and the kids are home from college for the summer.

"There's a little bit of sticker shock on the new cars but I don't know how many people buy a used car because of it. If they see what they want they just go ahead and buy it," said Karl.

"It's a crazy world and I've gotten to think the only thing that's constant is change," said Dick Arnold, the dealer at Valley Dodge, Inc., in Van Nuys, Calif., as he talked about the used-car trade.

"It was a lack of gasoline and prices that were holding down sales and now it's only prices," Arnold said. "High interest rates and high new-car prices are what we've got and anything used that's clean is moving. Used cars are excellent."

Arnold gets his used cars chiefly from wholesalers "who scour the weeds out here," with only 20 or 30 percent coming from new-car trade-ins.

Arnold said vans and pickups are moving again.

"People that have income are buying right now," he said. "Dealers are fighting to get vans again and Chrysler had to shut down its van lines in January and February. It's a crazy world."

Automotive News records indicate U. S. truck production in January and February this year was at its lowest levels since 1965.

•"Used cars are going pretty well—anything that's clean with low mileage on it," said Jerry Burrey, partner in Hardin Motors, Inc. (Chrysler-Plymouth-Dodge), Mt. Victory, O.

"That includes the ones that are moderately large. The big barges still are slow but everything else is going good.

"Good used cars are bringing in top dollar. Omni/Horizon is selling very well but there's a good market for cars like the New Yorker — if they're clean and have low mileage," said Burrey.

Burrey said the used units the dealer does handle usually come as trades.

Deep in the heart of Texas, used-car sales are being punched along by a three-way combination of improving national and local economic news, a fast-approaching vacation season and the public's growing accustomed to once-appalling new-car prices.

That is the opinion expressed by Rick Sowder, used-car man-

Service Index rises again

By Francis J. Gawronski
Service Editor

With all indicators showing increases, franchised new-car dealers' service and parts sales continued to show strength by registering their second straight monthly advance in April, according to the Automotive News Service Index.

Service and parts volume for April amounted to 106.5 percent of the business for the same month a year ago, and the rate of business growth in April was up over that recorded in March by 1.6 percent.

Table on Page 58.

The back-to-back increases in service and parts business over the comparable year-earlier months followed the year's only decline in February.

Surprisingly, the leading indicator in April was repair order written. ROs for the month were up 9.9 percent, the first such increase since January, 1980, when the orders were up 0.5 percent.

In the runnerup spot in April was sales of all parts and accessories with an increase of 8.2 percent over the year-ago figure.

Gross profit on all labor, parts and P&A sales—the most im-

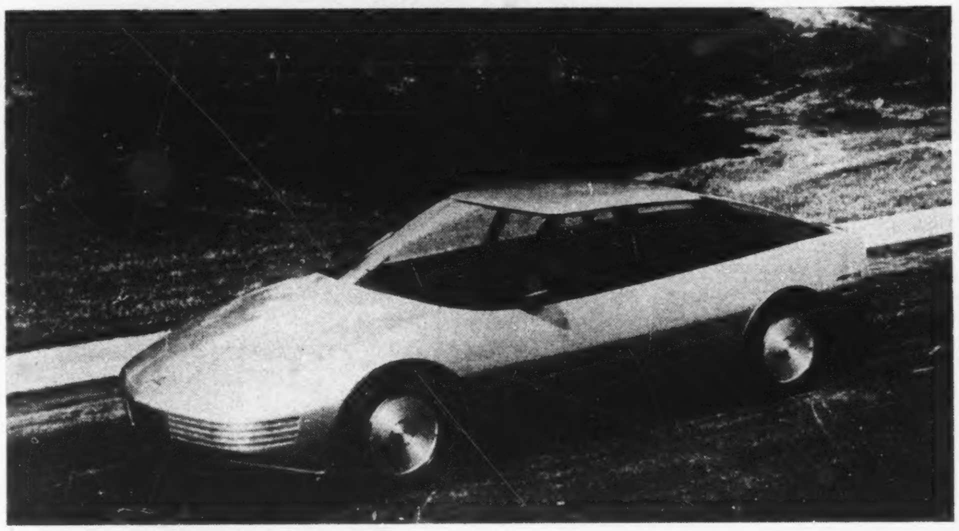
Drag? What drag?



Aero X-car from General Motors

This experimental Aero X-car is General Motors' latest in aerodynamic design. It is a four-passenger vehicle designed around the X-car. Its drag coefficient of 0.285 compares with the X-car's 0.45. It has been tested extensively in the new wind tunnel at GM's Technical Center in Warren. That sprawling facility is 25 years old this month.

Meyers says spending is right on schedule

Renault to handle AMC car design

By Kathleen Hamilton
News Editor

SOUTHFIELD. — When Wisconsin begins pumping out super-economy Renaults by the hundreds of thousands, engineers on the American Motors drawing boards will be engrossed in four-wheelers. And they are likely to remain so for the foreseeable future.

"Never is a long time," cautioned AMC Chairman Gerald C. Meyers.

Gerald C. Meyers

At some point there could be another designed to a significant degree by the Detroit team, he said. But Renault is going to take the lead in this area for some time to come.

"We're not planning on designing all new automobiles in addition to and aside from what Renault has already designed," Meyers told Automotive News.

Instead, AMC engineers will influence Renault's designs while focusing most of their attention on a new line of fuel-efficient Jeeps and successors to the four-wheel-drive Eagle automobile.

This division of labor was all part of the plan whereby Renault took a 46-percent stake in AMC. The buy-in holds some tasty promises.

While the Big 3 have lopped off or delayed product plans because of capital shortages, Renault/AMC is ready to roll with front-drive cars.

"We're not going to run low on capital," Meyers said with finality. "How can I be so sure? Because the vehicles are already on their way in, through design, some of them into tooling and some of them into production at Renault.

"Renault's cost of getting into all FWD is, of course, considerably less than that of the Big 3 companies which obviously don't have the component plants in place to build the automatic transaxles, the constant velocity joints and all the front mechanisms."

Although the market could conceivably trash today's capital spending plans, Meyers said AMC is right on schedule with its plan to spend $1.5 billion to $1.6 billion between 1981 and 1987.

Yet, the market's hijinks are nothing to sneeze at. After all, it was the plunge in Jeep sales that caused AMC to go looking to Renault for capital to build its new Jeeps, and to offer Renault almost half its equity in trade.

It was mostly the market that turned the ink red in the AMC profit and loss columns, and it is expected to generally stay that way until 1983.

Neither is today's market as enamored of the newest Renault as it could be: With eight months of the model year gone and some 6,600 sales of the Renault 18i to show for it, the French-American partnership would probably like to forget it had forecasted its sales hopes at 24,-

breaking news

Chevrolet extends truck incentive

DETROIT.—Chevrolet extended until June 10 its "Big Bonus Time" contest for sales managers. It pays up to $3,000 plus a $50 override on qualifying truck/van units. The contest had been scheduled to end May 31. There are no essential changes in the program which runs in tandem with "Truck Extravaganza," slated to end June 10.

Datsun 4WD pickups to be recalled

CARSON, Calif. — Some 41,427 four-wheel-drive Datsun pickups wil be recalled because of faulty front-wheel bearing seals, said Nissan Motor Corp. in U.S.A. Owners will be notified later this month, when dealers will have parts necessary to make the correction.

Supreme Court rules on contracts

WASHINGTON. — Auto finance companies are creditors within the jurisdiction of the Truth-in-Lending Act when they buy installment contracts from dealers, the Supreme Court has ruled. Nevertheless, the court added, statements on contracts which tell of their assignment to auto finance companies are sufficient disclosure of the companies' creditor status.

Will pass U. S. by 1995 in capital outlay, Predicasts says

U.S.S.R. seen as spending leader

CLEVELAND.—The U. S. S. R. will overtake the U. S. as the world's largest capital spending nation by 1995, according to Predicasts, Inc., a Cleveland-based business information and market research firm.

World Capital Spending, an analysis published by Predicasts Research Group, projects U.S.-S.R. capital spending will exceed $381 billion by 1995, compared with the United States' $373 billion.

Japan's level of capital spending, two-thirds that of the U. S. in 1979, will increase at more than 4 percent annually, approaching $330 billion in 1995, the report said.

Predicasts' economists said that by purchasing the best available technology, Japan has been able to "leapfrog" over the graduated steps in technological progress while modernizing and expanding capacity.

Citing innovation and quality control as factors, the study said that "by early 1990s, Japan will emerge as the indisputable world technological leader."

Also important is Japan's high labor productivity. The U. S., which had the world's highest level of labor productivity in 1963, had slipped to sixth by 1979, and will drop to 14th by 1995, the report said.

Total world capital spending will reach $2.8 trillion by 1995, with the U. S. S. R., U. S., Japan and China together accounting for 47 percent, the report said.

However, Predicasts noted that the greatest economic rate of increase will occur in the capital-surplus oil-exporting countries as well as in the recently industrialized nations of Eastern Asia and Latin America.

Mexico, in particular, will witness an above-average growth in capital spending as its mining sector rapidly exploits coal and molybdenum resources, Predicasts said.

Spending on equipment will continue to outpace that on structures, accounting for 57 percent of total capital spending in 1995, the report said.

Predicasts anticipates a trend toward more flexible, automated production/assembly and administrative systems and the increasing diffusion of electronic (particularly microprocessor) technology.

Also on the horizon, according to the study, are significant innovations in genetic engineering and biochemistry, and in steelmaking, iron and energy technologies.

World Capital Spending, a 225-page report, analyzes the capital spending outlook for more than 50 countries and regions by type of goods and by sector.

The study is available from Predicasts, Inc., 11001 Cedar Ave., Cleveland, O. 44106. The price is $825 per copy.

N.H. dealer-governor lists expenditures

CONCORD, N. H. — Former New Hampshire automobile dealer Hugh J. Gallen spent $389,080 of the $412,492 he received in campaign contributions for the 1980 state election in which he won his second term as governor.

The information is contained in a report filed with the Secretary of State. Gallen was previously in automotive retailing in Littleton.

Registrations not available for Oklahoma.

29.65 pct. of month's registrations

Import penetration sets a record

By Jenny L. King
Staff Writer

Registrations of new imported cars in February set a market penetration record for the second month in a row, according to figures compiled by R. L. Polk & Co.

Import penetration of total U. S. registrations was 29.65 percent, 1.69 percentage points ahead of the 27.96-percent share a year earlier. January import penetration was 27.38 percent, up from 27.00 percent.

New import registrations in February totaled 200,075, up 2.02 percent from the previous year's 196,122 units. Record monthly totals were posted in six months of 1980: January, February, March, August, September and November. The other six months were second best.

For the first two months of 1981, total import registrations were 374,317, down 6.29 percent from 399,424 last year.

Imports accounted for 28.54 percent of total U. S. new-car registrations in the first two months, compared with 27.46 percent last year.

In February, the Japanese led the pack with Toyota taking 23.66 percent of the import share of the market, off a slight 0.54 percentage points from its 24.20 percent in Feb., 1980.

Second-place Datsun captured 17.29 percent, down 3.64 percentage points from 20.93 percent a year earlier. Honda picked up some of the slack, climbing to 16.47 percent from 13.37 percent, Volkswagen was up to 9.32 percent from 8.41 percent, and Mazda edged ahead to 7.71 percent from 6.11 percent.

Sixth-place Subaru climbed to 5.45 percent from 4.81 percent; Fiesta was off 0.37 percentage points to 2.76 percent from 3.13 percent, and Colt dipped to 2.51 percent from 3.22 percent. Arrow/Champ earned 2.47 percent, down from 3.18 percent, while Mercedes-Benz was up to 2.11 percent from 2.02 percent a year ago.

• The top 10 imports accounted for 89.75 percent of February import registrations, compared with 89.63 percent a year earlier.

Japan continued to increase its grip on the U. S. import market in February, accounting for 76.97 percent of registrations, compared with 76.82 percent in 1980.

Registrations of imported cars in February by country of origin, with year-earlier figures in parentheses, were: Japan, 154,006 (150,657); West Germany 34,414 (33,138); Sweden, 4,918 (4,855); France, 3,232 (2,672); Italy, 2,514 (3,283), and United Kingdom, 991 (1,517).

Registrations by country of origin for the first two months of 1980, with year-earlier figures in parentheses, were: Japan, 286,327 (305,767); West Germany, 65,386 (68,908); Sweden, 9,602 (10,022); France, 6,567 (5,105); Italy, 4,401 (6,380), and United Kingdom, 2,034 (3,222).

Registrations of imported trucks in February were down 18.40 percent to 36,252 from 44,424.

Registrations of imported trucks in February, with year-earlier figures in parentheses, were: Toyota, 8,879 (11,823); Datsun, 7,377 (9,013); Courier, 5,682 (6,625); LUV, 5,284 (7,576), and others, 9,030 (9,387).

The truck import total for the first two months of 1981 was 67,839, down 22.91 percent from 87,998 last year.

Registrations of imported trucks in January-February, with year-earlier figures in parentheses, were: Toyota, 16,687 (23,164); Datsun, 13,872 (17,992); LUV, 10,418 (15,851); Courier, 10,295 (13,265), and others, 16,380 (17,726).

Olds promotes Kludt

LANSING. — Rosemary A. Kludt, 30, has been appointed assistant director of purchasing for Oldsmobile. She will be responsible for the purchasing of all non-product items. Kludt formerly was a senior divisional buyer.

$15 million computer setup to link Toyota and dealers

TORRANCE, Calif. — Toyota has signed a $15 million contract for the purchase of computer equipment from IBM that will link the company with its dealers.

Toyota said it will provide instantaneous answers for customers questions including new vehicle and parts availability and even how to finance a purchase.

It is called the Toyota Dealer Network and will connect Toyota's headquarters in Torrance with participating dealerships from the company's 1,085-dealer body in the U. S.

"The new system provides for fast and efficient processing of information between the company and its dealers," said Robert Best, corporate data systems manager at Toyota Motor Sales, U.S.A., Inc.

"Dealers around the country will now have access to information just as quickly as we get it here at corporate headquarters."

Toyota said dealers will be able to receive and send data in a matter of seconds to locate vehicles, request sales information, order critical parts and submit warranty claims for expedited credit.

In addition, the dealer will be able to use the minicomputer for conducting his own business including accounting, payroll, parts inventory, repair orders and other applications.

"The dealership service and parts departments, by using the new computer system, will be able to quickly tell if a part needed is in stock and if it's not, where one can be found and an estimate of how long it will take to get it," Best said.

"Being able to tell a customer within 10-15 seconds how long it probably will take to service his or her car can play a big part in keeping a customer happy."

Best predicted the computer system also will help dealers increase their sales.

"If a customer wants a particular car that the dealer doesn't happen to have in stock, the salesman, by using the computer hookup, can quickly see if another Toyota dealership in the area may have the particular model," he said.

"The salesman also can use the computer to work out financing arrangements."

In Chase Econometrics study

Japanese limits called no help for U. S. cars

BALA CYNWYD, Pa.—Chase Econometrics does not believe the voluntary restraints recently agreed to by Japanese auto makers are going to help the U. S. auto industry, either from a standpoint of sales or employment.

A Chase study of the impact of the agreement reaches these conclusions:

1. During the first year of import limits, Japanese manufacturers will sell 300,000 fewer cars in the U. S.

2. Only 45,000 of those lost sales will be retrieved by American-made cars. The rest of the potential customers will be deterred by the price increases caused by the limitation agreement.

3. As a result, the Japanese import limitation agreement will have a negligible effect on U. S. auto employment.

The study is contained in the new Chase Econometrics Passenger Car Outlook. It was directed by William R. Pochiluk, vice president and director of automotive services, and John H. Hammond, director of automotive market analysis.

"The constraints accepted by the Japanese manufacturers are very severe," Pochiluk said. He noted that the Japanese are limited to 1.68 million exports to the U. S. in the first year (down from 1.82 million last year) and 1.68 million plus an adjustment for overall market growth the second year.

"Since the current market demand in the U. S. for Japanese imports is close to 2.1 million units," he said, "that translates into a cutback of 15 percent, or 300,000 units, during the first year, adjusting for inventory liquidation, and 19 percent, or 400,000 units, during the second year of the import limits."

Pochiluk continued, "In order to make up their loss in volume, Japanese auto manufacturers will be forced to raise prices higher than they would otherwise had done.

"And when the Japanese car makers raise their prices, American manufacturers will follow suit. American car companies are in a financial squeeze and will move to raise prices on small cars.

"As a result, the average price paid by the American consumer for a new automobile will be 3 percent higher than it would have been in an automotive 'free market,'" Pochiluk said.

"The U. S. auto market is already highly price-sensitized," he said, " and our forecasts indicate that the additional price increase will subtract more than a quarter of a million car sales from the total for each of the next two years.

"In short, most of the U. S. sales lost by the Japanese will not be made up by the American manufacturers," Pochiluk said.

The accompanying table presents the Chase Econometrics analysis of the situation.

"THE AUTO AUCTION OF THE 80's"

Rise in ownership, operating expenses since '72 put at 160 pct.

Truck costs up 20 pct., Hertz says

Continued from Page 20

truck costs vary substantially as unit mileage totals advance, with 1980 tractor-trailer expenses ranging from less than 65 cents per mile during the first year's initial 100,000-miles to more than 78 cents in the fifth 100,000-mile use period, even assuming constant prices with no further inflation.

But if inflation boosts prices between now and 1985 at the same rate it did in past years, fifth-year outlays then will be more than $1.33 a mile. For example, the report notes, first-year upkeep costs in 1976 were just 2.45 cents a mile, but fifth year maintenance in 1980 was 15.5 cents, some 533 percent higher.

However, Evangelist said, most small-fleet operators replace some units each year, so inflation masks the high-mileage cost increases.

As another example, the study shows, while first-year expenses for a tractor-trailer purchased in 1980 came to that 65 cents per mile figure, fifth-year 1980 expenses for a combination acquired in 1976 were only 69 cents a mile, because of the lower purchase price of the rig five years ago. The lower purchase price offsets a 311 percent rise in upkeep costs for units between their first and fifth years.

The Hertz study shows that the cost of operating an 18-foot, gasoline-powered "straight truck" 15,000 miles a year in typical city-suburban pickup-and-delivery service came to almost $1.06 a mile in 1980, against 88.6 cents in 1979, a 19 percent advance.

For 15-passenger vans, typical of units used in commuter pools, the study estimated costs for 13,270-mile-per-year commutation for both four-and-7½-year ownership periods and also listed comparative per-mile and per-passenger-mile cost estimates for station wagons and sedans.

In four-year use, the per-mile van cost was about 61½ cents at 13,270 miles a year, a typical annual "van-pool" commuting distance. This compares with 38.8 cents a mile for a station wagon in the same circumstances and with just over 31 cents for a 1980 compact sedan.

(This is the same typical compact which cost 39.8 cents a mile to run 10,000 miles a year for three years at 1980 prices. By traveling more miles, per-mile expense drops, but overall annual dollar outlays increase.)

The Hertz data shows that per-passenger mile costs for the compact, assuming four accupants, would be 7.7 cents a mile at the 13,270-mile-a-year rate, while the per-rider, van-pool commuter costs would be about half that figure, or 4.1 cents a mile, for each of the 15 van occupants.

Hertz has issued vehicle-cost studies since 1973 to provide car and truck operators with a benchmark to measure their own expenses.

But the company emphasizes that a wide variety of circumstances can materially change costs for any individual unit, and for similar units in different use by different people in different sections of the country.

The company said annual percentage rises should provide guidelines against which operators can measure their own expense increases.

Also, vehicle specifications have varied slightly over the years for straight trucks, and a major change from higher-performance to "fuel-saver" units was made on the big tractors to conform with truck industry shifts to these units in the mid-1970s.

A Hertz coast-to-coast "Economy Run" for these 18-wheelers showed fuel savings of about 17 percent with the "derated" units as opposed to comparable units equipped with high-performance components.

D. W. Oates, from general manager of the Trailer Axle Division to market-development vice president of the Highway Brake and Trailer Axle Division.

Mack appoints Davis to top marketing post

Mack Trucks, Inc., has elevated **Garner L. Davis** to executive vice-president-marketing. Senior vice president-sales since 1979, he succeeds **H. Kenneth Tooman,** who has taken early retirement. Davis joined Mack in 1946 as a sales trainee at the Houston factory branch.

Joseph P. Rossetti, marketing distribution vice president since 1977, was named to replace Davis, with responsibility for Mack's domestic sales program. He has been with Mack since 1964, starting as used-truck manager at the Providence (R. I.) branch.

The company also announced the appointment of **Gary D. Johnson** as Atlantic Region vice president, with responsibility for marketing operations in Pennsylvania, Ohio, Southern New Jersey, Delaware, Maryland and Northeastern Virginia. He succeeds **Paul C. Ritter,** who has been named acting general manager of Mack Canada, Inc.

G. L. Davis

J. P. Rossetti

Dealer to factory and back again

WALLA WALLA, Wash. — Robert Ahrent has come full circle in the auto business.

In 1969, he added Subaru to his Oldsmobile dealership in Aberdeen, Wash. Three years later, he sold the dealership and joined Subaru Northwest. Then in August, 1980, he bought a Lincoln-Mercury and AMC dealership here, although staying on with Subaru Northwest.

Last month he added Subaru to the dealership and resigned from Subaru Northwest. He also has an interest in a Toyota dealership here.

Koci, Downham get new positions at DDA

Ludvik F. Koci, formerly director of diesel engine and transmission engineering for Detroit Diesel Allison Division, has been appointed general engineering director. He now is also responsible for gas-turbine research and engineering.

Donavon F. Downham, who had been director of worldwide product planning, has been named strategic planning director and has become a member of the division's Executive Committee.

Happy anniversary

HARTFORD. — A. C. Hine Pontiac-Honda, hosted a surprise party honoring general manager Perry Briggs and parts manager Ed Swietlicki on their 35th and 41st anniversaries, respectively, with the dealership.

NIASE appoints unit to oversee its HD program

Continued from Page 20

who also serve on the NIASE Board of Directors, are Donald E. Hancock, service development manager, International Harvester; Harold E. Sullivan, fleet maintenance director, Commercial Motor Freight of Indiana, Indianapolis, and Bernard C. Uhl, Uhl Truck Sales, Palmyra, Ind.

Chuck F. Charpie, public relations manager, Service Parts Group, Dana Corp., also has been appointed to the Committee. It is expected that additional members who do not serve on the NIASE board will be named to the committee.

NIASE is nine years old and the heavy-duty truck tests have been conducted for eight of those years, with 13,416 heavy-truck mechanics certified in one or more areas of specialization. Of the total number of HD certified mechanics, 7,810 are employed by truck dealerships, while 2,074 are from fleets.

"The Institute understands that HD problems differ from those of the automobile sector, and this committee will help to address those that relate to heavy-duty particularly," said Hogan.

"We expect to target promotional activities to key HD specialists, encourage HD publications to cover NIASE HD activities, and to assist the NIASE staff in increasing HD truck registrations, particularly among fleet mechanics."

New officers in Oregon

Oregon Automobile Dealers Assn. members elected officers for 1981-82. From left, they are: Jack Koken, Lithia Motors, Medford, treasurer; Allan Larsen, Larsen Motor Co., McMinnville, secretary; Howard Trachsel, Trachsel Buick-Opel, Salem, president, and Bob Murray, Murray Chevrolet Co., Gresham, immediate past president.

Service, parts business climbs for second straight month

Continued from Page 1

portant indicator from the dealers' viewpoint—showed a gain of 6.1 percent. In March, this category showed an increase of 8.9 percent.

Sales of shop parts (those used on customer-paid and warranty repairs) were up 3.5 percent, while total labor sales (customer-paid and warranty) increased 1.3 percent over year-earlier volume.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

Service and parts business in the first four months of 1981 amounted to 102.5 percent of the business done in the same period a year ago. The rate of business growth in the January-April period was up over the three-month period by 1.2 percent.

Gross profit was the leading indicator for the year-to-date period with an increase of 6.8 percent, followed by sales of all parts and accessories, up 5.9 percent.

Shop parts sales recorded an increase of 1.7 percent, while labor sales moved up 0.1 percent. Despite the healthy increase recorded in April, repair orders written in the four-month period were down 4.9 percent.

SERVICE INDEX
106.5*

	April, '81 vs. April, '80	4 mos., '81 vs. 4 mos., '80
Gross Profit on All Labor and P&A Sales	+ 6.1%	+ 6.8%
Repair Orders Written	+ 9.9%	— 4.9%
Total Labor Sales (Customer & Warranty)	+ 1.3%	+ 0.1%
Shop Parts Sales (Customer & Warranty)	+ 3.5%	+ 1.7%
Sales of All P&A	+ 8.2%	+ 5.9%

*—Survey by Automotive News shows that dealers' service and parts business in April, 1981, was 106.5 percent of business in April, 1980. Service business in the four months of 1981 was 102.5 percent of business in the corresponding period in 1980.

Stripped Rabbit to offer price edge

Continued from Page 3

for their Escort and Chevette engines.

Meanwhile, EPA has also granted Ford a waiver from the CO standard for its innovative cast-aluminum 3.8-liter V-6 engine which will replace its V-8 engines. EPA accepted the company's position that "effective emission control technology is not available to meet the statutory CO standard of 3.4 grams per mile without unreasonable risk that production vehicles will not meet emission requirements or unreasonable cost penalties."

To date, EPA has now granted waivers of the 1981-82 CO standard to 10 different manufacturers and 23 engine families. More are expected this year in light of a recent National Academy of Sciences study indicating a CO emissions standard of 7 gpm instead of the 3.4 gpm standard would not lead to any violations of the national ambient air quality standard for CO or create a significant health hazard.

IH announces second venture south of border

Continued from Page 20

personnel to assist DINA in the integration and manufacture of the Transtar heavy conventional 4000 Series and its S-Series medium and heavy models. This assistance includes the transfer of specifications, test data and manufacturing processes.

3. The supply of specific parts and components such as cab stampings and structure members, as well as service parts. They will be provided from IH's truck and component plants.

This is the second major venture in Mexico for International trucks. In 1978, IH announced that it had purchased a 40 percent interest in Fabrica de Autotransportes Mexicana, S.A. (FAMSA) for the production and marketing of IH's S-Series medium and heavy trucks.

FAMSA now has about 10 percent of the medium and 31 percent of the heavy Mexican truck market. It will produce about 6,500 vehicles in 1981. These trucks are marketed under the joint IH/FAMSA nameplates.

International Harvester owns 37½ percent interest in DAF Trucks of Holland, that country's leading truck maker, and recently entered into a joint venture in Spain with that country's leading producer of trucks carrying the Pegaso name.

Domestic total 2nd-lowest since 1958

May sales rise, but slump continues

By Jenny L. King
Staff Writer

New-car sales in May nudged ahead of year-ago levels but were far from the spring-selling-boom numbers recorded just a few years ago. Domestic auto makers reported a 5.13-percent increase for the month, while imports were up 6.17 percent and accounted for 28.58 percent of the May market.

Domestic sales totaled 524,021, up from 498,474 a year earlier but far from the May record of 971,304 set in 1973 and the 962,985 of 1978. With 25 selling days this year compared with 26 a year ago, the daily selling rate of 20,961 for domestics was up 9.34 percent from 19,170.

Although domestic sales topped last year's, the total was the second lowest for May since 1958.

Import sales numbered 209,742, up from 197,549 in 1980, but they, too, were far behind their record for the month of 255,495 in 1979.

Combined sales for the month totaled 733,763, up 5.42 percent over 696,023 in 1980.

Combined year - to - date sales were down 2.31 percent, to 3,858,908 from 3,950,257 last year. Domestic sales for the five-month period were 2,790,654, down 3.38 percent from 2,888,304 reported for the first five months of 1980. Import sales for five months were 1,068,254, up 0.59 percent from 1,061,953. It was the first time this year the cumulative import total has surpassed its 1980 counterpart.

All five U. S. auto makers were up in May, both on a direct comparison and on a daily-selling-rate basis. Chrysler enjoyed the greatest growth, up 28.94 percent for the month to 58,791 from 45,594 last year. Chrysler was up 34.09 percent on a daily-rate basis.

General Motors sales climbed 1.51 percent to 314,764 from 310,074 (up 5.58 daily rate). Ford reported a 4.97-percent sales increase, to 122,343 from 116,548 (up 9.17 percent daily rate). American Motors sales of 13,648 new passenger cars were up 15.63 percent over 11,803 (up 20.26 percent daily rate), and Volkswagen of American was up 0.14 percent to 14,475 from 14,455 (up 4.14 percent daily rate).

Chrysler continued to get its double-digit percent share of the domestic market, earning 11.22 percent this May compared with 9.15 percent a year earlier. Ford cornered 23.35 percent, down slightly from 23.38 percent. GM had 60.07 percent, down from 62.21 percent. AMC grew to 2.60 percent from 2.37 percent, and VWoA sales accounted for 2.76 percent, down from 2.89 percent.

Of the U. S. makes, 10 of the 13 reporting sales for both years showed improvements this May. Plymouth was strongest, up 65.49 percent, followed by Dodge, up 25.47 percent; Mercury, up 25.38 percent; Oldsmobile, up 24.73 percent; Pontiac, up 21.74 percent; AMC, up 15.63 percent; Cadillac, up 10.43 percent; Lincoln, up 9.46 percent; Buick, up 6.54 percent, and VW, up 0.14 percent.

U. S. makes reporting sales declines were Chrysler, down 32.32 percent; Chevrolet, down 18.52 percent, and Ford, down 0.92 percent.

Ford Escort was the top-selling U. S. nameplate in May, with retail sales of 25,864. Chevrolet Chevette was second at 24,783, followed by Oldsmobile Cutlass at 21,557, Chevrolet Citation at 21,159 and Cutlass Supreme at 20,685.

A year earlier, the top five were: Citation, Chevette, Ford Fairmont, Ford Mustang and Chevrolet Malibu.

Third-period domestic sales were down 1.90 percent on a year-to-year basis, to 197,572 from 201,406. On a daily-rate comparison, May 21 - 31 sales were up 10.36 percent.

This year's eight selling days had an average of 24,697 compared with 22,378 per day for nine days last year. Chrysler and VWoA were up for the period, while GM, Ford and AMC were down.

The import market reflected gains for the major European auto makers and a mixed bag for the Japanese in May.

BMW had a record month, its sales up 40.54 percent from 1980; Mercedes-Benz was up 43.89 percent, and Saab was up 50.85 percent, Volvo was up 63.01 percent and reported its best first five calendar-year months in its U. S. history.

Toyota sales jumped ahead 27.27 percent, but Number-Two Datsun reported a 22.53-percent sales decline. Honda was down 4.33 percent, Mazda was up 15.57 percent and Subaru was up 19.42 percent.

With imports garnering the largest segment (28.58 percent) of the market class, the remainder was divided as follows: U. S. subcompacts, 17.20 percent; compacts, 19.04 percent; intermediates, 20.06 percent; standards, 10.32 percent, and luxury models, 4.80 percent.

AUTO DEALERSHIPS AND LEASING COMPANIES

**The difference between profit and loss can be the difference between accountants who know your business…
and accountants who don't.**

If ever there was a time in the auto business for constructive, creative, "heads up" accounting, the time is *now*.

We have special insights and a 35 year history of serving the automotive industry. In fact over 50% of our clients are in new car sales or car and truck retail and fleet leasing.

We don't simply come in at year's end, close your books, and prepare a tax return. We study your operation, uncover cost inefficiencies, and recommend tax savings methods that are unique to your business.

NADA applauds financial tie of Chrysler, 2 others

WASHINGTON. — NADA applauded actions announced by Chrysler Financial Corp., Volkswagen of America and American Motors which will provide VWoA and AMC franchised dealers with wholesale and retail automobile financing.

"Access to credit is critically important to dealers," said NADA President Wendell H. Miller. "Through this agreement, VW and AMC dealers' ability to finance their inventories will be significantly improved, and they can also assure their customers of financing availability to purchase increasingly expensive cars."

Dealers are finding that retail financing is becoming increasingly difficult to arrange, particularly as commercial banks continue to withdraw from auto financing. Within the last decade, banks have reduced their market share from 60 percent of the retail automotive financing to less than 36 percent.

NADA has repeatedly pressed manufacturers, importers and distributors to provide retail as well as wholesale credit to their dealers, who need access to a finance organization which is responsive to the needs of dealers, as well as their customers.

Volkswagen and American Motors have recognized this need, Miller said, and through this new partnership with Chrysler Financial Corp., have increased their dealers' ability to compete effectively in the marketplace.

May total highest since October

Year-to-date auto output tops 1980

By Patricia Hoffman
Staff Writer

For the first time in nearly 23 months, U. S. auto production for the year-to-date has risen above the comparable year-ago level. And at the same time, the makers have reached the three-million mark for this year.

The last time the year-to-date output exceeded the year-earlier level was in July, 1979.

Output for last week was targeted at 163,772 units, up 16.96 percent from 140,027 built in the previous week, and up 30.73 percent from 125,272 completed in the comparable 1980 week.

So far this year, the makers have built 3,035,743 units, up 0.20 percent from 3,029,664 cars completed in the comparable 1980 period. Thus, the industry reached three million in the same week each year.

In May, the auto manufacturers assembled 666,399 cars, up 26.37 percent from the 527,353 units built in the same month last year. The total was the highest for the month since May, 1979, when the makers completed 935,198, and it was the most of any month since October, 1980, when 675,001 cars were built.

- Breakdown for May by company was: General Motors, 418,021 units, up 30.56 percent from 320,167 built in the comparable 1980 month; Ford Motor, 144,890, up 35.67 percent from 106,793; Chrysler Corp., 74,816, up 7.87 percent from 69,357; Volkswagen of America, 16,391, down 8.85 percent from 17,982; American Motors, 11,998, down 5.71 percent from 12,724, and Checker Motors, 283, down 14.24 percent from 330 completed in May, 1980.

The June forecast for the auto makers is 719,534 units, up 34.72 percent from 534,085 built in the comparable month last year.

For the second quarter, the car manufacturers have slated output at 2,048,596 units, up 24.74 percent from 1,642,293 built during the second three months last year.

Due to an increase in orders, Checker Motors, originally slated to go down today (June 8) has rescheduled its downtime for June 19, with operations resuming July 13.

Ford's Lorain assembly point was idle last week. Output resumes today (June 8).

Chrysler scheduled Saturday overtime last week at Belvidere and Jefferson. Both plants worked two eight-hour shifts on Saturday (June 6).

The Jefferson point will continue on daily overtime this week, working two daily nine-hour shifts. Chrysler's Newark plant will also work daily overtime this week.

GM scheduled Saturday overtime last week at its Flint, Oklahoma City and Van Nuys points.

VWoA's Westmoreland assembly point, down since June 1, will resume operations today with production reduced from 1,120 units per day to 752 per day.

Ford has slated daily overtime this week at six U. S. assembly plants. They are Kansas City, Atlanta, San Jose, Metuchen, Wayne and Wixom. The Oakville plant in Canada also will work daily overtime this week.

Week's truck production rises; May total tops '80

For the second week in a row, the year-to-date output for the U. S. truck makers remained above the comparable 1980 period, and the total for the week showed a substantial improvement over those of the previous week and the year-ago week. The output for May was also up from the 1980 level.

Truck production last week was planned at 41,084 units, up 18.13 percent from 34,780 built in the previous week, and up a considerable 87.55 percent from 21,906 trucks completed in the comparable 1980 week.

In May, the makers assembled 159,400 units, up 45.46 percent from 109,585 built in the same month last year. But it was less than half of the 338,961 units completed in May, 1979.

So far this year, truck production has reached 791,288 units, up 4.06 percent from 759,184 built through June 7, 1980.

For June, the truck makers have forecasted 182,512 units, up 84.09 percent from 99,141 trucks completed in the comparable 1980 month. The slated total would bring the second quarter output up 46.28 percent from 338,454 last year to 495,102.

GMC's Pontiac assembly point (heavy-duty trucks) will boost its daily output on one shift from 53 to 76 units, beginning today, (June 8).

Volkswagen of America's Westmoreland point, down since June 1, resumes operations today with a production cut in pickups from 280 units per day to 188 per day. The reduction will put 60 workers on indefinite layoff.

Chrysler's Warren truck point continues on daily nine - hour shifts this week.

General Motors has scheduled downtime this week at its Pontiac (medium-duty truck) assembly plant. The closing will put 2,500 workers on temporary layoff.

Ford has scheduled daily overtime this week at its Lorain and Kentucky truck points. The Ford Kentucky plant also worked last Saturday (June 6).

Canadian output of cars, trucks rises for month

Canadian car and truck production for May exceeded the year-ago-month, and last week's car output was substantially above the comparable 1980 period.

Canadian auto production last week was targeted at 21,925 units, up 5.0 percent from the 20,880 completed in the previous-week, and up 35.44 percent over the 16,188 built the week ended June 7, 1980.

In May, the auto manufacturers assembled 83,018 units, up 11.35 percent from 74,557 completed in the comparable 1980 month. The total was the highest for that month since 1979, when the makers built 99,878.

The June forecast for the car makers is 99,170 units, up 28.26 percent from 77,321 built in the same month last year. The second-quarter output is slated at 276,486 units, up 21.34 percent from 227,855 cars completed in the second three months last year.

Truck production last week was planned at 12,357 units, down 4.04 percent from 12,877 trucks built in the previous week, but up 24.43 percent from 9,931 completed in the comparable 1980 week.

Truck output for May was 45,803 units, up 5.01 percent from 43,617 built in the same month last year. But the total was far below the 1979 count of 74,003.

For June, the truck manufacturers have slated 49,524, up 14.33 percent from the 43,315 trucks assembled in June, 1980.

Truck production for second quarter is targeted at 143,051, up 4.42 percent from 136,991 built in the second three months last year.

So far this year, the Canadian auto makers have completed 385,521 units, down 1.82 percent from the 392,496 cars assembled in the comparable period last year.

The year-to-date output for the truck makers exceeds the year-ago level with output of 252,098 units, up from 249,731 trucks built through June 7, 1980.

A diesel for Datsun

Something new for 810 Maxima

Datsun is offering a diesel engine on 810 Maxima sedan and wagon models sold in the U. S. It's a 2.8-liter powerplant, and Datsun expects to sell about 1,000 diesel Maximas monthly now and more after the diesel becomes available in California as an '82 model. The price is $11,729 for both the sedan and the wagon, $850 more than the gasoline-engine version. Story on Page 6.

New-car inventory climbs to 1.4 million, 70 days

By Jenny L. King
Staff Writer

Mildly improved sales and healthy production levels in May left the domestic industry with increased inventories on June 1 compared with a month earlier. But the auto makers were in much better shape than they were June 1, 1980, when their highest days-supply level for that date was notched.

The industry opened this June with a 70-day supply of U. S.-built new cars, up from 66 days the preceding month but down from the glutted 83-day stockpile a year ago.

Total unsold cars on hand numbered 1,471,650, up from 1,348,836 on May 1 and lower than the 1,597,866 units at the beginning of the month in 1980. Most new-car supplies were at manageable levels, with shortages among those no longer produced.

Three of the five major auto makers increased their stockpiles during May, while Volkswagen of America remained the same and American Motors was down.

General Motors had a 70-day supply as this month opened, up from a 67-day level May 1. There appeared to be plenty of X-bodies, with Chevrolet's Citation in heavy stock. J-car figures are misleading because the cars went on sale late in May.

Ford Motor Co.'s inventory edged up to 73½ days' supply from a 68-day level a month earlier. Its June, 1981, stockpile was greatly improved from the 94-day supply for the month a year ago. Ford Thunderbird and Mercury XR-7 were again in abundance, as they were in May and a year ago.

Chrysler Corp. jumped to a 73-day supply from 58½ days a month earlier. One year ago, the corporation found itself with 134 days' worth of new cars to peddle. Chrysler's largest cars had manageable stock levels while its K-cars were getting heavy. Dodge Mirada topped them all with a 114-day supply.

American Motors was down to a 40-day level from 48 days the preceding month. A year ago, AMC had a 100-day supply of cars on hand. Volkswagen of America stayed at 72 days.

- The June 1 domestic inventory was divided this way: GM, 59.59 percent; Ford Motor Co., 24.46 percent; Chrysler Corp., 11.64 percent; AMC, 1.49 percent, and VWoA, 2.82 percent.

A month earlier the inventory breakdown read: GM, 58.78 percent; Ford Motor Co., 24.38 percent; Chrysler Corp., 11.98 percent; AMC, 2.00 percent, and VWoA, 2.86 percent.

By size class, only the stockpile of subcompacts was lighter than a month earlier as compacts and luxury units jumped and standard-size and intermed-

FTC asked to investigate

'Great rebate hustle' under attack

WASHINGTON. — The Federal Trade Commission has been asked to investigate the latest General Motors and Ford Motor Co. rebate programs which included dealer participation.

The Center for Auto Safety, in a letter to Acting Chairman David Clanton, claims the national advertising exaggerated the value of rebates because some dealers were not making their customary "best deals" because of their share of the rebate.

Examples of ads cited by the center are: "Make your best deal and get $700 rebate check direct from GM at your participating dealer" and "10-percent rebate from Ford — Get up to $1150.00 cash back."

The center finds significant consumer economic injury from what it calls the "great rebate hustle" as well as simple deception because of the failure to disclose the dealer share in the rebates. The ads, according to the center, appear to violate Section 5 of the FTC Act which bans unfair and deceptive acts and practices.

In the GM "direct-from-the-manufacturer" rebate of $700, the dealer's share was $300. Recently, an unnamed GM dealer wrote to the center: "The reason I am blowing the whistle on this marketing scheme started by General Motors is that it is an absolute fraud on the public. It forces the dealer to lie to the customers that he is getting 'the best deal' when in fact we have to hide $200 or $300 in the gross profit to return to the factory so they can send the customer a big check."

- Among similar consumer complaints received by the center is one from a woman in California citing her experiences with trying to buy a car before the rebate period with receiving one quoted price; her failure to buy during the rebate period, except at a price higher by more than $300, and then receiving a call from a dealer after the rebate period at the initial lower price deal.

The car in question was a Pontiac Grand Prix Brougham which was advertised with a $700 rebate on sales made between Feb. 18 and March 19.

A Virginia customer trying to buy a 1981 Mercury Zephyr told of a dealer who "included a $200 charge for the rebate with a deduction for $617 allowed for the 'L/M rebate' " written on the order form. Yet, before the customer visited the dealership, he "had been led to believe through manufacturer advertising that he would receive a full 10-percent rebate off the base price of the car rather than the 10-percent less $200 for the dealer's contribution."

The center acknowledges dealers have little choice but to participate and that NADA has voiced its objections to dealer participation.

But the center also points to

Firms accused in rustproofing

By John A. Russell
New York Staff Writer

NEW YORK. — In a scathing report on the aftermarket rustproofing industry, State Attorney General Robert Abrams charged widespread faulty workmanship and inadequate warranty protection. He said that in his opinion, consumers in the state who purchase dealer-applied rustproofing are defrauded "of at least $11 million annually."

The report concluded a six-month investigation into dealer-applied rustproofing by the Attorney General's office. As a result, 8 new-car dealers agreed to inspect and redo allegedly un-

breaking news

MIC cuts insurance rates on J-cars

NEW YORK.—Motors Insurance Corp., the General Motors insurance affiliate, is offering premium reductions on GM's new J-cars. The reductions range up to 17 percent on collision coverage and up to 28 percent on comprehensive, fire and theft. MIC said its studies indicate that damageability and repairability features of the J-cars will result in lower repair costs and that improvements in anti-theft characteristics will reduce theft exposure and expense.

L-M cash incentive includes LN7

DETROIT.—Lincoln-Mercury is running a June 10-July 20 incentive for salesmen whereby they receive $150 for selling any combination of three of four cars—LN7, Capri, Cougar or XR-7. A new demo allowance also knocks $350 or $400 off special value packages for LN7, but units must be put in service by Sept. 30 and kept there 90 days. If sold, a replacement may be ordered and put in service to balance out the 90 days on the original unit.

Bill just missed last time around

Voluntary tire recall returns to Congress

WASHINGTON.—A bill coupling voluntary tire registration by independent dealers and allowing advertising of tire recalls has taken its first step in the 97th Congress.

It is virtually identical to a measure that came within a hair's breadth of passage during the 96th Congress when it had the misfortune to be included in an authorization measure with a controversial air-bag mandate and a change in bumper standards.

Although the tire bill is the same, there are now important differences: NHTSA support for voluntary tire registration and the desire by tire members of the Rubber Manufacturers Assn. for some change in the public notice provisions.

Voluntary tire registration is being pushed by the National Tire Dealers and Retreaders Assn. Last time, it was introduced by Kentucky Senator Wendell Ford, whose bill easily passed in the Senate.

Then it was coupled with a tire recall advertising bill introduced by Rep. Matthew Rinaldo, of New Jersey.

In the House, it was again passed by a majority, but this was not good enough since it had been brought up under suspension of the rules and needed a two-thirds majority.

As part of a compromise with the air-bag and bumper changes and authorizing funds for NHTSA, the tire measures again went through the Senate but never became final because the House failed to approve.

- This time, the backers of the tire provisions want—and have — an understanding that the Rinaldo bill, which now includes both registration and public notice, will not get tacked on to any other bill. NTDRA Executive Director Philip Friedlander devoutly wishes for quick, clean action with no floor amendments and no conference needed.

In the Senate, a virtually identical bill has been introduced by Alabama Democratic Sen. Howell Heflin.

Testimony before a House subcommittee headed by Colorado Rep. Tim Wirth revealed wide support for the Rinaldo bill and only limited opposition —from Clarence Ditlow III, director of the Center for Auto Safety.

But RMA vice president Thomas E. Cole, in a statement filed for the record, did ask for changes to protect tire makers from the burden of recall for tires for which they had no registration and to have the secretary reach agreement with the tire manufacturer before advertising of the recall.

NTDRA is concerned lest these RMA-backed changes endanger passage of their voluntary registration provisions.

Friedlander said his association believes tire registration will double or triple in a very short time and is ready to start a nationwide educational effort for its members.

NTDRA has already printed a wall chart and it plans to urge its members to be sure servicemen write the registration number on the card while the car is on the rack.

- NTDRA is being joined in its support of the Rinaldo bill by the American Automobile Assn., the American Farm Bureau Federation, the National Assn. of Farmer Cooperatives, the American Retail Federation, the National Grange, the National Rural Letter Carriers Assn., the Society of Independent Gasoline Marketers of North America and the Service Station Dealers Assn. of America.

The Center for Auto Safety, pointing out that tires are cited as causative in more than 1,300 fatal vehicle accidents every year, opposed voluntary registration. Ditlow argued that independent dealers would lose more in the long run by an increase in product liability suits that could be avoided by effective recalls.

Datsun offers diesel version of top-of-the-line Maxima

By Bob Hall
Los Angeles Staff Writer

LOS ANGELES. — It was inevitable, but one of Japan's "Big Two" has begun marketing a diesel passenger car in the U. S. Datsun has added a 2.8-liter diesel version of its most expensive sedan-wagon series, the 810 Maxima.

The price of each model is $11,729, which is $850 more than the gasoline cars, which retail at $10,879.

The 810 diesel uses a 2,793-cc (170.4-CID) diesel engine that is based on the Datsun ZX's OHC inline six of similar displacement.

Maximum power of the converted gasoline engine is 80 HP at 4,600 RPM, and peak torque of 120 pounds-feet is developed at 2,400 RPM. This compares with the 120 HP and 134 pounds-feet for the gasoline-fueled 810's 2,400-cc engine.

The diesel is offered only with automatic transmission, but unlike the gasoline 810's standard automatic, the transmission fitted to the diesel has a top-gear lock-up feature.

Gear ratios have been selected to work more efficiently with the diesel's torque characteristics, and the final drive has been reduced from 3.545:1 to 3.364:1, both moves made in the interests of extracting maximum economy from Herr Doktor Diesel's already frugal powerplant.

For the balance of the 1981 model year, Datsun plans to sell about 1,000 diesel Maximas per month in addition to the 3,000 monthly sales of the gasoline Maxima.

The diesel will be offered only in a 49-state model, with California versions becoming available in the 1982 model year.

Datsun officials said they believe that the dieselized Maxima may make up about 50 percent of 810 sales as the car becomes more readily available in 1982.

EPA fuel-economy figures on the diesel 810 Maxima are 28 MPG city/35 MPG highway. Equivalent EPA numbers for the 2.4-liter gas - inline - engine 810 are 22 MPG city/27 MPG highway.

80 U. S. dealers handle Comuta-Car electric auto

SEBRING, Fla. — Commuter Vehicles, Inc., manufacturer of the Comuta-Car electric auto, said it now has 80 authorized dealers in the U. S.

The company said it is exporting to six foreign countries — Ireland, Holland, Canada, Chile, Peru and Costa Rica. Negotiations are also under way for exports to Spain, the firm said.

Imports' share slips

Registrations increase in March

By Jenny L. King
Staff Writer

Total U. S. new-car registrations were up in March, buoyed by increases in both domestic and import numbers, according to figures compiled by R. L. Polk & Co.

The March total rose dramatically from February this year and from March of 1981. New-car registrations added to 848,967, 25.76 percent ahead of the preceding month's 675,045, and up 6.02 percent over the 800,780 recorded a year earlier.

Table on Page 48.

Of the March total, 225,733 were imports, an increase of 2.74 percent over 219,720 for March, 1980. Their share of the total market slipped, however, as domestic new-car registrations climbed. Imports accounted for

Advertising chief receives doctorate

Ross Roy, left, founder and chairman of Ross Roy, Inc. (advertising), Detroit, receives a Doctor of Business Administration degree at Hillsdale (Mich.) College's 1981 commencement. The degree was presented by Dean John B. Muller, right, following an introduction by George C. Roche III, center, president of the college. Founded in 1926, Ross Roy, Inc., is today one of the top 26 ad agencies in the world, with annual billings in excess of $191 million.

Lotus, Toyota sign pact for long-term cooperation

NORWICH, England. — Lotus, the specialist sports car manufacturer, has reached agreement with Toyota of Japan for "future close cooperation and the supply of certain components."

A joint statement issued here and in Japan speaks of "a desire to cooperate on a long-term basis in engineering, manufacturing and other areas where practical."

Details have yet to be finalized, but Mike Kimberley, Lotus Cars managing director, admits that his company has looked at 1.6-liter and 2-liter Toyota twin-overhead-cam shaft engines and gearboxes.

Almost certainly, Toyota will supply these for the "slightly less expensive" new sports car Lotus has planned for 1984 or 1985. This coupe or convertible would have an annual volume of 3,000 to 5,000 units.

Such production levels would take Lotus back to those of the old Elan days in the early '70s.

Last year, Lotus made only 360 versions of its more expensive Elite, Eclat and Esprit models, compared with 1,050 the previous year and 1,200 in 1978.

Kimberley says, "We approached Toyota and other manufacturers about 12 months ago. I have been going backwards and forwards since then working on the details and so has the chairman."

There is to be no financial link between the companies. At present, the deal does not involve Toyota selling Lotus cars, though it must remain a long-term possibility. The two model ranges are complementary.

By buying fully certified components, Lotus will be a long way toward meeting type approval requirements in Japan and the U. S.

"It depends what the U. S. thinks of the car," says Kimberley.

The British company has been trying to establish a Porsche-type reputation as a design and development house for the motor industry. Its work for DeLorean is all but finished and there is a possibility that Toyota is interested in Lotus engine technology and advanced plastics techniques.

Lotus is known to have another additional model in the development stage, a luxury car powered by a V-8 engine.

Toyota tops in Japan in corporate profits

TOKYO. — Toyota Motor Co. was the largest corporate profit earner in Japan in 1980, according to a survey by Nikkei Business quoted in the Japan Economic Journal.

Other automotive firms ranked as follows: Nissan Motors, 4th; Toyota Motor Sales, 10th; Mitsubishi, 21st; Honda, 22nd, and Toyo Kogyo, 46th.

Government switches plans

France's 1980 experimental economy cars, Renault Eve and Peugeot Vera, soon will be superseded by new government-sponsored projects.

The Vera has been handed over to the Agency for Energy Savings for testing and evaluation, while Eve is still in Renault's hands, having failed to meet its goals.

Work is already in progress on new cars, targeted for average fuel consumption not exceeding 3 liters per 100 km (78.33 MPG). Known as Peugot Vesta and Renault Eco-2000, they are due for completion in 1985.

The government hopes this work will lead to production by 1990 of a new generation of small super-economical production cars.

The plan, as approved by former industry minister Andre Giraud, committed the government to spend one billion Francs (approximately $180 million) toward this end.

DAF production down

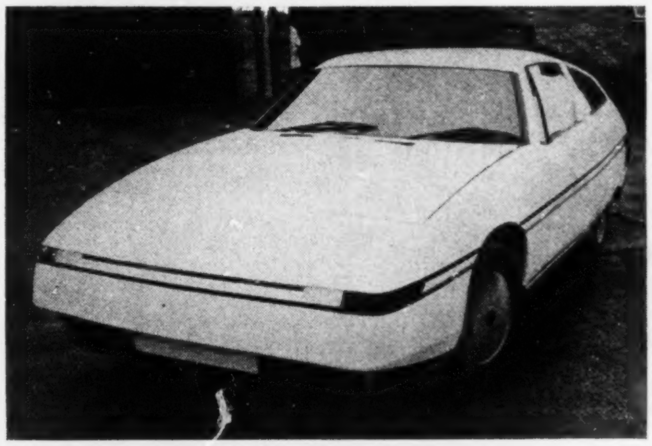
DAF Trucks of Eindhoven, Holland, built 13,554 vehicles in 1980, compared with 15,544 the previous year.

Profits went up, but management wants to keep the surplus in a reserve fund and again omit paying a dividend to stockholders.

Designs on prototype business

Englishman challenges Italians

By Jan P. Norbye
Staff Correspondent



TRX by International Automotive Design

The two-plus-two coupe is a study in materials applications, using the latest technology available from General Electric Plastics.

Car companies all over the world have a habit of going to Italy for styling prototypes. There are good reasons for this.

But a young Englishman, John W. Shute, figured there is no reason why an establishment providing the full services of an Ital Design, Bertone or Pininfarina could not prosper in the United Kingdom.

Five years ago he started a company called International Automotive Design (IAD) at Worthing in Sussex. Today his clients include Karmann, Audi-NSU, Daf, Lotus, Ford, Volvo, Saab, BMW and International Harvester.

IAD also has designed and supplied body assembly jigs to DeLorean Motor Co.

IAD goes beyond Italian houses in scope of services, and even undertakes chassis design. Shute has built a staff of 180 specialists who tackle a car project at concept and, assuming existing powertrain components are used, bring it to production prototype.

A special section works on production tooling for metal and plastic bodies, including jigs, fixtures, dies, molds and press tools.

The styling department is small, with two designers and 13 sculptor-molders working under direction of Eddie Peppall, formerly chief interior designer at British Leyland.

IAD has come up with a showcase vehicle called TRX. The two-plus-two T-roof coupe, built on the Triumph TR-7 chassis, was exhibited at the Motor Show in Birmingham last October and reappeared in May at SITEV in Geneva, the international exhibition for auto suppliers.

- From its styling, Italians may conclude they have little to fear from IAD. The TR-7's 85-inch wheelbase does not allow proper proportioning, and overall design betrays influences from Citroen and Porsche.

Nor is it the ultimate in aerodynamics, with a drag coefficient of 0.371, despite careful attention to detail such as flush-fitting window glass, wheel covers and headlamps, plus an air-dam-type front spoiler.

Its major interest, however, lies in materials. Body structure, panels, fittings and accessories were developed in collaboration with General Electric Plastics.

Most exterior body panels are made of CL 100, a polycarbonate thermoplastic with good dimensional stability and good impact resistance over a wide temperature range. The front fender, a CL 100 injection-molding, weighs only 3.62 pounds.

- Doors are comprised of inner and outer panels with a combined weight of 7 pounds. A complete door, including glass and window mechanism, weighs 28.7 pounds; with a steel outer panel, it would be more than 8 pounds heavier.

The integral front spoiler and bumper are entirely CL 100, and weigh 8 pounds. The simple rear bumper, also CL 100, weighs 3 pounds. Total savings per car, compared with the standard TR-7 (which has plastic bumpers), is about 21 pounds.

The rear hatch is made entirely of Lexan, which may be painted to match the body color. It is a large single piece, including the whole roof behind the B-post and the upper portion of the tail panel, yet weighs only 11 pounds. A hatch of steel-and-glass construction would weigh 22 pounds more.

The TRX has a custom interior, using the standard instrument cluster with a special center console. To make room for the rear seat, the fuel tank and spare wheel are relocated further back, outside the wheelbase.

- The TR-7 underbody structure is retained, with the same cowl and windshield-base positioning. Even the rectangular headlights are mounted on the same hinge points as the standard Triumph body. Overall length is 157.5 inches, width 65 inches, height 47.2 inches.

Shute, 41, got his engineering degree after six years of night-school studies at Brighton Technical College, while holding a full-time job as an apprentice with British Railways.

He worked in the body design office of Vauxhall Motors from 1961 to 1966, then briefly joined Chrysler-Australia.

After 2½ years on the staff of Leyland-Australia, he became an independant consultant, working exclusively at first with Leyland, and later adding Chrysler, Ford and International Harvester as clients.

In 1972, he went back to England on the strength of consultation agreements with Volvo and Porsche, and four years later was able to formally incorporate the business.

Jogging in any language

Capitalizing on the popularity of exercise running in France, Renault will adopt the name Jogging for a special series of 5,000 R4 recreational vehicles sold in French and Benelux markets.

General Motors buys 45 percent of Taiwan firm

General Motors will have a 45 percent holding in Hua Tung Automotive Corp., a new joint venture to produce trucks, buses and diesel engines in Taiwan.

Local interests have subscribed for the rest of the $120 million capital investment. Taiwan Machinery Mfg. Corp. will have 34 percent, Central Investment Holding Corp. 15 percent, Bank of Communications 5 percent, and China Steel Corp. 1 percent.

Using parts shipped from the U. S., assembly operations could begin as early as September, 1981, at an initial rate of 3,000 vehicles a year.

On completion of a new plant at the end of 1982, Hua Tung will have capacity for 10,000 vehicles a year. A manufacturing plant for diesel engines has a planned annual capacity of 15,000 units.

Freightliner's new bumper option

A new aluminum bumper clad with stainless steel now is available on Freightliner trucks. The firm said it has the weight of aluminum, the look of chrome-plated steel and durability that surpasses them both. It said the stainless-clad aluminum, made by the Metallurgical Materials Division, Texas Instruments, Inc., weighs 45 pounds less than a chrome-plated steel bumper.

IH, Snyder team up in high-tech engine line

By Jack Walsh
Truck Editor

DETROIT. — Snyder Corp. and International Harvester have gotten together again to design and build what the latter calls a "state of the art" engine-block machining line which will be installed in a new diesel-production facility in Spain.

It is the second machining system to be designed and built by the Detroit machine-tool manufacturer for Harvester. The first, in operation at the Melrose Park (Ill.) plant, was produced about 12 years ago for a new IH engine line—the 400 Series.

The new line, which will machine blocks for the DT-466 mid-range diesel, is 925 feet in length, almost triple that in use in Melrose Park, and has a capacity of 25 finished blocks an hour, compared with 15 for the original.

"In setting up the new line, we reviewed 12 years of downtime experience," said Vincent J. Spedale, general manager, Harvester's Engine Division, at a preview of the new line in the Snyder plant.

"We kept what was right and fixed what was wrong," he explained. "We wanted to set a new standard for our DT-466 blocks, and that's what Snyder has done for us with this machine."

- Emphasizing that the new system will allow Harvester and its partners to produce a diesel second to none in quality, Spedale called the block the backbone of any engine.

"Building the block right is the key to producing a first-class engine," he said. "If the block is wrong, nothing can be done to make up for it."

He added that the line incorporates these quality features: Accumulators between machine sections, idle stations for easy removal of a block when neces-

Scale model of engine-block line

Richard Davidson, center, manager of the International Harvester Engine Division plant to be built in Spain to produce diesels in partnership with ENASA, Spanish vehicle maker, points out details of the Snyder Corp. block-assembly line on a scale model of the new line to Robert Johannessen, left, plant engineering manager, and Bill Murray, division mechanical engineering manager.

truck industry news

Only heavies lag as total rises for second month in row

Truck sales increase again in May

For the second consecutive month, retail sales of new trucks of all types in the U. S. have exceeded those in the same month a year ago. Preliminary figures for May show 199,063 sales, up 1.2 percent over last year's 196,758 units.

The industry total for the first five months of 1981, however, was still slightly below the year-ago count. Through May, 977,797 new trucks had been retailed in the U. S., down 3.1 percent from last year's 1,008,761 units.

In the first two months of the second quarter, franchised dealers and factory outlets have retailed 410,599 trucks, an increase of 2.7 percent over the year-earlier 399,727. First-quarter sales were down 20.1 percent, from 709,934 in 1980 to 566,452.

Table on Page 38.

Sales in May were higher than a year ago in two of the three market segments, the light and the medium trucks.

The light-truck total for the month, including the non-captive imports, was 180,857, an increase of 2.2 percent over last year's 176,923. The non-captive count was up 7.4 percent, from 20,524 units in 1980 to 22,037.

Medium-truck sales in May totaled 6,282 units, a gain of 6.1 percent over the year-ago 5,920.

- Heavy-truck sales continue to reflect the slowdown in the general economy. May sales were down 14.3 percent from a year ago, 11,924 units versus 13,915.

While sales of light trucks as a whole were up again in May, the number of compact-pickup deliveries continues to decline.

The May total was 38,497, a drop of 2 percent from last year's 39,300 units. The five-month count was down 9.7 percent, from 231,083 units a year ago to 208,773.

Toyota, Mazda and Volkswagen were the only compacts to register gains during the month. Sales were down for the Datsun, Ford Courier, Chevrolet LUV, Dodge Ram 50 and Plymouth Arrow pickups.

The Motor Vehicle Manufacturers Assn., in a preliminary report, said dealers franchised by U. S. producers and factory outlets retailed 177,026 units in May, up about a half of one percent over last year's 176,234.

The five-month total of 867,-

Has Volvo foiled D-B plan?

Volvo may have thrown a wrench into the acquisition plans of Daimler-Benz, which is putting the final touches on its agreement with Consolidated Freightways, Inc., for the purchase of Freightliner Corp., a CF subsidiary.

The West German car-and-truck builder had been talking with both CF and White Motor Corp. about purchase possibilities before reaching an agreement in principle on the Freightliner bid.

Once the CF agreement was reached, Daimler-Benz interrupted, but did not break off, talks with White, and devoted its efforts to working out a definite arrangement for the Freightliner takeover.

Subsequently, Volvo of Sweden — faced with the possible loss of its U. S. truck-distribution (Freightliner) outlets if Daimler-Benz completed a deal with CF — opened negotiations with White and eventually an agreement in principle was reached.

Bill Panny, former Bendix Corp. president and a veteran in the truck and truck-component-manufacturing industry, was a consultant to Daimler-Benz in working out the preliminary details with CF.

- Under the "game plan," according to Panny, Daimler-Benz was to acquire both Freightliner and White, whose combined new-truck registrations in 1980 accounted for about 16 percent of the Class 8 total.

The Freightliner/White share was equal to that of PACCAR (Kenworth/Peterbilt), and was exceeded only by No. 1 International with 19 percent, Mack with 18.5 percent and General Motors (GMC/Chevrolet) with 16.4 percent.

At this point, apparently, the Daimler-Benz/Freightliner deal hinges only on approval by the federal government.

White and Volvo still have not

Stahl announces 3-year warranty on truck bodies

CLEVELAND. — Stahl Division, Scott & Fetzer Co., has announced what it describes as the first three-year warranty ever offered by a manufacturer of service and utility truck bodies.

Robert J. Lytle, Stahl president, said the warranty will cover all bodies constructed of Jalvanneal alloyed zinc-coated steel. Locks and other components of the bodies also are covered.

"The unique qualities of Jalvanneal steel permitted us to extend our warranty an additional 2½ years beyond what other truck-body manufacturers offer," Lytle said. "By giving customers a warranty six times

from the 992,768 units retailed in the comparable period in 1980.

The number of unsold new trucks in retailers' hand going into June was down significantly from a year ago, with substantial declines in all three market segments.

On June 1, there were 568,794 units of all types in inventory, down 21.9 percent from the year-earlier 727,877.

The light-truck total was down 21 percent, from 637,789 units a year ago to 503,937. The medium-truck total was 23,429, a drop of 25.6 percent below last year's 31,508, and the heavies were off 29.7 percent to 41,392 units, compared with 58,580 in 1980.

• Big Three truck sales in May were down about 700 units from the same month a year ago, but the five-month total was 13.7 percent lower than last year.

Dealers retailed 158,054 units during the month, compared with 158,796 in 1980. The total through May was 770,193, as against 892,313 a year ago.

Ford regained sales leadership by outselling Chevrolet by a slim margin in May. Its dealers sold 64,194 units, compared with 63,536 by Chevrolet outlets. Ford's five-month total of 305,117 was about 500 units higher than Chevrolet's 304,620.

Ford sales in May were up 5.3 percent from the year-earlier 60,943. The count included 5,045 Couriers, compared with 5,505 in 1980. The five-month total was off 11.7 percent from last year's 345,705. Through May, the Courier count was 29,219, almost 16 percent lower than the year-ago 34,533.

Chevrolet's May sales also were slightly higher than last year. The total was 1.4 percent higher than the 62,675 units sold in 1980. During the month, dealers retailed 6,085 LUVs, compared with 6,288 a year ago.

• Through May, the Chevrolet total was off 12 percent from last year's 346,086 units. Dealers sold 35,276 LUVs in the five-month period, a decline of 15.5 percent from the year-earlier 41,742.

Sales by Dodge and Chrysler-Plymouth dealers were down for both the month and the five-month period. In May, 16,541 units were retailed, off 19 percent from the year-ago 20,419. The five-month total of 83,663 was 27.9 percent lower than last year's 116,072.

During the month, sales of the Dodge Ram 50 and Plymouth Arrow pickups totaled 1,579 and 543 units respectively, compared with 3,257 and 1,407 a year ago. Ram 50 sales through May were down from 19,119 last year to 13,719, while Arrow dropped from 9,096 to 4,681.

GMC dealers retailed 13,783 units during the month, down 6.6 percent from last year's 14,759. The five-month total declined from 84,450 units in 1980 to 76,793, a dip of 9.1 percent.

For the second straight month, sales of Jeep four-wheel-drive vehicles exceeded the year-earlier count. In May, dealers retailed 6,104 units, an increase of 18 percent over last year's 5,174. The five-month total was off 29.2 percent, however, from 34,668 units in 1980 to 24,548.

Mercedes-Benz reported a 3.7 percent increase in May sales, from 301 units a year ago to 312. The five-month total was down only six units from last year, from 1,547 to 1,541 units.

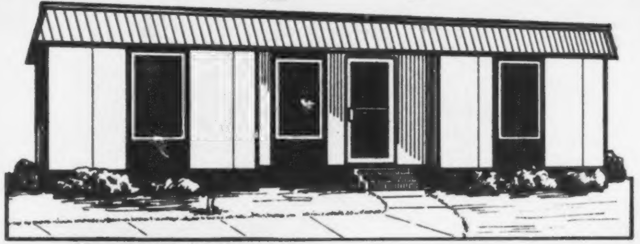
May sales of Toyota and Mazda compacts were up significantly, while the Datsun total was down from a year ago. Only Mazda reported an increase over 1980 in calendar-year sales.

Toyota dealers sold 11,972 trucks during the month, an increase of 16.4 percent over the year-ago 10,284. The five-month total was down 12.2 percent, from 61,445 units to 53,947.

Mazda sales in May were more than double the year-ago count. Dealers retailed 1,355 units, a gain of 125 percent over last year's 602. The five-month total of 6,118 units was 57.7 percent over last year's 3,879.

During the month, Datsun dealers sold 8,710 trucks, a decline of 9.6 percent from the 9,638 retailed in the same month in 1980. Through May, the total was 50,504 units, only 165 units fewer than last year's 50,669.

We can put you in a 1982 model lot office



See an office displayed on one of our lots. We're in over 50 cities in 15 states from the Rockies to the Appalachians.

Many factors attract customers — price, reputation, convenience, selection. Another is physical appearance. And a new Morgan lot office will steer customers your way.

Lot offices available in 12 and 14 ft. widths, and lengths from 20 to 40 ft. in 4 ft. increments. Buildings are complete with wiring for all electrical needs including air conditioning (we supply the lighting), plumbing, insulation, floor tile or carpeting and interior finishing. Many colors and roof styles available. There's a variety of partitioning and office arrangements available. We'll also custom-build to your needs.

Morgan buildings are built in the plant nearest you, trucked to the site and put in place. You'll be in your new office in about one-fourth the time it would take a contractor to build one and you'll save about 30%. May we build one for you?

U. S. studying options on Standard 208

Belt/bag decision to impact many

WASHINGTON. — The auto industry, its manufacturing processes, motorists, makers of restraint systems, steel, plastic, fuel production, water and air quality and the production of toxic and hazardous materials will all be affected in some way by the coming decision on what to do about the passive restraint standard (208).

A draft environmental impact statement done by the Transportation Department and EPA shows that rescinding the standard entirely — meaning that about 11 million cars a year would have virtually no airbags or automatic belts—would have the least net safety benefits although it would have the greatest reduction in the use of steel, plastic, and energy consumption. This is the third alternative under consideration now by NHTSA.

The first alternative—a three-year phase-in starting with 1983 models and with small cars first, then mid-size and finally large cars — would mean that almost five million small cars would have automatic restraints before the 1984 model year.

Even though this would mean fewer automatic restraints than the current standard — which now has large and mid-size cars coming under the standard for 1983 models — "any loss in net safety benefits would be offset by the greater savings that would accrue from the higher risk small car."

It would also result in a decrease in the use of steel, plastic and energy consumption.

- The second alternative—mandating passive restraints for all cars as of March 1, 1983—would decrease the total number of cars with automatic restraints by about one million in the 1983 model year.

But it would increase the number of small '83 models with automatic protection by about 2.5 million. Since small cars present the greatest risk in crashes, "this would more than offset any loss of safety benefits resulting from fewer automatic restraint-equipped cars."

This alternative would also reduce the use of steel, plastics, and fuel over the current standard, but not as much as the first alternative.

This draft statement was finished about May 8. It assumes that air bags will be used in 50,000 to 100,000 cars. No companies will be installing air-bag systems in '82 models, but if the mandate is retained, there may be air bags in future Mercedes-Benz cars sold in the U. S. The assumption then is that other makers of luxury cars may follow suit.

M-B sells between 50,000 and 60,000 cars in the U. S. annually. Volvo had once planned for some 4,000 and BMW also has had plans on the books. GM and Ford have dropped plans for air bags even in their top-of-the-line cars.

The figure of 10 pounds of extra weight is used for auto-

GM awards go to Chicago U. and Columbia

DETROIT.—Winners of General Motors' annual Intercollegiate Business Understanding Competition were Columbia University in the undergraduate section and the University of Chicago in the graduate section.

GM said the 1981 program "assessed the responsibilities of business and government to contribute to a dynamic society and summoned — from future government people — recommendations for promoting a better relationship between the two."

Teams consisting of students from government/political science schools participated in the competition. There were nine universities in the undergraduate sector and four in the graduate sector.

As undergraduate winner, Columbia received $7,000, a plaque and letters of commendation for each team member. Vanderbilt University was second, winning $5,000, and Brown University received honorable mention and $2,500. Both received plaques and certificates. The money is for use in the schools' educational programs.

University of Chicago received $10,000 as graduate winner, and Massachusetts Institute of Technology earned $7,000 for second place. Both received plaques and letters of commendation for team members.

NEW DATSUN "200 SX" CONVERTIBLES

"Newest and Fastest Selling Roadster"

American Custom Coachworks, Ltd. builds these sporty convertibles for Datsun Dealers. They have proven to be a successful and profitable answer to the Mercedes SL Roadster—the finest quality convrtible for 1981 summer sales. This showroom traffic builder is superbly engineered and styled. Base units can be drop-shipped to American Custom Coachworks, Ltd. plants or there are some open factory (pool cars) presently in build that are available.

DOT, EPA issue draft statement

U.S. looks at options on passive restraints

Continued from Page 39

matic belts, although some estimates have been as high as 40 pounds. The higher gasoline consumption comes from the 10-pound figure as well as from the projected use of steel and plastics.

Rescinding the entire standard would probably eliminate all air bags — hence any sodium azide or other pyrochemical.

The loss of safety benefits for rescinding the standard takes into account a projected rate of usage for automatic belts that ranges from 15 to 60 percent. This has been equated to a range of 750 to 7,500 lives saved and about 20,000 to 100,000 serious injuries prevented for the current standard if it goes into effect or the obverse with recission of the standard.

In other words, the first alternative would reduce the number of vehicles with automatic restraints by 1,950,000 on a one-time basis and the third alternative would reduce the number of those vehicles by 11 million annually.

The second alternative — across the board with passive restraints by '84½ model year— would reduce the number by 940,000.

EPA says that any of the three proposals would show an unqualified decrease in water pollution (because of the decreased production and transportation of steel and other energy absorbing materials used in automatic restraints) and would reduce the amount of material entering the solid waste stream.

- Any disposal problem for air bags in the first and second alternative would not exist if the standard is rescinded. But based on discussions with manufacturers, "it is anticipated that manufacturers would provide a unique electrical plug or other device in their air-bag-equipped cars to allow recyclers to deploy the air bags as the car enters the scrappage process, from a remote location, so that workers would not be exposed to any danger."

The draft study adds: "It is further anticipated that most auto disposal businesses will adopt procedures for proper handling of these systems as they have for other parts of the disposed vehicles which require special treatment, such as gas tanks and batteries."

It was also found that all three alternatives — decreasing production of steel, plastics and fuel consumption — would also lead to a small, unqualified reduction in air pollution.

Imports' share slips

Registrations increase in March

Continued from Page 8

26.59 percent of March registrations, compared with 27.32 percent a year ago.

Domestic new-car registrations totaled 623,234 for the month, up 31.22 percent over 474,970 in February, 1981, and 7.26 percent ahead of 581,060 a year earlier.

For the first three months of 1981 new-car registrations totaled 2,160,499, down 4.20 percent from 2,255,305 last year.

Chrysler Corp. and General Motors increased their market shares in March compared with a year ago. Chrysler boosted its share of registrations 1.78 percentage points to 9.18 percent from 7.40 percent, while GM's share was up 1.15 percentage points, to 46.19 percent from 45.04 percent.

Ford Motor Co. and American Motors lost market ground in March to their domestic competitors. Ford was off 1.65 percentage points, to 16.57 percent from 18.22 percent. AMC slipped back 0.42 of a percentage point, to 1.45 percent from 1.87 percent.

The share taken by miscellaneous domestic makes dipped 0.01 of a point, to 0.02 percent from 0.03 percent. Checker passenger cars account for about 80 percent of the miscellaneous category.

Excluding imports, domestic-only registrations in March were divided this way: GM, 62.92 percent; Ford Motor Co., 22.57 percent; Chrysler Corp., 12.50 percent; AMC 1.98 percent, and miscellaneous, 0.03 percent.

A year earlier, domestic-only registrations were divided as follows: GM, 62.06 percent; Ford Motor Co., 25.11 percent; Chrysler Corp., 10.20 percent; AMC, 2.58 percent, and miscellaneous, 0.05 percent.

By size segments, subcompacts, compacts and intermediates increased their market shares compared with a year earlier, while standards took it on the chin and luxury models and imports were off slightly.

Imports cornered the largest share of the total—26.59 percent, down from 27.32 percent in March of 1980. U. S. subcompacts grew to 15.68 percent from 13.82 percent; compacts increased their share to 23.90 percent from 21.75 percent; intermediates were up to 21.87 percent from 21.31 percent; standard-size domestic models plunged to 8.03 percent from 11.60 percent, and luxuries were off, accounting for 3.93 percent, compared with 4.20 percent a year ago.

Registrations by size class in March were: Subcompacts, 133,137; compacts, 202,940; intermediates, 185,633; standard, 68,180; luxury, 33,344, and imports, 225,733.

The Top 20 nameplate listing (domestics, only) was headed by Chevrolet Chevette this March and last, but brand-new nameplates appeared in the "most popular" listing and old favorites tumbled back to make way. For example, Ford Escort was in fourth place in March while standard Chevrolet dropped from fourth to 13th. Plymouth Reliant and Dodge Aries made the top 20 as standard Ford and Ford Thunderbird vanished.

The best 20 domestic nameplates in March new-car registrations were:

1—Chevrolet Chevette	54,408
2—Chevrolet Citation	39,764
3—Olds Cutlass Supreme	32,081
4—Ford Escort	28,242
5—Buick Regal	24,543
6—Buick Skylark	24,525
7—Ford Fairmont	21,647
8—Chevrolet Monte Carlo	20,819
9—Ford Mustang	19,479
10—Plymouth Reliant	18,321
11—Chevrolet Malibu	18,144
12—Olds Cutlass	16,012
13—Standard Chevrolet	15,754
14—Pontiac Grand Prix	15,656
15—Plymouth Horizon	15,456
16—Dodge Aries	14,191
17—Oldsmobile Omega	13,029
18—Ford Granada	11,685
19—Pontiac Phoenix	11,469
20—Chevrolet Camaro	11,429

New York attorney general completes 6-month investigation

Extensive rustproofing abuse found

Continued from Page 1

satisfactory rustproofing jobs on 3,600 cars.

"Because deficiencies in New York City, Westchester and Long Island jobs were so frequent and so great, I am impelled to conclude that the sale of rustproofing by New York City-area new-car dealers is permeated by gross negligence, or in many cases, outright consumer fraud," Abrams said.

In discussing the warranty provisions of aftermarket rustproofing, the report said: "We found that although aftermarket rustproofing warranties vary greatly among manufacturers, they all contain limitations of conditions that render them essentially worthless."

This statement was used on an analysis of most rustproofing manufacture warranties.

It went on to say that "the warranties insulate the rustproofing companies from liability for claims, rather than provide meaningful protection to purchasers."

• For this investigation, the Attorney General's office trained an investigator in rustproofing. This person visited new-car dealers in Buffalo, Albany, Troy, Schenectady and the New York metro area.

A total of 122 new cars that had been rustproofed by 46 different new-car dealers were inspected and each car was rated on the extent to which the rustproofing compound was applied to auto surfaces vulnerable to rust.

A minimum acceptable score was established at 76. According to the attorney general, 83 percent of the cars inspected scored 75 or less and more than half scored below 50.

The worst abuses were found in the New York City area where 96 percent of the cars failed to achieve the minimum acceptable score, and the average score was 38. The average score for all cars was 46.

In the report, the Attorney General said that most of the manufacturers' warranties had potential loopholes: "The mere presence of such restrictions creates a chilling effect on a consumer's assertion of legitimate rust damage claims."

He listed those alleged loopholes as:

1. The one-remedy loophole, in which protection is limited to either one repair or to one damaged part of the car, or to a refund or the cost of the rustproofing at the warrantor's option.

2. The proper allocation loophole, in which protection is offered only to those areas of a car to which the rustproofing compound was applied or, in the case of some warranties, properly applied. If the car dealer or agent applies the compound poorly, the rustproofing company can deny liability for rust damage.

3. The registration loophole, in which the consumer or dealer is required to register with the warrantor within a specified period.

4. The transferability loophole, which provides that if the consumer sells or otherwise disposes of the car "regardless of how soon after the rustproofing job was done, the warranty terminates."

5. The required inspection loophole, which provides that the car must be periodically inspected by the dealer or warranty protection will be lost.

6. The accident loophole which specifies that if the car is in an accident, the consumer must bring the car back within a specified time to the dealer who did the rustproofing job for inspection and reapplication. Failure to do so voids the warranty protection even if rust subsequently develop in an area not affected by the accident.

7. The manufacturing defect loophole which provides that if the warrantor determines that the rust damage is due to a manufacturing or design defect, warranty coverage does not apply.

8. The pre-existing warranty loophole which requires that the consumer must first look to any pre-existing warranty for satisfaction of claims.

The attorney general's report went on to say that "all vehicle manufacturers provide at least a three-year rust protection warranty."

The report added that "consumers, therefore, may have no protection under their (rustproofers') warranty for dealer-installed rustproofing during the three-year period both warranties are in effect. Therefore, some rustproofing warranties which are stated to be for five years are really only two-year warranties with three-year waiting periods."

The report continued that "since many cars are sold or traded within three years, this limitation, when joined with the limitation barring transfer of the warranty, may result in the denial of even two years' protection."

9. The limited remedy loophole provides that in the event of rust damage, recovery is limited to the original purchase price of the rustproofing.

The report added that "other warranties provide that the remedy is limited to repair of the damaged area or refund of the purchase price of the rustproofing at the option of the rustproofing company."

"Of course, the original job may often cost substantially less than repair or replacement of rust-damaged parts," the report continued.

10. Notification of first sign of rust loophole requires the consumer to return the vehicle to the dealer "immediately," "promptly" or "within a reasonable time" after the first evidence of rust. This requirement, the report said, is vague and "moreover, the warrantor determines whether the notice provided by the consumer is timely."

The attorney general determined that "all domestic and foreign car manufacturers provide extensive anti-corrosion treatments to their new cars in the manufacturing process" and "virtually all manufacturers of domestic and foreign cars offer at least a three-year anti-rust warranty for perforation caused from inside out."

The report concluded that rustproofing applied by car dealers "is best avoided because manufacturers provide adequate rustproofing backed by at least a three-year warranty; there is a widespread pattern of inferior workmanship in post-manufacture rustproofing sold by new-car dealers, and, warranty protection is poor or non-existent."

It concluded that "for those consumers who intend to retain their cars for three years or less, there is no benefit gained from the additional aftermarket rustproofing and for customers who plan to keep their cars for more than three years, benefit from aftermarket rustproofing depends on the elimination of the deficiencies discussed in this report."

As part of its report, the attorney general's office also made a series of recommendations for rules and legislative action.

It also suggested that car manufacturers "include a conspicuous notice in their anti-corrosion warranties to advise consumers that aftermarket rustproofing is unnecessary at least for the period the car manufacturer's warranty is in effect."

It urged adoption of a regulation to require that dealers, prior to sale, disclose the existence and terms of any manufacturer's anticorrosion warranty and the car maker's recommendations relating to the use of aftermarket rustproofing.

It also recommended legislation to correct the alleged loopholes in the warranties including:

1. Honoring all eligible rust damage claims arising within the warranty period regardless of the number of claims.

2. Requiring that claims be honored regardless of how, or even whether the rustproofing was applied, if the warrantor authorized the dealer to furnish the warranty to the customer.

3. Warranties be transferable to anyone who owns the car during the warranty period.

4. Warranties not impose unreasonable conditions such as registrations, periodic inspections, accident reporting and unreasonable notification of first sign of rust.

5. Warranties, as a minimum, offer consumers a choice of repair or replacement of rust-damaged parts or refund of the purchase price of the option.

6. Dealers selling rustproofing be required to assume warranty liability in addition to the rust compound manufacturer or applier of the product.

The attorney general also noted that in addition to the eight dealers that agreed to redo the rustproofing jobs, all dealers included in the investigation will be required to reinspect all 1980 and 1981 rustproofing jobs and redo those that are unsatisfactory. Action is being taken against the dealers.

Domestic makers open June with 70-day inventories

Continued from Page 1

iate new cars squeezed ahead.

On June 1, the industry had a 57-day supply of subcompacts, down from 58 days a month earlier. Intermediates were up to 79 days from 74 days May 1. Compacts climbed to 75 days from 66 days; luxury models were up to 62½ days from 56½, and full-size cars weighed in at 68½ days compared with 65 days a month earlier.

The June 1 inventory was divided this way among the size classes: Subcompact, 19.71 percent; compacts, 28.62 percent; intermediates, 31.59 percent; standard size, 14.10 percent, and luxury models, 5.98 percent.

A month earlier, the inventory was divided as follows: Subcompact, 19.42 percent; compacts, 27.78 percent; intermediates, 31.95 percent; standards, 14.64 percent, and luxuries, 6.21 percent.

• The June 1 days-supply figures by market class were:

Subcompact — Bobcat, 20; T-1000, 41; Chevette, 43; Sunbird/J-2000, 46; Spirit, 50; Omni, 58; Horizon, 61; Escort/EXP, 61; Lynx/LN7, 63; Pinto, 70; Rabbit, 72, and Monza/Cavalier, 98.

Compact — Concord, 30½, Eagle, 44; Skylark, 50; Aspen, 54; Firebird, 57; Zephyr, 59; Capri, 62; Volare, 62½; Omega, 64; Mustang, 65; Camaro, 66; Phoenix, 83; Fairmont, 88; Reliant, 90; Aries, 103, and Citation, 109½.

Intermediate — Cutlass, 41; LeBaron, 55; Diplomat, 57; Century, 63; LeMans, 65; Monarch, 73; Malibu, 77; Supreme, 78; Cordoba, 84; Grand Prix, 94; Regal, 95; Granada, 97; XR-7, 106; Mirada, 114; Thunderbird, 122, and Monte Carlo, 125.

Standard — Gran Fury, 25; Oldsmobile 98, 42; Oldsmobile 88, 53; St. Regis, 56; LeSabre, 57; Chrysler, 61½; Electra, 69½; Pontiac, 76; Mercury, 78; Chevrolet, 83, and Ford, 89.

Luxury — Imperial, 41; Corvette, 46½; Lincoln, 49; Cadillac, 62; Mark VI, 63; Riviera, 64; Eldorado, 65; Toronado, 68; Seville, 95, and Cimarron, 102.

FTC probe urged on rebates tied to dealer money

Continued from Page 1

the action taken by the New York Attorney General's Office, which made a formal agreement with GM requiring the company to add a line saying, "Participating GM dealers are contributing to the bonus," to their New York print advertising.

• GM's strong market position, the center notes, forces Ford and Chrysler into rebates and the Ford program, although different from GM, was just as "deceptive" as GM's so far as dealer participation goes, but the Chrysler rebate was factory alone.

The center believes the rebate "hustle" is vulnerable to action not only under Section 5 of the FTC Act but under the FTC's guidelines concerning the use of the word "free." A violation of the Robinson-Patman Act possibly may have occurred also, it believes.

The center says FTC should seek the maximum sanctions against GM and other manufacturers with similar rebate programs. FTC "should order affected consumers to be reimbursed for the difference in value between the rebate as advertised and the rebate as practiced, usually the amount that the dealer was required by the manufacturer to contribute to the rebate," it says.

Further, the center contends, FTC should ban such "deceptive" ads in the future.

MUSTANG

CONVERTIBLE KIT $1,495.00 !

Finally! An AFFORDABLE convertible sports car!

We will supply everything you need to build this exciting conversion using regular shop tools.*

Total is 29 pct. above last year

Week's auto output tops 170,000

By Patricia Hoffman
Staff Writer

For the second week in a row, U. S. auto production for the year-to-date output remained above that of the comparable 1980 period, and the week's total was also up from the previous week, and last year's comparable week.

The auto manufacturers targeted production last week at 170,655 units, up 7.39 percent from 158,908 built in the previous week, and up a substantial 29.41 percent from 131,869 completed in the comparable week last year.

So far this year, the makers have completed 3,201,534, up 1.35 percent from 3,158,822 units assembled through June 14, 1980.

Breakdown for last week by company is: General Motors, 62.88 percent; Ford Motor, 21.87 percent; Chrysler Corp., 11.25 percent; Volkswagen of America, 2.20 percent; American Motors, 1.76 percent, and Checker Motors, 0.04 percent.

Saturday overtime was scheduled at five assembly plants last week.

Chrysler's Jefferson and Newark points both worked eight-hour shifts on Saturday (June 13).

Also on Saturday overtime were GM's Pontiac, Flint and Tarrytown assembly points.

Daily overtime is scheduled this week at Chrysler's Jefferson, Newark and Belvidere points. The three Chrysler plants will work nine-hour schedules.

NADA will fight White sale unless dealers are protected

By Jack Walsh
Truck Editor

DETROIT. — NADA's American Truck Dealers Division said last week it will fight the sale of White Motor Corp. truck assets to AB Volvo unless White dealers' franchise rights are spelled out to ATD's satisfaction.

If the White/Volvo sales agreement is approved intact, every White dealer "would be left holding a virtually worthless franchise," said the ATD, which is a member of the creditors committee in White's Chapter 11 proceedings in U. S. Bankruptcy Court.

An ATD spokesman noted that the sales agreement calls for Volvo to acquire "all contracts and leases except dealer agreements."

White Motor Corp. called the ATD position "misleading and potentially damaging to the survival of White and White dealers."

Craig Thompson, White public relations vice president, said that if Volvo were to assume the existing dealer agreements, "it would expose them to potentially endless and uncertain liabilities because of White's bankruptcy proceedings."

Thus far in negotiations with Volvo, there have been no indications that the Swedish firm is planning any significant change in the existing franchise agreements, he added.

Thompson said Volvo has indicated it will be meeting with dealers between now and August to sign new franchise agreements to become effective on the date that Volvo takes over.

"They recognize the need to put into place quickly a strong and loyal dealer body, and that it is critical to the success of the new company," he said.

A Volvo spokesman said Sten Langenius, president, Volvo Truck Corp., an AB Volvo subsidiary, is hoping to meet with ATD representatives in New York Wednesday (June 17) to discuss franchise arrangements.

NADA and ATD have urged the creditors committee to reject the sale if the dealer interests are not "adequately and legally protected."

"Verbal assurances are not enough protection for the many dealers who have worked so hard to preserve this network," the ATD spokesman said. "White dealers need and deserve written and legally binding assurance that their franchise relationship will continue past any reorganization.

"Anything less," he continued, "amounts to a termination of that relationship now."

The spokesman said "unjust termination" could lead to hundreds of individual lawsuits or possible class actions which "would only serve to impede and ultimately destroy any viable reorganization of White Motor."

Because of the uncertainty of their future, he observed, dealers will have no incentive to "continue the aggressive representation of White products," and their reluctance to order trucks, parts and accessories could destroy the White nameplate and badly damage the value of White's assets.

He said ATD has requested a formal meeting with representatives of Volvo, and that the Swedish firm will be asked to extend a new sales agreement to all current holders of agreements with White prior to approval of the sale by the Bankruptcy Court.

Truck makers assemble 41,272 for weekly gain

U. S. truck production rose last week above the previous week's output, and the total was up substantially from the comparable 1980 week at which time Ford Motor scheduled downtime at all of its truck assembly plants.

The truck makers targeted production last week at 41,272 units, up 1.35 percent from 40,724 built the previous week, and up sharply from 17,313 completed in the comparable week last year.

So far this year, the makers have completed 832,200 units, up 6.56 percent from 777,648 trucks assembled in the comparable 1980 period.

Saturday overtime was scheduled last week at Chrysler's Warren truck assembly plant. The plant, which worked an eight-hour shift on Saturday (June 13), will continue on daily overtime schedules this week, working nine-hour shifts.

Canadian output rises for week, nears 1980 total

Canadian auto production last week rose above the previous week and the comparable 1980 week's totals. However, the year-to-date output continues to lag slightly behind that of last year.

Last week, the Canadian auto makers slated output at 23,041 units, up 1.61 percent from 22,675 built in the previous week, and up 10.65 percent from 20,824 built in the comparable 1980 week.

So far this year, the car manufacturers have completed 409,312 units, down 1.10 percent from 413,810 assembled through June 14, 1980.

Canadian truck production for the week was targeted at 12,339, almost the same as the 12,346 built the previous week, but up 6.49 percent from 11,587 in last year's comparable week.

Year-to-date, the truck makers continue to stay above last year.

So far this year, truck production is 264,426 units, up 0.89 percent from 262,078 completed through June 14, last year.

NADA urges action to trim high interest

NEW YORK. — NADA last week demanded administrative and Congressional action to reduce the high interest rates that are crippling the automobile industry.

At its board of directors meeting here, NADA called for immediate passage of federal spending cuts plus the three-year personal tax cut.

Additional NADA actions included petitioning the Senate Banking Committee to assess the effects of high interest rates on small businesses and consumers and initiation of an NADA investigation to isolate the effect of lending practices based upon what it called the artificial term "prime rate."

"Our industry is integral to the nation's well being," said NADA President Wendell H. Miller. "These actions are the necessary first steps in starting the desperately needed economic recovery."

Cuts in federal spending will lessen inflationary expectations, Miller said, while multi-year tax cuts will restore confidence and increase disposable personal income.

"Our dealer members will personally appeal to their congressional representatives to support the actions called for by the NADA board today," Miller said.

NADA said it will meet with Senator Jake Garn, Utah Republican and chairman of the Senate Banking Committee which has oversight of the Federal Reserve Board, to seek to guarantee that the Fed's actions "do not continue to shift the fight against inflation to the back of small businesses."

NADA said that results of its investigation into the effects of lending practices based upon the prime rate will be presented to Administration and Congres-

Konvertible

Airier Reliant from Grandeur

Grandeur Motor Car Corp., Pompano Beach, Fla., has started production of K-car convertibles and expects to build up to 100 a month. Conversion takes less than four weeks, and the converted cars retail for upwards of $15,000. The annual Automotive News review of the conversion and specialty-car industry follows Page 28.

Specialty-car makers note a sales rebound

DETROIT. — Like the mass producers, many low-volume builders of specialty cars experienced rough sledding last winter, as interest rates climbed and even high-income buyers delayed limousine purchases or scrapped plans to spend $50,000 to $100,000 on an exotic model in favor of high-yield bank notes.

Builders of U. S. exotica insist sales are now on the rebound, and many expect sales to remain strong until Detroit once again has the capital and manpower to spend to personalize its models.

In this week's Custom Market EXTRA, AUTOMOTIVE NEWS assesses that forecast, examines the kit-car boom and reports converters are girding for some tough convertible competition from the major makers.

Both high- and low-volume producers talk about their interdependence and the inevitable friction in their relationships.

Marketing strategies of the specialty-car builders and their distributors are examined, and dealers talk about the new- and used-car pitfalls in the exotic-car business that don't exist for traditional lines.

Industry sources offer suggestions on picking the right product and builder.

But even when the exotics suffer Detroit sales blues or when they merge and diversify like their big brothers, they operate with a flair for the unconventional and with unbridled enthusiasm for the cars they build, often by hand. It's a business built on power and egos. Reports on it follow Page 28.

Slow J-car sales linked to output; quality praised

By Kathleen Hamilton
News Editor

It looks as though General Motors is living up to its promise of the slowest startup in its history for its new J-cars.

Dealers and factory agree the new subcompacts are coming off the line with excellent quality, but that insistence on quality is suppressing early production levels and apparently wearing down dealers and customers made impatient by heavy J-car advertising schedules.

Production should be up to full speed "within weeks," according to a General Motors Assembly Division spokesman. He would not be more specific.

Divisional spokesmen would not speculate on how soon back orders will be filled.

But Chevrolet and Pontiac dealers surveyed by AUTOMOTIVE NEWS said they have been told to not expect comfortable supply levels for at least 60 days, and some are expecting to get a full complement no sooner than November.

"We aren't happy they're in short supply," a Chevrolet spokesman said.

Cadillac said its single-line dealers (who get the Cimarron first) in the East have the shortest supplies, as the pipeline from the South Gate (Calif.) assembly plant fills eastward.

The Chevrolet Cavalier is also built at South Gate, but it is also assembled, along with the Pontiac J2000, at Lordstown, O. Pontiac and Chevrolet report no such regional scarcities.

- Their scarcities are universal: Pontiac, for example, had an average of two J2000 models for each of its dealers on opening day, but now has an unfilled order bank of more than 87,000—largest in its history.

Meanwhile, Cavalier's order bank tops 100,000, but the division doesn't have comparisons for earlier models.

Cadillac took better than 10,000 orders for the $12,000-plus Cimarron within 25 days of its introduction; planned production for the car is only 15,000 by Sept. 24, when the remaining 1,350 dealers will begin taking orders for the car.

In any case, early supplies are much tighter than when the X-cars were introduced during a fuel crisis in 1979.

A look at early production figures shows anticipated production levels through last week for the three lines at 21,568 Cavaliers, 18,885 J2000s and 3,437 Cimarrons.

Cars are coming off the

breaking news

Camaro/Firebird delayed until December

DETROIT.—General Motors hasn't officially announced any dates yet, but the debut of its 1982 F-body Camaro and Firebird has been set back to Dec. 3 from Nov. 19. The reason: Trouble meeting the Job One deadline for Camaro/Firebird, which is being completely redone for '82. This will be the second delay in the F-body intro date.

New Chrysler intro dates

DETROIT.—Latest plans call for Chrysler Corp. to introduce its carryover K-cars and Omni/Horizon on Oct. 1 and have a separate intro for the new LeBaron and Dodge 400 Oct. 29. C-P dealers will get four styles of LeBaron—four-door, two-door, wagon and, later, a convertible. Dodge dealers will get only a two-door Dodge 400, but will have exclusive access to the new Omni/Horizon-derived pickup truck, L-29, being introduced in January.

GM backs off rebates—for now

DETROIT.—General Motors reportedly backed off from a consumer rebate—for the time being. Reports have it that Chevrolet wanted a consumer rebate, but didn't have Buick-Oldsmobile-Pontiac support. Chevrolet had a 109-day supply of Citations and a 125-day supply of Monte Carlos on June 1, compared with a 50-83-day supply of B.O.P X-cars and a 77-95-day supply for B-O-P intermediate specialties. If the current Citation program doesn't clear the decks, and GM's stocks as a whole continue climbing in June/July, observers predict another round of industrywide rebates for the third quarter, triggered by GM.

Move could wipe out project

GM puts 'hold' on Pontiac P-car

By Jim Plegue
Staff Writer

Development of Pontiac's sporty two-seat P-car has been placed on "indefinite hold" by General Motors management, a move that could delay its introduction or even result in total cancellation of the program, according to sources.

"Right now, the future of the P-car is of unknown status," said a source.

The decision to stop work on the mid-engined fiberglass car was made several weeks ago by the GM Executive Committee, according to the source, and follows closely a recent decision to push back P-car introduction from late '82 to early '83. That decision reportedly was to allow extra plant conversion time.

Several reasons have been mentioned for the latest GM decision regarding the project. One source cited the cash squeeze. Purchasing agents have told tooling vendors to hold further spending on the P-car project.

The P-car has been planned as a Pontiac exclusive, at least during its first production year, sources said. A project with such limited production might be the first to be axed during a cash crisis.

Another source cited a development problem. Engineers, he said, are having trouble properly anchoring the subframe which holds the P-car's mid-mounted engine.

Whatever the reason, the recent GM decision clouds the P-car's future. The last time a program was put on indefinite hold, a source said, "it was gone by the next quarter." But he added

Mazda and domestic makers the targets

CASA may sue on 'standard' radios

By Marjorie Sorge

The Custom Automotive Sound Assn. (CASA) and Mazda Motors may do legal battle over the auto company's radio standardization.

And CASA is also contemplating action against the domestic auto makers concerning their special promotion options, packaging and dealer credit programs for deleted radios. All the domestic makers have some radios as delete options but CASA would like that situation changed to optional equipment which dealers must specifically order, not delete.

CASA has not yet filed the lawsuit against Mazda but is researching its case with the intention to sue in the future, according to Cheryl Hollins, CASA executive director.

"By its refusal to halt the installation of unordered sound equipment at the ports and standardization of radios in many of its models, Mazda is denying dealers and consumers the freedom to purchase sound equipment of their choice," said Philip Christopher, CASA President, "Consequently, CASA has no other recourse but to initiate a lawsuit against Mazda."

He said CASA will seek injunctions and other relief against the company because of what he called its "arrogant disregard of antitrust laws."

In the past two years, CASA has filed suits against General Motors, Toyota and Volkswagen charging they were in violation of the Clayton and Sherman antitrust acts by making radios standard equipment.

The association won out-of-court settlements from the auto makers which eliminated standard radios in most models. Both GM and Toyota now have delete-option radios, while VW radios are optional and treated as add-on items. At the time of the VW agreement, Christopher said CASA would use the "add-on" terminology to go after the other manufacturers.

• GM agreed in its original settlement not to make radios standard on any cars, except the Chevette and all Cadillacs, through 1983. (Radios are delete options on many GM cars.)

GM contended in the 1979 suit that the Chevette radio must be standard to compete with the imported small cars. However, CASA has now won agreement from some of the major importers, and Christopher has said these agreements may force GM to reevaluate its standardization in the Chevette with a little prodding from CASA. Last year, he said once these agreements were reached CASA would go back to GM and demand the Chevette be stripped of its standard radio.

According to Hollins, the market for the Chevette is large, and the aftermarket sound equipment manufacturers feel they should not be excluded competitively because of standard radios.

Thomas Leary, GM assistant general counsel, said GM has offered to reconsider the radio standardization on the Chevette from time to time depending on the situation of its competitors. He said that currently, major competitors of the Chevette still have radios standard and GM management feels "as long as some competitors are doing what they want to (with standard radios) we will do what we want to do (in the Chevette line)."

While the agreement did call for delete options in all new cars introduced through 1983 there have been some judgment calls which Leary said have gone CASA's way. Since the agreement did not include Chevette it was questionable whether its sister, the Pontiac T1000, should have a standard radio. Also, the Cadillac line was not included and the same question erupted about the Cimarron. In both cases, he said, GM decided to make the radios delete options.

• Chrysler Corp. and Ford Motor Co. were not sued by CASA. Ford already had radios as delete options in most models, and Chrysler voluntarily changed its program. Honda also voluntarily stopped putting standard radios in its cars in 1980 models that came to the U. S.

Subaru changed its radio pol-

Nader seeks reopening on Ford transmissions

WASHINGTON. — Ralph Nader has petitioned NHTSA to reopen the investigation into certain automatic transmissions on Ford vehicles that allegedly slip from Park to Reverse.

In a separate but related action, the Center for Auto Safety —started by Nader but now independent of him—has filed a motion for summary judgment in response to the government's motion to dismiss its case earlier brought by the center on the same subject.

Both the petition and the court filing cite a survey of 750 vehicles and owners in San Francisco, metropolitan Washington and Minneapolis, claiming that only 49 consumers — or 6.5 percent of those surveyed —have placed warning labels on the cars.

Last December, then Secretary Neil Goldschmidt — disagreeing with advice given him by former NHTSA Chief Joan Claybrook — negotiated a settlement with Ford Motor Co. in the defect investigation of some 16 million 1970-79 Ford vehicles.

Ford agreed to mail owners a warning label. Proponents of a mandated recall and correction point out that the deaths of more than 140 individuals and injuries to some 1,700 people have been linked to the transmissions.

• The center has been joined in litigation by several persons injured or relatives of those who have been killed and by the Washington - based Automobile Owners Action Council, the Quebec - based Automobile Protection Assn., Minnesota Public Interest Group and San Francisco Consumer Action.

Plaintiffs contend that after the initial findings of a safety-related defect for some transmissions, Claybrook's October, 1980, memo recommending a final determination was binding on Secretary Goldschmidt because he had delegated authority to her.

The center and the others also maintain that warning labels are not a "remedy" under the law.

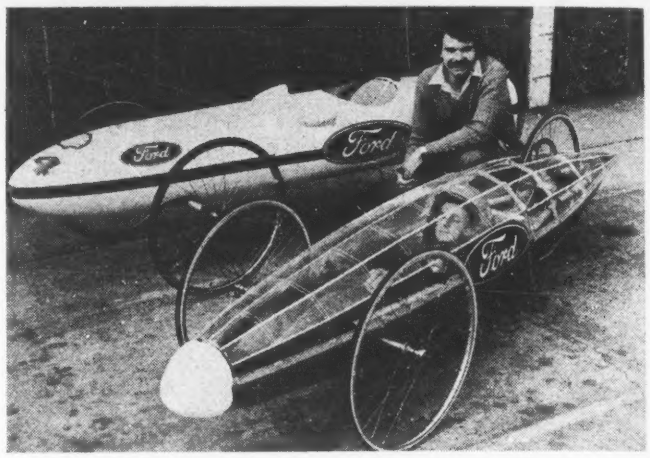
The government says the federal district court lacks jurisdiction in this case and even if it had it, DOT's agreement with Ford is perfectly legal.

The settlement does not injure plaintiffs, says the government, and can only help. To remand it to the agency would not change anything since it is no more likely to find a defect and force a recall than it was before.

If it did reopen the investigation, according to the government, Ford would resist and DOT adds, there is no mechanical fix for the alleged problem. Finally, the court has nothing to review since DOT never reached a final determination. The Claybrook memo was merely an opinion with which her boss disagreed.

Remembering the Cord

Southeastern Replicars, Largo, Fla., builds a fiberglass replica of the 1937 Cord 812 Phaeton so true to the original that parts are interchangeable. The $65,000 815 SE is sold by Southeastern directly. It features front-drive, like the original, and a modified Oldsmobile powertrain. Power equipment, air conditioning and stereo are standard. Each car takes 2,000 hours to build; anticipated production is put at 24 per year.



Fuel-economy giants

Engineers from Ford Motor Co. of Australia entered two "cars" in this year's Shell/The Australian Mileage Marathon, in Sydney. Ford engine design engineer Ian Cole shows the newest vehicle, piloted by 16-year-old Shane Thomas, an apprentice at the Ford Apprentice Training School, Geelong, along with the one run last year as well as this. Cole predicted the new vehicle can beat the world record of 2,684.7 MPG.

Early-June sales rise; few cheers are heard

By Jenny L. King
Staff Writer

Early-June sales of domestic new cars topped the 1980 period but were still disappointing to those anticipating an end to the 26-month retail sales recession. The daily selling rate, based on nine selling days, averaged 19,493, up 10.72 percent from the extremely low 17,606 average for eight days a year ago.

The May 21-31 daily selling rate this year had showed more strength with its average of 24,697 sales per day; the mid-May rate was 21,309.

The year-to-date daily selling rate for the 136 days of 1981 was a modest 21,809, down 1.36 percent from 22,110 in 1980. Year-to-date sales totaled 2,966,089 this year compared with 3,029,154 a year earlier.

June 1-10 sales numbered 175,435, up 24.59 percent from 140,851 last year. High for the period was posted just three years ago, in 1978: 283,274. The daily selling rate for that period was 31,475.

On a year-to-year basis, four of the five major U. S. auto makers were up for the period, while on a daily-rate basis that was pared to three with improved sales. Chrysler Corp. enjoyed the greatest gain; its sales were up 46.70 percent to 19,684 from 13,418 (30.41 percent on a daily-rate basis). General Motors sales were up 29.61 percent, to 108,082 from 83,387 (up 15.22 percent daily rate).

Ford Motor Co. sales totaled 40,383, up 8.45 percent from 37,236 last year (down 3.61 percent daily rate). Volkswagen of America reported sales of 2,886 Rabbits, down 17.78 percent from 3,510 (down 26.88 percent daily rate), while estimated sales of American Motors passenger cars were 4,400, up 33.33 percent from 3,300 (up 18.40 percent daily rate).

GM earned 61.62 percent of the early-June market, up from 59.20 percent a year earlier. Ford's share dropped to 23.02 percent from 26.44 percent. Chrysler cornered 11.22 percent, up from 9.53 percent. AMC had an estimated 2.50 percent of the market, up from 2.34 percent, and VWoA sales accounted for 1.64 percent, down from 2.49 percent.

On a year-to-year basis, nine of the 14 makes reported increases over year-ago sales. Plymouth doubled its sales, jumping to 9,998 from 4,551; Buick did the same, going to 27,875 from 13,050. Oldsmobile sales were up 42.18 percent, Dodge was up 34.36 percent, Mercury was up 33.98 percent, AMC was up 33.33 percent, Cadillac was up 29.36 percent, Chevrolet was up 4.13 percent and Ford was up 2.35 percent.

Chrysler continued its long slide, its sales down 40.94 percent to 1,913 from 3,239. VWoA was down 17.78 percent, Lincoln was down 5.22 percent and Pontiac was down 0.14 percent. Imperial was not on the market a year ago.

Ford Escort was the top-selling nameplate during the period, with sales of 8,849. Second was Chevrolet Chevette at 8,221, followed by Chevrolet Citation, 7,613, Buick Skylark, 7,555 and Buick Regal, 7,546.

VWoA names VP

WASHINGTON. — Phil Hutchinson, director of government and industry relations for Volkswagen of America, has been named vice president-government and industry relations.

Axle venture links IVECO and Rockwell

AMSTERDAM, The Netherlands. — Rockwell International Corp. and IVECO B.V., a member of the Fiat Group, will establish a joint venture to build and market Rockwell heavy-truck axles for Europe, North Africa and the Middle East.

The joint venture, to be called Rockell CVC/OMEVI, S.p.a., is acquiring an IVECO plant in Cameri, Italy, and will retool it for axle production scheduled to begin in 1983.

Initially, the new company will produce Rockwell axles for IVECO's five truck nameplates, and eventually they will be available to other commercial-vehicle manufacturers.

At the start, according to Robert Anderson, Rockwell chairman, the U. S. firm will have only a minority interest in the joint venture, with plans to assume a majority holding with the startup of production in 1983.

"When Rockwell axles reach volume production, the investment by Rockwell and IVECO will be well in excess of $150 million," Anderson said here after the signing of the agreement to set up the joint venture.

Martin D. Walker, president, Rockwell Automotive Operations, called the venture "part of our long-held strategic objective of applying Rockwell's advanced technical resources to develop, design and engineer components for the European truck industry.

- "The joint venture," he added, "will give us a great platform to introduce fast-ratio, single-reduction axle technology to this market."

Walker said the new firm will build to OEM and fleet-operator specifications from both the plant in Cameri, about 30 miles west of Milan, and Rockwell's present manufacturing facility at Maudslay, England.

Giorgio Manina, IVECO managing director, said Rockwell's plan to expand its product offerings in Europe coincided with IVECO's desire to free current resources for other projects.

"IVECO is moving from total integration to deintegration of some major truck components," he explained. "Our long-range strategy . . . is to continue to seek other leading international

Utilimaster's new van body

Utilimaster Corp., Wakarusa, Ind., has introduced a new aluminum van body for the IVECO Z-100 truck chassis. The van's aerodynamic front cap and radius corners follow the truck cab's airflow design. Other features include a strong ladder-type floor frame and rub rail, and a fully lined plywood interior.

Six more states boost big-truck weight limit

ATLANTA. — Six states have joined the list of those raising truck weight limits to 80,000 pounds as the trucking industry continues its drive to obtain more uniformity among states for over-the-highway trucks.

Tennessee is the latest to raise the weight limit, increasing it to 80,000 pounds from 73,280 pounds.

The legislature approved the increase, which has now been implemented.

One of the provisions which lured Datsun's light-truck plant to Smyrna, near Nashville, was that the state liberalize its stringent trucking laws. Gov. Lamar Alexander promised the Datsun manufacturer that the law would be changed.

However, one of the provisions of the weight-increase law was that trucks help pay for highway maintenance with a boost of five cents per gallon in the price of diesel fuel. The legislature approved it and also raised gasoline taxes by two cents a gallon.

- The Missouri legislature also has approved a bill increasing weight limits to 80,000 pounds. If signed by the governor, the law would go into effect this fall.

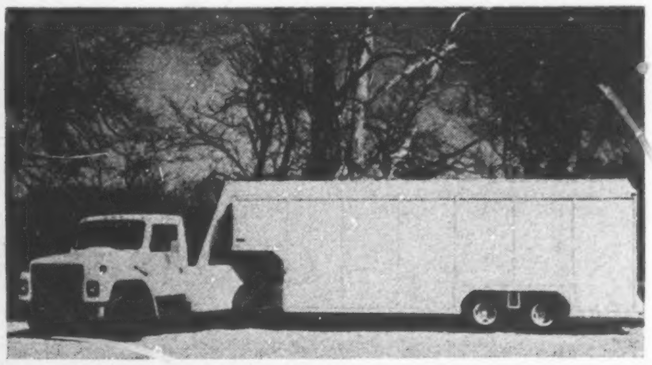
The American Trucking Assns. said Mississippi and Indiana legislatures also have passed bills raising the weight limits to 80,000 pounds.

In Mississippi, the new law will become effective in November, while Indiana is scheduled to implement the new limits in January.

Georgia also has modified its heavy-truck limitations on certain agricultural products, raising the limit to 80,000 pounds and extending truck lengths to 36 feet.

By extending the length, officials said, weights would be more evenly spread out, minimizing damages to roads.

The Arkansas legislature has approved a one-year test that will require the Arkansas Highway Commission to issue special permits to haul agricultural commodities on trucks with a gross weight of 80,000 pounds. The test is to start July 1.



'I-Hauler' set for beverage run

The new "I-Hauler" combines an International S-Series medium tractor with a special low-profile service body and a Swan "Supergoose" or "Hawk" gooseneck trailer for multistop beverage pickup-and-delivery applications. The unit is rated at 32,000 pounds gross combination weight, with either diesel or gas power.

Beverage hauler from IH teamed with 'goosenecks'

CHICAGO. — The beverage industry has a new delivery team at its disposal — International "S-Series" medium trucks and special gooseneck trailers which are designed to provide more expedient deliveries for multistop beverage runs.

The new unit is called an "I-Hauler" and is available with a choice of Swan "Supergoose" or "Hawk" gooseneck beverage trailers.

The S-Series single-rear axle tractor is fitted with a special low-profile service body equipped with compartments sized to accommodate beverage cases.

A special spring package and low-profile wheels and tires are specified to reduce vehicle overall height for complete compatibility with the Swan trailers. Gross combined weight is rated at 32,000 pounds.

The I-Hauler will be available as a diesel Model 1654 S-Series with an International 9.0 liter V-8 engine, or gasoline-powered Model 1724 with an International MV-404 V-8. Both models will offer a choice of a four or five-speed manual transmission or a four-speed automatic, and a choice of a 15,000-pound single-speed or two-speed rear axle.

truck industry news

'81 count off 22.4 pct. from year ago

4-month registrations are lowest since 1975

Four-month registrations of new trucks of all types in the U. S. were off 22.4 percent from the same period a year ago, with only one of the eight weight groups showing an increase.

Through April, according to R. L. Polk & Co. statistics, there were 686,657 registrations, compared with 884,661 in 1980. It was the lowest four-month total since 1975, when the count was 658,993. The alltime high of 1,184,771 was hit in 1979.

The April total was down 16 percent, from 221,404 a year ago to 185,927. As with the four-month count, registrations during the month were lower than last year in all three market segments.

There was a decline of 22 percent in light-truck registrations through April. The Group 3 tallies, however, were up dramatically over last year, 4,264 versus 2,550.

The Group 1 count suffered the smallest percentage loss, down 12.2 percent with 243,355 tallies, compared with 389,901 a year ago. Group 3 registrations totaled 272,874 units, a decline of 32.2 percent from 1980.

- Four-month registrations of medium trucks dropped 18.8 percent below the year-earlier levels, while the heavies had a decrease of 28.7 percent.

The biggest percentage decline in the medium-truck segment was suffered by Group 4. Only four units were registered over the four-month span, down 97.2 percent from last year's 143 units.

There were 481 Group 5 tallies through April, a drop of 42.5 percent from the year-ago 836, while the Group 6 count

International ups lead over Ford in HD registrations

International increased its lead over Ford in heavy-truck registrations by more than 2,300 units through April, and improved its share of the industry's four-month total by almost 10 percentage points over a year ago.

R. L. Polk & Co. reported 13,083 Group 7 and 8 International trucks were registered in the first four months of the year, compared with 10,759 for Ford. In April, International had 3,777 tallies and Ford had 2,909.

While International is No. 1 in total four-month registrations, Ford is the leader in Group 7 tallies with 8,057, compared with 6,631 for Interna-

Registrations lowest since '75 for four months

Continued from Page 16

was off 17.2 percent, from 19,869 units in 1980 to 16,927.

Group 7 registrations for the four months totaled 21,779, a decline of 22.5 percent from last year's 28,107 units. The Group 8 count was down 30.6 percent, from 40,985 units a year ago to 28,458.

No. 1 Ford increased its lead over Chevrolet by about 400 units in April and boosted its four-month edge to approximately 8,200 units.

In April, Ford had 57,555 registrations, compared with 57,158 for Chevrolet. Through April, Ford's total was 220,085 and accounted for 32.05 percent of the industry count.

Chevrolet's four-month registrations totaled 211,907 units, accounting for 30.86 percent of the tally.

International ups lead over Ford in HD registrations

Continued from Page 16

tional. But the latter is far ahead in the Group 8 count, 6,452 versus 2,702.

International registrations through April accounted for 26.04 percent of the industry total, an increase of 9.80 percentage points over the year-ago 16.24 percent on 11,202 tallies.

Ford's share of the industry total was off 2.67 points from a year ago from 24.09 percent on 16,618 registrations to 21.42 percent on 10,759.

During the first four months, 50,237 Group 7 and 8 new trucks were registered in the U. S., down 27.3 percent from last year's 69,092. April tallies were off 25.9 percent, from 19,435 a year ago to 14,392.

Pochiluk joins Chase

BALA CYNWYD, Pa. — William R. Pochiluk Jr., has been named vice president and director of the automotive group at Chase Econometrics. He formerly was with General Motors as manager of North American passenger-car market analysis and forecasts.

Mair looks at the engines of tomorrow

More cars, but they'll use less fuel

WARREN, Mich. — Even though there are going to be increases in the number of cars on the road and in miles traveled, cars in the U. S. will use at least one-third less fuel in 1990 than they did in the record high usage year of 1978.

That is the prediction of Alex C. Mair, vice president and group executive in charge of General Motors' Technical Staffs. It was made at a press gathering as GM observed the 25th anniversary of its Technical Center here.

The reduced consumption will come from increased fuel economy. Mair said there is intramural competition among proponents of various engines in GM with each group contending its favorite engine is the best.

He said turbine engines lag behind three other powerplants, at least for the mid-term period.

He said GM engineers consider the most promising candidates over the next 20 years or so to be advanced gasoline engines, advanced diesel engines and advanced electric vehicles.

Gasoline engines, already being improved by the use of fast-burn combustion chambers, lower bore-to-stroke ratios, electronic knock limiters and friction reducers, can achieve further fuel-economy gains by port fuel injection and ram tuning, he said.

- Diesels, which today typically get 25 percent more mileage than comparable gasoline engines, might achieve an even greater advantage with the use of direct fuel injection and turbocharging, Mair said.

Durability tests of its nickel-zinc batteries, now being conducted, probably are the most critical phase in determining whether GM will achieve its goal of introducing electric-powered vehicles in the mid-'80s, he said.

"Because of more-stringent emissions standards, the gas engine has to be fitted with many complex devices — three-way catalysts, closed-loop controls and a small computer to keep the engine operating at optimum conditions for emissions control and fuel economy and performance," he said.

Diesels must simultaneously meet very strict standards for particulates and oxides of nitrogen.

With GM's advanced, nickel-zinc batteries, electric vehicles are expected to get about 80 miles between recharges.

"This target range would satisfy over 90 percent of the daily trips that can be envisioned for electric vehicle users," Mair said. "But the batteries won't last the life of the vehicle, and because batteries are relatively expensive, a large percentage of our current work is directed at improving battery life," Mair said.

Hittle award

Donald E. Hittle, left, dealer at Hittle Pontiac-Cadillac, Inc., Greenville, O., is presented with his 25-year Pontiac recognition award by Charles L. Gress, assistant zone manager in Cincinnati.

Brown receives NIADA's top dealer award

NEW ORLEANS. — The National Independent Automobile Dealers Assn. has presented its 1981 National Quality Dealer Award to Berford O. Brown, a used-car dealer in Trussville, Ala., for 19 years.

Brown is president of Trussville Motors, Inc. He received the award during NIADA's convention here.

Brown began selling and servicing cars at the age of 16 when a new-car dealer let him have a used car to recondition and sell. He purchased other cars and began to build a business.

His present dealership began in 1962 when, at the age of 26, he purchased property and started with a five-car inventory. Ten years later, he built his present facility, which has a showroom, sales offices and a service area. Trussville Motors merchandised nearly 700 cars in 1980.

Brown is first vice president and president elect of his state's independent dealer association.

Goodyear remains No. 1 by wide margin

Goodrich passes Uniroyal in tire-firm rankings

Crain News Service

AKRON.—B. F. Goodrich Co. displaced Uniroyal, Inc., as the No. 3 domestic tire maker in 1980.

Goodrich experienced a slight decline in tire sales in 1980, but climbed above Uniroyal when the New York-based firm's sales slid even more.

Goodyear Tire & Rubber Co. remained the largest tire maker by far, outdistancing second place Firestone Tire & Rubber Co. by 82.7 percent, based on sales of tires and related products. Firestone in turn, sold nearly three times as many tires and related products as did third place BFG.

Goodrich, Uniroyal and General Tire & Rubber Co. are all grouped closely around the $1 billion sales mark. All three companies' tire sales comprise less than 50 percent of their respective companies' overall sales.

The next two companies, Armstrong Rubber Co. and Cooper Tire Co., are the antitheses to BFG and General; tires and related items are the only products they manufacture. Mohawk Rubber Co., on the other hand, has been concentrating on several non-tire product lines, a fact reflected in its past five years' results; tires have gone from 91 percent of Mohawk's sales in 1976 to 78 percent the past two years.

Goodyear has shown consistency in its tire segment, with tires comprising 83 to 84 percent of the company's overall sales and 71 to 83 percent of its operating profits in the past five years.

- Of the eight domestic tire makers, only Goodyear, Armstrong and Cooper experienced increased tire sales in 1980.

Goodyear, Armstrong and Cooper also were the only three to experience higher sales in each of the past five years. Goodyear's sales grew an average of about 10 percent per year, Cooper 7 percent and Armstrong roughly 3 percent.

Goodrich, after growing more than 8 percent yearly from 1976 to 1979, faltered slightly last year, as tire sales were down by 0.12 percent. Even taking that into consideration, BFG still grew almost 7 percent a year during the five-year period.

General also was growing nearly 8 percent yearly before experiencing an off year last year to slow its annual growth to about 4 percent.

The eight companies' overall figures reflect the tire rankings mirror perfect. Goodyear had overall 1980 sales of $8.44 billion, good for 36th place on the Fortune 500 list of the nation's top industrial firms.

Firestone was 73rd with sales of $4.85 billion while BFG was ranked 122nd based on sales of $3.08 billion. Uniroyal and General are nearly neck and neck at $2.3 billion and $2.22 billion respectively, putting them 164th and 171st on the Fortune 500 list.

Armstrong, $401.3 million, Cooper, $324 million, and Mohawk, $180.7 million, follow in the second 500.

Machine Tool Operations is newly formed GM unit

WARREN, Mich.—Recognizing the potential use of the General Motors - developed Numerically Controlled (N/C) Painting System in GM plants worldwide, the GM Manufacturing Staff has established a new activity, Machine Tool Operations, according to Thomas O. Mathues, GM vice president in charge of the Staff.

The N/C Paint System, which is still in the development stage, totally automates the spray painting of car and light truck bodies. In its first installation, the computer - operated paint system will consist of three pairs of automatic roof and side sprayers, five pairs of N/C paint machines with door openers, and an off-line teaching booth that houses one N/C painter with door opener.

Automatic side and roof sprayers are fixed-length stroke devices that are already widely used in painting operations. The system's hardware will vary depending upon painting requirements and physical limitations of the plant.

Guilford W. Forbes has been named the director of the section. Reporting to Forbes is Robert J. Caulfield, manager, Flexible Automation Systems, and Gerhard K. F. Haas, manager, Balance Engineering.

"Flexible Automation Systems will provide, install and service the N/C Painter System in GM plants," Mathues said. "This new operation is the most expeditious and efficient way of insuring the speedy introduction of this new technology into our manufacturing plants.

"The N/C painter has taken six years to develop by GM scientists and engineers. There is no similar product like this on the market today," he added.

Balance Engineering, also being brought under the umbrella of the newly-formed section, has a long history within GM. Formed by GM Research Labs in 1923 to manufacture balance machines for use in GM plants, Balance Engineering has developed into an industry leader in the making of high-technology precision balancing machines for companies and governments throughout the world.

Some decanter!

Pete Barengo, left, owner of Sierra Wine & Liquor, Reno, Nev., presents the first of a 2,500-limited edition whiskey decanter to Mead Dixon, chairman, Harrah's Hotels and Casinos, Reno and Lake Tahoe. The special decanters are tiny replicas of the 1933 Duesenberg.

Oregon dealers elect Trachsel president

PORTLAND, Ore. — Howard Trachsel, of Trachsel Buick, Salem, has been elected president of the Oregon Automobile Dealers' Assn. He succeeds Bob Murray, Murray Chevrolet Co., Gresham.

Other officers are Wayne Kuni, Kuni Cadillac, Beaverton, vice president; Jack Koken, Lithia Motors, Medford, treasurer, and Allan Larsen, Larsen Motor Co., McMinnville, secretary.

But total is well ahead of year-ago period

Auto production drops for week

By Patricia Hoffman
Staff Writer

Although U. S. auto production last week fell below the previous week's total, output continues to stay above the comparable year-ago figures.

The auto makers targeted production last week at 158,925 units, down 4.91 percent from 167,125 built the previous week, but up 25.31 percent from 126,822 assembled in the comparable 1980 week.

So far this year, the makers have completed 3,356,232 cars, up 2.15 percent from 3,285,626 built in the same period last year.

Breakdown for last week by company is: General Motors, 64.33 percent; Ford Motor, 20.73 percent; Chrysler Corp., 10.63 percent; Volkswagen of America, 2.37 percent; American Motors, 1.89 percent, and Checker Motors, 0.05 percent.

Saturday overtime was scheduled last week at six assembly plants.

GM's Flint, Oklahoma City, Wilmington, Lordstown and Van Nuys assembly points all worked Saturday (June 20).

Also working last Saturday was Chrysler Belvidere. The plant worked only one of two shifts on Friday, June 12, and Monday, June 15.

Belvidere will continue on daily overtime schedules this week with both shifts working nine-hours.

Also at Chrysler, the Jefferson and Newark assembly plants will work two daily nine-hour shifts this week.

GM said that its Framingham assembly plant (Century, Regal and Cutlass) closed Monday (June 15) to begin changeover into 1982 models.

According to GM, the plant is slated to resume operations either the third or fourth week of September, (tentatively Sept. 21) with production of the new front-wheel-drive A-cars.

Due to lagging sales, Checker Motors' Kalamazoo assembly point has scheduled downtime, which began Friday (June 19) with operations resuming July 13.

Saturday overtime was scheduled last week at two Ford assembly plants—Kansas City and Atlanta.

Also at Ford, daily overtime is slated this week at Wayne, Dearborn and Metuchen. Downtime is slated this week at the Ford Chicago plant.

Complaint on Volvo pricing ruled a class-action matter

SAN FRANCISCO. — The three-judge First District State Court of Appeals here has ruled that a lawsuit in which Charlene P. Rosack, of San Mateo, charges Volvo of America Corp. with price-fixing should be tried as a "class action."

The ruling will, in the event Rosack proves her charges, open any money judgement against Volvo to sharing by approximately 50,000 buyers of Volvo automobiles.

The 33 page ruling, written by Justice Betty Barry-Deal, was unanimous, with the concurrence of Acting Presiding Justice James Scott and Justice Sidney Feinberg.

The litigation, which eventually will be heard before a San Mateo County Superior Court judge still to be assigned, accuses Volvo of "discouraging dealers from offering discount prices to potential and actual buyers of Volvo models."

"This decision," said Rosack's attorney, Susan Yvonne Illzston, "will have a substantial impact. What it means, is that large corporations cannot henceforth attempt to prevent consumers from obtaining relief in the courts merely by creating minor differences in marketing techniques or in pricing practices."

Volvo will be represented by several attorneys, including Daniel Williams, of Los Angeles.

The litigation began in March, 1976, when Rosack filed suit against Volvo charging representatives of the company had "engaged in a vertical retail pricing management scheme between 1967 and 1976 in which Volvo dealers were coerced into offering little or no discount from the vehicle sticker price."

"This resulted," the legal action alleged, "in artificial maintenance of the price of Volvo vehicles above the free competitive levels, in violation of California's antitrust laws embodied in the Cartwright Act."

That initial action was appealed to the U. S. Supreme Court which ruled the case was a state and not a federal issue.

EV marketing seminar opens in New York

NEW YORK. — Electric Vehicle Progress, an industry newsletter, is sponsoring a two-day seminar here June 22 and 23, "Moving Toward EV Marketing: Mobilizing a New Industry."

Government and industry speakers will address methods of overcoming technical and marketing barriers. Results of a new marketing study will also be presented.

Truck production top week ago; far ahead of 1980

U. S. truck production last week took a substantial jump over the comparable year-ago week's total, and year-to-date, output continues to climb above the comparable 1980 period.

The truck makers slated 42,324 units last week, up 3.22 percent from 41,003 completed in the previous week, and up considerably by 51.80 percent from 27,882 built in the same week last year.

Year-to-date, the makers have assembled 874,255 trucks, up 9.42 percent from 798,991 built in the same period last year.

Saturday overtime was scheduled last week at General Motors' Detroit (Chevrolet chassis) truck assembly plant.

Daily overtime is slated this week at the Chrysler Warren truck point. The plant will work a daily nine-hour shift.

Saturday overtime was scheduled last week at Ford's Ohio truck facility.

Downtime is slated this week at the Ford San Jose truck assembly point.

Canadian output of cars climbs to 23,617 for week

Canadian auto production last week was up from the previous week and the comparable 1980 week, although the total remained below last year's year-to-date output.

The auto makers targeted production last week at 23,617 units, up 2.84 percent from 22,965 built the previous week, and up 12.41 percent from 21,010 in the comparable year-ago week.

So far this year, the makers have assembled 432,853 cars, down slightly from 434,543 built in the comparable 1980 period.

Canadian truck production last week was 12,648, up 2.84 percent from 12,299 trucks built the previous week, but down 1.20 percent from 12,802 completed the same week last year.

Year-to-date output for the truck manufacturers was 277,034 units, up 1.59 percent from 272,704 built the same period in 1980.

Overtime was scheduled last Saturday (June 20) at Chrysler's Pillette Road truck assembly point. The plant has also slated overtime for next Saturday (June 27).

All other Canadian assembly plants will be working regular schedules this week.

Delay in Clean Air action poses a threat to makers

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Substantive talk of what to do about future auto emission standards has started in the Senate Environment Committee, although the Reagan Administration has yet to make known its position.

The first two days of hearings clearly indicated wide disagreement between the auto makers and their suppliers of control equipment; between some Senators (including the Republican Chairman Robert Stafford of Vermont) and what is believed to be the position of the Administration, and between environmentalists and the auto makers over the concept of averaging.

The failure of the Administration to consult with key Congressmen, the delay in its proposals—which will probably not come until after the July 4 recess — and the speculation of "gutting" the law have combined to make it almost certain that the Clean Air Act will not be changed by the end of September. (Last time around, it took almost three years to deal with this enormously long and complex law.)

Any delay beyond September or October becomes crucial for the auto companies, for they would normally be making hardware and emission-control decisions for '83 models by that time.

They all want the CO standard to be changed to 7.0 gpm and the NOx standard changed to 2.0 gpm. The fight will be over both, but primarily the NOx level and whether or not three-way catalysts will be used.

Other fights will occur over diesel particulates and the adequacy of trap oxidizers, the level of control for heavy-duty trucks, high-altitude vehicles and, above all, over the "mobile bubble" concept of averaging fleet emissions in much the same way as CAFE is used for fuel-economy standards.

- On the first day, the committee gave the star role to Tom Austin, head of the California Air Resources Board and a former EPA employe. Austin said flat out that two proposals of the auto makers and some EPA staffers — relaxing NOx and averaging — would double auto pollution and contribute to acid rain as well.

He cited data gathered by California to show that fuel economy can be improved and more diesels used without relaxing standards.

Countering auto makers' arguments that relaxing NOx control is acceptable because few violations of the ambient air nitrogen dioxide standards occurs outside California, Austin said such a relaxation would mean more "junk" in the air, such as nitrate particles. It also raises the possibility of nitric acid rain to damage lakes, streams and forests, he said.

Other arguments for relaxing NOx emissions — fuel-economy improvement and more diesels —were questioned by Austin. Citing California experience (where manufacturers can certify at 1.5 gpm NOx with a 100,000 mile warranty or at 0.7 gpm for the normal 50,000-mile life —Austin noted that Checker, using the General Motors diesel engine, had slightly increased the exhaust-gas recirculation (EGR) rate, certified at 0.7 gpm NOx and found city fuel economy was 20-MPG — the same as for the GM diesel at 1.5 gpm NOx.

Moreover, said Austin, Mercedes-Benz has told CARB it is

AMC Targa

Open-air four-wheelin'

One of the newest conversions on the market is the targa-top treatment for American Motors four-wheel-drive Eagle models by Griffith Co., Ft. Lauderdale, Fla. Griffith plans 1,200 such conversions in the '82 model year, each retailing for $3,795. It says it has an interrupt-ship arrangement with AMC whereby converted targa-top cars are shipped to dealers through regular factory channels.

3-cylinder turbo diesel and CV transmission

75-MPG Volkswagen in the wings

By Paul Lienert and Jake Kelderman

"There's a good chance we'll be building a 75-MPG car in the next five years."

Those words from Volkswagen of America's top engineer, Duane Miller, signal the small-car/fuel-economy wars have just begun in this country.

"We're already over 40 MPG (Rabbit diesel) with pretty decent performance, using relatively straightforward powertrains," said Miller, engineering vice president of VWoA. "With more-advanced designs, like our supercharged three-cylinder diesel engine and possibly a continuously variable transmission, we should be able to get into the 70s with just a small sacrifice in performance."

To date, the only major auto company to even talk about that kind of fuel economy has been General Motors, where design boss Irv Rybicki has said his staff is developing a small four-passenger car that could be capable of delivering 75 MPG with a two-cylinder, motorcycle-type engine.

But Miller's comments indicate VW is moving ahead with a full-scale production program designed to put the first true 75-MPG car on the road by 1986.

Like GM, VW feels it can squeeze that kind of mileage from a four-passenger car.

"I don't think we need to build any tiny two-passenger models," said Miller. "Maybe we'll need something smaller than the Rabbit. I'd like to see us bring the Polo (the smaller sister to the Rabbit, sold only in Europe) to this country in a few years. We see a market for it here."

Several auto firms are planning to build two-passenger models by 1985-86, capable of delivering up to 60 MPG, according to industry insiders. But the new four-passenger minicars planned by GM, Ford Motor Co. and others during the same period are likely to get only 40 to 50 MPG, using current powertrain technology.

It is clear VWoA intends to maintain its lead in the fuel-economy derby in the U. S., where the Rabbit diesel has been the top-rated car for the last four years.

Miller did not specify which vehicle may receive the production version of the supercharged three-cylinder diesel, basically a development of the current four-cylinder block.

It is believed the company will introduce a redesigned Rabbit here in late '84, but it will use existing gas and diesel powertrains. The three-cylinder apparently won't be ready for production before '85, according to sources at VWoA. By then, it may be installed in the next-generation Rabbit or in an updated version of the Polo. There is even talk of designing a new four-passenger, front-drive model to accommodate the engine.

The engine is already being tested in running prototypes, according to Miller. With a supercharger, the diesel three is said to have the same power characteristics as a larger four-cylinder gas engine.

Fuel economy in preliminary testing by VW is in excess of 90 MPG, according to sources who say VW has conducted the tests using a duplicate of the EPA fuel-economy test cycle. Most of the tremendous gains in mileage come from shutting off the engine at stops—the EPA city cycle has 26 stops and the highway cycle has 10—then restarting it, and boosting it to maximum efficiency via the supercharger, which does not exhibit the low-speed lag normally associated with turbochargers.

Advanced engine electronics also may be used to meter fuel more precisely and govern engine operation, based on electronic sensing of engine tem-

breaking news

McNealy joins Kenyon & Eckhardt

DETROIT.—William McNealy Jr. has joined Kenyon & Eckhardt Advertising as executive vice president, a new position, on the Chrysler Corp. account. Most recently a management consultant and earlier a senior executive at companies such as AMF, Inc., and American Motors, McNealy will be responsible for K&E's Chrysler account management group, as well as for the agency's 10 U. S. field offices that service Chrysler dealer associations. He will headquarter in Detroit.

Recchia to head Mitsubishi in U. S.

LOS ANGELES.—Richard Recchia has been named general manager of Mitsubishi's U. S.-based operations. The firm will start importing cars in the 1983 model year. Recchia resigned last March as president of Fiat Motors of North America.

Nissan to drop Datsun name in U. S.

TOKYO. — Nissan Motor Co. Ltd. plans to drop the Datsun nameplate in the U. S. in favor of a Nissan nameplate beginning with 1982 models. A Nissan source said the change will be made despite protests from export officials.

Japan sets up quotas for shipments to U.S.

TOKYO.—Japan's Ministry of International Trade and Industry has given that nation's auto makers quotas on car shipments to the U. S. for the first year of the three-year voluntary limitation of such shipments.

Under the agreement reached by the two nations, Japanese car shipments to the U. S. will be limited to 1,680,000 for the period from April 1, 1981, to March 31, 1980. .

The estimated quotas are as follows: Toyota, 518,000; Nissan (Datsun), 453,000; Honda, 350,000; Mazda, 159,000; Mitsubishi, 114,000; Subaru, 66,000, and Isuzu, 17,000.

Those figures add up to 1,677,000, close to the voluntarily established limit of 1,680,000.

Japanese makers shipped about 1,820,000 cars to the U. S. during the 1980 calendar year.

The April 1-March 31 time period in the quotas is based on the Japanese fiscal year.

Japanese car sales in the U. S. during that period will undoubtedly be higher than the 1,680,000 quota because the makers had good inventories of cars in the U. S.

The year-to-year changes listed by sources here for the various makers actually show a bit of an increase over year-earlier totals. This is because they are changes in the number of cars actually shipped from Japan to the U. S. from April of last year to March of this year. Shipments had begun to taper off by the beginning of that fiscal period.

Changes listed by sources show declines of 7,000 for Toyota and 6,000 each for Nissan and Honda. There are increases of 4,000 each for Mazda and Mitsubishi and 2,000 for Subaru.

Diesel auto market bucks trend, tops last year by 31 pct.

By Jim Plegue
Staff Writer

Sales of diesel-powered automobiles in the U. S. continue to buck the nation's overall car sales trend, posting a healthy 31.45-percent increase during the first five months of calendar 1981.

Manufacturers sold 220,204 diesel-powered cars in the U. S. from Jan. 1 to May 31, up from 167,513 sold during the equivalent period in 1980. Total domestic new-car sales during the period were down 3.38 percent.

General Motors continues to lead the pack, with sales of 138,893 diesel models, up a whopping 59.16 percent from the 93,116 diesel cars sold during the first five months of 1980. Likewise, GM's share of the diesel market increased — from 55.58 percent to 63.07 percent of the market this year.

Oldsmobile — GM's divisional diesel sales leader — increased its production for the period but actually lost slightly over one percentage point of its market penetration because Buick, Pontiac and Chevrolet substantially increased their diesel output.

- Oldsmobile built 69,389 diesel-powered vehicles during the period, followed by Pontiac, 20,025; Buick, 18,744; Chevrolet, 15,422, and Cadillac, 15,313. Pontiac, Buick, Oldsmobile and Cadillac offer the Oldsmobile-built 350-CID (5.7-liter) diesel V-8 engine in full-size and intermediate models.

Chevrolet offers the 350-CID diesel in its full-size models, and in March added the Isuzu-built 1.8-liter four-cylinder diesel to the Chevette's option list.

Sales of diesel-powered Volkswagen Rabbit and Dasher, and Audi 5000 models dropped slightly for the period. The VW-Audi total of 51,655 diesel sales was down 4.42 percent from 54,045 diesels sold last year.

The VW-Audi reduction, combined with GM's increase, helped knock nearly nine percentage points off VW-Audi market penetration. VW-Audi's market share for the first five months of this year was 23.45 percent, down from 32.26 percent for the comparable '80 period.

Volkswagen noted, however, that much of its diesel capacity is being funneled into its VW Pickup model, which has a diesel installation rate of 75 percent, compared with the Rabbit's installation rate of 55 percent. Production of diesel trucks has more than doubled since last year, the company said.

VW-Audi has forecast sales of 124,000 diesel models through calendar '81.

- Mercedes-Benz sold 21,280 diesel models in the U. S. during the first five months of calendar '81, up 37.65 percent from the 15,459 sold during the equivalent period last year. Currently, diesels account for 79.5 percent of total Mercedes sales in the U. S. The company has originally expected that figure to be 76 percent.

Mercedes expects to sell more than 43,000 diesel models in the U. S. through the '81 calendar year. The German maker's top-seller for the last two years has been the 300-SD turbodiesel model, which accounted for 26.6 percent of total sales during the January-May period. That model lists for $34,185.

Peugeot, which sold 5,697 of its 505 diesel and 505 turbodiesel models during the period, posted an increase of 22.09 percent over the 4,666 diesels sold during the equivalent '80 period. The company's diesel target for calendar '81 is 16,000 sales.

Newcomer Isuzu, which started selling to the U. S. market April 1, had retailed 1,390 of its diesel-powered I-Mark models through the end of May. Isuzu's sales target for calendar '81 is 16,000 diesel I-Marks.

- Volvo numbers do not accurately reflect its diesel sales potential. The company was unable to certify its '81 diesel because, according to the maker, there were problems with EPA's diesel fuel supply. All Volvo figures are for 1980-model diesels. Volvo had planned to sell 7,000 of the 1981-model diesels.

Latest diesel car models to debut in the U. S. are the Volkswagen Jetta and Datsun Maxima diesels, both which bowed this month. Datsun expects first-year sales of 6,000 diesel Maxima models, while VW's Jetta target is 9,800 units through calendar '81.

Continuing demand for fuel-stingy diesel cars is prompting other companies to prepare diesels for the U. S. and convincing others to expand their current offerings.

General Motors, for example, is readying a new V-6 diesel engine for the '83 model year, while Ford Motor Co. plans to purchase six-cylinder diesel engines from BMW-Steyr for its future fullsize models. Chrysler is planning to buy diesels from Peugeot for cars in the mid-1980s.

Two favorites

Side by side, in West Berlin, are the most popular Mercedes-Benz sports car and probably the most famous. Left, a 1981 380-SL, the 100,000th of the two-seat coupe/roadsters that found their warmest welcome in the U. S. market and have been offered with engines ranging from 2.8-liters to 5.0-liters, snuggles up to 300-SL gull-wing, of which only 1,400 were built during the 1954-57 production run.

Toyota expands body operations in Australia

MELBOURNE, Australia—The Toyota Motors Group here has approved the start of the second phase of a major expansion of its factory on the outskirts of Melbourne, where a new $46 million (Australian dollars) body press addition is scheduled to go into production early in 1983.

Toyota already is undertaking a $146 million (Australian) expansion of its plant facilities at Altona and Port Melbourne to produce cylinder blocks and parts for the General Motors-Holden's world car.

The new body press plant will produce 3,000 units a month, increasing the total capacity and output to 5,500 units a month. The Melbourne plants will represent Toyota's largest overseas investment and will amount to $1 billion (Australian).

Grass-roots meetings are part of program to restore confidence

Ford dealers get voice in planning

By Marjorie Sorge

Ford Motor Co. has cleaned out the pipeline between the dealers and factory and is giving the dealers a grass-roots voice in company planning.

With the new program, factory and dealers have held grass-roots meetings with no-holds-barred sessions discussing problems, products, selling techniques, advertising and future outlooks among others.

"We are not going to play 52 pickup any more," said Gordon B. MacKenzie, general manager of Lincoln-Mercury Division. "We want the entire selling organization to be fully aware of how we intend to market every product and we want dealer input at the early stages. We're putting our best brains together."

Dealers, too, are responding favorably to the widened communications line. Edward Soukup, Hempstead Lincoln-Mercury Motors Corp., Hempstead, N. Y., said there is now a restored confidence in Ford Motor Co. management among the dealers.

"It's more than just lip service," he said. "There is more promise for the future and an upbeat feeling about the company. We are over the hesitancy about the future."

Ford has opened the doors to future products to its dealers, showing members of the Marketing Committee of the L-M National Dealer Council the new 1982 and some 1983 models earlier this month.

Each of the nine members showed enthusiasm and optimism about the L-M products in the next two years and were also pleased that some of their marketing and styling suggestions were included.

They predicted a strong sales market in 1983 and said L-M has turned the corner to a new luxury car lineup and a more complete full-product line. According to the dealers the new luxury car lineup will be complete when the Lincoln line is revamped in 1984.

New lines for 1982 include the Continental and five-door Lynx while in 1983 the Topaz and a new XR-7 will be introduced.

"Ford looks like they have some style again," Soukup said. "They did well with the original Mark III and Cougar but then seemed to lose it. Now they are back into the market."

One thing the L-M dealers have fought the factory for in the past 12 to 15 years has been a greater differentiation in styling between Ford and L-M.

According to the dealers, the L-M products will now have a higher level of luxury than the Ford sister products and will also have some different styling. For example, the XR-7 will have an entirely different roofline than the Ford Thunderbird, sources said.

The change in styling will make it easier to sell the cars, the dealers said, because in the past it has been difficult to justify the higher L-M price when the cars look the same as the lower-priced Ford models.

Dealers are also getting more input into the corporate advertising program and hope to have the same theme line used by all districts across the country.

Currently it is planned with Moody Blues and Wings background and music, sources said.

Other ideas evolving from the dealer/factory communications include a pre-order program which MacKenzie characterized as "a plan of some magnitude" and discussions on the best method of selling. That could include rebates, dealer incentives or special packaging techniques, among others, he said.

"It's gratifying to talk openly with them (dealers)," he said. "And if we can't do something, they understand. We've always had a good relationship with the dealers but this is a step further."

The dealers characterized the new program as a "feed and fuel" method and said the factory is really listening to their suggestions. They said the new communications lines help their long-term relationship with the factory.

The expanded communi-

Saudi Arabia threatens Toyota with blacklist

By Edward Lapham
Financial Editor

The Saudi Arabia threat to Toyota that a joint venture with Ford Motor Co. could mean economic reprisals is likely to affect talks between the two companies, auto analysts said.

Saudi Arabia last week "warned" Toyota that it should not enter into any arrangements with Ford, which is blacklisted by the Arab League nations because it maintains a CKD operation in Israel.

A Saudi Arabia official told a Japanese official, "This is the formal view of the Saudi Arabian government. Please convey this view to Toyota and the United States."

Later in the week the government of Kuwait joined the controversy by issuing its own caveat to Toyota.

Toyota has been a successful exporter to the Arab world. Last year, the Japanese auto maker exported about 200,000 units there, with more than 60 percent going directly to Saudi Arabia and about 15,000 to Kuwait.

"There is no doubt this is going to be a factor in the talks," said Prescott, Ball & Turben analyst Arthur Davis. "This puts Ford at a severe disadvantage in the talks."

Davis said Toyota is one of the few auto makers which has learned how to effectively serve the Arab world by exporting "batches" of cars which meet the individual market needs.

"Toyota is the best managed automotive company in the world," Davis said. "Toyota's management knows its Arab World exports could easily go to 400,000 a year and they don't want to endanger that."

He said several factors, including the Saudi threat, are affecting Toyota-Ford talks, not the least of which is Toyota's new strengthened position.

"Toyota is stalling," he said. "They want to do as harmless an arrangement as possible just to keep a foot in the door in case the shootout in the '83 (U. S.) market gets too bloody."

Arvid Jouppi, John Muir & Co. vice president and auto analyst, agreed that the threat is a factor but said it is nothing new.

"It is a factor, but there is no

Sneak preview is a pleasant surprise

'82s and '83s impress L-M dealers

By Marjorie Sorge

Ford Motor Co. has made dramatic improvements in its '82 and '83 product lineup in the past 18 months, its dealers say, much to their surprise.

In early June, members of the Lincoln-Mercury National Dealer Council Marketing Committee were in Detroit to view the new offerings for 1982 and 1983. All were very impressed with the models and said the quality in both design and manufacturing is much improved.

"The quality and the Ford dealer system is 100 percent better than in the last two or three years," said Peter Assimon, Express Sales, Inc., Manlius, N. Y. "We had some nit-picky stuff before, in the last year or two, but that's improving."

The improvement in quality can be measured only by the number of complaints from the customers, said Fred C. Smith, council chairman and owner of Fred Smith Lincoln-Mercury, Independence, Mo. He said five years ago, buyers would bring their vehicles back often for little repairs, but the number of returns has dropped, indicating an improvement in quality.

The same group of council members checked out Ford's future plans 18 months ago and left that meeting thinking the company was a long way behind the other makers, the dealers said.

"There is now a vast improvement over the last 18 months," said Richard J. Clements, Clements Lincoln-Mercury, Inc., Shreveport, La. "It looks like they pulled out all the stops and began making the cars we needed. In 1982 we will almost be on par with the other makers and by 1983 we will be there."

- Ed Jussen Jr., council vice chairman and owner of Star Lincoln-Mercury Sales, Inc., Glendale, Calif., said Ford's new product mix will provide well-rounded competition for General Motors as well as the other makers. But the current gas glut may help give L-M an even stronger position.

That division has long been known for its big cars and dealers are hoping a heavy gas supply will bring prospective buyers into their showrooms.

Jussen, a dealer since 1963, said he feels Ford has been a year or two late on some products and "a year ago I would have said we were out of the fight on front-wheel-drive." Now, he said, the new products represent the best down-the-line mix the company has had in his experience.

Most committee members agreed that Lincoln-Mercury is behind the other makers now in the intermediate line but can hold its own in the luxury and small-car markets.

In the 1983 model year, that disparity will disappear, they said, when the new XR-7 is introduced. That car gets away from the boxy look, dealers said, and has flowing, rounded curves giving it a streamlined look. The car will compete not only with the domestics, but with higher-priced Japanese and European imports, they said.

Smith said Ford dealers really need the new intermediate now and its introduction date "may be too late for some dealers who aren't going to make it."

"As pretty as that car is it will sell anytime," he said. "People will be standing in line for it, but we need it this year for survival."

According to Jussen, dealers who will survive are those who are managing their dealerships correctly. He said the current sales slump leaves no room for any mismanagement and the surviving dealers are like the diamonds appearing after coal has been under pressure.

Ronald C. Dale, Rule-Dale Lincoln-Mercury, Modesto, Calif., said the new XR-7 "is the prettiest any manufacturer has produced in the last 15 years. If we had them today I'd take a hundred of them."

Also new for 1983 will be the Topaz, a front-wheel-drive replacement for the Fairmont and Zephyr, but it will not be introduced until '83½, sources said.

"When that car comes in, we are going to be the cat in the bird's nest," Jussen said.

- The members of the marketing committee agreed the Topaz will be a stiff competitor for the General Motors J-car, although the J will have a year's jump on the market, but they are worried about the pricing of the new car.

Smith said the J is priced too high for the market which, if Ford prices the car correctly, may help Topaz sales a year from now.

The Topaz has European styling, flush glass and limo doors, which open into the roof of the car. It will be available as two- or four-door models. And, like the new XR-7, dealers wish they had the car a year earlier.

"The 1983 lineup has the most dynamite models since I've been a dealer," said H. Herald Friedley, Friedley Lincoln-Mercury, Cedar Falls, Ia. He became a dealer in 1958 and opened a Lincoln-Mercury store in 1972.

For 1982, Lincoln-Mercury is also bringing out some new models but the one receiving the most attention from the marketing committee is the Continental, a newly four-door traditional luxury car with a 23-gallon gas tank, the dealers said.

"It drives and handles beautifully for that size car," Smith said. "Frankly, I was amazed. It should compete nicely with the Seville in ride and handling."

Clements expects the car to be one of the hottest sellers at his Southern dealership and said it may "not replace the Lincolns but it will attract a lot of Cadillac owners."

Rule sees the Continental as a catalyst to stimulate the luxury market in California.

Lincoln-Mercury is taking special care of the components in the new Continental. After the zinc die-cast grille surround is cast and buffed, it is plated with copper semi-bright nickel and bright nickel and then hand-buffed before being returned to the plater for final chrome plating, a company spokesman said.

According to Gordon B. MacKenzie, L-M vice president and general manager, the Continental is a "magnificant car equal to the division's Town Car." He said it has a 108-inch wheelbase, compared with the 117-inch last year, and a 3.8 liter V-6 engine (a new powertrain) or a 5-liter V-8.

"Our engines are pretty straightforward," he said. "And we aren't concerned. We will have no problem with powertrains next year."

- Ford Motor Co. is testing the new V-6 engine in pre-production and, according to a company spokesman, the procedure is the most extensive of any new engine in Ford history.

He said the new engines are subjected to nearly 1,200,000 miles of on-the-road testing and were also hooked up to dynamometers for more than 51,000 hours of testing. Each engine was completely torn down after 50,000 miles and each component was checked for evidence of wear and then compared with the program's objectives. Improvements were made when needed.

Also, coming in the '82 model year will be the five-door Lynx,

Continued on Page 34, Col. 3

L-M dealers inspect five-door Lynx

Members of the marketing committee of Lincoln-Mercury Division's National Dealer Council met with divisions management in Detroit in June. They discussed marketing of the new 1982 cars, including this 5-door Lynx, and test drove them at the Dearborn Proving Ground.

The Silver Ghost Rolls-Royce in the foreground was owned by President Woodrow Wilson. The car was built not in Great Britain but at the firm's plant in Springfield, Mass. It was displayed for the introduction of the new Rolls Silver Spur and Silver Spirit.

Mid-June sales tumble; total lowest since 1961

By Jenny L. King
Staff Writer

Mid-June domestic new-car sales were off from the low year-ago total as the market continued to resist a sales recovery.

June 11-20 sales numbered 172,170, down 8.12 percent from 187,379 a year ago. Low for the period was 131,848 back in 1958 while the boom year of 1973 saw mid-June sales soar to 311,044. This year's total was the lowest since 1961.

So far this year, sales have been down in 10 periods and up in seven periods. The mid-June daily selling rate averaged 19,130, down 8.12 percent from the year-earlier rate of 20,820. There were nine selling days this year and last.

Year-to-date sales totaled 3,138,259, down 2.43 percent from 3,216,499 through June 20, 1980. The daily selling rate for the year-to-date period was 21,643.

Only Chrysler Corp. reported a sales gain for mid-June. Chrysler sales climbed 16.50 percent, to 19,210 from 16,489 last year. AMC, which does not report period sales, was estimated to be up 2.33 percent, to 4,400 from 4,300.

General Motors sales dropped 11.69 percent, to 103,331 from 117,014 in 1980. Ford Motor Co. reported sales of 41,644, down 5.90 percent from 44,256. Volkswagen of America sales plunged 32.61 percent, to 3,585 from 5,320.

- GM's share of mid-June market remained large but it was down from the preceding year. GM earned 60.02 percent; off from 62.45 percent. Ford's share increased to 24.19 percent from 23.62 percnt. Chrysler climbed to 11.16 percent from 8.80 percent. AMC had an estimated 2.55 percent of the market, up from 2.29 percent, and VWoA slipped to 2.08 percent from 2.84 percent.

Six of the 13 U. S. makes reporting sales a year ago were up for mid-June this year, and seven were down. Imperial is a 1981 newcomer. Plymouth sales leaped 77.57 percent, Mercury was up 32.08 percent, Cadillac was up 8.47 percent, Dodge was up 7.18 percent, Oldsmobile was up 6.78 percent and AMC was up 2.33 percent.

Chrysler sales dropped 58.82 percent, Buick was down 36.79 percent, Volkswagen was down 32.61 percent, Lincoln was down 21.86 percent, Pontiac was down 20.62 percent, Ford was down 13.79 percent and Chevrolet was down 13.44 percent.

Emphasis shifts from van to car for Ford-Toyota

DEARBORN.—The drawn-out Ford-Toyota talks about a possible North American joint assembly venture are expected to now "center on a number of passenger vehicles" rather than a mini-van, a Ford official said last week.

Harold A. Poling, Ford North American Automotive Operations executive vice president, said the 12-month-old talks are complicated but that the two companies have "a good basic understanding" on the administrative and technical aspects but "have yet to agree on what product to produce."

He confirmed that in prior discussions the preferred vehicle was a mini-van, but that the emphasis had changed.

"I cannot predict the timing of an agreement," he said, "but it is becoming apparent that a decision will not be reached in the immediate future."

He said the two companies want to reach an agreement as quickly as possible and are working to that end but that they will take whatever time is needed to "assure the proper decision" about the right product for the venture.

To market Brazilian-made replicar of classic MG

Lafer building sales network in U. S.

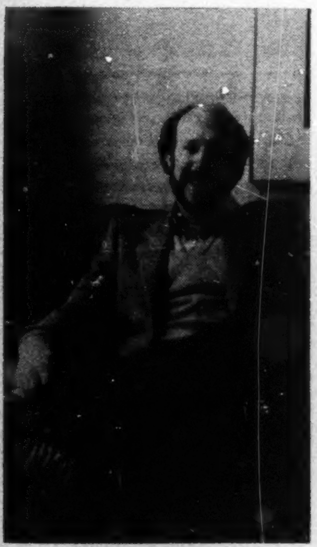
Brazilian replicar

Body of this MGTD roadster replica, the Lafer MP, is built in Brazil of hand-laid fiberglass, mated to a Beetle engine and chassis at four U. S. points. Interior features the same plush leather and woodwork that is found in Brazil Contempo furniture stores supplied by the parent firm. Power windows and hardtop are among the options; base retail price through the 30-dealer network is $13,900. The U. S. is receiving about 50 MPs a month.

NORTH HOLLYWOOD, Calif. — Word association time: Brazilian auto sold in the U. S .

Those who answered "Puma" are among the many who are unaware that a Brazilian furniture company has beaten Puma to the punch by selling an MG lookalike here called the Lafer MP.

It's a good-looking replica of the 1951 MGTD, built of hand-laid fiberglass mated to a Beetle chassis in the U. S. Unlike many, it is fully capable of freeway travel, with a top end put around 95 MPH.



Lafer man in U. S.

William Schumer parlayed his furniture connection with the Lafer brothers into the presidency of Lafer Auto Sales, the U. S. arm of the Brazilian-made Lafer MP.

And, unlike many specialty cars, the Lafer MP is being marketed through more than 25 auto dealers in the U. S. The U. S. is now getting 50 of the home firm's monthly production run of 110 autos.

But the most unusual feature of the Lafer MP is its heritage.

It was designed from original MGTDs by Percivale Lafer, one of three brothers who own Lafer S.A. Industria e Comercio, best known in the U. S. as the parent firm of Brazil Contempo, the upper-crust leather furniture chain.

The Lafers learned of fiberglass from building furniture frames and egg-shaped telephone booths supplied to the Brazilian government.

• They easily perceived a demand for luxury autos in their home market. Brazil's strict home-content rule kept out all but high-volume makers.

So, in 1973, the first Lafer MP rolled off the San Paolo line, built on chassis supplied by the neighboring Volkswagen do Brazil. That was 4,500 cars ago.

The Lafers also build a fiberglass Mercedes SEL replica, based on a Brazilian Chevrolet chassis, for their home market, and a sportier version of the MP for the younger Brazilian market.

For the U. S. market, remanufactured Beetle chassis and engines are used because of EPA certification rules. But William Schumer, president of Lafer Auto Sales, the U. S. subsidiary based here, is hoping the VW do Brazil adaptation of the Rabbit engine to rear-engine configuration will become available for the U. S.

Meanwhile, Schumer is developing a network of specialty-car and traditional dealerships for the Lafer, which could be imported in volumes up to 100 a month, Schumer said.

About a third of the Lafer's U. S. dealers carry VW; others are required to service the autos themselves or to enter into cooperative agreements with nearby service points so the 12-month, 12,000-mile warranty can be honored.

The Lafer retails for around $14,000 on the West Coast, including leather interior—in the style of Brazil Contempo furniture — and wooden wheel and dash.

Glass power windows, hardtop, two-tone paint and stereo can be added.

Schumer, partner in four of the firm's California furniture outlets, said the Lafer is also experimenting with alcohol-powered engines for the U. S. market.

"THE AUTO AUCTION OF THE 80

Total tops previous week, swamps year-ago period

Auto output stays above 160,000

By Patricia Hoffman
Staff Writer

Domestic auto production last week showed a gain over the total for the previous week and was far above that of the comparable 1980 week.

The U. S. auto makers slated output at 163,147 units, up 1.90 percent from 160,103 completed in the previous week and up 31.04 percent from 124,498 built in the comparable 1980 week.

Auto production for year-to-date is 3,520,557, up 3.32 percent from 3,407,346 cars built in the comparable period last year.

Breakdown for last week by company is: General Motors, 63.91 percent; Ford Motor, 19.93 percent; Chrysler Corp., 12.01 percent; Volkswagen of America, 2.31 percent and American Motors, 1.84 percent.

Checker Motors' Kalamazoo assembly point was down last week. Downtime began June 19 and the plant is slated to resume operations July 13.

Saturday overtime was scheduled last week at five GM and three Chrysler facilities.

They were GM Tarrytown, Oklahoma City, Wilmington, Pontiac and Southgate and Chrysler Belvidere, Jefferson and Newark.

The Chrysler Belvidere and Jefferson points will continue on daily overtime this week working two nine-hour shifts.

GM's Doraville point (Malibu, Monte Carlo and Cutlass) closed last week (June 26) for model changeover to front-wheel-drive autos. The plant is scheduled to remain idle until September 28.

Saudi Arabia threatens Toyota with blacklist

Continued from Page 2

new effect," Jouppi said. "The possibility of an Arab reaction has been a factor in the talks since they began in March, 1980."

Harvey E. Hienbach, Merrill Lynch Pierce Fenner & Smith Inc. vice president and auto analyst, said the Japanese have a history of being able to "bend" when business is at stake. He compared it to the willingness of the French to sell a nuclear reactor to Iraq in the name of commerce.

"The Middle East is an important market for Toyota, particularly with the pressure on in the U. S. and Europe," Heinbach said. "I think anything said to them by Saudi Arabia will cause them to sit up and take notice."

Ford last week said it had "no direct knowledge of the report" and therefore "it is difficult to respond." A Ford spokesman said the company had had no direct communication with Toyota about the matter but still hoped to reach an agreement.

Ford and Toyota began talks about a possible North American assembly joint venture early in 1980.

The talks were rumored but remained unconfirmed until later in the year. The Japanese Ministry of International Trade and Industry did leak some details prior to President Carter's July, 1980, visit to Japan.

Ford Chairman Philip Caldwell confirmed the talks in September. The two companies had planned to have reached a decision by the end of the current month, but earlier this year Caldwell said the talks would take a little longer than originally planned.

One of the points of contention apparently is exactly what type of vehicle might be best for a joint venture. Reportedly, the two sides cannot decide whether a car or truck project would be best, or even what type of truck might be best-suited.

- A Ford official said his company had not committed to either a car or mini-van project, although many observers have believed the talks were focusing on a truck project because Toyota had made known its mini-van preference.

The official did say that it now appears the mini-van project "has been back-burnered" in favor of talks about a small car "but not a mini-car."

Even if the mini-van project re-emerges, there is still a lack of agreement on type. Ford is said to favor its own front-drive mini-van, code-named Sierra, which is a scaled-down version of its existing conventional rear-drive van.

The Sierra has a stub nose with the driver position back from the front of the vehicle. It shares many components with the Ranger mini-pickup which will bow next year.

Toyota is said to favor a rear-drive successor to its Hi-Ace van model, with driver positioned up front, ahead of wheels and engine.

Sourcing also is a point of contention. Ford President Donald E. Petersen said in April this year that his company will insist on a high local content.

He also said the project would utilize one Ford plant with an annual capacity of about 300,000. The company's St. Louis, Lorain (O.) and St. Paul plants are said to be the leading contenders.

Truck production down for week; 39,398 assembled

U. S. truck production last week, although down from the previous week's output, continued to climb above the comparable year-ago totals.

The domestic truck makers scheduled 39,698 units last week, a 5.49 percent drop from the 42,006 trucks completed in the prior week, but up a substantial 52.68 percent from 26,001 units built the same week in 1980.

The truck manufacturers have also upped year-to-date output over the comparable 1980 period by 10.69 percent from 825,437 to 913,635 units.

Saturday overtime was scheduled last week at Chrysler's Warren truck and General Motors Detroit assembly points.

All U. S. truck facilities are slated to be idle for one day this week (July 3) in observance of the Independence Day holiday.

All of the International Harvester assembly points will remain idle through July 27 due to vacation shutdown. The other truck facilities are scheduled to resume normal operations next Monday (July 6).

Canadian output slips but exceeds year-ago week

Canadian auto and truck production last week dropped below the previous week's output, but the totals were above the comparable year-ago figures.

The auto manufacturers scheduled production last week at 23,061 units, down 1.86 percent from 23,499 completed in the previous week, but up 13.10 percent from 20,390 built in the comparable week last year.

Year-to-date, output for the auto makers was 455,796 units, up slightly from 455,400 assembled through June 28, 1980.

Truck production last week was targeted at 12,680 units, down 2.72 percent from 13,035 built in the previous week, but up 21.39 percent from 10,446 completed in the same week last year.

So far this year, the truck makers have built 290,101 trucks, up 2.51 percent from 283,006 completed in the comparable period last year.

Saturday overtime was scheduled last week at Chrysler's Pillette Road truck facility.

Volvo said that it's Halifax assembly point will be down Wednesday (July 1) in recognition of the Canada Day holiday.

All other Canadian assembly points have reported that operations will be idle on Friday, July 3, for the holiday.

Service Index pace slips, but tops '80 level

By Francis J. Gawronski
Service Editor

The rate of growth of new-car dealers' shop volume in May slipped 4.5 percentage points from the April pace, but was up from results in the same month a year ago, according to the Automotive News Service Index.

May's service and parts volume, according to the Service Index, amounted to 102.0 percent of the business recorded by dealers' shops in the same month of 1980. In April, shop volume was 106.5 percent of the business in the like month the year before.

With three of the five indicators showing good increases, May marked the third consecutive month in which parts and service business in new-car dealerships has shown an increase over the comparable year-earlier figure.

The three consecutive increases followed the year's only decline in February. The last time shop business registered three or more consecutive monthly gains was May, 1979.

The leading indicator in May was sales of all parts and accessories which were up 7.1 percent over the volume for the year-ago month.

In the runnerup spot in May was shop parts sales (those used on customer-paid and warranty repairs), up 3.5 percent, while gross profit on all labor, parts and P&A sales — the most important indicator from the dealers' viewpoint — showed a gain of 3.1 percent.

The indicators showing declines in May were repair orders written, down 5.2 percent, and total labor sales (customer-

*—Survey by Automotive News shows that dealers' service and parts business in May, 1981, was 102.0 percent of business in May, 1980. Service business in the five months of 1981 was 102.4 percent of business in the corresponding period in 1980.

New Datsun unveiled

510 successor debuts in Japan

Nissan's replacement for the Datsun 510 has been officially introduced in Japan. The front-wheel-drive model will have a 2-liter engine and five-speed manual transmission as standard when it goes on sale in the U. S. this fall. Three and five-door versions, as shown here, will be marketed in the U. S.

Hatchbacks slated for fall intro in U. S.

All-new FWD Datsun 510 on way

By Bob Hall
Los Angeles Staff Writer

LOS ANGELES. — A relative newcomer to the front-wheel-drive dog and pony show, Datsun will be joining the bandwagon in a big way in 1981-82.

Already introduced in Japan is a series of new transverse-engined 510 replacements (called Violet, Auster and Stanza in Japan, depending on which grille is fitted) which have little in common with the present 510 other than nomenclature.

For Japan, the new FWD 510 will be offered with a choice of 1.6-and 1.8-liter single overhead camshaft in-line fours, both from a new C-family of engines.

As is usually the case with Nissan/Datsun products offered in Japan, the larger power units will be sold with a choice of carburetor or fuel injection. However, the U. S. will continue to get 2.0-liter, 2-plug-per-cylinder NAPS-Z engines that is essentially the same as the one used in today's front-engine/rear-drive 510.

For Japan, both 4- and 5-speed manual transaxles will be used (rumors from Japan are that the latter will be standard in the U. S.) along with an all-new 3-speed automatic transaxle that may add a torque-convertor lock-up by mid-1982.

Not surprisingly, Nissan has followed the concept of the Cherry with the front suspension, which has struts with negative offset steering geometry. There is rack-and-pinion steering, power assisted on some models, while the rear suspension is also of strut type. It is similar to that of the Lancia Beta series, with one trailing rod, and a pair of parallel rods giving lateral location.

Overall length of the basic models is 169 inches, or 3.4 inches less than a Chevrolet Cavalier.

- In Japan, the car will be offered in the usual bewildering number of trim levels ranging from a suitable-for-taxi-use strippo to a power-window-and-steering top-of-the-line luxury model that will undoubtedly be a real high-dollar, or, yen, item in Japan.

U. S. levels of trim are expected to be at the same level as that of the present 510, and it is quite likely that the power-assisted rack and pinion steering of the more costly Japanese domestic models will be offered as an extra-cost option.

The Violet / Auster / Stanza ranges will offer a choice of four-door notchback sedan, and three- and five-door hatchback models (although not all body styles will be offered in all ranges), but in the U. S. the new 510 will be offered solely as a hatchback with both the three- and five-door models to be sold in this country.

As the illustrations indicate, the '82 510 has very little in common with today's 510. The U. S. production car is essentially the same as the Japanese domestic model but U. S.-bound cars will have somewhat larger bumpers and inset SAE-standard single rectangular lights instead of flush-with-the-body rectangular units.

The three-door hatchback looks like it will be the style leader of the pair said to be coming to the U. S., and one Japanese journalist said the car may put a sizeable dent into sales of the Silvia/Gazelle (200-SX in America) hatchback coupe.

U. S. introduction of the two new 510s is expected this fall as 1982 models.

EPA leans toward CAFE-like plan for emissions rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — EPA says it has tentatively found that averaging a maker's emissions levels in a CAFE-like system is potentially the cheapest compliance program that "does not sacrifice air-quality goals . . ."

It has therefore set up a workshop on the so-called "mobile bubble" concept for July 28-30 in Washington.

EPA is considering revising the present system of certifying prototypes, checking assembly-line quality of emission controls and conducting field surveillance programs for possible recalls and repair.

Although EPA says the averaging concept is not the only option it is considering, it is the only one being taken up at this time.

EPA has opened a docket and added material but says these should not be construed as representing EPA's "positions, policies, or preferences."

Those wishing to testify should notify the docket by July 20.

The record will stay open 30 days after the workshop, which will address only the feasibility of and permutations on the "mobile bubble." It will not address proposed changes in the 1970 law, which is up for reauthorization before Sept. 30.

- The averaging concept being considered could include at least three basic elements — compliance based on in-use testing, compliance based on average emission performance and economic incentives aimed at assuring compliance by all manufacturers in a timely fashion.

The thesis is that testing near the end of five years or 50,000 miles "could provide at least as effective an evaluation" of emission performance as the current program.

Further, with 10 years of experience and the prospect of standards becoming "stabilized," makers "will feel less pressure to develop and produce new emission control technology . . ." and with better quality control, the industry may be able to take on the burden of compliance, leaving EPA to checking up later and using economic incentives to encourage compliance.

EPA recognizes that requiring each and every vehicle to meet the standards is more stringent than averaging, which allows the low emitters to offset the higher ones, providing the makers "greater flexibility in designing the mix of vehicles, perhaps with cost savings in development vehicle hardware and production quality control."

Several kinds of averaging will be considered. One is "averaging within design"—allowing all emission tests on vehicles of normally the same configura-

breaking news

Pontiac P car is alive and well

DETROIT.—General Motors has revived the Pontiac P-car project, the sporty mid-engined two-seater which was shelved several weeks ago because of development costs. Following a review by division managers, the P is now set to bow as a 1984-model in the fall of 1983. It will feature a fiberglass body and will be powered by a throttle-body-injected 2.5-liter four. It continues as a Pontiac exclusive and will carry a price tag in the $10,000-$12,000 range.

Givens heads new Chrysler import unit

HIGHLAND PARK, Mich. — John K. Givens, former director of Sales Operations at Chrysler is being named general manager of a newly created Import Operations group in a move that separates and consolidates import activities. Givens will have a separate marketing budget, just as Joseph

First Hathaway

The first production model of the Hathaway, a fiberglass-bodied neo-classic built with chassis and engine of any Triumph, TR-2 through TR-7, has been turned out by Hathaway Motor Co., Santee, Calif. The new firm's owners haven't set production numbers and aren't sure whether a kit will be offered. They're leaning toward assembled models, probably in the mid-$20,000s.

GM engine-switch suit: Win a little, lose a little

By Roger Rowand

CHICAGO. — It was win a little, lose a little for General Motors when the jury in the engine-switch case brought in its verdict in federal court here.

For the plaintiffs, some 50,000 who bought Oldsmobiles and found Chevrolet engines in them, the jury brought back a mixed bag.

Judge Frank P. McGarr had divided plaintiffs into two classes. One class consisted of those who bought cars before April 10, 1977. That group consisted of about 10,688.

The second group consisted of those who bought cars after that date. Both classes claimed GM breached a warranty by substituting engines.

April 10 is significant as the date by which GM believed its customers, dealers and the general public had been made aware of its engine interchange program. The first engine-switch lawsuit was filed March 9, 1977.

The six-member jury deliberated during parts of three days.

It decided those in the first class should be awarded $550 each in damages, for a total of $5.8 million.

Members of the second class, about 39,000 strong, got nothing.

They no doubt were made aware of the engine switch through a huge GM awareness campaign that permeated the media as news, advertising and commentary and was widespread in GM dealerships, GM lawyers had contended.

No appeals are planned.

However, GM said it will not move to have set aside that part of the verdict not in its favor.

- Judge McGarr, in his instructions to the jury, emphasized a warranty must be written. He also said damages in the case must be restricted to the difference in value only attributable to engine value at the time of purchase.

Attorneys for the plaintiffs said they have several courses of action open to them.

They said they will appeal only if GM appeals. "If GM opens the case, we'll open it wider," said one.

A representative of the firm of Scheele, Serkland & Boyle, Ltd., representing many of the plaintiffs, said its lawyers can go back to the judge and ask for punitive damages which Judge McGarr early in the case ruled out.

Or, he said, they may work with Olds buyers who accepted a GM settlement of $200 in cash and an extended warranty. There is a question as to whether they were aware when they signed a release that they were signing away rights to sue over other matters. One such matter might be the General Motors Type 200 automatic transmission, he said.

That aggressive law firm specializes in personal injury and worker compensation cases, answers one of its several phones with "General Motors hot line," and even has a toll-free telephone number for the convenience of new clients.

Also, the Chicago lawyers will ask Judge McGarr to make a ruling on the status of those who ordered 1977 Oldsmobiles before April 10, 1977, but did not get the cars until after the crucial date. There are probably 5,000 in that grouping, he said.

Last Chrysler deal bows out in Buffalo

BUFFALO. — Bison Chrysler-Plymouth has closed, leaving Chrysler Corp. without a dealership inside the city limits.

Bison C-P was owned by Joseph P. Mosey Jr., who formed it in 1975.

Fraser lays down strategy

Reopen GM, Ford pacts? 'No way'

By Marjorie Sorge
Labor Editor

DEARBORN. — There is no way the UAW will reopen negotiations with either General Motors or Ford Motor Co., according to UAW President Douglas A. Fraser.

Both auto companies have been calling for the union to reopen bargaining on the present contract, citing a two-tiered wage structure because of the stripped-down Chrysler contract.

"There is no Chrysler agreement in Ford's future and no Chrysler agreement in GM's future," Fraser told delegates to the IMF (International Metalworkers Federation) -UAW GM World Auto Council.

He said GM President F. James MacDonald has said negotiations will be reopened, but never has said when or where.

"He'd better take along a deck of cards because he's going to be playing a lot of solitaire," Fraser said. "I'm not going to be there. Owen (Bieber, UAW vice president and director of the GM department) is not going to be there. The national bargaining committee is not going to be there."

Bieber, also speaking at the meeting said, "No one has ever accused GM of a lack of gall."

"Although we pointed out that GM could hardly be compared to the near-bankrupt Chrysler and asked whether GM would want to 'open its books' — as Chrysler had done — to prove its case, (Roger B.) Smith (GM chairman) and MacDonald continued to play this tune for several more weeks," Bieber said.

On March 19, the UAW's national GM and Ford councils met in Washington and voted not to reopen negotiations with either auto company. However, they did not prohibit starting the 1982 round of bargaining a little early. Both contracts expire in September, 1982.

- Since the UAW adopted that proposal, both companies have indicated they would like to see the number of paid days off reduced in lieu of wage cuts, citing high absenteeism costs.

Former GM Chairman Thomas Murphy has said that absenteeism costs the company $1 billion a year. A company spokesman said that is based on 20 percent of the 400,000-member work force being off the job on any given day. That figure includes contractural and non-contractural days off.

Bieber accused GM of using high absenteeism figures which include the contractural days off, creating a deceptive atmosphere for total cost.

"I suppose Mr. Smith wants us to say to a GM worker, 'now don't you dare get sick, don't you dare get hurt in an accident, because your insurance benefit, your health care costs, your sickness and accident benefit is costing GM money,'" Bieber said.

In an Automotive News survey made earlier this year, GM reported the unexcused absenteesim rate for 1980 dropped 1.5 percentage points from 5.7 in 1979 to 4.2 percent in 1980. Contractual absenteeism combined with unexcused days off, rose from 9.4 percent in 1979 to 9.6 percent in 1980. That includes additional paid personal holidays granted in the 1979 contract.

While the UAW has said it will not reopen bargaining with either company, Fraser has said study groups will be formed, probably this summer, to begin working out details of the 1982 round. He said this would save both parties time when they return to the table.

According to Fraser, in the 1982 round of negotiations, the UAW will be dealing "a lot more seriously" with job guarantees and sourcing outside the U. S. He said the union must now "address this more militantly than ever before."

Staudt returning to Chevrolet as marketing chief

Thomas A. Staudt, who resigned last month as vice president of marketing for American Motors, returned to Chevrolet as general marketing manager, effective July 1.

Staudt, who was marketing director at Chevrolet before joining AMC in 1979, will report directly to Robert D. Lund, Chevrolet general manager.

Staudt will oversee advertising, merchandising, marketing systems and information, market research and creative services. Some of these responsibilities formerly were overseen by Robert E. Cook, Chevrolet's general sales manager, who also reports to Lund.

Chevrolet attributed the change in responsibilities to a need to focus more heavily on both sales and marketing areas which could best be accomplished by dividing the two functions, a spokesman said.

E. P. (Bud) Feely Jr. retained his job as Chevrolet marketing director. He now reports to Staudt.

Later this month, Michael Erdman, Atlantic Coast regional manager, will become the new truck sales manager, replacing Jimmy C. Perkins.

Perkins replaces Robert Sellers, assistant sales manager of field operations, who is retiring.

Chevrolet will also name a new assistant general sales manager-staff to replace Albert T. Olson. Olson will take a new position within General Motors.

Chrysler workers get $40 million in stock

By Marjorie Sorge
Labor Editor

About 94,000 Chrysler Corp. workers will be getting almost 6 million shares of company stock under an Employe Stock Ownership Plan (ESOP), the UAW said last week.

Each employe in the U. S. and Canada gets about 63 shares, valued at $441, based on the current $7 price per share. The issued value was based on the closing price each day over the 20 trading days during June 2-29. It averaged $6.785 with a total cost of about $40.6 million.

The ESOP was mandated by Congress in the Chrysler Loan Guarantee Act, passed in January, 1980. It covers any Chrysler employes who have been with the company nine months and worked 650 hours between July 1, 1980, and June 30, 1981.

About 67,000 of those eligible are UAW members.

UAW Vice President Marc Stepp said each Chrysler employe gets an equal number of shares and additional shares will be allocated over the next three years, for a total of $162.5 million in stock.

The plan requires Chrysler to issue at least $40.6 million in stock to its employes, excluding officers and directors, in each of the four years of the plan.

There are currently about 67 million shares outstanding. Distributing the stock to the workers will bring that total to about 73 million, according to a company spokesman.

He said issuing the stock does not cost Chrysler anything directly, but requires that the company forego the money it would have made from selling the stock on the market.

According to Stepp, each employe will get a statement of account within 120 days, showing the number and value of his/her individual shares. Those shares will be put in a trust for the employes until they quit, retire or die. The Manufacturers National Bank of Detroit is the trustee. Each employe can inform the trustee on how to vote his/her shares.

The UAW and Chrysler are also currently negotiating the details of a profit-sharing plan for union workers. The company agreed to that plan in January after the third round of bargaining on the current contract.

Ford extends service guarantee to Kansas City

Ford and Lincoln - Mercury dealers in the Kansas City area have become the second group to offer Ford Motor Co.'s service program that guarantees certain repair jobs performed by the dealerships on any Ford Motor car or light truck for the life of the vehicle.

The program, called Lifetime Service Guarantee, will be offered by 18 dealers in Kansas City, the first major metropolitan area in the U. S. to offer the program.

The program was launched several weeks ago by the two Ford dealers and one L-M dealer in the Chattanooga area.

"The participating dealers installing a genuine Ford or Motorcraft part guarantee the customer that he or she never again has to pay for the same part or the labor to install it as long as they own the vehicle," said C. V. Barion, general manager, Ford Parts and Service Division.

With each covered repair, the customer receives a copy of the guarantee for both free parts and free labor on repeat repairs.

According to Barion, the guarantee, backed in part by Ford Motor and offered at no cost to the customer, covers repairs made on all functional parts and components. They include cooling and electrical systems, engine, transmission and other power-train components, steering and suspension, factory installed options and dealer-installed accessories.

Slates workshop on 'mobile bubble' concept

EPA favoring emissions averaging

Continued from Page 1

tion) to be averaged together—before setting compliance within the design.

Another is "averaging between designs" — this is, between different calibrations or engine displacements so that makers could target emission performance of each design, some above and some below standards. Ultimately, says EPA, this could be done over the makers' whole product line.

Another permutation, "averaging across mileage," recognizes that emissions change with mileage, with HC and CO historically increasing. Here, testing at 25,000 miles would average between tests at zero and at 50,000 miles.

Averaging in this manner could allow a manufacturer to offset excess (above standards) emission levels produced later in a vehicle design's life with better than required (below standards) emissions produced early in its life.

"Averaging across time" could mean testing at perhaps two, three and four years or alternately, testing vehicles of a particular age (say, all four-year-olds) each year and averaged across the years to determine an average emission performance across model years. Either way, the result would set average emission performance at an average age of in-use vehicles.

It could try "averaging across manufacturers" by agreement among manufacturers. In its broadest sense, averaging test results across manufacturers could be extended into an industry-wide determination of average emission performance, emissions of some manufacturers to be offset by lower than average emission of others.

In this connection, EPA does not mention problems that could arise under the antitrust laws, nor problems of partial ownership such as now exist among the Big Three domestic and three Japanese companies nor problems arising from joint ventures such as the one now under consideration by Ford and Toyota.

- The use of credits and debits and banking them or trading them is also to be discussed. And so are economic incentives — that is, fees or fines. EPA has placed in the docket a paper entitled "proposed Motor Vehicle Emission Control Program for the 1980s" and it encourages the industry to review that before preparing comments.

EPA wants discussion about such a program's impact on a manufacturer's design flexibility and development costs and on compliance demonstration costs. It also wants comments on the effect on competition and the effect on air quality, including any "pitfalls."

Specifically, comments are also asked on heavy-duty engines and motorcycles; averaging gasoline-fueled and diesel vehicles; ceilings; separate averaging for high altitude and California; vehicle eligibility (whether they have been properly maintained and used, or whether some vehicles like taxis and commercial vehicles should be excluded); vehicle selection technique (that is, randomly or in proportion to sales volume); compliance determination (that is, sampling and confidence level); test vehicle mileage; level of fine; recall (mandatory or voluntary); warranty; and fuel economy (since fuel economy is determined from the current certification, how would fuel economy standards compliance be tested?).

New England tax proposals focus on hikes for truckers

BOSTON. — With New England highways taking an unmerciful pounding from weather, salt, high tourist travel and especially heavy truck volume (because most of the goods bought into the area come by truck), all six states are looking for new sources of income to just keep up with highway maintenance.

Higher truck fees and increased fuel taxes are two areas targeted so far.

Vermont is a case in point. Fuel taxes of at least 10 cents a gallon (which bring the state's tax to one of the highest in the nation) have been proposed.

Legislators are relucant to increase the gas taxes, fearing this would hurt the state's tourist industry which is vital to its economy, as it is in the other New England states.

Next are higher use fees for out-of-state truckers. The truckers recently lost the first skirmish in a legal battle over the fees they would have to pay to use Vermont's highways.

In Rutland, U. S. District Judge James Holden denied the truckers' request for a temporary restraining order to block higher road-use fees on the basis they were unconstitutional. The American Trucking Assns. and several out-of-state trucking firms had asked for the order.

Judge Holden passed the case onto Superior Court, where he said the case belonged.

Under the new payment schedule, a $20 trucking permit would be doubled. Charges for making individual trips through the state would be raised from $10 to $15.

The legislators made it clear they wanted the additional fees to help bail out the state's deficit-ridden highway fund.

Healthy industry called vital part of defense buildup

DEARBORN. — The United States cannot rebuild its national defense unless it also strengthens its industrial base, Gerald C. Meyers, American Motors chairman, told the U. S. Army TACOM Military Vehicle Manufacturing Technology Conference here.

Meyers said that with the election of President Reagan, national defense policy has entered "a new age of realism, an age in which we finally seem to recognize that to be unprepared for war is to invite it."

"We have left behind, I hope forever, the dangerous illusion that somehow this nation could allow its armed forces to deteriorate, while those of our most likely enemies grew stronger at an alarming rate," Meyers said.

"The Reagan Administration has declared its commitment to rebuild our defense to a level unmatched by any nation.

"The commitment to a strong defense is equaled by its determination to rebuild our industrial base," Meyers said. "This double commitment is new and important. We simply cannot have a strong defense unless our defense industry is strong and vigorous."

AMC produces tactical wheeled vehicles for military forces throughout the world through its subsidiary, AM General Corp.

Fiat plan to build Zestava in Ireland appears dead

DUBLIN, Ireland. — A plan whereby Fiat (Ireland) would assemble the Yugoslav Zestava car in Dublin apparently is being abandoned.

Though Fiat here (wholly owned by the Italian parent) will not comment, it is believed that the plan involved assembling about 14 Zestavas per day in Dublin for the Irish and British markets.

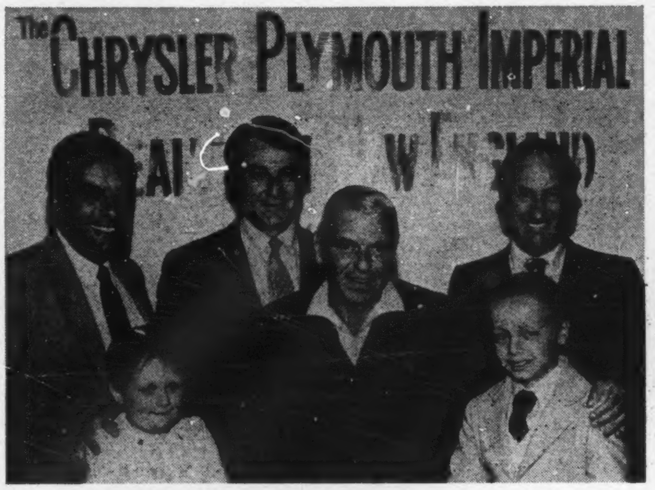
The Zestava has recently gone on sale in Britain, and an Irish assembly point is believed to be particularly attractive to Zestava. Both Ireland and Britain use right-hand-drive cars, so no revision of models would have been necessary.

A deal between Fiat and Zestava would have been logical, in that Fiat owns 20 percent of Zestava.

Zestava plans to sell 2,000 models in Britain this year and hopes to increase this to 12,000 by 1983.

The reasons for the breakdown in the plan are not known. Car assembly in general is in bad shape here, with the recent closure of Talbot and more recently Daihatsu, and by 1984 there will be no legal obligation for assemblers to build up a 5 percent stage of the market before being allowed to import fully assembled models.

Fiat makes it clear that it is looking for an alternative industry for its employes, currently numbering 115, after 1985, and the Zastava project was to have fulfilled that role.



Sinatra, C-P dealers fund raiser

Chrysler Corp., through its advertising agency, Kenyon & Eckhardt, is exploring a repeat of this fund-raiser in New York. It worked well for New England Chrysler-Plymouth dealers with Frank Sinatra and C-P dealers selling 4,200 tickets and raising nearly $150,000 for the Jimmy Fund. Pictured with Sinatra and the poster children are: John Fasjian, Framingham (Mass.) Chrysler-Plymouth; Ed Glick, Bancroft Chrysler-Plymouth, Worchester, Mass., and Dick Bournival, Bournival Chrysler-Plymouth, Lowell, Mass.

Retail slide prompts makers to push fleet/lease orders

Continued from Page 2

Dodge 400, there's an early order discount of $200, plus regular discount of $300, for a total of $500. On the Diplomat, Gran Fury and New Yorker, there's an early order discount of $100, plus regular discount of $400, for a total of $500.

On all North American-built trucks, there's a $100 early order discount plus regular discount of $400, for a total of $500.

In addition, fleet buyers have a choice of one free option from free air conditioning, AM/FM stereo radio, AM/FM stereo with CB unit, or speed control with deluxe wipers. The choice is available for all car lines, except the L-body Omni/Horizon. (Trucks are also excluded).

Chrysler has already drawn one big order for International Harvester for 1,400 K-cars. Last year, it scored a big order when Xerox purchased 3,500 K-cars.

- American Motors is offering special year-long discounts for all models, including the new '82 Fuego, a Renault model.

Spirit carries a $350 discount; Concord and Eagle, $400 discounts (the larger Series 30 Eagles carry a $700 discount); the Jeep CJ and Scrambler models have $500 discounts, and Cherokee, Wagoneer and pickup trucks have $700 discounts.

On Renault, there's a $200 discount for Le Car, $200 for 18i and $400 for Fuego. If ordered with factory air, AMC, Jeep and Renault vehicles qualify for an additional $100 allowance.

The 258-CID six-cylinder engine is available at no extra charge on Spirit, Concord and Eagle Series 50 units.

Chevrolet reports having more than 26,000 commercial orders for its new J-car, mostly from daily rental people.

However, buyers are being told there's a 10-to-12 week wait for the units compared with a more normal six-to-eight week wait on fleet orders.

The J-car is considered a bit too small, with too high an equipment content, to be a big factor in the fleet/lease market at this time, but it is considered an excellent vehicle for the daily rental market, where resale and high fuel economy are prime considerations.

Generally, fleet/lease sales are expected to improve this year, though daily rental is expected to continue to be soft because of a decline in airport traffic and high interest rates which pose as much a burden to companies like Hertz and Avis as they do to dealers who have to floor-plan units.

Robert Ward, president of Gelco Fleet management group, of Gelco Fleet and Management Services Co., said his firm was having a strong purchasing year in '81, and expected '82 to be even stronger.

"We are strongly advising (clients) to buy or purchase early. Rebate programs and bonuses are a big factor this model year, as they were last year," Ward said.

He qualified his optimism, though, by noting that availability of the more desired models, plus interest rates and pricing, would all be factors affecting the market.

Service Index gains again, but at a slower rate

Continued from Page 1

paid and warranty) which dipped 1.4 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

Service and parts business in the first five months of 1981 amounted to 102.4 percent of the volume registered in the same period a year ago.

Gross profit and sales of all parts and accessories were leading indicators for the year-to-date period with increases of 6.1 percent, followed by shop parts sales, up 2.1 percent.

Repair orders were down 4.9 percent for the five-month period, while labor sales declined 0.2 percent.

A SALES GUIDE FOR SALESPERSON, MANAGER, AND DEALER!

Most "self help" books do not work because ingrained behavior patterns and points of view are almost impossible to change. This hard cover book WILL work thru a unique concept in communication. The author stresses the necessity to understand oneself, which will lead to an expanded awareness of why prospects respond as they do.

HUMAN BEHAVIOR, INTEGRITY, AND SALES TECHNIQUE ARE COMBINED INTO A DYNAMIC, HUMOROUS, AND EASY TO READ SALES GUIDE FOR IMPROVING SALES, PROFITS, COMMUNICATION AND SATISFACTION. Perfect for experienced AND inexperienced salespeople; sales managers AND dealers.

ABOUT THE AUTHOR: Gary Erichson was an award winning auto salesman, sales manager, dealer, and is the creator of the LEAD (selling) SYSTEM. He is currently the President of Enlightened Sales Training, Inc., where he markets the LEAD SYSTEM and conducts a school and placement service for persons interested in becoming auto salespeople.

DEALER BONUS OFFER*: Included at no cost are three highly advanced LEAD SYSTEM forms which include the "Survey", an ingenious way for your salespersons to obtain the answers to eighteen qualifying questions "automatically". Another will open the door to AFTERSALE PROFITS, and the "Reconditioning Estimate" will assist you in appraising and closing the deal at higher gross. All forms come with complete instructions, and two are camera ready for inexpensive offset reproduction. GUARANTEE: Money back AT ANY TIME if you are not totally satisfied. MAIL $10 PLUS $1.50 SHIPPING TO:

Registrations not available for Oklahoma.

But market penetration declines

Import registrations rise for month

By Jenny L. King
Staff Writer

Registrations of new imported cars in the U. S. in March were up from the year-ago total as well as the totals in January and February of this year, but their penetration of the month's market was down from the March, 1980, level and levels of the first two months of 1981.

New import registrations in March totaled 225,733, up 2.74 percent from 219,720 in March of 1980. They were up from 200,075 in February and 174,242 in January, 1981.

Import penetration this March was 26.59 percent compared with 27.44 percent a year ago. February penetration was 29.64 percent and in January it was 27.37 percent. March, 1981, marked the culmination of numerous customer rebates and sales incentive programs which stimulated the domestic market and probably accounted for the drop in import penetration.

Record import penetration was 30.51 percent, notched in August of 1980.

For the first quarter, total import registrations were 600,050, down 3.08 percent from 619,144 last year. Imports accounted for 27.77 percent of U. S. new-car imports in the first three months, up a slight 0.32 percentage points from 27.45 percent a year ago.

• In March, Toyota maintained its lead, taking 24.44 percent of all import registrations. Honda continued to close the gap between its share and that of second-place Datsun. Honda was up to 14.47 percent from 12.97 percent a year earlier while Datsun dropped to 17.29 percent from 20.80 percent.

Fifth place Mazda enjoyed the greatest growth, up 2.18 percentage points, to 7.60 percent from 5.42 percent, gaining on fourth-place Volkswagen at 9.03 percent.

Fiesta was down to 2.81 percent from 3.08 percent last year, Colt dropped to 2.54 percent from 2.84 percent and Champ dipped to 2.47 percent from 2.96 percent.

Mercedes-Benz edged out Fiat for the number-ten spot among imports, its registrations in March accounting for 2.22 percent of the import total. The German-built luxury import was in ninth place, ahead of Champ, in the year-to-date lineup.

The top 10 imports accounted for 88.35 percent of March import registrations, compared with 87.88 percent a year earlier. In the first three months, the top 10 took 89.11 percent of the total, up from 88.91 percent last year.

Japan continued to dominate the U. S. import scene in March, taking 75.83 percent of the total, compared with 73.92 percent a year earlier. In pure numbers, Japan was up over March, 1980 to 171,163 from 162,411; Sweden was up to 6,201 from 5,446, and France was up to 4,008 from 3,502.

German imports slipped to 38,993 from 40,861; Italy was down to 3,544 from 5,535 and Great Britain dipped to 1,824 from 1,965.

Registrations by country of origin for the first quarter, 1980, with year-earlier figures in parentheses were: Japan, 457,490 (468,198); Germany, 104,379 (109,769); Sweden, 15,803 (15,468); France, 10,575 (8,607); Italy, 7,945 (11,915), and Great Britain, 3,858 (5,187).

Registrations of imported trucks in March were down 9.07 percent, to 44,736 from 49,200 a year earlier.

Registrations of imported trucks in March, with year-ago figures in parentheses, were: Datsun, 10,950 (9,799); Toyota, 10,212 (12,726); Ford Courier, 6,769 (7,264); Chevrolet LUV, 6,724 (8,201), and others, 10,081 (11,210).

The truck import total for the first quarter of 1981 was 112,575, down 17.95 percent from 137,198 last year.

Registrations of imported trucks in the first quarter, with year-earlier figures in parentheses, were: Toyota, 27,086 (35,890); Datsun, 24,822 (27,791); LUV, 17,142 (24,052); Courier, 17,064 (20,529), and others, 26,461 (28,936).

UAW would bar five firms from Chrysler pension fund

DETROIT. — The UAW has asked the trustee of the UAW-Chrysler Pension Fund not to make further investments in five U. S. corporations which have not endorsed the "Sullivan Principles" in South Africa.

The companies involved are United States Steel, Allegheny Ludlum, Eaton Corp., Dresser Industries and Newmont Mining, according to UAW Vice President Marc Stepp.

The Sullivan Principles relate to equal employment practices for U. S. firms operating in South Africa.

As part of the 1979 contract settlement between the UAW and Chrysler, the union received the right to recommend annually that the trustee of the pension fund not make any new investments in up to five companies which have not adopted the principles.

According to Stepp, the UAW wrote to 13 large U. S. companies which they were told were not supporting the principles. Based on responses from those firms, the trustee was notified of five companies the UAW wished to deny further investments from the fund, Stepp said.

He said he hopes that "at the very least, the Sullivan Principles will become the basis for similar and stronger pension-fund investment cutoffs to be negotiated by the UAW in future contracts with other companies" and that "other unions will bargain similar provisions."

Strong honored

A 25-year dealer award plaque is presented to Robert R. Strong, left, Strong Chevrolet-Buick, Inc., Damariscotta, Me., by R. R. McKenna, assistant zone manager/field for Chevrolet's Boston zone.

Decade-long look at agency, administrators

Recalls point to NHTSA vigiliance

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Following is a 10-year picture of the defect investigation and recall activities of NHTSA.

Like all statistics, it gives only a partial picture, but it does cover both Republican and Democratic administrations and five heads of the agency.

A decade is just a handy period. No slight is intended to the first safety chief, Dr. William Haddon Jr., who got the ball rolling by creating the initial standards out of cardboard boxes of comments in multiple languages and set up the defect investigation system.

Recalls initiated for cars and trucks:

1970— 1,240,000
1971— 9,420,000
1972—12,081,000
1973— 7,000,000
1974— 2,877,000
1975— 2,109,000
1976— 3,492,000
1977—12,923,000
1978— 9,063,000
1979— 8,919,000
1980— 4,863,000

(The 1971 total includes the largest recall, 6,682,000 General Motors cars and light trucks for engine mounts. Included were 1965 through 1969 models.

(The 1980 total does not include the 16 million labels which are to be affixed to Ford Motor Co. vehicles, negotiated as a result of alleged transmission slippage from Park to Reverse.)

The 1966 law required vehicle owners to be notified of safety-related defects; it was amended in 1974 to mandate recall and free repair or replacement.

In the interim period, manufacturers—spurred by the prospect of product liability suits — usually recalled and repaired vehicles with safety-related defects.

The law was signed by President Johnson on Sept. 9, 1966, and Haddon was named later that fall as head of a bureau of the Commerce Department. The Department of Transportation was created later, and the bureau (first under the Federal Highway Administration) became a separate agency, NHTSA.

Douglas Toms—Jan. 15, 1970-March 7, 1973 — served as NHTSA administrator under President Nixon.

James B. Gregory—Aug. 13, 1973-Feb. 23, 1976—served under President Nixon and President Ford.

John Snow—July 8, 1976-Feb. 28, 1977—served under President Ford.

Joan Claybrook—April 8, 1977-Jan. 20, 1981 — served under President Carter.

Raymond A. Peck—April 24, 1981—is serving under President Ronald Reagan.

All safety chiefs except for Haddon and Claybrook have been Republicans.

During the tenure of Toms, there were 72 recalls involving 456,000 vehicles during his first six months. During his first year, there were 154 campaigns involving 1,240,000 vehicles.

During Gregory's first six months, there were 105 campaigns involving 1,932,000 vehicles; during his first year, there were 247 campaigns involving 2,877,000 vehicles.

During Claybrook's first six months, there were 105 campaigns involving 4,164,000 vehicles. During her first year, there were 246 campaigns involving 12,923,000 vehicles.

This was the highest number of vehicles involved in recalls in any given year, although if the 16 million Fords with alleged slippage from Park to Reverse had been recalled instead of having warning labels, 1980 would have been the top year.

During the first six months under Peck, there have been 74 campaigns involving 1,272,000 vehicles. This does not include the 5.8 million GM cars and light trucks in the U.S. voluntarily recalled by GM last February for rear suspension bolts. The figure used by GM was 6.4 million, but that was worldwide.

A different way to assess government vigilance in the defect investigation business—or to assess improved quality control on the part of both domestic and foreign makers—is to compare opening of investigations.

Investigations opened:

1977—25
1978—18
1979—10
1980— 5
1981 so far—zero.

The closing of investigations is not assessed because those figures can be misleading. (For example, Claybrook closed a great many investigations that had lingered for years.) Investigations are closed by mandated recall, voluntary recall or because evidence does not justify continuation.

Closing of investigations — as well as opening them—also tends to reflect the judgment and personalities of administrators. Recall campaigns are better indicators of judgment since they may be subject to the acid test of litigation. The seriousness of the defect varies widely—from brakes and wheels falling off to a plastic grommet on a shoulder harness.

Corolla is rated world's top seller

For the fifth year in a row, Toyota Corolla was the world's best-selling automobile.

Leaders in sales for 1980 were:

1—Toyota Corolla	771,720
2—Renault R-5	519,851
3—Volkswagen Golf	517,818
4—Nissan Sunny	506,052
5—Chevrolet Citation	459,393
6—Chevrolet Chevette	454,068
7—Opel Kadett	418,152
8—Oldsmobile Cutlass	395,785
9—Buick Century	370,880
10—Honda Civic	367,067

The Martin-Senour Difference

Four Time-Saving, Money-Making Refinishing Systems to Tame the Toughest Paint Jobs in Your Shop

Whatever the refinishing job, you'll do your best when you use any of the four Martin-Senour Refinishing Systems available exclusively through your NAPA jobber. Each NAPA/Martin-Senour Refinishing System is complete in itself, and includes a full complement of thinners, reducers, primer surfacers, and sealers that help assure a mirror-match for any OEM finish on the road. So, when it comes to selecting any refinishing product—whether it's abrasives, tapes, adhesives, or hundreds of custom-mixed and factory-packaged painter-accepted colors—see your NAPA jobber. *He's got it all.*

MARTIN SENOUR PAINTS
Paints, Tapes, Abrasives and Adhesives

But tops year-earlier tally

Car production trails previous week

By Patricia Hoffman
Staff Writer

U. S. auto production last week fell below the previous week's output, but the total was substantially above that of the comparable 1980 week.

The auto makers last week targeted output at 144,888 units, down 11.69 percent from 164,073 built in the previous week, but up 42.47 percent from 101,699 units completed in the comparable week last year.

Year-to-date, output was 3,666,371 units, up 4.30 percent from 3,515,064 cars completed in the corresponding period last year.

Breakdown for the week by company was: General Motors, 62.52 percent; Ford Motor, 21.60 percent; Chrysler Corp., 11.73 percent; Volkswagen of America, 2.08 percent; American Motors, 2.07 percent.

Checker Motors will remain closed until July 13.

American Motors said that it will begin retooling its Lakefront plant in August for a new line of front-wheel-drive cars which will be introduced next year.

A second shift will be added at the Kenosha Main plant beginning Monday (Aug. 17) for production of the Spirit and SX/4 bodies, currently being built at the Lakefront point.

Chrysler has slated overtime this week at its Belvidere assembly point. The plant will be working two daily nine-hour shifts beginning today (July 6). All other Chrysler points will be on regular eight-hour schedules.

Ford's Wixom assembly point, which closed for '82 model changeover on June 26, will resume August 3 with production of the new luxury cars.

Also at Ford, its San Jose facility (Mustang and Capri) will be down starting today (July 6) for changeover to the Escort Lynx, EXP and LN7 cars. The plant is slated to resume operations Sept. 8.

Truck production tops year ago tally by wide margin

U. S. truck production last week again fell below the previous week's total, although output was still considerably above the 1980 comparable figures.

Domestic truck manufacturers scheduled output last week at 36,390 units, down 8.84 percent from 39,920 trucks built in the previous week, but up a substantial 58.01 percent from 23,030 in the comparable 1980 week.

So far this year, the truck makers have completed 950,247 trucks, up 10.64 percent from 858,878 assembled through July 5, 1980.

General Motors' St. Louis and Pontiac truck points were idle for vacation on Friday (July 3). Operations at both plants are slated to resume today (July 6).

General Motors said that as of June 19, its Baltimore truck assembly point ended production of the light Chevrolet and GMC trucks.

International Harvester, down July 3 for vacation, will remain idle, with operations slated to resume July 27.

Three alleged fuel-stretchers fail to perform in EPA tests

WASHINGTON. — EPA has told the makers of three different "fuel economy devices" their products do not perform as alleged and that the agency will not certify them.

Affected are: Pegusus Enterprise, which markets an item called "Platinum Gasaver." It is claimed "to improve gas mileage at least 20 percent and to cut down on harmful emissions."

It consists of a Gasaver instrument filled with 12 ounces of Gasaver solution and a line from the instrument connected to a vacuum line at the base of the carburetor through which the Gasaver solution is bubbled into the engine.

Chandler Associates markets an item called "Petromizer System," which is claimed to "better control exhaust emissions and increase miles per gallon."

It consists of two units—a carburetor base plate adapter which admits additional air and swirls the air-fuel mixture and fuel line diverter valve to regulate fuel pressure.

Fueltech Corp. markets two fuel additives called "ULX-15 and ULX-15D." These are claimed "to improve gasoline and diesel engine combustion" and thereby increase fuel economy.

EPA said none of the manufacturers had provided it with proof the devices or additives worked.

EPA is required under the Motor Vehicle Information and Cost Savings Act to test all alleged fuel-economy devices.

Diesel-car sales rise in France; Renault leads

PARIS. — France's diesel-car sales penetration climbed from 9.9 percent in the 1980 calendar year to 12.5 percent in the first quarter of 1981.

Renault did not have a diesel car until November, 1979, when the R-20 Diesel went into production. The same engine is installed in the R-18 Diesel, launched in October, 1980.

The R-18-D now takes a 28.6 percent share of the French diesel-car market, and the R-20-D an 8.8-percent share, giving Renault the lead over Peugeot with a total of 37.3 percent (20,896 cars in the first quarter).

Diesel-powered models account for 35 percent of all Renault R-18 sales and 36 percent of R-20 sales.

Canadian output also feels pinch of holiday week

Canadian auto and truck production during the four-day holiday week fell below the previous week's output. But both car and truck totals remain above the comparable year-ago figures.

Production last week for the auto makers was estimated at 19,248 units, down 17.79 percent from 23,412 cars built in the previous five-day week, but up 16.85 percent from 16,473 units in the comparable year-ago week.

Year-to-date, auto output was 475,395 units, up slightly from 471,254 built in the comparable period last year.

Truck production last week was targeted at 9,954 units, down 24 percent from 13,097 in the previous week, but up a substantial 80.72 percent over the 5,508 trucks completed in the comparable 1980 week.

So far this year, the truck manufacturers have completed 300,472 units, up 4.12 percent from 288,585 built through July 5, 1980.

Chrysler's Windsor car point, down since June 27 for '82 model changeover, will remain idle until Aug. 10.

All other Canadian car and truck facilities, with the exception of International Harvester's Chatham and Vancouver points, and Volvo's Halifax facility, were idle last Friday (July 3) in observance of the Canada Day holiday.

International Harvester and Volvo plants were down Wednesday (July 1) for the holiday, but were in operation Friday.

All Ford assembly points will remain idle after the holiday for vacation downtime.

The Ford Oakville and St. Thomas car assembly points will resume operations July 27.

The Ford Oakville truck facility will resume operations July 20.

All other Canadian assembly points are slated to resume normal production today (July 6).

1.6 million represent 83½-day stockpile

Unsold cars set record

By Richard A. Wright
Assistant Managing Editor

Fairly strong production coupled with lagging sales in June resulted in a heavy inventory of U .S.-built new cars July 1.

The domestic auto makers opened July with 1,664,871 new cars in stock, an 83½-day supply, heaviest ever for July 1.

A year ago, the industry had 1,627,857 new cars in inventory, an 80-day supply.

The July 1 inventory was up precipitously from a month earlier, when the industry had 1,471,656 new cars in stock, a 70-day supply.

All the corporate makers except Volkswagen of America increased their inventories during June, but the lion's share of the gain was accounted for by General Motors, which opened July with a record stockpile of more than a million cars, sufficient for 85 days. GM had a 70-day supply June 1.

Ford Motor Co. had an 81-day supply, up from 73½; Chrysler Corp., 86 days, up from 73; American Motors, 75½, up from 40, and VWoA, 66½ days, down from 72.

- The July 1 domestic inventory was divided this way: GM, 60.98 percent; Ford Motor Co., 23.91 percent; Chrysler Corp., 11.64 percent; VWoA, 1.78 percent, and AMC, 1.69 percent.

A month earlier, the inventory was divided as follows: GM, 59.59 percent; Ford Motor Co., 24.46 percent; Chrysler Corp., 11.64 percent; VWoA, 2.82 percent, and AMC, 1.49 percent.

By size class, all segments increased during the month. The industry had a 70-day supply of subcompacts, up from 57 days; a 94-day supply of compacts, up from 75 days; a 91-day supply of intermediates, up from 78 days; a 72½-day supply of standards, up from 68½ days, and an 85-day supply of luxury cars, up from 62½ days.

The July 1 inventory was divided this way by size segment: Subcompact, 20.18 percent; compact, 30.51 percent; intermediate, 30.04 percent; standard, 12.77 percent, and luxury, 6.50 percent.

A month earlier, the inventory was divided as follows: Subcompact, 19.71 percent; compact, 28.62 percent; intermediate, 31.59 percent; standard, 14.10 percent, and luxury, 5.98 percent.

- The July 1 days-supply figures by market class were:

Subcompact — Chevette, 57; Escort/EXP, 61; Rabbit, 66½; J-2000, 69; Lynx-LN7, 71; T-1000, 73; Horizon, 76; Omni, 86; Cavalier, 88, and Spirit, 119½.

Compact — Concord, 46; Skylark, 70½; Zephyr, 75; Omega, 81; Mustang, 83; Capri, 89; Reliant, 91; Fairmont, 91; Eagle, 95; Camaro, 96; Aries, 103½; Citation, 118, and Firebird, 121½.

Intermediate — Cutlass, 52; Century, 63; LeBaron, 73; Cougar, 77; Supreme, 77; Cordoba, 82; Diplomat, 83; LeMans, 89; Granada, 96; Mirada, 100; Malibu, 101; Regal, 112; Grand Prix, 116; Thunderbird, 117; RX-7, 119, and Monte Carlo, 133.

Standard — Gran Fury, 34; Olds 88, 54; Olds 98, 60; St. Regis, 65; Pontiac, 67; Chrysler, 68; LeSabre, 68½; Mercury, 72; Ford, 79; Electra, 89, and Chevrolet, 92.

Luxury—Imperial, 54; Cimarron, 55; Corvette, 66; Riviera, 75; Toronado, 75; Cadillac, 86; Eldorado, 88; Lincoln, 102; Seville, 105, and Mark VI, 118.

Ford incentive pays up to $600 per car

DETROIT.—Ford Division has instituted a July 10-Sept. 13 incentive, paying up to $600 on selected models. Dealers get $150 for hitting 30 to 59.9 percent of a combined Fairmont/Granada/Thunderbird objective, $300 for 60 to 89.9 percent and $500 for 90 percent and over. A July 10-Aug. 9 fast start gives them $200, $350 and $600 for the respective categories, if they hit it.

VW's Thomee fills in for Schmuecker

WOLFSBURG, West Germany. — Volkswagenwerk AG's head of finance, Prof. Friedrich Thomee, is filling in as acting chairman of the firm. Chairman Toni Schmuecker, 60, suffered a heart attack June 11, and is expected to be convalescing for six to eight weeks.

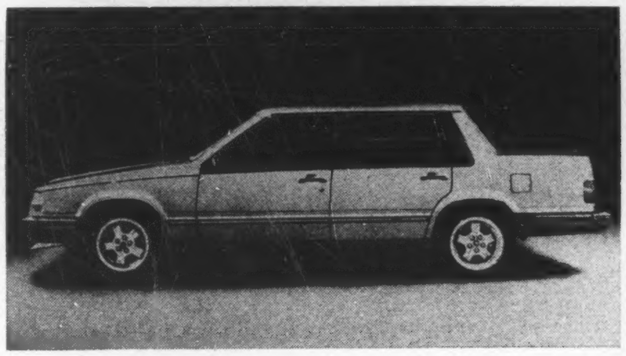
NEWSPAPER

Svelte Swede



New Volvo due for '83

Destined to replace Volvo's top-of-the-line GL series, this new car represents a rather radical styling departure for the Swedish maker. Introduction is scheduled for '82 in Europe and '83 for the U. S. Power most likely will be choice of a V-6 gasoline unit or an inline diesel six, with turbocharging for both a possibility.

Benton maps a big role for '82 4-door Escort

By Al Fleming
Industry Editor

Ford Motor Co.'s already strong Escort/Lynx lineup will pack added wallop in the 1982 model year when a four-door hatchback model is introduced.

"Our biggest volume plus next year will come from the new four-door," Philip E. Benton, vice president of sales operations for Ford's North American Automotive Operations, told AUTOMOTIVE NEWS.

"We expect the four-door to account for close to half the total mix of the line," he added.

According to Benton, about 500,000 Escort/Lynx and sporty EXP/LN7 versions will be sold in the 1981 model year. "That's every one we can produce, flat out," he said.

The '82 lineup, including the four-door, will hit 950,000 sales, the Ford official predicted.

"At the start of the model year, we'll run at about a 900,000-unit annual rate," he said. "By mid year '82, we'll have production capability of over a million units, but I think we'll average 950,000 for the entire year."

Escort, one of the industry's few success stories this year, has become the number one nameplate in the U. S. It is accounting for 30 percent of Ford Division sales and about 19 percent of the subcompact-car market.

Still, the two-seat EXP/LN7, introduced last spring, isn't living up to the company's sales expectations, Benton admitted.

"They've been somewhat hamstrung by our lack of experience with two-seaters in this price range," Benton said.

The idea for an optional rear seat—discarded just before debut of the sporty models last April — is being revived, and a prototype of a three-seater headed into a market research program just last week.

Asked if a rear-seat option will be offered in '82 models, Benton replied, "I think it will."

Besides the four-door Escort/Lynx and three-seat EXP/LN7, other products expected to stir buyer interest, according to Benton, are a new station wagon in the Granada/Cougar series and a downsized Lincoln Continental.

"We hope to sell 30,000 to 40,000 Continentals," Benton said.

He called the company's forthcoming compact-size Rang-

NADA backs usury action

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Preemption by the federal government of state usury ceilings will not be a panacea for the U. S. auto industry, but it will have a positive impact on automobile and truck sales, NADA President Wendell Miller told a Senate panel.

Miller, who has seen more than 2,000 of his fellow dealers close their doors over the past 18 months, thinks high interest rates and the consequent drying up of credit in those states with usury limits have been major contributors to those closures.

In testimony before the Senate Subcommittee on Financial Institutions, he called for passage of legislation sponsored by Sen. Richard Lugar, Indiana Republican, that would preempt state usury ceilings for consumer credit.

Gordon Gilbert, of the Recreation Vehicle Industry Assn., a group that has been even harder hit by rising interest rates, echoed Miller's sentiments, saying that the loss of even one sale to an RV dealer because of usury limits can be very damaging and that preemption

Dealer programs

Chrysler, Toyota, VW launch cash incentives

By Joseph Bohn
Marketing Editor

Auto companies are cranking up a new round of dealer cash incentives to stimulate sales with new Volkswagen, Chrysler and Toyota programs the latest.

VW kicked off a 60-day program, called "60 Days, Triple Pay," which runs from July 1 to Aug. 31. It sets a combined objective for sales of gasoline and diesel-engine Rabbits and pickup trucks.

The payoff levels are: 1-50 percent of objective, $50 per unit; 51-100 percent, $150 per unit, and 100 percent and above, $400 per unit, non-retroactively.

The objectives are based on a dealer's planning volume and his rate of travel for the past five months.

One dealer observed that, based on high planning volumes in the metro areas, it might be tough to hit the upper echelons of the payout, but "If I can duplicate my rate of travel for the past five months I can hit it (the $400 level)."

Chrysler Corp. launched a July 1-Aug. 31 sales managers' program, paying from $375 to $3,000 to managers who hit various attainment levels.

The program is called "Tee Off on '81." Payments are based on retail sales objectives. The objectives combine all domestic and imported cars and trucks into one figure which varies by dealership.

Dealers are grouped into various flights of A, B or C. Flight A dealers have an objective of 125 or more units; Flight B dealers an objective of 65 to 124 units and Flight C dealers an objective of 15 to 64 units.

If the Flight A manager hits 90-99.9 percent of his objective he receives $750; for 100-119.9 percent, he receives $2,000, and for 120 percent or more he receives $3,000.

If a Flight B manager hits 90-99.9 percent of his objective he receives $550; for 100-119.9 percent, he receives $1,500, and for 120 percent or more, he receives $2,250.

For Flight C, a manager who hits 90-99.9 percent of his objective receives $375; for 100-119.9 percent, he receives $1,000, and for 120 percent and over he receives $1,500.

Dealerships can move up to the next higher level, beyond their original flight, by volunteering to meet a higher objective and selling more units.

- Toyota has two new incentives, a cash program aimed at trucks only and a trip program aimed at cars and trucks.

The pickup truck incentive, called "Toyota Stretch Drive," runs from July 2 to Sept. 1. Dealers are paid performance against a total objective in the following amounts: 45-75 percent of objective pays $100; 76-100 percent pays $200, and 101 percent and over pays $300. The payments are nonretroactive.

However, there is a July 2 to Aug. 2 fast start. If the dealer hits it, he receives a 30 percent bonus on previous payments, which would equal $30, $60 and $90 per unit for the various brackets.

If a dealer misses the fast start but hits 110 percent of his total objective, he receives a 50 percent bonus on previous payments, amounting to $50, $100 and $150 extra per unit.

If he hits the fast-start July objective and gets 110 percent of his total objective, he receives an 80 percent bonus, amounting to $80, $160 and $240 per unit.

In a second contest—for sales managers — there is a total car-truck objective. Dates for this contest, called "Stretch Drive to Japan," are July 2 to Oct. 1.

Sales managers receive trips to Japan for achieving a certain percentage of their objective. They can also accumulate up to eight extra percentage points toward their objective by hitting one of four minor objectives.

For hitting a July car-truck objective, they receive two additional percentage points; two more for a July-August car-truck objective; an additional two for July-August car objective and two more for a July-August truck objective.

20-dealer loss seen for Detroit

DETROIT. — High unemployment and attrition from overdealering is liable to cost the Detroit area about 20 dealerships in the next year, according to Dan Hayes, executive vice president of the Detroit Auto Dealers Assn.

On the positive side, he added, Ford dealers' individual profit picture has improved considerably from a year ago.

Metro Detroit now has 230 dealers, down from 257 in 1978. The projected decline would take the number to 200-210.

PasseParTout covers ground

The multi-purpose PasseParTout tracked vehicle, from PPT of Michigan, a division of Twin Bay Industries, Inc., Livonia, Mich., carries people and equipment through almost any terrain. The company is expanding its U. S. dealer organization from Northern and Western states to outlets of power and mobile equipment around the country. PasseParTout in French means master or skeleton key.

AMC chooses Compton for international ads

SOUTHFIELD, Mich.—American Motors International Operations has named Compton Advertising, New York, as its new agency for AMC and Jeep vehicles outside North America, effective immediately.

Compton replaces Chiat/Day which had previously handled the $3 million account. Compton also handles AMC's four-wheel-drive vehicles in the U. S.

AMC said the selection resulted from an extensive screening process that began last May.

"Compton is a large, internationally experienced agency with an exceptionally strong worldwide network of operations," said Robert M. Williams, director of marketing for AMC International Operations.

"Their extensive knowledge of American Motors' products was a significant factor in their selection," said Williams.

No abrupt shift for '82, Arakawa says

Nissan memo details name change

By Joseph Bohn and Bob Hall

Tetsuo Arakawa, president of Nissan Motor Corp. in U.S.A., issued an internal memo to employes, indicating the company would not drop the Datsun name for '82, but leaving the door open for a gradual, evolutionary change in image.

Arakawa termed "exaggerated" press reports that the Datsun name is being replaced by Nissan for '82.

"We will be introducing an all-new front - wheel - drive car, bearing the Nissan name more prominently, but that same vehicle will continue to carry the Datsun name as well," Arakawa said, referring to the new Stanza (510 series replacement) which is tentatively set to be introduced Oct. 9.

Nissan Motor sources in Tokyo said the move away from numerical designations is based on the success of the 810 Maxima, a car remembered more as Maxima than as 810.

The name "Stanza" has been used in Australia for the current 510 range for a few years now and was one of Nissan Australia's earlier moves away from numeric designations.

A new 280-ZX turbo five-speed is tentatively slated for a Nov. 20 introduction.

"In reality, the higher visibility of the Nissan name is part of an ongoing effort by the parent company to bring all the increasingly important international auto operations under the same umbrella," Arakawa said.

"It is felt that the Nissan name better identifies the worldwide vehicle lineup and unifies the company image," he said.

"I must tell you no final decision on this matter has been made. But if it does receive approval, the transition will be an evolutionary process and not accomplished overnight. This project is still being carefully studied."

An Automotive News report (June 29) of the name change for '82, brought a storm of protest from dealer groups, as well as advertising people, because of the tens of millions of dollars which had been spent to promote the Datsun name.

The company appears to be attempting to soothe ruffled feathers and taking a more cautious tack, although the underlying intent to bring about a gradual name change remains a part of the long-term strategy of its home office.

Tokyo sources at Nissan confirmed the U. S. memo, saying the gradual phase-in for the Nissan name has not been set, but was coming and would be evolutionary.

One Nissan source in Japan said, "The head office has had a bee in its corporate bonnet for a number of years now that the Nissan name should appear more prominently in export markets, rather than the Datsun nameplate which is used only for trucks here in Japan.

"Some upper executives see the gain in corporate prestige being enormous, but they tend to forget that we've spent 20 long, hard years in some of these places developing the Datsun name and reputation, and they want to change it overnight.

"Sure, in some small nation where you have, say 50 to 100 dealerships, you can change the corporate image in a reasonably short period of time.

"In some place like the U. S., where there are hundreds upon hundreds of dealer outlets, the task becomes even more massive. Then, too, you must consider what sort of advertising expenditures would be needed just to help in establishing the new corporate identity.

"About the only people who would prosper from a move like this will be the makers of signs for the dealerships and the Esty (advertising) people. And I can imagine that users will continue to refer to us as Datsun for years to come," the source added.

Breaking away with T-1000s

Pontiac dealers in the Newark zone drove 110 new subcompact T-1000 passenger cars away from their spring product training meeting at the GMAD plant in Wilmington, Del. The event included a plant tour plus a briefing on quality before the dealers took to the roads with their new products.

30-day U. C. warranty in N. Y. legislature

By Marjorie Sorge

New York State dealers are up in arms about a proposed used-vehicles bill which they say could cripple that industry if passed.

That proposal, currently in committee in the State Legislature, would require a 30-day warranty and a written statement on the car's condition. If the dealers failed to comply with the provisions, the act says their licenses could be suspended.

Ford, Chrysler and General Motors dealers throughout the state have already banded together, some through the state associations, to defeat the bill. According to Ray Cohen, executive vice president, Independent Dealers Committee Dedicated to Action, their lobbyist has told the committee the bill doesn't have much chance of passing.

Under the bill, dealers would have to warrant the vehicle for 30 days or 2,000 miles after the date of delivery. That warranty would cover the engine, frame, body, driveshaft, transmission, axles, brakes, tires, wheels, differential and the cooling, fuel, steering, suspension, exhaust and electrical systems.

The warranty specifies that the dealer will either repair the car, pay for the repair or replace the parts or systems without charge to the buyer during the covered period. In addition, if the warranty is breached the dealer would have to refund

UAW's trip to Japan seen bolstering image

By Marjorie Sorge
Labor Editor

DEARBORN. — The joint UAW-Ford trip to Japan may have quelled some of the fears Japanese manufacturers have concerning the U. S. labor movement, according to Donald F. Ephlin, union vice president and director of the Ford Department.

Ephlin said eliminating some of these fears was a sidelight of the trip. The joint tour was a fact-finding operation on Japanese labor and management relations.

The Japanese auto makers have been apprehensive about building plants in the U. S. because of their fears of American unions, but Ephlin said the fears are unfounded and an excuse. He said the companies were surprised to see the Ford and UAW people together because they had been told the relationship between U. S. companies and unions was at the very least bitter.

Both Honda and Datsun are building plants in the U. S., scheduled to come on stream within the next 18 months. Those companies have voiced concern for the company/union relationship if those operations are organized.

Labor observers say the UAW is hoping joint ventures like this Ford-UAW trip may quiet some of this apprehension and make it easier to organize those facilities. However, there will still be the problem of a very different relationship between companies and unions in Japan and the U. S.

"The UAW and the Japanese system just don't go together," Ephlin told a press conference following the group's return from Japan. "We are a product of the (U. S.) industrialized system and the Japanese have trouble understanding U. S. labor relations."

- He said the Japanese unions are company organizations and would be called "sweetheart" unions in the U. S. But he said he would not criticize their system because "they've done well" and have achieved job security for their workers in the form of lifetime employment.

The UAW has been calling for more job security for its members in the U. S. auto companies lately, and it is thought that subject may play a big role in the 1982 negotiations.

While the Japanese and U. S. labor systems differ, Ephlin said there are certain areas in the domestic relationship that don't make much sense and needs to be changed.

"Just because we are adversaries, doesn't mean we are enemies," he said.

Some of those changes are coming in the new Employe Involvement program being used at several Ford plants. Both Ephlin and Peter J. Pestillo, Ford vice president, labor relations, said that system is improving quality and productivity and is not all that much different from the much-ballyhooed Japanese plant system.

"We didn't find anything startling over there," Pestillo said. "They don't do anything dramatically different than we do. We just need to tinker a little bit."

Ephlin agreed the trip showed both parties they were on the right track with the U. S. program and that the Japanese are not "supermen."

The only differences found during the trip were a lower standard of living for the Japanese workers in benefits and work time; roomier, less congested plants, and fewer middle management people. That has already been implemented in some Ford plants where the management level has been reduced to bridge the gap between the shop floor and the offices.

Also, Ephlin said, the Japanese choose their hourly people like the Americans choose their top management, and those workers have lifetime employment.

This philosophy, however, does control the marketing concept. The Japanese build cars then find the marketplace because of their commitment to keep people working, while in the U. S., if the cars aren't selling, workers are laid off, he said.

Pestillo said he was impressed with the emphasis on human, rather than labor relations.

Both men said there was very little of the Japanese system that could be adopted in total for use in the U. S.

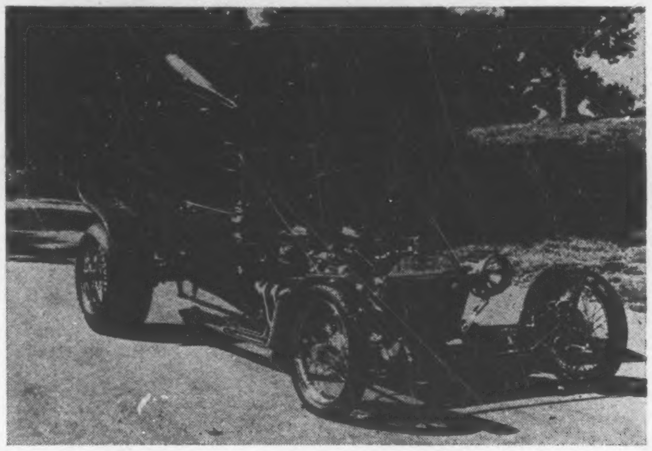
"We didn't go over there to copy them," Ephlin said. "I didn't see anything over there I didn't see in the United States before."

There were 15 members of the study committee, eight from the UAW and seven from Ford.

Rockwell to enter AOT Hall of Fame

MIDLAND, Mich. — The Automotive Organization Team will hold its sixth induction program at its Automotive Hall of Fame here on Oct. 15.

To be honored is the late Col. Willard F. Rockwell, founder of Rockwell Corp., now known as Rockwell International.



Total T Roadster kit

This fiberglass replica of the 1923 Model T is built on a pickup bed and set off with chrome front end or optional brass. A chromed Jaguar rear end is another option. The kit, from Total Performance, Wallingford, Conn., starts at $7,995.

McDonald cites progress in labor relations

GM execs predict an end to slump

NEW YORK. — General Motors executives maintained an optimistic view of the future of the auto industry, and GM in particular, as they met with the leading financial analysts here last week.

During questioning by the analysts, senior executives came back to the same point: There is a slump but the corner will be turned and GM will compete.

The analysts, on the other hand, concentrated on productivity, quality and the ability of the company to compete with the Japanese in those critical areas. Many of the nearly 100 analysts present had recently returned from trips to Japan where they toured various facilities.

GM President F. James McDonald said that closing the $8-per-hour wage gap between the two nations and the productivity questions was an issue "too big to overcome by ourselves." He said flatly that management and labor have to come together. "All parties ought to be talking about it and coming up with solutions," he said.

McDonald bluntly said that "we've been bent over by labor" and "we've taken the long strikes in the past, but that's changing." Strikes don't solve anything anymore, and even the UAW leadership is realizing this, he said.

- McDonald stressed that in the area of work practices, to increase productivity and quality of the product, management had to depend on labor. With labor, the company has introduced what it calls a Quality Work Life Program in some plants, which McDonald says makes it easier to resolve some problems.

As for automation, which the analysts focused on as part of productivity, McDonald said the company was moving quickly in this area. He added that automation is developing quickly into a new area of programmable robotics. This new technology will enable a company to merely reprogram the system rather than replace it for specific job tasks.

When asked whether the company has specific target percentages of productivity increases for the upcoming year, compared with the Japanese who are looking to increase productivity by 6 to 8 percent, McDonald responded that GM did not.

In response to another question on mixed assembly, similer to the Japanese plants to allow faster response to market demands, McDonald noted that GM was still in a transition phase with the introduction of front-wheel-drive models.

The aim of the company is to be able to build a couple of model lines at the same plant, either at the same time or in one-day time frames.

While GM is moving ahead, some analysts pointed out that certain programs have been delayed. McDonald said it was a question of improving quality with more time.

He said that as the market shifted to smaller cars, GM compressed its programs to meet the needs. It was decided, he said, that if the company now spread out its programs and gave them more time, the quality would be better.

- Howard H. Kehrl, vice chairman, added that people were carrying double work loads since the production program rate was doubled and something had to be done to spread this out more.

As for the stability of GM and its ability to compete, both McDonald and Kehrl as well as F. Alex Smith, executive vice president, voiced the opinion that there is a "pent-up" demand in the marketplace. The current situation is temporary, and is caused by high fuel costs and high interest rates, they said.

Smith said that GM has the financial capability and will have a complete product offering around the world in the future.

"We do see the market strengthening and there is stronger demand out there in the long term," he said.

Antitrust suit against Mack is dismissed

WASHINGTON.—The Justice Department has dismissed without prejudice a civil antitrust suit against Mack Trucks, Inc., and its National Distributor Advisory Council (NDAC).

The department filed the suit last January, alleging that Mack and NDAC (a body of independently-owned distributors appointed by Mack to sell trucks and truck parts) had conspired to fix prices of truck parts in the U. S.

Justice dropped the suit, according to Assistant Attorney General William F. Baxter, because the alleged violation consisted of a vertical pricing arrangement between Mack and its distributors, with no demonstrable horizontal effects as had earlier been suspected.

"Even if one views the case as a purely vertical one, our evidence for the proposition that Mack had entered an agreement with the independent producers was confined to one episode, and even as to that episode there were evidentiary weaknesses," Baxter said. "Also, we had no evidence of subsequent policing or coercion."

At first, because Mack has a wholly owned distributor network as well as independent distributors, the Justice Department perceived the case as having horizontal features.

But "the mere fact that a manufacturer achieves a portion of its distribution through wholly owned channels does not, by that factor alone, convert a vertical case into a horizontal one," Baxter said.

Imports gain over May; domestics lose ground

June sales inch ahead of 1980 level

By Jenny L. King
Staff Writer

New-car sales in June showed a slight increase overall compared with the month a year ago, with domestics up 1.35 percent and imports pulling ahead 7.93 percent. In fact, it was a disappointing month for the U. S. auto makers and yet another strong one for the imports.

June domestic sales were down 1.18 percent from May's 524,021 total.

Domestic new-car sales totaled 517,815 in June, up only 1.35 percent over 510,921 for June, 1980, and down 2.55 percent on a daily-selling rate basis. With 26 selling days this June, the average was 19,916, compared with 20,437 based on 25 selling days a year earlier.

Meanwhile, imports enjoyed a sales increase, plus 28.41 percent of the month's market. Import sales totaled 205,527 in June, up 7.93 percent over 190,431 a year ago.

Combined sales for the month numbered 723,342, up 3.14 percent over 701,352 last year.

Total first-half sales were 4,582,201, down 1.46 percent from 4,651,150 in 1980. The domestic auto makers retailed 3,308,432 new cars during the first six months of 1981, down 2.67 percent from 3,399,190. Import sales for the period were up 1.74 percent, to 1,273,769 from 1,251,969. The imports share of the market for the first half was 27.80 percent.

The daily selling rate for the domestics for the first half was

Alfa hatches a hatchback

Alfa Romeo's Alfasud sedan, previously available only as a two-door or four-door, has been joined by a three-door hatchback. The hatchback is part of a new-model policy designed to drive Alfa Romeo back to profitability.

Alfa Romeo mixes ambition and realism

The Alfasud has never lacked for sales among auto enthusiasts. When it appeared nearly a decade ago, it set new standards in ride, space and road handling that brought it rave reviews.

Even today it must be rated among Europe's best in these respects.

But enthusiasm alone does not guarantee a product's success, and Alfa Romeo's history in the past decade — when it turned from being a specialist performance-car manufacturer to a would-be mass-market operator with the Alfasud — has brought its share of disaster and disappointment.

It ran up a loss in 1973 and has been in the red ever since. It has changed the chairman or chief executive on average once a year for the past decade. On a good day, its absentee rate would be only one in five at the plant at Pomliagno d'Arco, near Naples.

That factory, with a theoretical capacity in excess of 200,000 annually, made 101,750 units last year.

• But a greater sense of realism is shaping Alfa Romeo's future these days. It talks of reducing losses and breaking even by the mid-'80s, and has ambitious plans for a new and more frequent model up-dating policy.

The V-6 version of the Alfetta GT was the first. The controversial deal with Nissan is another.

In the meanwhile, Alfasud has brought out a long overdue hatchback version of the Sud sedan to enable it to compete more effectively with the Fiat Ritmo/Strada, VW Golf, Renault 14, Ford Escort and Opel Kadett opposition.

In doing so, Alfa Romeo has followed a pattern taken by Citroen with the GS — a competitive model launched shortly before the Sud. It was recently given the extra rear door and folding rear seat treatment.

In the Alfasud's case the hatchback conversion has been effected only on the two-door models. To do the job on the four-door would apparently have required considerable extra torsional strengthening which could have upset the vehicle's inherent handling characteristics.

The same reason is given for not extending the rear door opening down to bumper level. The result is a rather high loading sill to overcome when putting luggage in or taking it out.

To go with the new models — and the sedans as well — is a new dash which features better face-level ventilation.

Fiat supercharges Mirafiori sedan

Fiat has put a supercharged version of its Mirafiori sedan on sale in Italy. The company simply believes the supercharger is a more realistic alternative to the currently fashionable turbocharger in volume production cars.

Fiat's 2000 Mirafiori carries an Abarth badge. It costs around $11,700 in its country of origin, and boosts power output by 22 percent to 140 HP. Abarth — a company within the Fiat group — is offering a supercharger kit for other models in the Supermirafiori range at approximately $3,200.

Abarth's Roots-type unit is driven by a toothed belt from the crankshaft and gives a boost of 6.5 pounds per square inch.

Among the features which attracted Fiat to the supercharger were its comparatively low cost of manufacture; its lower weight (35 pounds) than a fully installed turbo with fuel injection; and the comparative ease of adapting it to carburetor engines without the need to employ expensive injection equipment.

Fiat says the 8 HP absorbed by the supercharger is made up by better mixture and combustion.

Not that the company is not interested in turbochargers. Its Weber subsidiary has a license to manufacture the West German KKK units, and it uses turbos extensively in its competition Lancia sports cars and Ferrari Formula 1s.

South Carolina dealers select

Newly elected 1981-82 South Carolina Automobile and Truck Dealers Assn. officers are, from left: Patrick E. Watson, Columbia, executive vice president-secretary; John T. Jones, Jones Chevrolet, Sumter, first vice president; C. Weldon Burns Jr., Burns Chevrolet, Rock Hill, president, and John W. Sullivan, Sullivan Motor Co., Anderson, treasurer.

Isuzu to build engine plant; seen as GM S-car supplier

TOKYO. — Isuzu Motors, which currently introduced its snazzy Piazza coupe to the Japanese market, has announced plans for a new factory.

This factory is slated to start engine production in 1984 and is situated at Tomoakomai on the island of Hokkaido, to the north of the Japanese mainland. It will be the first automotive plant to be built on the northern island, which spends the winter covered in deep snow.

Isuzu Motors, owned 34 percent by General Motors, is buying a 365-acre site and will invest $225 million in a new engine plant with an annual capacity of 200,000 to 300,000 units.

Isuzu will build a complete range of diesels and probably gasoline engines in the 1.2 to 2.4-liter range. This will include the existing 1.8 liter (110-CID) unit used in the Gemini and being supplied to GM for the Chevrolet Chevette.

There is already a 2-liter (122-CID) version of that engine which is used in a van, and there is the possibility of a six-cylinder version of 2.4 liters or more.

However, the greatest volume is expected to be for an engine of 1.2 to 1.4 liters, which will be used by Isuzu and also sold to GM in the U. S. and Australia for the new S-car. It is expected that GM will take well over 100,000 diesel units a year from this plant.

Currently, the Isuzu Gemini is the smallest Japanese diesel car available in Japan, but this will change next year when a 1.3-liter (80-CID) diesel Toyota Corolla is expected to be introduced and sold in big numbers.

The VW Golf (Rabbit) Diesel also is sold in Japan, and although it does well for an import, sales volume for all Golfs is around 20,000 units a year.

Isuzu is selling its Gemini diesel at around 5,000 units a month, far more than the numbers of other diesel models. Isuzu expected the Datsun Bluebird 1.8-liter (110-CID) diesel to be a strong competitor, but so far it has not been a big success.

New-car outlets licensed as used-car rental points

HAZLET, N. J. — Three auto men have begun licensing new-car dealers for territories in a used-car rental network, aimed at businesses and individuals seeking lower-cost transportation.

Called Affordable Used Car Rental System, Inc., the new firm is headed by Donald Buhler, a Chevrolet dealer here; Gerald Levine, a Fiat dealer and vice president of Affordable, and Raphael Cohen, former Dodge dealer and current executive vice president of the Independent Dealers Committee Dedicated to Action.

Buhler, who originated the system, claimed net profits at his dealership for the first quarter of 1981 amounted to $18,280.

Families are turning to rentals for their second or third car, he said, pointing to another market in businesses seeking to cut transportation costs.

Large car-rental firms are being hit by escalating costs of new cars. But used-car prices aren't increasing as quickly, Buhler said.

The new-car dealer has a ready supply of clean used cars taken as trades, he said. The dealer can choose his own fleet and, thus, his own costs.

Training and insurance are offered by Affordable. Besides the week-long training session for the dealership's manager, a field representative helps launch new operations.

Waldrep appointed

RED OAK, Ga. — Warren H. Waldrep has been appointed director of fleet services at the Atlanta Auto Auction here.

Automotive News seminar opens July 19

Hemphill, Farrar at World Congress

Dr. John Hemphill, executive vice president of J. D. Power & Associates, and Jerry R. Farrar, president and chief executive of General Warranty Corp., are among the faculty members for the sixth annual Automotive News World Congress which will be held July 19-22 at the Hyatt Regency Hotel, Dearborn.

The World Congress will present 34 top-level decision makers from all facets of the worldwide auto industry. They will address attendees from around the globe. See page 45 for additional Automotive News World Congress information.

Hemphill, who will forecast the prospects of micro-mini cars in the U. S. market, joined J. D. Power in 1979 as senior research director. He was elected executive vice president in 1980.

The company, founded in 1968, specializes in automotive consumer research. It collects and analyzes data on the vehicle market. It publishes the Automotive Consumer Profile, which measures changes in vehicle ownership, use, purchase intentions, attitudes, lifestyles and opinions related to the automotive market.

John Hemphill

Jerry R. Farrar

Hemphill has an extensive background in economic and consumer transportation-related studies for the National Science Foundation, U. S. Department of State, Office of Naval Research, U. S. Department of Housing and Urban Development and the Smithsonian Science Information Exchange.

- Farrar, a service-contract expert, will address the issue of dealer survival with extended service contracts.

He launched two general agencies, one in 1965, Century International Corp., which became a $10-million-a-year general agency after three years, and the other in 1981, an independent service contract firm that he presently heads as president and CEO. He was president of American Warranty Corp. until early this year.

Farrar began his insurance career with Prudential Insurance Co., and during this period he was named to the Million Dollar Round Table for sales achievement. He also won sales-achievement awards during his stint with Bayly, Martin & Fay Financial Services, Inc., for developing mass-merchandising programs for Chevron Travel Club, Mastercharge, J. C. Penney, Arco and United California Bank.

The Automotive News World Congress is in its final preparation stages. Registration for the four-day forum is $425 which includes admission to all sessions, a comprehensive workbook, two lunches, three dinners and three scheduled cocktail receptions. A registrant changing his plans may substitute the name of another individual prior to the Automotive News World Congress. There is a service charge for cancellations and they must be written.

To register, call collect (313) 567-9520, or write Cynthia Radom, special projects director, 965 E. Jefferson Ave., Detroit, Mich. 48207.

Sodium azide gets air-bag nod of Nissan, Toyota

WASHINGTON.—Nissan and Toyota agree that sodium azide is the best propellant if they produce air-bag systems, although neither has now any intention of doing so. The responses were to questions posed by Rep. John Dingell, Michigan Democrat, to the major Japanese producers.

Nissan said it had used sodium azide in its experimental air-bag development program which it terminated several years ago. The air-bag system used in the Nissan ESV used 100 to 120 grams for the driver side and 200 to 240 grams in the passenger side. Nissan used only sodium azide and says it does not know of any alternative propellants.

Toyota says that although it does not now have any plans for air-bags, sodium azide was the only base chemical closely studied and used. But before its experience with pyrotechnic inflators, it studied compressed gas and so-called hybrid systems. Those studies were ended at an early stage because of gas release characteristics, system weight, reliability, and cost.

Toyota's past experience found it necessary to use some 500 grams per car for the driver and passenger systems. Toyota knows of no other alternative.

The GM air-bag systems including those used on the road now, contain sodium azide and GM feels this is a safe system.

Imports gain over May; domestics lose ground

June sales inch ahead of 1980 level

Continued from Page 6

21,624, based on 153 days. A year ago it was 22,073, based on 154 days, a difference of 2.03 percent.

On a year-to-year basis, two of the five major domestic makers were up in June; on a daily-rate basis, only Chrysler Corp. showed an increase. Chrysler sales were up 27.19 percent, to 58,454 from 45,957 (up 22 percent daily rate). Ford Motor Co. sales were up 3.42 percent, to 127,173 from 122,971 (off one-half percent daily rate).

General Motors reported sales of 310,886, down 1.28 percent from 1980's 314,911 (down 13 percent daily rate). American Motors sales were down 11.60 percent, to 9,726 from 11,002 (down 15 percent daily rate), and Volkswagen of America was down 28.01 percent, to 11,576 from 16,080 (down 30.82 percent daily rate).

GM earned 60.04 percent of the June domestic market, down from 61.64 percent last year. Ford sales accounted for 24.56 percent, up from 24.07 percent. Chrysler climbed to 11.29 percent from 8.99 percent. VWoA dropped to 2.23 percent from 3.15 percent, and AMC slipped to 1.88 percent from 2.15 percent.

Of the 13 U. S. makes reporting both years, six were up this June. Plymouth sales climbed 81.99 percent, Mercury was up 33.26 percent, Cadillac was up 32.35 percent, Dodge was up 21.72 percent, Oldsmobile was up 14.85 percent and Buick was up 6.70 percent.

Chrysler suffered the greatest sales decline, down 49.73 percent from last June. VWoA was down 28.01 percent, Lincoln was down 19.20 percent, Chevrolet was down 13.92 percent, AMC was down 11.60 percent, Pontiac was down 7.47 percent and Ford was down 2.84 percent.

• Among the imports there were some impressive sales gains in June over last year. Volvo was up 54.05 percent for the month and reported its best first half ever in the U. S. market. BMW sales were up 49.83 percent, Audi was up 45.65 percent, Fiat was up 45.53 percent, Mercedes-Benz was up 34.04 percent, Mazda was up 23.43 percent, Subaru was up 16.31 percent and Honda was up 12.68 percent.

Of the 26 imports reporting a year ago, 17 were ahead of first-half 1980 levels.

In June, imports accounted for the largest single piece of the market, 28.41 percent. U. S. subcompacts were 17.34 percent, compacts were 19.51 percent, intermediates were 19.69 percent, standards were 10.53 percent and luxury models were 4.52 percent.

Best selling domestic nameplates for the month were: Ford Escort, 28,400; Chevrolet Chevette, 24,412; Chevrolet Citation, 23,414; Oldsmobile Cutlass Supreme, 23,089, and Chevrolet Malibu, 18,910.

June 21-30 domestic sales dropped 12.09 percent, to 173,684 from 197,572 last year. The daily selling rate was 21,711 this year compared with 24,697 in 1980. There were eight days each period.

Domestic new-car sales during the second quarter of 1981 totaled 1,575,560, up 1.65 percent over 1,550,026 a year ago.

Chrysler was the only U. S. auto maker to post a sales increase for the first half of this year. Chrysler sales were up 22.26 percent, to 400,717 from 327,758. GM's first-half sales dropped 5.55 percent, to 1,997,376 from 2,114,849. Ford reported a sales decline of 3.92 percent, to 750,951 from 781,587. AMC sales totaled 75,074 during the first six months, down 4.71 percent from 78,788. VWoA was down to 84,314 from 96,208, a difference of 12.36 percent.

• The six-month domestic market showed GM with 60.37 percent of the total, down from 62.22 percent a year earlier. Ford had 22.70 percent, down from 22.99 percent. Chrysler increased its foothold to 12.11 percent from 9.64 percent. VWoA dropped to 2.55 percent from 2.83 percent, and AMC went to 2.27 percent from 2.32 percent.

During the first half, Plymouth sales were up 52.34 percent, Dodge was up 25.11 percent, Oldsmobile was up 8.66 percent, Buick was up 6.41 percent, Mercury was up 5.80 percent and Cadillac was up 2.94 percent.

Reporting sales declines the first half of 1981 were: Chrysler, down 35.35 percent; Chevrolet, down 16.42 percent; VWoA, down 12.36 percent; Pontiac, down 8.79 percent; Lincoln, down 8.75 percent; Ford, down 6.49 percent, and AMC, down 4.71 percent.

The top 10 U. S. nameplates for the first half were headed by Chevrolet Chevette at 205,730, followed by Ford Escort, 162,120; Chevrolet Citation, 161,784; Oldsmobile's Cutlass Supreme, 141,878; Chevrolet Malibu, 122,182; Oldsmobile's Cutlass, 111,775; Buick Skylark, 106,704; Buick Regal, 106,052; standard Chevrolet, 101,537, and Ford Fairmont, 101,479.

First-half market class was divided as follows: Imports, 27.80 percent, subcompacts, 16.86 percent; compacts, 20.70 percent; intermediates, 20.59 percent; standards, 9.59 percent, and luxury models, 4.46 percent.

CAS loses suit over delay on restraint rule

WASHINGTON.—The Center for Auto Safety suit against the government for the year's delay granted from the passive restraint rule for large cars has been dismissed by the federal appeals court for the District of Columbia.

The center had petitioned for summary judgment and reversal on grounds that the government had "suppressed" and failed to consider data on belt usage which affected the benefit picture for air bags or automatic belts.

The government, noting the center had filed a day late, said the document in question was only the latest in a series of reports containing similar and cumulative findings on automatic belt usage and, in any case, the document—in the technical reference library although not in the docket itself—had been considered even though it was not particularly relevant.

The short court order agreed with the government both on the timelines of filing and the issue itself.

2nd quarter, 1st half also top 1980 totals

Car production up 33 pct. for June

By Patricia Hoffman
Staff Writer

U.S. auto production in June rose sharply above the comparable 1980 month, and the makers ended the first six months of 1981 above the total for the year-earlier period.

In June, the auto manufacturers assembled 712,633 units, up 33.43 percent from 534,085 built the same month last year, and the most for that month since 826,678 in 1979. The total was the highest for any month since September, 1979, when output reached 783,843 cars.

During the second quarter, the domestic auto makers produced 2,032,895 cars, up a substantial 23.78 percent from 1,642,293 built in the 1980 period, and the most for that quarter since 1979 when 2,485,124 units were assembled.

There were 3,602,873 units completed the first six months of 1981, up 4.69 percent from 3,441,464 in the first half of 1980.

Breakdown for June by company is: General Motors, 451,960, up 27.96 percent from 353,205 completed in the comparable month last year; Ford Motor, 149,930, up 38.12 percent from 108,553; Chrysler Corp., 83,784, up 136.47 percent from 39,660 and American Motors, 14,492, up 4.55 percent from 13,861.

Volkswagen of America and Checker Motors were down last month with VWoA completing 12,363 units, a drop of 33.67 percent from 18,639 in 1980, and Checker, 104, down 37.72 percent from 167.

Breakdown for the second quarter by company was: GM, 1,268,625, up 21.80 percent from 1,041,557 last year; Ford, 436,897, up 28.29 percent from 340,562; Chrysler, 242,140, up 52.32 percent from 158,964; VWoA, 46,344, down 19.87 percent from 57,836; AMC, 38,447, down 9.68 percent from 42,566, and Checker, 442, down 45.30 percent from 808.

Domestic auto production last week was down from the previous week's total dropping 19.91 percent from 145,685 to 116,684 units, but output was 14.45 percent above the comparable 1980 week's total of 101,950 units.

Year-to-date, the makers have completed 3,783,852 units, up 4.62 percent from 3,616,726 in the comparable period last year.

Ford Motor scheduled vacation downtime at all of its car assembly plants last week, with operations slated to resume July 20.

Chrysler Corp. scheduled overtime at Belvidere assembly plant last week. The point worked two eight-hour shifts Saturday, (July 11.)

Checker Motors' Kalamazoo assembly point, down since June 19 due to poor sales, returns today (July 13).

Canadian production rises for June and 2nd quarter

Canadian auto and truck production in June rose considerably above that of the comparable 1980 month, and the totals for the second quarter also showed an improvement over the same period last year.

For the first half, car output was up slightly from last year, but truck production was off a bit.

In June, the Canadian auto makers completed 101,919 units, up 31.81 percent from 77,321 cars built in the comparable 1980 month. It was the most for that month since 1978 when the makers completed 117,848 units. The total was also the highest for any month since November, 1978, when 103,872 units were built.

During the second quarter, the auto manufacturers assembled 279,235 units, up 22.55 percent from 227,855 built in the second three months last year. The total was the highest for the second quarter since 328,270 built in 1978, and the highest for any quarter since the second period of 1979 when the makers completed 294,832.

Canadian truck production for June was 55,445, up 28.0 percent from 43,315 trucks built in the same month last year, and the most for that month since 1979 when truck output totaled 61,335 units. The June output was the most for any month since October, 1980, when 55,943 trucks were assembled.

The second-quarter total of 148,972 was up 8.75 percent from 136,991 trucks built in the comparable 1980 period. The total was the highest output for that quarter since 192,515 trucks were completed in 1979.

In the first six months of 1981, the auto makers completed 462,527 units, up 1.48 percent from 455,782 built in the first half of 1980.

The Canadian truck makers assembled 282,020 trucks in the first half, down slightly from the first six months in 1980 when 282,782 units were completed.

Auto production last week was targeted at 13,825 units, down 28.06 percent from 19,218 in the previous week, but up 5.49 percent from 13,105 cars completed in the comparable week last year.

Year-to-date output for the auto makers was 489,190 units, up 0.94 percent from 484,636 in the comparable period last year.

Last week's truck production was slated at 9,592, down 2.73 percent from 9,861 trucks built the previous week, but up substantially from the 3,304 in the week ended July 12, 1980.

So far this year, the truck makers have completed 309,971 units, up 6.07 percent from 292,235 trucks in the comparable 1980 period.

All of Ford's car assembly points scheduled vacation downtime last week and are slated to resume operations July 27.

Also at Ford, all Canadian truck production was halted last week for vacation with assembly scheduled to resume July 20.

Chrysler's Windsor van plant will end production this week (July 17) to begin '82 model changeover. The point is slated to resume August 3.

Truck production in June is 79 pct. above 1980 total

U. S. truck production in June took a substantial jump over the comparable 1980 month's total, and the second quarter output was up considerably from last year's period.

Domestic truck production in June was 177,921 units, up 79.46 percent from 99,141 trucks completed in the comparable 1980 month. The total was the most for the month since 1979 when the makers completed 292,897, and the most for any month since October, 1980, when 179,888 trucks were built.

In the second three months of 1981, the truck makers finished 491,262 units, up 45.15 percent from 338,454 trucks completed in the comparable period last year. The total was the most for that quarter since 1979 when the truck manufacturers completed 887,948 units, and the highest for any quarter since the second quarter of 1979.

Output for the first half of 1981 reached 932,336 units, up 12.88 percent from the 825,961 trucks built in the first six months of 1980.

Truck production last week was targeted at 22,910 units, down 38.24 percent from 37,098 built in the previous week, but up 30.89 percent from 17,503 trucks completed in the comparable week last year.

So far this year, the truck manufacturers have completed 973,865 units, up 11.42 percent from 874,048 trucks built in the comparable period last year.

All of Ford's truck assembly points were down last week for vacation and will remain idle until July 20.

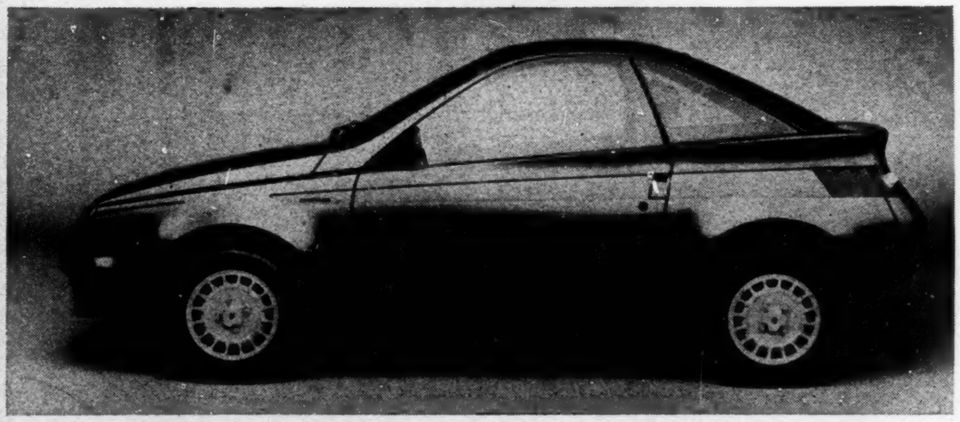
Snazzy silhouette



Computer concept from Ford

Designers at Ford's Ghia studios in Italy have rendered the Shuttler, a graceful, wedge-shaped two-seater, as the aerodynamic answer to the box when gasoline hits $4 a gallon. Ford studio photos showed a front nameplate of "Optim" on the Shuttler. "Optim" is the code name for the minicar Ford plans to produce domestically starting in late 1986. The Shuttler/Optim is 129 inches long and built on a 77-inch wheelbase. More on Ford's futuristic fleet on Page 3.

Import-car stock on lean side with a 51-day supply

By Richard A. Wright
Assistant Managing Editor

While domestic new-car inventories were climbing to record heights, combined dealer and wholesale stockpiles of imported cars continued to be on the lean side.

The inventory of new imported cars in dealer stocks and in importer and distributor hands July 1 totaled 441,000 units, a 51-day supply at current sales rate.

This compares with a domestic inventory July 1 of 1,664,871 new cars, a hefty 83½-day supply.

The July 1 import inventory was up slightly from the month-earlier total of 432,500, which was a 48-day supply.

Generally, the importers like to carry a somewhat heavier stockpile than domestic makers do, because of the time lag that many experience in moving their cars from the ports through the distribution pipeline.

Most importers feel a 60-day supply is optimum, so the inventory has been somewhat lean through most of this year. Among domestic makers, a 40-to-50-day supply is generally considered optimum.

Most of the gain during June in import inventories was the result of the Japanese lines trying to beef up very short supplies. On July 1, several leading Japanese nameplates had inventories lean enough to affect sales.

Toyota had a very short 24½-day supply and Honda was not much better off with a 26-day stockpile.

Mazda had a 37-day supply of new cars, while Subaru had a 48-day stock on July 1. Nissan was in stronger shape with a 54-day supply.

Isuzu had a 90-day supply July 1, but since that importer is just getting under way in the U. S., a larger proportion of its cars are still filling up the pipeline, rather than sitting on dealer lots.

The Chrysler-captive Mitsubishi lines were in 115-day supply, heavier in the Champ/Colt hatchback nameplates than in the higher-line Challenger and Sapporo.

The Japanese-line inventory, which includes pickup trucks in the Datsun, Toyota, Isuzu, Mazda and Mitsubishi figures, totaled 300,200, which was 68 percent of the July 1 stock. It was

Petersen and Agee open Automotive News seminar

World Congress gets under way

DEARBORN. — Nearly 300 auto-related companies from four continents were represented at the opening session of the sixth annual Automotive News World Congress here.

Ford Motor Co. President Donald E. Petersen delivered the keynote address. He was followed by William M. Agee, chairman of Bendix Corp., who reviewed the role of the industry's supplier firms.

For the 3½ days of the high-intensity sessions, nearly 500 registrants will listen to, ask questions of and rub elbows with the 34 faculty members who are the industry's regulators, suppliers, financiers, analysts, designers, managers, innovators, movers and shakers.

"We expect the 1981 Automotive News World Congress to be the same sort of unique forum for the exchange of ideas and information among persons in the industry, as it has been ever since its launching in 1976," said Keith E. Crain, publisher and editorial director of AUTOMOTIVE NEWS.

"We feel the industry needs, more than ever before, such a seminar — a place where decision-makers, advisors and leaders can share in-depth examination of the global industry," Crain said.

• From Elizabeth, N. J., to Elizabeth, South Australia, the World Congress rolls list registrants from Mexico, Canada, Puerto Rico, Sweden, England, Ireland, France, Germany, Italy, Australia, South Africa and New Zealand.

Thirty-four states and the District of Columbia are represented.

The 1981 World Congress offers more visual presentations than last year's, with about a third of the faculty scheduled to use audio-visual or multimedia aids.

"We are happy to welcome those who have joined us for the first time as well as the repeat participants," Crain said.

The Sixth Annual Automotive News World Congress closes Wednesday afternoon.

Components to be shared with Civic

Honda grooms new commuter car

By Bob Hall
Los Angeles Staff Writer

TOKYO.—Sometime this fall, Honda will introduce a new front-wheel-drive, 1,000-cc commuter car for the Japanese market.

The little 3-door hatchback is a reversal of present Honda design philosophy, which has been to introduce cars that are either larger than the model they replace (the '80 Civic for instance), or a step upmarket for owners of earlier Honda cars (as in the case of the Accord, which was viewed as a logical step up for Civic users).

It has been suggested that this corporate policy has severely limited Honda's marketing potential in the Japanese market, but it certainly hasn't had an adverse effect on sales of the maker's product in export (notably the United States) markets.

This 1,000-cc commuter is a sort of "retrenching" in an area similar to that which was the domain of the original 1,200-cc Civic.

The car is, at least from the standpoint of design, a new concept for Honda, which has forsaken the "two-box" configuration so familiar to many of the maker's previous economy models (the N-series 360 and 600-cc sedans, the Z-coupes, the short-lived "Life" models, both generations of Civic and the 3-door Accord) for what might best be described as a 1.5-box package.

The hood on the commuter (Honda is doing a good job of keeping the name a secret) is extremely short — perhaps no more than 20-24 inches long—and steeply raked to provide reasonably good aerodynamics. The car is, for something in this size category, very tall and wide. The width is said to come from the fact that very early in the development program, the car was to be built off a shortened Civic floorpan, picking up all of the Civic's suspension and transmission components.

Rumors filtering out of Hon-

Downsizing, Japanese version

This front-wheel-drive hatchback, its name still secret, is being prepared by Honda for introduction in the Japanese market as a low-priced commuter car. The basic model reportedly will be priced in the $2,625-$2,850 range in the home market.

breaking news

Nissan for Datsun begins this fall

CARSON, Calif.—Nissan Motor Corp. in U.S.A. confirmed last week that it will begin the name change from Datsun to Nissan in the U. S. on '82 models this fall (AUTOMOTIVE NEWS, June 29). The process will take 2½ years.

Chrysler designers get raise

DETROIT. — Chrysler Corp. has given a small group of UAW-represented new-product designers a 12-percent raise in order to keep key people from taking more lucrative jobs

Ford unveils ideas for next decade: Not a box in sight

Kathleen Hamilton
News Editor

DEARBORN. — If Ford Motor Co.'s vision for the next decade proves correct, the two-box hatchback gig is up.

Company brass last week unveiled for reporters and photographers five concept cars smaller than the Escort, each seating from two to eight persons. There wasn't a Fiesta look-alike in the lot.

The lines are smooth; the silhouettes are fast-looking, and the engines which could power them are exotic variations on the internal combustion, reciprocating engines of today.

Although Ford has no plans to produce any of the five, which were produced in Turin, Italy, it expects to incorporate some of their lines in its cars of the late 1980s and early 1990s. They are designed for the time when gasoline hits $4 a gallon.

Downsizing and styling changes are progressing so rapidly that the clinics with which auto makers test consumer reactions to cars that are five years down the road are ineffective, Donald F. Kopka, vice president of design, told the group.

The fleet of five is being displayed in auto shows to prepare the public for tomorrow's designs, he said. Ford President Donald E. Petersen pointed to the fleet as proof that, despite troubled times in the industry, Ford is committed to long-term R&D.

- The vehicle closest to possible production is the Aerovan, five inches shorter than the Escort, and built on the Escort platform, but seating seven or eight passengers depending on seating configuration.

Such vans could come onstream in the mid-80s, if demand is deemed sufficient, Petersen said. Ford is fairly certain van users are willing to downsize, but it is uncertain whether station wagon buyers will be willing to shift to a taller configuration.

The least likely to see the production line in the near future is the Cockpit, shaped like a fighter plane's cockpit, carrying two passengers in tandem, weighing in at 770 pounds and plying city streets on three wheels.

It is designed for a 12-HP, 200-cc engine, which drives the single rear wheel. Kopka described the Cockpit as a probe of the outer limits of fuel-efficient vehicles.

Ford also displayed its Super Gnat, a two-passenger, 134-inch-long vehicle developed by Ford four years ago. Aerodynamically carved mirror, flush-mounted glass and an air dam under the nose are fitted to the Super Gnat. Its 77-inch wheelbase is 6 inches less than the smallest-wheelbase car sold today in the U. S., the Triumph Spitfire.

- A variation on the Gnat theme is the Shuttler, another two seater, four inches shorter and with even smoother lines.

Interestingly, a studio shot provided by Ford showed the Shuttler with "Optim" on the front nameplate. That's the code name for the 4-cylinder minicar Ford is planning to build in the U. S. starting in late-1986.

Ford measures its drag coefficient at 0.335, the same as the Mercury LN7 carries.

The Pockar — so named because the bottoms of door panels open like pockets for luggage space — is a sloping box which, like all of Ford's futuristic fleet, features an oversized greenhouse for improved visibility.

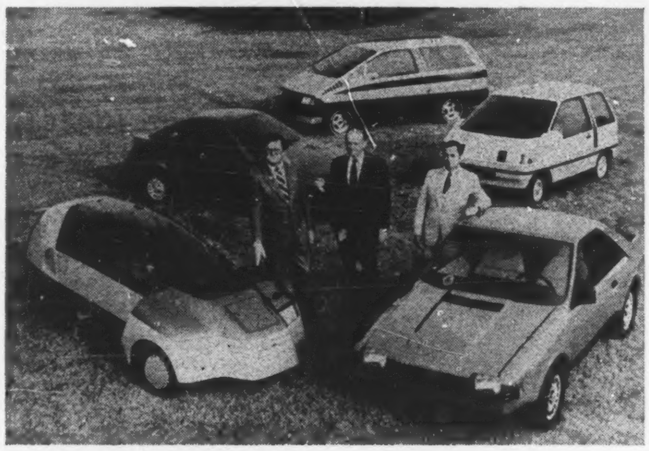
The 129-inch Pockar can carry four passengers. Among its most distinguishing features are large wraparound bumpers and an aerodynamic rear-view mirror flared right into the body work.

Thomas J. Feaheny, vice president of vehicle research, Engineering and Research Staff, forecast Ford would be phasing out its automobile V-8s by the mid-1980s, but said the three-cylinder engines sketched for the audience would not necessarily phase in because of their high costs.

The three-cylinder gasoline and diesel research engines are based on the Escort/Lynx CVH 1.6-liter hemi engine, and much of the tooling is already in place should production proceed.

To reduce vibration, they have counter-rotating balance shafts; to increase fuel efficiency, a leaner 18:1 air-fuel mix for combustion, a higher compression ratio facilitated by intake-port fuel injectors. A fuel-shutoff system is also incorporated. Ceramic exhaust-port liners and graphite-reinforced fiber piston wrist pins may also be incorporated, Feaheny said.

Ford is forecasting 50 MPG for the gasoline version and 63 MPG for the diesel in the EPA metro cycle when fitted in a car weighing about 1,500 pounds.



Ford's futuristic fleet

Ford executives show off design experiments which could find their way into the shapes of cars of the late 1980s and early 1990s, or when gasoline breaks $4 a gallon. From left, Vehicle Research Vice President Thomas J. Feaheny, President Donald E. Petersen and Design Vice President Donald F. Kopka with the Cockpit, a three-wheeled two-seater; Shuttler, a FWD two-seater; Aerovan, an eight-seater that's smaller than the Escort; Pockar, a four-seater with door "pockets" instead of a trunk, and Super Gnat, a FWD two-seater that has been on the show circuit several years.

Subaru unit buys land

CHICAGO. — Subaru Mid-America, a distributor of the Japanese car, has purchased 150,000 square feet of vacant industrial ground in the Mitchell Field Industrial Park, Addison, Ill.

Honda planning parts output from second U.S. plant

MARYSVILLE, O. — Honda Motor Co. and two Japanese partners reportedly plan to build a parts factory adjacent to the Honda assembly plant being built here.

Honda also expects to get that assembly plant into full production more quickly than had been expected.

In addition, the assembly plant's capacity has been raised by 20 percent to 144,000 cars a year from 120,000.

Production will begin before the close of 1982 and full production rates will be reached in May, 1984, instead of November, 1984, as originally expected, Honda of America Mfg., Inc., said.

The parts facility will produce mufflers and seats and start up when car assembly starts, according to reports published in Japan.

Reports also said Honda tried but failed to induce American companies to become its partner in parts production.

High fuel prices called key to their success

Scramble begins for minicar market

By Kathleen Hamilton
News Editor

DEARBORN.—If Ford's sleek show-car fleet of idea cars for the late '80s and early '90s is to see the light of day, fuel prices are going to have to rise significantly to make the minicar a high-demand number, Ford President Donald E. Petersen said.

Ford is forecasting that the market for cars smaller than today's Honda Civic or German-built Ford Fiesta will grow faster than growth in the total U. S. market, but Petersen won't be pinned down to specific numbers.

Industry analysts say the market is already here, just waiting for a supplier.

General Motors, Nissan, Toyota, Toyo Kogyo and Honda are all working on minicar projects. The first mini for the U. S. may be the GM S-car, not expected before 1985.

The first GM S-car, built in Spain, is to debut in Europe as an Opel in the fall of '82.

Ford is expected to bring in a minicar in mid-1984 from Toyo Kogyo, in which Ford holds a 25-percent equity stake.

Petersen said the successor to the Fiesta is the likely candidate as Ford's first minicar. The Fiesta is due for major overhauling — read "downsizing" — "in the late 1980s" after an '84 overhaul.

- Insiders say Ford is working on a four-cylinder domestic minicar, codenamed Optim, for introduction in late 1986.

Strangely enough, one of the studio shots provided by Ford of the research vehicle it calls the Shuttler was tagged "Optim" on the front license plate.

The Shuttler/Optim on the auto-show circuit is a two-seater that is 129 inches long and has a 77-inch wheelbase.

If the graceful little Shuttler/Optim is indeed in line for production, it won't be in the same league as the econoboxes that are already built abroad and are most likely to comprise the first wave of minis in the U. S.

Marketing research by the Los Angeles-based firm of J. D. Power & Associates found there is already demand for a minicar in the U. S., just no supplier.

The research firm found nearly a quarter of respondents it polled by telephone were considering a mini for their next purchase. Of those, only a quarter wanted a two-seater. Fully one-half of the potential customers were looking for a four-seat, four-door model.

- At J. D. Power marketing clinics in Los Angeles and Cleveland, drivers of all ages gave high marks in static and on-road tests to three minicars, the Volkswagen Polo, Austin Metro and Daihatsu Charade. The three range from 130 to 140 inches in length and have engine displacements of 900 to 1,000 cc.

(For comparison, the Honda Civic hatchback measures in at 148 inches and its smallest engine in the U. S. displaces 1,300 cc.)

An even smaller model, the Suzuki Alto, fitted with an 800-cc engine, got good marks as

L-M contest for cars; Datsun pays on trucks

By Joseph Bohn
Marketing Editor

Lincoln-Mercury's version of the Ford Division incentive program (AUTOMOTIVE NEWS, June 13) gives dealers a bit more flexibility in their choice of which car lines to base payments on.

Meanwhile, Datsun launched a new incentive called "4x4 and More," covering four-wheel-drive pickups and sport package trucks.

The Lincoln-Mercury incentive is almost identical to Fords, except for cars.

The L-M contest runs from July 10 to Sept. 13, with payments of $150, $300 and $500 for hitting, respectively, 30 to 59.9 percent, 60 to 89.9 percent and 90 percent or more of a three-car-line objective.

There is also, as with the Ford program, a July 10-Aug. 9 fast-start provision which, if attained, ups payments to $200, $350 and $600, for each category, nonretroactively.

However, in the L-M program, payments are based on Cougar and XR-7 with dealers having a choice of either Zephyr or Marquis as their third car line.

If they choose Marquis, they receive a higher sales quota to shoot for than with Zephyr which, reportedly, is the more difficult of the two lines to move at L-M these days.

The Datsun incentive runs from July 11 to Sept. 30 and offers cash to both dealers and sales managers.

Dealers receive $100 for reaching 0 to 50 percent of their 4x4/sport truck objective, $200 for 51 to 100 percent and $400 for 101 percent and over.

Additionally, there is a separate total truck objective which, if attained, pays dealers an extra $100 for 4x4 and sport vehicles. Thus, they receive $200, $300 and $500, respectively, in each category. Payments are nonretroactive.

Datsun has also provided a 10 percent override for sales managers. They receive 10 percent of whatever the dealer earns as extra incentive from the factory.

Datsun also has an interesting Los Angeles/Orange County matching funds incentive, running from July 11 to Aug. 10.

It is based on the 210, 310 and 4-wheel-drive truck. For every unit sold, a dealer puts in $30 toward the program and the company puts in $30.

Each time a salesman sells a car or truck, he receives a pull on a pullboard, giving him a chance to win cash prizes ranging from $20 to $3,000.

Two $3,000 cash awards are being given along with a number of other cash awards down to the lowest $20 level.

GM hits rock-bottom for '81

Car sales wither to 20-year low

By Jenny L. King
Staff Writer

Early July domestic new-car sales fell to their lowest level in 20 years, with General Motors reporting its smallest 10-day total so far this year and Ford Motor Co. its second worst of 1981.

July 1-10 sales totaled 128,417, down 17.60 percent from the year-ago 155,852, and down 26.06 percent from the preceding period's 173,684 (June 21-30). It was the poorest early-July showing since 1961 when new-car sales reached only 99,592 units.

GM reported sales of 76,296 passenger cars, down 13.75 percent from 88,462 a year earlier and its lowest total to date in 1981. Ford sales numbered 30,182, down 34.22 percent from 45,884. The only period this year in which Ford sold fewer cars was Jan. 1-10 when its total was 24,930.

Chrysler Corp. was the single major U. S. auto maker to enjoy a sales increase. Chrysler sales climbed 13.63 percent, to 16,435 from 14,463 a year ago. Volkswagen of America sold 3,104 U. S. Rabbits, down 17.07 percent from 3,743, and American Motors' estimated passenger-car sales stood at 2,400, down 27.27 percent from 3,300.

GM increased its share of the market to 59.41 percent from 56.76 percent last year. Ford's share fell to 23.50 percent from 29.44 percent. Chrysler sales accounted for 12.80 percent of the market, up from 9.28 percent. VWoA cornered 2.42 percent, up from 2.40, and AMC's estimated share was 1.87 percent, down from 2.12 percent.

Plymouth and Dodge were the only makes with improved sales in early July. Plymouth was up 40.74 percent, to 7,942 from 5,643 last year, and Dodge pushed ahead 11.23 percent to 6,675 from 6,001.

Lincoln sales plunged 45.43 percent, Ford was down 40.51 percent, Chrysler was down 38.03 percent and AMC was down 27.27 percent.

Buick sales dropped 22.15 percent, Cadillac was down 22.09 percent, Pontiac was down 20.77 percent, VWoA was down 17.07 percent, Chevrolet was down 11.06 percent, Mercury was down 8.04 percent and Oldsmobile was down 4.09 percent.

Chevrolet Citation was the best-selling nameplate in early July with sales of 7,155 units. Second was Chevrolet Chevette at 6,428, followed by Ford Escort, 5,687, Oldsmobile Cutlass Supreme, 5,530, and Chevrolet Malibu, 5,209.

There were eight selling days in the period this year and last. The daily selling rate averaged 16,052, down 17.60 percent from 19,482. It was the second lowest daily selling rate thus far in 1981, following 16,005 back in early January.

Year-to-date sales totaled 3,436,849, down 3.33 percent from 3,555,245.

† Estimate

Low import quota set for Subaru excludes 4WDs

PENNSAUKEN, N. J.—When Japan's Ministry of International Trade and Industry announced its quotas on car shipments to the U. S., a startling figure appeared for Subaru of America.

The company would have a quota of 66,000 units, or a cut of over 50 percent from its current sales in the U. S. market.

But, according to Alan Ross, vice president of corporate communications for the company, the figures were erroneous. That total, he said, did not include the four-wheel-drive vehicles sold in the U. S. These, according to Ross, amount to nearly 50 percent of the company's sales.

Ross said the company is monitoring the situation on a daily basis, but still doesn't have firm data on the exact number of vehicles it will be able to import under the quota system.

Right now, he said, there is still some confusion. But he was emphatic on the point that the initial estimated quotas did not reflect the four-wheel-drive vehicles. Those include station wagons, hatchbacks and the BRAT.

During 1980, SoA sold 142,968 vehicles in the U. S. For the first half of this year, ended June 30, the company sold 77,769, up 9.8 percent from 1980.

From VWs to computers

JOHNSTON, R. I. — The State of Rhode Island has purchased a former Volkswagen showroom for $500,000 from Vorelco Inc., Engelwood Cliffs, N. J., the real estate holding company for Volkswagen of America. The state will move its computer processing center to the property.

truck industry news

But second-quarter total top '80 by 17 units

First-half truck sales drop 11 pct.

In spite of a relatively strong second quarter, retail sales of new trucks of all types in the U. S. in the first six months of 1981 fell almost 11 percent below the total for the same period a year ago.

Franchised dealers and factory outlets retailed 1,198,839 units in the first half, according to preliminary reports, a decline of 10.5 percent from the year-earlier 1,339,200.

In the April-June quarter, sales were 17 units higher than a year ago, with June the only one of the three months to show a decline from the 1980 totals. During the quarter, 630,183 vehicles were retailed, compared with 630,166 in 1980.

The June total of 219,584 units was down 4.7 percent from last year's 230,439, with declines in all market segments except the compact pickup trucks. Sales of these vehicles were 9.5 percent higher than the previous year, from 38,675 units to 42,347.

Light-truck sales in the January-June period totaled 1,079,022 units, a decline of 10.3 percent from the year-earlier 1,202,675. The compact-truck count was down 6.4 percent, from 269,732 units to 252,368.

The non-captive Japanese-built compact pickups — Toyota, Datsun, Mazda and Isuzu—did much better in the first six months than did the captives—Chevrolet LUV, Ford Courier, Dodge Ram 50 and the Plymouth Arrow.

Sales of the non-captives through June totaled 139,249 units, an increase of 2.4 percent over the year-ago 136,015. The captives were down 21.1 percent, from 120,628 in 1980 to 95,223.

Medium-truck sales in the first half dropped 13.7 percent from a year ago, from 46,843 units to 40,436. Heavies were off 11.5 percent to 79,381 units, compared with 89,682 in 1980.

The number of unsold new

To build 11 combat prototypes

AM General gets Army contract

DETROIT. — AM General Corp., a wholly owned subsidiary of American Motors, has been awarded a contract from the U. S. Army Tank-Automotive Command to deliver 11 prototypes of a newly designed 1¼-ton tactical wheeled vehicle.

The new vehicle is designed to meet the military requirement for a family of versatile cross-country vehicles capable of performing various combat and combat-support roles.

One version is an anti-tank missile carrier. Other versions would serve as an ambulance and in a reconnaissance, fire support, communications and command role.

The Army's plan is to selectively replace certain existing vehicles in the ¼ - to - 1¼ - ton range which are less mobile.

The prototypes will be delivered to the Army by early 1982, according to AM General, and will undergo extensive testing and evaluation in competition with the vehicles of two other manufacturers who received similar prototype contracts.

Upon completion of the test program and following evaluation of production cost proposals in late 1982, the Army will select one of the three competing entries for the initial production contract, the firm said.

George W. Scharbach, AM General's engineering and product development vice president, said the vehicle was designed to exceed the expectations of the user.

"Our engineers started with a clean sheet of paper and designed an all-new vehicle from the ground up," Scharbach said. "Unique solutions were developed to meet the demanding specifications for ground clearance, low silhouette, forward visibility and vehicle weight, coupled with superior mobility, durability, reliability and maintainability."

Scharbach added that maximum utilization was made of proven commercial components to reduce production costs.

Prototype designed for military

This is one of 11 prototypes of a newly designed 1¼-ton tactical wheeled vehicle which AM General Corp., an American Motors subsidiary, will build for the U. S. Army Tank-Automotive Command. The Army plans to replace certain existing vehicles which are less mobile.

Spicer's first shipment of new transmission

On hand for the first shipment of new SST-2 seven-speed units from the Spicer Transmission Division's Toledo plant were, from left, Rudy Eskra, division vice president/general manager; Charles Jones, engineering vice president, and Paul Motyl, plant manager.

Spicer readying parts for the 'world truck'

By Jack Walsh
Truck Editor

TOLEDO.—Dana Corp.'s Spicer Transmission Division is moving into new markets, improving its share of the heavy-duty business and is readying products with broad potential in the expanding world truck market.

Russ Halstead, the division's general sales manager, made these observations during the recent introduction here of Spicer's new SST-2 line of transmissions.

Noting that Dana is anticipating a slight increase in domestic truck sales in the second half, he said the company is looking beyond these shores, developing components for the "world truck" which is expected to become a reality in the '80s.

"Three of our transmissions—the CM50, the seven-speed and the 10-speed—already are recognized as worldwide transmissions, regularly in use throughout Mexico, Europe, the Middle East, South America and Australia," Halstead said.

"In addition, we are designing and building prototypes for an even broader range of weight classifications — transmissions that will put us on the leading edge as prime suppliers to the world market."

Halstead said Spicer, in line with a shift in corporate strategies announced earlier this year,

Exit weak link

With a dual engine seal using filled "Teflon" TFE fluorcarbon resin, the seal no longer is the weak link on the front and rear of crankshafts and accessory drive shafts, according to duPont Co. Diesel trucks can log over 200,000 miles before a replacement is needed, the firm said.

Rebates offered by Freightliner on trucks in stock

PORTLAND, Ore. — Freightliner Corp. is offering $3,000 cash rebates on all 1981 model Freightliner trucks currently in stock.

The program, scheduled to run through Sept. 30, is available through participating Freightliner truck dealers, with rebates paid directly to purchasers by Freightliner, a spokesman said.

Trucks qualifying for the rebate program, he explained, can be selected from participating dealers' own stock or from nationwide inventory made available to all dealers through Freightliner's computerized reporting system.

Along with the rebate, he added, Freightliner buyers also may qualify for a unique finance program, offered through Freightliner Credit Corp., which gives new-truck buyers the option to refinance at any one time during the first two years following purchase of the new vehicle.

Sixty-month payment terms, adding another year to the standard 48-month maximum, also are available to qualifying customers, he said.

But second-quarter total tops '80 by 17 units

First-half truck sales drop 11 pct.

Continued from Page 10

trucks in retailers' hands at the end of June was down 8.6 percent from a year ago, with declines in all three market segments.

On July 1, there were 583,112 units in inventory, compared with 637,727 at the same time last year.

Light trucks in stock totaled 515,189 units, off 5.9 percent from last year's 547,215. Mediums were down 22.8 percent, from 32,663 units in 1980 to 25,228, while the heavies were at 42,695 units, a decline of 26.2 percent from last year's 57,850.

- The Motor Vehicle Manufacturers Assn. said preliminary figures showed that domestic retail outlets sold 1,059,590 new trucks in the first half, a decline of 11.9 percent from the 1,203,185 retailed in the like period a year ago.

The June total was estimated at 192,157 units, down 8.7 percent from the 210,417 vehicles sold in the same month in 1980.

Six-month sales by Big Three truck retailers were off 12.7 percent from last year, 943,541 versus 1,080,996. The June total of 173,348 units was down 8.1 percent from the year-earlier 188,683.

At the half-way point in the calendar year, Ford was No. 1 in retail sales with a lead of slightly more than 15,000 units over runnerup Chevrolet.

In the January-June period, Ford dealers retailed 381,875 units, compared with 366,534 by Chevrolet outlets. At the same time a year ago, Chevrolet was the leader with 422,425 units, versus 418,979 for Ford.

June was a much bigger month for Ford than Chevrolet. Ford had 76,758 sales, including 5,435 Courier pickups, an increase of 4.8 percent over last year's 73,274 units. The year-ago total included 5,544 Courier sales.

The six-month total of 381,875 units, including 34,654 Couriers, was down 8.9 percent from the previous year's 418,979, which included 40,077 Couriers.

Chevrolet dealers sold 61,914 units during the month, a drop of 18.9 percent from last year's 76,339. The LUV count was 4,128, versus 5,979 in 1980.

Through June, the Chevrolet total of 366,534 units, including 39,404 LUV pickups, was down 13.2 percent from last year's 422,425 units. The LUV count for the first half of 1980 was 47,712 units.

Dodge and Chrysler-Plymouth dealers retailed 17,641 vehicles in June, a decline of 14.2 percent from the year-ago 20,559. The six-month total of 101,304 units was off 25.9 percent from the year-earlier 136,631.

During the month, dealers sold 2,127 Dodge Ram 50 and 638 Plymouth Arrow compact pickups, compared with 3,269 and 1,355 in the same month a year ago. The six-month counts were down, too, 15,846 versus 22,388 for the Ram 50 and 5,319 versus 10,451 for the Arrow.

GMC said its dealers retailed 17,035 trucks during the month, a decline of 17.1 percent from the year-ago 18,511. The first-half total of 93,828 units was off 8.9 percent from the 102,961 units sold in the like period in 1980.

American Motors reported that 6,304 Jeep four-wheel-drive vehicles were retailed in June, down 9 percent from the year-ago 6,894. Six-month sales were off 26 percent, from 41,562 in 1980 to 30,852.

Mercedes-Benz outlets sold 290 mid-range diesel models during the month, a decline of 14.7 percent from last year's 340. Through June, the total was 1,831, off 3 percent from the year-earlier 1,887.

- All independent compact-truck importers reported sales improvements in June over a year ago, and two of the four posted six-month totals higher than last year.

Datsun dealers retailed a record 10,783 units during the month, an increase of 25.3 percent over the year-ago 8,606. The six-month total of 61,287 sales was 3.4 percent higher than last year's 59,275.

Toyota's June sales were up 26.7 percent over the same month last year, 13,500 versus 10,657. Through June, however, the total was down 6.5 percent, from 72,102 in the first half of 1980 to 67,447.

In June, Mazda sales were more than double the year-ago total and the six-month count was almost double. Dealers retailed 2,021 units during the month, up 166 percent over last year's 759. The first-half total of 8,139 units was 75.5 percent higher than the year-earlier 4,638.

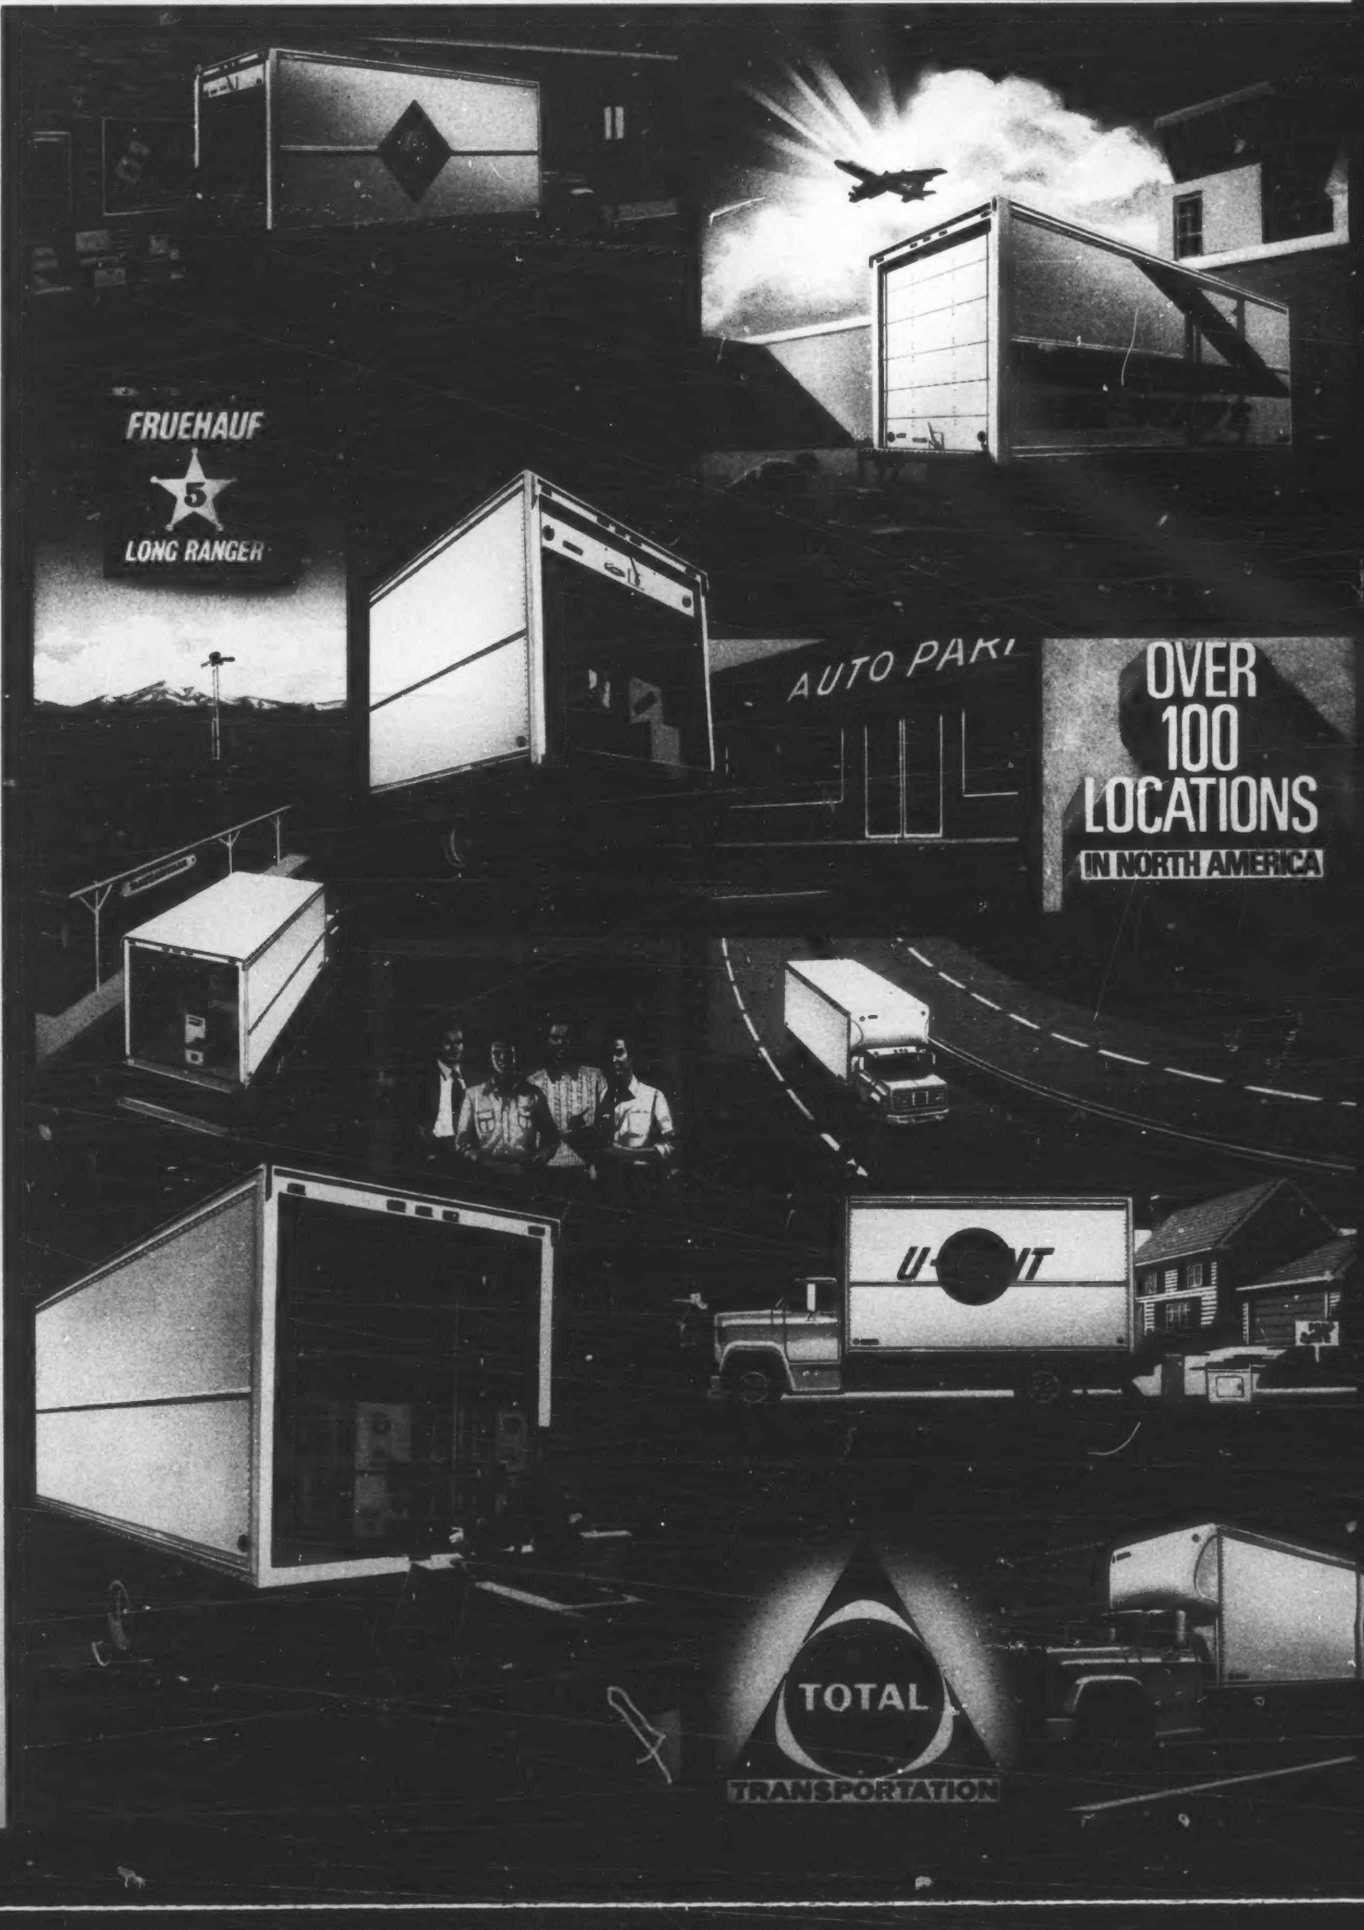
Isuzu outlets sold 1,123 compact pickups in June, bringing their two-month total to 2,376 units.

Arizona program seeks to reduce gas consumption

PHOENIX. — DECAT, which stands for Driver Energy Conservation Awareness Training, has been tailored to the needs of Arizona's residents and businesses and is being sponsored by the Arizona Energy Office (AEO).

The program promises to save participants 10-30 percent of their gasoline consumption and will first train groups of instructors around Arizona who will then spread the ideas to other persons.

AEO hopes to teach large numbers of Arizonans in its first year. In the future, DECAT workshops will be offered to trucking industry representatives, bus operators and the public.



Lowest for month, since 1975

New-car registrations dip in April to 751,845

By Jenny L. King
Staff Writer

U.S. new-car registrations in April fell below their year-ago level and were lowest for the month since 1975, according to figures compiled by R. L. Polk & Co.

New-car registrations in April totaled 751,845, down 4.42 percent from 786,640 a year-earlier and lowest since 581,304 recorded back in 1975.

April registrations were down 11.44 percent from the 848,967 tallied in March of this year.

Import registrations crept ahead of their April, 1980, levels, to 228,024 from 222,394. Imports accounted for 30.33 percent of the April, 1981, registration total, highest share so far for this calendar year.

Domestic registrations in April totaled 523,821, down 7.16 percent from 564,246 a year ago and down 15.95 percent from 623,234 the preceding month.

For the first four months of 1981, new-car registrations totaled 2,912,334, down 4.26 percent from 3,041,945 last year.

Domestic new-car registrations through April were 2,084,270, down 5.28 percent from 2,200,407 in 1980.

Chrysler Corp. was the only major domestic auto maker to increase its market share in April compared with a year earlier, edging ahead 1.92 percentage points to 9.06 percent from 7.14 percent.

General Motors dropped 2.66 percentage points, to 42.24 percent from 44.90 percent. Ford Motor Co.'s share declined 1.14 percentage points, to 16.72 percent from 17.86 percent. American Motors slipped 0.18 percentage points, to 1.60 percent from 1.78 percent.

Imports pushed over the 30-percent mark, to 30.33 percent from 28.27 percent, and miscel-steady at 0.05 percent.

Excluding imports, April do-

Lowest for month, since 1975

New-car registrations dip in April to 751,845

Continued from Page 21

mestic registrations were divided this way: General Motors, 60.62 percent; Ford Motor Co., 24.00 percent; Chrysler Corp., 13.01 percent; American Motors, 2.30 percent, and miscellaneous, 0.07 percent.

A year earlier, domestic-only registrations were divided as follows: GM, 62.60 percent; Ford Motor Co., 24.90 percent; Chrysler Corp., 9.95 percent; AMC, 2.49 percent, and miscellaneous, 0.06 percent.

By size segments, subcompacts, luxury models and imports increased their shares of the month's total.

Imports took by far the biggest chunk of the total, 30.33 percent compared with 28.16 percent a year earlier. Subcompacts climbed to 13.96 percent from 13.04 percent. Luxury-class models were up to 4.48 percent from 4.20 percent.

U. S.-built compacts dropped to 20.97 percent from 22.27 percent, last year, intermediates were down to 20.96 percent from 21.30 percent and standards slipped to 9.30 percent from 11.03 percent.

Registrations by market class in April were: Subcompacts, 104,980; compacts, 157,684; intermediates, 157,584; standards, 69,925; luxury models, 33,648, and imports, 228,024.

The top 20 domestic nameplates in registrations in April were:

1—Chevrolet Chevette	31,141
2—Ford Escort	26,929
3—Chevrolet Citation	25,369
4—Chevrolet Malibu	23,238
5—Olds Cutlass Supreme	21,682
6—Olds Cutlass	18,864
7—Ford Fairmont	18,678
8—Buick Skylark	16,712
9—Buick Regal	16,581
10—Ford Mustang	16,307
11—Standard Chevrolet	15,799
12—Plymouth Reliant	15,183
13—Buick Century	13,664
14—Plymouth Horizon	13,378
15—Chevy Monte Carlo	13,284
16—Dodge Aries	12,449
17—Standard Cadillac	11,639
18—Oldsmobile 88	11,450
19—Chevrolet Camaro	10,604
20—Pontiac Grand Prix	10,258

Kole achieves 50

Louis Kole Sr., center, and his sons Edward, left and Louis Jr. celebrate the 50th anniversary of Kole Pontiac GMC Trucks, Oak Lawn, Ill., this year. The senior Kole handles real estate and leasing operations; Louis Jr. is president of the dealership, and Edward is vice president and general manager.

Gilmore's son buys father's Michigan deal

KALAMAZOO. — James Gilmore III has purchased controlling interest in the Jim Gilmore Cadillac-Pontiac-Datsun dealership here from his father, James Gilmore Jr.

The elder Gilmore, who has owned the company since 1961, has acquired Anthony Abraham Chevrolet in Miami.

Jack Mazzie, executive vice president of Gilmore Enterprises, said the Kalamazoo dealership will remain a division of Gilmore Enterprises.

He said, "Since General Motors policy does not permit multiple-dealer ownership by a single individual, the new arrangement will continue the family's long-held commitments to Kalamazoo."

James Gilmore III will take an active role in directing operations at the Kalamazoo dealership. He said Hilbert Hutt, executive vice president and general manager, will continue in that capacity.

Earlier this year, James Gilmore III was named vice president and assistant to the president of Gilmore Enterprises. He joined the firm in 1978.

Jentick honored

Harold J. Jentick, left, owner of Jentick Chevrolet-Oldsmobile, Inc., Brillion, Wis., receives Chevrolet's 25-year dealer award plaque from Donald O. Novaria, Milwaukee zone manager.

Aurora The Spirit of Cobra lives in a great Canadian Sports Car!

GRX Aurora is a hand-built contemporary version of one of the most revered sports roadsters ever conceived — the legendary Shelby A.C. Cobra. This thoroughbred sports car has superior performance and handling characteristics, while meeting rigid safety and emission control standards.

The GRX features a 5 litre Ford V-8 engine, 4 wheel independent suspension, inboard 4-wheel disc brakes, leather seats, tubular space frame chassis, corrosion-resistant body and more plus such options as automatic transmission, roll bar, hard top, AM/FM cassette and Dayton wire wheels. Fully certified and crash-tested it comes with Aurora and Ford backed warranties. In stock for immediate delivery. Specialty car trades welcome.

Send $5 for color brochure
or see the GRX Aurora at your East Coast Dealer:

Month's market share also climbs to 1981 peak

Import registrations at year's high

By Jenny L. King
Staff Writer

April registrations of new imported cars surpassed the year-ago total and achieved their greatest market penetration to date this year.

April, 1981, import registrations totaled 228,024, up 2.53 percent over 222,394 a year earlier, according to figures compiled by R. L. Polk & Co. Imported cars accounted for 30.33 percent of all registrations for the month, up from 28.27 percent in April, 1980.

Imports had 26.59 percent of the March total, 29.64 percent in February and 27.37 percent in January.

Year-to-date new-car registrations totaled 2,912,344 of which 828,074 — 28.43 percent — were imports. In 1980, the four-month total in registrations was 3,041,945, with 841,538 — 27.66 percent — imports.

The April import registration breakdown showed Toyota making the largest single gain, up 2.19 percentage points from a year ago, and its chief competitor, Datsun, with the largest drop, down 2.94 percentage points.

Toyota registrations accounted for 24.86 percent of the import total, up from 22.67 percent in the 1980 month. Datsun slipped to 19.03 percent from 21.97 percent a year earlier. Honda was up to 14.70 percent from 13.63 percent; Volkswagen dropped to 8.93 percent from 10.59 percent, and Mazda was up to 6.92 percent from 5.52 percent.

Sixth-place Subaru was up 1.32 percentage points to 5.40 percent from 4.08 percent last year. Volvo grabbed seventh place with 2.60 percent; a year ago it was not among the top 10 imports. Fiesta ranked eighth with 2.36 percent, down from 2.85 percent, followed by newcomers Mercedes-Benz at 2.33 percent and Audi at 1.66 percent.

The top 10 imports accounted for 88.79 percent of the April import registrations total, compared with 88.38 percent in 1980. In the first four months, the top 10 took 88.91 percent compared with 88.66 percent last year.

• Japanese nameplates accounted for 75.20 percent of the April import market, up from 73.55 percent a year earlier. German-built cars slipped to 17.10 percent from 18.90 percent. Sweden's share increased to 3.21 percent from 2.47 percent. France was up to 1.83 percent from 1.51 percent, while Italy slipped to 1.67 percent from 2.56 percent and Britain had 0.99 percent, down from 1.01 percent. There was one Irish car registered in April, 1981; presumably the first DeLorean.

Registrations of imported cars in April by country of origin, with year-earlier figures in parentheses, were: Japan, 171,464 (163,588); West Germany, 38,990 (42,028); Sweden, 7,323 (5,504); France, 4,171 (3,352); Italy, 3,820 (5,688); Britain, 2,255 (2,234), and Ireland, 1 (0).

Registrations by country of origin for the first four months of 1981, with year-earlier figures in parentheses, were: Japan, 628,954 (631,786); West Germany, 143,369 (151,797); Sweden, 23,126 (20,972); France, 14,746 (11,959); Italy, 11,765 (17,603); Britain, 6,113 (7,421), and Ireland, 1 (0).

Registrations of imported trucks in April were down 4.65 percent to 45,046 from 47,241 a year earlier.

Registrations of imported trucks in April, with year-earlier figures in parentheses, were: Toyota, 10,847 (11,677); Datsun, 10,461 (9,076); Chevrolet LUV, 7,906 (8,132); Ford Courier, 6,055 (6,911), and others, 9,777 (11,445).

The truck import total for the first four months of 1981 was 157,621, down 14.54 percent from 184,439 the preceding year.

Registrations of imported trucks in the first four months, with year-earlier figures in parentheses, were: Toyota, 37,933 (47,567); Datsun, 35,283 (36,867); Chevrolet LUV, 25,048 (32,184); Ford Courier, 23,119 (27,440), and others, 36,238 (40,381).

Employes seek to take over plant being closed by GM

CLARK, N. J. — Employes of the General Motors bearing plant located here are moving to keep the facility open by purchasing it under a federal employe ownership program. It was slated for closing this month.

The plant is still open and operating until an agreement can be struck. Alan Lowenstein, attorney for the Hyatt-Clark Job Preservation Committee, the group of salaried and union workers who initiated the project, said he was "cautiously optimistic" that the employe takeover would become a reality.

"The chances are better than 50 percent," he said.

GM scheduled the 2,400-employe plant for closing several months ago because of the declining need for the plant's major product, tapered bearings, in the new GM lineup of front-wheel-drive cars.

GM decided to produce the needed spindle bearings at its plant in Sandusky, O.

Employes at the plant here formed the committee and hired Lowenstein, who has handled other such acquisitions under the federal Employe Stock Option Plan, and the Massachusetts consulting firm of Arthur D. Little, Inc., to work out a feasibility study of the project.

• Lowenstein said the study came back showing that the plant could be operated at a profit if the employes took it over.

The company, tentatively named Hyatt Industries, would be leaning to the Big Three auto makers as well as farm machinery firms, as major customers for its products. Lowenstein said products would be predominantly tapered bearings, but plans call for more product development work to be started if the acquisition comes to fruition.

Major stumbling block for the committee is acquiring the needed financing. It needs $55 million to complete the project, and Lowenstein noted that all the applications have been submitted to various sources and none has been rejected. He anticipates this crucial question will be answered within the next 30 days.

Negotiations with GM are proceeding relatively smoothly, he said with the basics agreed upon such as the purchase of the real estate and machinery in the plant, with other details being ironed out.

• One key to the sale, according to Lowenstein, is a three-year agreement by GM to purchase tapered bearings. Lowenstein said that this is being fine-tuned, but the basic principle has been agreed upon between the two parties.

A spokesman for GM did confirm that negotiations between the two parties are underway, but said "no decisions have been reached." The spokesman added that the auto maker is "also exploring other alternatives" to this proposition.

Should there be federal specs and testing?

Government and the bus business

Continued from Page 46

a 6/30,000 warranty on its body after the cracks in the undercarriage. Flxible's target date for undercarriage reinforcements is next month (August), depending on results of an engine cradle test.

In general, the only substantive testing of the advanced design buses is done by the makers. UMTA did no testing and did not require any of the companies. Four of the five transit authorities reached by GAO also did no testing beyond the required post delivery tests, limited to finding obvious defects.

But because of the cracking problem with Flxibles, most transit officials reached by GAO think the Flxible buses should have had more testing, both by the company and with the government having a greater role.

GAO says UMTA could require every bus model being offered for purchase with UMTA funding to undergo performance tests, with the results available to the transit industry. The tests could be designed and supervised by UMTA and the transit industry.

Using the test results would depend on whether the UMTA specs are retained, made optional or rescinded. If the specs are retained, then bus models that fail — depending on the seriousness of the failures—could be designated as ineligible for buying with federal funds or UMTA could require that the maker's bid price be penalized by a price offset to reflect the failure. A maker could correct deficiencies and be retested.

- If the federal specifications were optional or were eliminated, then all UMTA could do would be to disseminate the test results so transit officials could have relative performance data to use in choosing their buses.

Another alternative for exploration given by GAO would be to have UMTA sponsor and fund a quality control inspection procedure for the transit industry rather than to fund such efforts by each individual authority as it now does.

This way, the quality control of a maker's production process could be uniformly monitored against standards set jointly by UMTA and the transit industry.

Makers schedule 105,057 cars for week

Ford's closing trims car production

By Patricia Hoffman
Staff Writer

U. S. auto production last week, although down from the previous week's output, remained above the comparable 1980 week. The year-to-date output continued to top that of last year despite the vacation closings at all Ford Motor assembly points.

The domestic auto makers scheduled 105,057 units last week, down 9.04 percent from 115,502 completed in the previous week, but up 12.26 percent from 93,582 built in the comparable week last year.

So far this year, the makers have finished 3,887,727 units, up 4.74 percent from 3,711,638 completed through July 19, 1980.

Breakdown for the week by company is: General Motors, 76.88 percent; Chrysler Corp., 16.37 percent; Volkswagen of America, 3.58 percent; American Motors, 3.14 percent and Checker Motors, 0.03 percent.

Ford, down for vacation since July 6, remained idle last week. Most Ford plants are scheduled to resume operations today (July 20).

Checker Motors, down since June 19 for inventory adjustments, resumed operations last Monday (July 13).

GM's Flint facility (Century, Regal, LeSabre and Electra) closed last week for changeover to '82 models. The point will remain idle until Aug. 3.

Chrysler's Belvidere assembly point scheduled Saturday overtime last week (July 18). The plant will continue on daily overtime schedules, working two nine-hour shifts this week.

Smith says Japan must end 'one-way street' in trade

TOKYO — General Motors Chairman Roger B. Smith said the future of the world auto industry depends on open world trade and he called upon Japan to "help keep the trade lanes open.

"The one-way street has to be done away with," Smith told the American Chamber of Commerce in Japan. "Trade must be free to move in both directions."

Smith was in Japan to participate in activities marking the 10th anniversary of the affiliation of GM and Isuzu Motors. GM has had a 34-percent equity interest in Isuzu since 1971.

Smith called it a decade of progress and mutual benefit for the two companies.

In his speech, Smith said Japan was wise to voluntarily restrict exports of passenger-cars "because the auto traffic on the one-way street was growing too fast for the U. S. Congress to accept."

"But there is even more that Japan could be doing to silence the forces of protectionism," he said.

He suggested further removal of non-tariff barriers, changes in calculation of commodity taxes and revisions of vehicle certification processes and said that "opening plants in other countries might dull the controversy this on-way-street policy is creating around the world for Japan.

"Between our two countries, otherwise so closely linked, a new kind of constructive, anti-protectionist dialog is needed to resolve these and all similar problems," Smith declared.

The U. S. auto industry does not look for a big increase in business in Japan through removal of barriers, he said, "but we do look for cooperation in promoting the fundamentally important cause of open trade."

Smith emphasized that GM and other U. S. auto makers are moving aggressively to meet their competition on an international basis.

He said GM is determined to retain its world leadership, and with more new products soon to be introduced, he declared that "GM has no fears about domestic or foreign competition.

"We have always said the way to beat our competition is not with paper and pen in Washington, but with products in the marketplace," he declared.

"This explains why we have consistently opposed any legislation in the U. S. Congress that would create trade barriers that could lead to a full-scale trade war."

AMC recalling 11,000 cars

SOUTHFIELD, Mich.—American Motors is recalling 11,000 1981 Concord, Spirit and Eagle cars equipped with six-cylinder engines and cruise command for service to the cruise command system.

The company said the vehicle's throttle can be prevented from closing completely because of interference with the cruise command's actuation chain.

There have been no reports of accidents, AMC said.

Truck production drops for week but exceeds 1980

U. S. truck production dropped considerably last week from the previous week's total; however, output stayed above the year-ago figure.

The domestic truck makers scheduled 18,110 units last week, down 20 percent from the prior week's total of 22,637 units, but up 21.93 percent from 14,853 trucks completed in the same week last year.

So far this year, the manufacturers have assembled 991,702 trucks, up 11.62 percent from 888,499 built in the comparable 1980 period.

All of Ford Motor's truck assembly points, down since July 6 for vacation, are scheduled to resume operations today (July 20).

International Harvester's assembly plants, down for vacation since July 2, will remain idle this week. The facilities are slated to resume production July 27.

Car output up 5 pct. in Canada; 13,224 assembled

Canadian auto production rose last week from the previous week's output, and the total also was above the comparable 1980 week's figure.

Last week, the auto makers scheduled 13,224 units, up 5.57 percent from 12,526 built the previous week, and up 3.99 percent from 12,716 completed in the comparable 1980 week.

So far this year, the auto makers have assembled 501,115 units, up slightly from 497,859 cars built in the comparable period last year.

The Canadian truck makers slated 6,935 units last week, down 21.10 percent from 8,790 trucks built in the previous week, but up 25.95 percent from 5,506 in the comparable week last year.

Year-to-date, the truck manufacturers have completed 316,104 units, up 6.25 percent from 297,502 in the comparable period last year.

Ford Motor's Oakville and St. Thomas car-assembly points, both down since July 6 for vacation, will resume operations July 27.

Ford's Oakville truck facility, also down since July 6, is scheduled to resume production today (July 20).

Chrysler's Windsor car plant has scheduled downtime beginning July 24 for changeover to '82 models. The facility is slated to resume production Aug. 10.

General Motors' Oshawa car point will be idle beginning today (July 20) for '82-model changeover. Production is scheduled to resume Aug. 31.

UAW seeking support for local-content law

By Marjorie Sorge
Labor Editor

The UAW has asked automotive suppliers to come to its party and endorse a hefty local-content law, according to union President Douglas A. Fraser.

Fraser told the Automotive News World Congress that a local-content bill could be introduced in Congress this summer which would preserve employment, enhance competition, shore up the nation's sagging industrial base and address the "savaging of the American economy by the Japanese."

"In the past few months, my union has received many invitations to 'come to the party' from various companies seeking help," he said. "Where it has been justified, we did. Now, on an issue which is also justified and which will mean increased investment and job creation here, we're asking them to 'come to the party.'"

Fraser proposed that the program be phased in beginning in 1983 and include cars built in the U. S. and Canada. The legislation should require auto makers with yearly sales above 200,000 to have at least 75 percent North American content by 1985, while companies with annual sales over 500,000 would have to have 90 percent local content, he said.

For purposes of the bill, manufacturers would be defined by majority control, he said. For example, Chrysler and Mitsubishi would be counted as two separate companies, since Chrysler does not control Mitsubishi.

According to a Chrysler spokesman, the proposal would not affect Mitsubishi because the annual sales do not reach 200,000.

European auto makers also would not be affected since none have annual sales that high. Volkswagen, however, more than likely would be affected when it achieves higher U. S. production in the next few years.

The major thrust seems to be against the Japanese imports, specifically Toyota, Nissan and Honda.

The idea met with little reaction from the domestic makers. Ford Motor Co. President Donald E. Petersen said "there is nothing new or novel in Mr. Fraser's suggestion. As a multinational company, we live successfully with local content requirements in many parts of the world."

General Motors had no official reaction to the proposal, but a company spokesman said local-content laws are not new to GM, which has been dealing with them overseas for quite a while.

Chrysler also had no comment, but its Chairman Lee A. Iacocca did stiffly criticize the

Iacocca returns to capital, enjoying Chrysler profit

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Chrysler's latest trip to Washington was a triumphal one to announce a second-quarter profit—$12 million and higher than expected—and not to beg for help. Chairman Lee Iacocca, accompanied by Gerald Greenwald, vice chairman and the company's financial wizard, passed out bottles of black ink—labeled "Now being used by Chrysler Corporation—thanks to you"—at a Congressional reception attended even by some members who had voted against the loan guarantee program.

At a National Press Club luncheon, Iacocca was flanked by the two major movers and shakers from the Hill—Michigan Rep. James Blanchard and Senator Don Riegle.

This time, it was a proud and jubilant Iacocca happily taking a swipe at the "intellectual carpetbaggers" who had told the corporation to "die with dignity" and a cocky Iacocca, joking that Chrysler might join the others in trying to take over Conoco.

But despite the upbeat talk, Iacocca also noted the economy is "dead in its track" at least as far as the housing and auto businesses are concerned, and the "attitude of defeatism in the air." But he asked reporters to allow him at least a "day of glory" before the third-quarter figures.

Despite the gloom over decrease in productivity and the vast inroads of imports—from 8 percent to 30 percent of the market in 20 years, 80 percent of them Japanese — Iacocca labeled the "negative" and "self-defeating" attitude a "very dangerous" one.

He decried the notion that the import companies were "smarter" or had anticipated the market better or made cars that were never recalled, and he rejected trying to be a "clone" with the Japanese. They may be different, but "not better, just different," he said.

On the other hand, the Japanese notion of a combined government, business, and labor policy that sets long-range goals and provides the means to achieve them "is better and an American national policy is indeed needed fast," Iacocca said. (Blanchard's House Banking subcommittee is now holding extensive hearings on revitalization of the U. S. industrial base.)

- The Japanese success, Iacocca recounted, was not their perfection but happening to be here and ready when the second oil crunch hit and the market turned, using up the Japanese inventory and leaving the domestic makers stuck with big cars. Specifically, Iacocca mentioned in his text—and later ad libbed a "Toyota example" of what he called a Japanese tax incentive that provides an export incentive.

Chrysler's arithmetic is at best confusing—a Japanese car that sells for $8,000 in Japan sells for $600 less in this country and the Toyota example had it selling for $10,500 in France. Presumably, Iacocca was talking about the Japanese commodity tax (17.5 percent for small cars and 22.5 percent for large ones) that is rebated for exports just as the Common Market countries rebate a value-added tax upon export and just as cars exported from the U. S. (which has no federal tax) does not carry any state or local taxes.

- As living proof of American ability to meet the foreign challenge, Iacocca called his company's return to profitability — "maybe a little miracle." He labeled this a "genuine operating profit" and pooh-poohed the pot-shots taken by the press about overbuilding in the second quarter—a practice com-

'Survival only issue' for dealers, says Belli

By Kenneth R. MacDonald
Staff Correspondent

SAN FRANCISCO. — Automotive News has been told exclusively by internationally known attorney Melvin M. Belli that he has agreed to become legal counsel and spokesman for a group of "very unhappy" auto dealers intent on battle with vehicle manufacturers over a long list of complaints.

"Almost from the start of the automobile industry," Belli said, "this country's car dealers have publicly been presented and promoted by manufacturers as independent business men and women.

"In factory relations, however, the dealers have been treated more as serfs and slaves by the makers of the cars they sell. This new group intends to bring such shabby treatment to an end."

Belli, although based in plush, well-landscaped Victorian-era offices not far from San Francisco's downtown financial area, practices as a trial lawyer in courts all over the world and has gained widespread fame for the huge jury awards he has won for clients.

He met with leaders of the new group, which calls itself the Automobile Dealers Coalition, in New York City, prior to signing the agreement in his offices here.

"The initial concept of the Coalition," Belli explained, "was developed by 17 prominent dealers in the Detroit area. To date, they have spent some $70,000 of their own money in visits to dealers across the nation and researching the relations between all lines of dealers and their manufacturers.

"What they found in their attempt to tune in on the five-year projection plan the various factories started in 1978 was that conditions since that date have deteriorated to the point that today dealer survival is the only real issue.

"Dealers in all lines," Belli said, "now are witnessing the

Reuss sees new market for individualized cars

Buick eyes 2-seater; Opel ruled out

By Kathleen Hamilton
News Editor

Pontiac isn't the only General Motors division eying a two-seater; Buick General Manager Lloyd E. Reuss told a news conference at the Automotive News World Congress that Buick may introduce a car smaller than the subcompact J-car.

"There may be a market out there for a two-passenger Buick," Reuss said.

It won't be an Opel, though. Reuss said there are no plans to reintroduce the European marque in the U. S., at least in Buick showrooms

Small cars are becoming more than just the choice of necessity for U. S. buyers, Reuss told the Congress.

"Big cars once meant big status. Now smaller cars symbolize the customer's personal autonomy," he told his audience.

The trend toward purchasing cars as an expression of individuality has two consequences, he said.

First, it means a proliferation of models is likely to occur. But also it means buyers are willing to defer their purchases until they can get a quality product that will satisfy them.

• The big market gains will be in this segment of buyers, Reuss said. Population trends indicate the 25- to 45-year-old segment will increase 25 percent between 1980 and 1990.

These people will have more money to spend, Reuss projected. The number of households with $25,000 (constant dollars) in income is expected to rise by 55 percent; $35,000 households, to rise 84 percent.

Autos will have to compete for these dollars with other big-ticket items while meeting the rising expectations of young affluents, Reuss said.

One of the cars Buick is betting on is, of course, its version of the J-car, the Skylark, which is to bow next spring.

Availability of cars is forcing Buick and other GM divisions into staggered public introductions of 1982 models, Reuss said.

Buick plans to introduce its carryover models in September. The new front-wheel-drive Century is to debut in late November or early December, he said.

Buick hopes to have at least 6,000 Century models built — two per dealer — by intro day. After that, production of the Century is expected to accelerate rapidly.

• On the subject of the diesel engine, Reuss noted Buick's late start in offering the diesel and said the division is expecting to sell about 50,000 diesel-equipped cars this year.

Next year the diesel will be offered on the LeSabre, Electra, Riviera, Regal and Century. Reuss projected diesels will be installed in 15 percent of those models.

Although he expects diesel volume to increase over the years, Reuss said he doesn't see any significant growth in its penetration.

Reuss said Buick could be the first GM division to produce electrics if the vehicles are to be high-ticket, low-volume offerings. If, on the other hand, electrics emerge as low-cost, high-volume vehicles, it is more likely Chevrolet will take the lead, he said.

Reuss outlined Buick's efforts to improve quality and productivity through participatory management experiments which are being phased in at GM plants.

He also stressed the importance of dealership service departments in the quality equation. He outlined a computer network, still in its infancy, through which Buick hopes to share technicians' early experience with new models and to receive quick feedback on problems.

The data bank—which should probably be funded in large part by the factories at the start, could also assist technicians in diagnosis, Reuss said.

Reuss said a computerized tracking system for new cars should be operating in all Buick sales outlets by September.

But the first step toward improved service is the recognition that the shop is a sales tool, Reuss said.

Buick is encouraging its dealers to extend their shops' hours to better serve customers. Second shifts double capacity with no new capital investments, Reuss noted.

New orders for DeLorean replace 'fallout,' Brown says

By Edward Lapham
Financial Editor

DeLorean Motor Co. has experienced some fallout of previous retail orders since introducing the stainless-steel sports car with a $25,000 sticker price, but new orders are flowing in to replace the fallout, DMC Vice President C. R. Brown said.

Following his address to the Automotive News World Congress, Brown told AUTOMOTIVE NEWS the DMC dealers in the Western region, that is west of the Mississippi River, who had received cars were reporting selling prices well above the $25,000 price.

"I don't know what the average selling price is," Brown said, "but several of the dealers were able to stay out of the red last month because they had our cars to sell."

The car, priced at $25,000 with manual transmission and $25,650 with automatic transmission, has an 18 percent dealer discount, Brown said, meaning that even selling at "just" full sticker price would gross a dealer a minimum of $4,500.

Several dealers, he said, have reported a net of $10,000 or more on each car.

"We should not feel that it is justifiable to raise the price, however," Brown said. "The number of people who are willing to pay $10,000 over sticker for a DeLorean is probably somewhat limited."

• In his speech, Brown described the new approaches used by DeLorean Motor Co. to foster its new-concept automobile.

He said there were three fundamentals which were crucial to the project: Sufficient capitalization, the right product and highly qualified people in the organization.

Brown described the company's three-fold product objective as "a performance car, an economical car and a safe car."

The DMC executive said that although the company is not "out of the woods yet," it has taken many steps to assure it doesn't follow some typical path to failure taken by some previous ventures.

Brown told the audience that DMC dealers have just one

GM, Ford get waiver, but Nissan rejected

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — In some ways, it pays to be a struggling auto maker.

The EPA says it will allow certain General Motors and Ford engines to meet eased carbon monoxide standards for 1982 on the grounds that this will allow the makers to make the cars less expensively and therefore make them more competitive.

As an extension of that logic, EPA said it was denying a similar request by Nissan for a waiver on the 1982 CO standard for a 90-CID and a 120-CID engine the company wants to use.

Said the EPA, "The manufacturer failed to establish that they were incapable of meeting the statutory standard (3.4 grams per mile), even considering cost, driveability and fuel economy.

Of the GM and Ford waiver requests, the EPA said it was granting them on the grounds that "it is essential to provide these manufacturers with sufficient production flexibility to improve the competitiveness of these models under current market conditions."

Waiving the CO standard to 7 grams per mile could provide them with the flexibility to improve fuel economy or driveability, or decrease costs without increasing the risk of noncompliance with EPA's emission requirements, the EPA said.

Ford engines receiving the waiver for the 1982 model year are the 2.3-liter, 3.3-liter, 4.2/5.0 liter and 5.8 liter. The CO standard also was waived for those engines for the 1981 model year.

GM engines receiving waivers were: A new 1.8-liter fuel-injected version of the J-car engine, a new 2.5-liter throttle body injected-four cylinder engine, the 3.8-liter turbocharged small V-8 which had been operating with a CO waiver, a new 4.1-liter fuel-injected V-8 and a new 5.0/5.7-liter fuel-injected V-8.

• EPA said it would also waive the CO standard in 1982 for a 4.2-liter engine Jaguar uses and three new engines Lotus wants to use. They are a 2.2-liter naturally aspirated engine, a turbocharged version of this engine and a 4-liter engine. In addition, EPA said Lotus could also have a one-year extension on the CO waiver it now has on its 2-liter engine.

The EPA has now waived the CO standard for 37 engine families for the 1982 model year. These are built by AMC; BL Cars, Ltd.; Chrysler; Excalibur Motors, Ltd.; Ford; GM; Lotus; Subaru; Toyota, and Volkswagen of America.

In all, these engines will power more than one-third of all vehicles sold in the 1982 model year.

Waivers from the 3.4 CO standard are available through the 1982 model year. Recently, the National Academy of Sciences recommended that the standard be changed, until at least 1986, to the 7 grams per mile standard that is now permitted under the waiver provisions of the Clean Air Act.

The auto makers have testified that waiving the CO standard to 7 grams per mile can save the consumer from $30 to $60 per vehicle because the catalyst can be loaded with less precious metal. Some have also suggested that the 7-gpm standard can result in slightly better fuel economy and better driveability.

Ford jets 200 from Coast for Escort training

DEARBORN. — Ford Motor Co. flew 200 hourly and supervisory quality upgrade operators from its San Jose (Calif.) assembly plant to Detroit for hands-on training in the production of Escort and Lynx cars at its Wayne assembly plant.

The San Jose plant will be converted to Escort and Lynx production in September. It stopped building Mustangs and Capris earlier this month.

During the Detroit training sessions—five days for each of the two groups—the San Jose employes worked side by side with their counterparts, learning how to properly assemble the new models. They in turn will train the rest of the San Jose plant employes.

Clarke & White is one of last to leave historic area

Boston L-M deal quits Auto Row

BOSTON. — One of Boston's last old-time "Automobile Row" dealers is leaving the old "Row" and heading to suburban Newton, to the west of the city.

Clark & White, Inc., a Lincoln-Mercury deal, is moving to the former Luby Ford building in Newton. Clark & White has been at the Boston site since 1950.

More important, though, is the history of the building in which the dealership has been housed for the last 31 years.

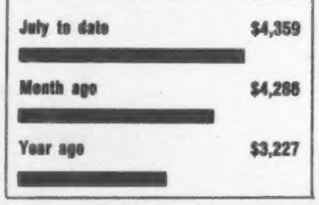
The building that Clark & White has occupied was the site of the original auto showroom on Commonwealth Ave. It was the start of a tradition on the street that has lasted to today.

It was in this building that Gov. Alvin T. Fuller, the man who originated the Washington's Birthday sales, opened his Packard dealership.

Some people thought Fuller was a bit crazy when he opened his dealership there about 1903 because there was nothing on the avenue to even suggest a future in automobiles.

Used car sales

Auction Averages



• Moving along the "Row," next came "Fuller's Folly." This was the multi-storied Cadillac building across from Boston University.

After Fuller opened his initial store, other dealerships followed through the years. One could find just about any make on the "Row." Some of those names were Buick, Franklin, Studebaker, Pontiac, DeSoto, Plymouth, Mercury, Lincoln, Ford, and Nash.

Soon, though, this will all be history. The Clark & White dealership will soon become a 218-unit luxury apartment building.

The current dealership is making the move because the new building will offer a more modern, efficient designed facility with a large parking area, according to Loren White Jr.

However, there could be another "Automobile Row" in the making in Newton because the areas where Clark & White is moving also boasts several dealerships in a small area.

Pace is one month ahead of 1980

Year's car output reaches 4 million

By Patricia Hoffman
Staff Writer

U. S. auto production for the year-to-date hit the four-million mark last Friday (July 24), one month earlier then the point was reached in 1980. Last year, the domestic auto makers built the four-millionth car in the week ended Aug. 23.

So far this year, the auto manufacturers have completed 4,014,562 units, up 5.53 percent from 3,804,184 completed in the comparable period last year.

Last week, auto production was slated at 119,583 units, up 6.48 percent from 112,309 in the previous week, and up 25.81 percent from 95,050 cars built in the comparable period last year.

Breakdown for the week by company is: General Motors, 56.04 percent; Ford Motor, 24.40 percent; Chrysler Corp., 13.63 percent; Volkswagen of America, 3.14 percent; American Motors, 2.76 percent and Checker Motors, 0.03 percent.

GM's Wilmington and Oklahoma City facilities both worked last Saturday (July 25).

GM's Linden assembly point closed July 22 for changeover to '82 models. The plant is slated to resume operations Aug. 19.

Also at GM, the Leeds assembly point will close Friday (July 31) for changeover. The plant is scheduled to resume sometime in October.

GM's Janesville point, down last week due to a parts shortage, resumes operations today (July 27).

No GM rebates, Lund says; incentives called possible

Continued from Page 4

and Bob Cook, Chevrolet general sales manager, make a "tremendous team" and this could indicate long-range marketing plans. However, Lund denied rumors that he is retiring and that Staudt will be his replacement.

New advertising campaigns may also be in the works for the J-car which Lund said will be re-emphasized, not relaunched, this summer and fall. There will be minor changes on the car, for instance tweaking the drivetrain of the 1.8-liter engine for "more zip," which will not hurt the MPG, he said.

At the spring introduction, Lund predicted model year sales of 75,000 Cavaliers which, he said, may have to be revised downward if production doesn't meet demand.

Right now there are not enough J-cars in the dealer's hands to make a sales prediction, but he said in the next 60 days there should be enough to forecast both sales and consumer response. At that point, GM will introduce "activities that will stimulate interest in the J-cars" he said.

• Some dealers have feared a sticker shock reaction from customers on the new J-cars, but Lund said there is not much evidence of that problem.

One new trend in the industry Lund doesn't like is the tendency to "leak" new-product information long in advance of introduction day. He said he feels such information about the S-truck and F- and A-cars is hurting present sales.

The S-truck, due for introduction this fall, will eventually replace the LUV, according to Lund. He said as each new version of the S-truck comes out, similar models of the LUV will be discontinued.

In his speech to the World Congress, Lund called for the introduction of "America, Inc." to combat "Japan, Inc." He said government, labor, business, consumers, media and academia should join together in cooperation and cost effectiveness to improve the U. S. marketplace.

"When we mobilize our industrial resources, when we join our strengths we can be a lot tougher, a lot smarter and a lot more effective," he said.

According to Lund, the auto industry is now international and the national markets are disappearing. Cars, too, are shrinking, and GM expects compact and smaller cars to approach 60 percent of industry sales by 1985 and perhaps 65 percent by 1990, he said.

Specialty cars, not general-purpose cars, will rule the automotive markets of the future, he said, but mini-subcompacts will not be all things to all people.

Millionth truck of 1981 produced by U.S. makers

Domestic truck production for the year-to-date topped one million last week, about five weeks earlier than the point was reached in 1980.

The millionth truck was completed last Tuesday (July 21). The cumulative total through July 25 was 1,024,394, up 11.62 percent above the 917,790 trucks assembled in the comparable period last year. In 1980, the domestic truck manufacturers topped a million trucks in the week ended Aug. 30.

Last week, truck production was scheduled at 32,336 units, up 75.11 percent from 18,466 built in the previous week, and up 8.01 percent from 29,939 trucks completed in the comparable period last year.

International Harvester's assembly points, down since July 2 for vacation, return today (July 27).

General Motors' Fremont facility, which closed July 17 for '82 model changeover, will resume operations August 24.

Canadian output slips for week but tops 1980

Canadian auto production last week took a substantial jump over the comparable 1980 week's output, but the total was below the previous week's figure.

Canadian auto production for the week was estimated at 11,523 units, up substantially above the 3,821 cars completed in the comparable 1980 week, but down 14.54 percent from 13,483 units assembled in the previous week.

Year-to-date output for the Canadian auto manufacturers was 512,897 units, up 2.45 percent above the 500,627 units completed in the comparable period last year.

Canadian truck production last week was slated at 7,658 units, up a considerable 27.68 percent from 5,998 units completed in the comparable 1980 week, and also up 8.35 percent from 7,068 built in the previous week.

So far this year, the truck manufacturers have completed 323,895 trucks, up 6.70 percent from 303,547 units built in last year's comparable period.

Ford Motor's Oakville (Line #1) and St. Thomas car assembly points, both down for vacation since July 6, return today (July 27).

Ford's Oakville truck assembly point, also down for vacation since July 6, resumed operations last week.

Chrysler Corp.'s Windsor car point went down last Friday (July 24) for '82-model changeover. The plant is slated to resume operations Aug. 10.

Also at Chrysler, the Windsor truck facility, down since July 17 for '82 model changeover, is scheduled to return August 3.

General Motors' St. Therese car assembly point closed July 23 for changeover to 1982 models. The facility is slated to resume Aug. 14.

GM's Oshawa truck plant will close July 31 and is slated to return Aug. 3 with 1982 models.

GM has also scheduled downtime beginning today at its Scarborough truck facility for changeover. The plant is slated to resume operations Aug. 18.

Automotive News World Expo slated for 1982

A worldwide automotive business exposition, geared to meet the needs of vehicle manufacturers and suppliers, will be produced and staged in Detroit next summer by AUTOMOTIVE NEWS.

Christened Automotive News World Expo, it will run in tandem with the seventh annual Automotive News World Congress. Together, the two industry affairs will comprise Automotive News World Week, an industry extravaganza running for six days in the heart of Detroit—the auto capital of the world.

The Automotive News World Congress will return to the Detroit Plaza Hotel in the Renaissance Center, opening Sunday, Aug. 22, and closing on Wednesday, Aug. 25.

Nearby, in Detroit's gigantic Cobo Hall, the Automotive News World Expo will open on Tuesday, Aug. 24, and close on Friday, Aug. 27.

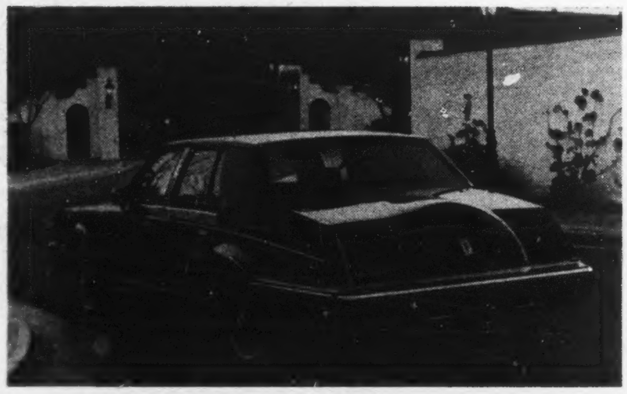
The Automotive News World Congress will continue as a high-intensity, educational seminar.

"We expect Automotive News World Expo to bring together buyers and sellers in the OEM market, thus providing a service available nowhere else in the world," said Keith E. Crain, publisher and editorial director of AUTOMOTIVE NEWS.

"Detroit is widely accepted as the hub of the world automotive industry," Crain continued. "It is our intent to make Automotive News World Expo the automotive marketplace of the world."

Crain said that the outstanding success of the Automotive News World Congress over the past six years led to the determination to expand AUTOMOTIVE NEWS' service and support to the industry through the organization of the business exposition.

Continental bows



Downsized luxury for Lincoln

Lincoln-Mercury Division hopes to sell 30,000 to 40,000 of its 1982 Continentals, smallest of the division's luxury cars. Wheelbase is 108.5 inches, and overall length is 201 inches. Standard engine is a new 3.8-liter V-6, and a 5.0-liter V-8 is optional. Story and another picture are on Page 7.

1st-half dealer mortality eases; 325 outlets close

By John K. Teahen Jr.
Managing Editor

The first half of 1981 brought a definite slowdown in the decline in the number of dealerships handling domestic makes of passenger cars.

The loss was large, much larger than it would have been if the industry were healthy. But it was not nearly so devastating as the dropoff in the first half of 1980.

The latest AUTOMOTIVE NEWS census found 21,447 domestic-car outlets on July 1 of this year, down 325 from the 21,772 in operation on Jan. 1.

By comparison, the industry lost 930 dealerships in the first half of 1980—nearly three times as many.

The second quarter was especially encouraging, if that term can be used to characterize another loss. The April-June dip amounted to 104 establishments. It was less than half of the 221 outlets that faded away in the first quarter.

And it was only a fraction of the 672-unit bloodbath in the second quarter of 1980, the worst quarter ever.

The second quarter resulted in the industry's smallest decline in two years. It was just two years ago that the horrendous downturn in new-car dealerships began, a slide that cost the industry 1,607 outlets in calendar 1980.

April-June was a delight for Chrysler Corp. In addition to making a profit, the corporation increased its dealer total by 10, its first quarterly gain since the fourth period of 1977. By comparison, Chrysler Corp. lost 261 dealers in the second quarter of 1980.

• Getting back to the six-month story, American Motors showed a dip of 28 outlets this year. Chrysler was down 41, and there were drops of 135 at General Motors and 141 at Ford Motor. That totals 345. A change in the number of intercorporate duals reduced the industry's slip to 325.

There are fewer intercorporate duals than there were a year ago. When such a dealership gives up the line of one manufacturer, it does not reduce the industry's total because the point continues in business.

The improved climate can be measured by comparing this year's losses with those of 1980. Chrysler is down 41, but it had a staggering decline of 413 outlets in the first half of 1980. Ford's 141 compares with 331,

Biggest increase in 30 months

Service Index scores major gain

By Francis J. Gawronski
Service Editor

With all indicators registering healthy gains, new-car dealers' service and parts business in June scored its biggest increase in 30 months.

As measured by the Automotive News Service Index, June service and parts volume amounted to 116.6 percent of the volume recorded in the same month a year ago.

June's increase was the best since January, 1979, when the reading was 121.1, the second highest in the 20-year history of the Service Index.

June also marked the fourth consecutive month in which dealers' shop volume has shown an increase over the comparable year-earlier figure. The last time shop business registered four or more consecutive monthly gains was in May, 1979. In May of this year, shop business was 102.0 percent of the year-ago business.

All five indicators used in the Service Index scored impressive increases in June, with the top gainer being sales of all parts and P&As. These sales were up 21.3 percent over the sales in the same month a year ago.

A notch behind the sale of parts and P&As in second place was gross profit on all labor, parts and P&A sales—the most important indicator to dealers. In June, this indicator was 21.2 percent above the year-ago figure.

Shop parts sales (those used in customer-paid and warranty repairs) increased 19.6 percent, while total labor sales (customer-paid and warranty) were up 14.2 percent over last year's total. Repair orders written were up 5.7 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealerships.

For the first half of 1980, dealers' shop volume amounted to 105.4 percent of the corresponding period of 1979, an improvement over the 102.4 percent showing for the five-month period.

Leading indicator for the period was sales of all parts and P&As, up 8.7 percent, followed by gross profit, up 8.5 percent.

Shop parts sales were up 4.9 percent, while labor sales climbed 2.1 percent. Repair orders written were down 3.2 percent.

SERVICE INDEX 116.6*

	June, '81 vs. June, '80	6 mos., '81 vs. 6 mos., '80
Gross Profit on All Labor and P&A Sales	+21.2%	+ 8.5%
Repair Orders Written	+ 5.7%	— 3.2%
Total Labor Sales (Customer & Warranty)	+14.2%	+ 2.1%
Shop Parts Sales (Customer & Warranty)	+19.6%	+ 4.9%
Sales of All P&A	+21.3%	+ 8.7%

*—Survey by Automotive News shows that dealers' service and parts business in June, 1981, was 116.6 percent of business in June, 1980. Service business in the three months of 1981 was 105.4 percent of business in the corresponding period in 1980.

Makers eye '82 floor-plan aid

DETROIT.—General Motors was scheduled to hold meetings last week with its top dealer council members to discuss a new supplementary floor-plan assistance program for '82. Ford Motor and Chrysler Corp. are also working on programs to help dealers cope with the high cost of floor-plan financing for '82 models.

Freightliner sale wins go-ahead

PALO ALTO, Calif.—After a Justice Department announcement that it would not challenge the sale of Freightliner Corp. to Daimler-Benz AG, Consolidated Freightways, Inc., and the West German car/truck manufacturer were scheduled to finalize the deal last Friday (July 31). Daimler-Benz was expected to turn over about $200 million at the closing and pay almost $100 million over the next two years.

Chrysler sells last of its aircraft

DETROIT.—Chrysler Corp. has sold the remainder of its corporate air force, a company spokesman confirmed. The auto maker, under pressure from the federal loan guarantee board to sell its planes, last month received about $11 million

EPA's Walsh quits as Reagan moves to ease Air Act

WASHINGTON.—On the eve of the Reagan Administration's announcement that it intended to work for a substantial rollback of automotive emission standards as part of its proposed revision of the Clean Air Act, a key EPA official said he had enough and would leave the agency immediately.

Michael Walsh, deputy assistant administrator for Mobile Source Air Pollution Control, said only that "I feel I can do more for the things I believe in outside the agency than inside the agency."

Walsh had held the deputy job for more than three years. His decision to leave came as somewhat of a surprise because he had been doing much of the liaison work between the EPA and the Reagan Administration's Clean Air task force on mobile source air pollution.

No replacement has been named.

Meanwhile, the Reagan Administration has run into some unexpected opposition on its plans to rewrite the Clean Air Act. Senate Majority Leader Howard Baker and Senate Environment and Public Works Chairman Robert Stafford, Vermont Republican, recently called the President to warn him it would be counterproductive to take on the fight they envision arising from the wholesale revisions he is considering.

Canada has also let the Administration know that it is not at all pleased by the unwillingness of the U. S. to do something about the acid rain problem.

Acid rain stems from sulfate emission emitted by large electric generating plants and other large coal burning facilities.

New Mexico launches AUTOCAP system

ALBUQUERQUE, N. M.—Panel members have been appointed to AUTOCAP of New Mexico, the complaint resolution system for new-car buyers set up by the New Mexico Automotive Dealers Assn.

Panel members are Jim DiLorenzo, Quality Pontiac; Charles Melloy, Albuquerque Datsun; John Chandler, Frontier Ford; Richard Royman, Albuquerque Public Schools mechanics instructor; Henry "Kiki" Saavedra, New Mexico state representative, and Mary Rask, past president of Common Cause. Jackie Berube is AUTOCAP director.

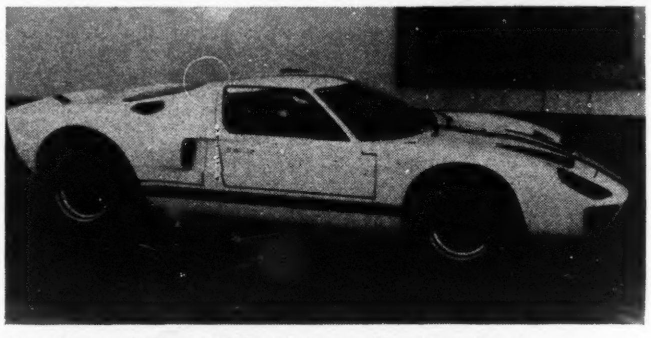
56th year — No. 4874

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.



Replica of Ford GT 40 from Switzerland

Italian automotive engineer and coachbuilder Franco Sbarro transforms the De Tomaso Pantera into a look-alike of the Ford GT 40. The finished product, Sbarro Replica GT 40, is a street version of race cars Sbarro also builds at his shop in Switzerland. Transformation cost is about $45,000.

EPA clarifies regulation

Dealers won't be liable for emission failures

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—The nation's auto dealers, who have been concerned that EPA's dealer certification regulations make them liable for emission control system failures on new cars, can breathe a little easier.

EPA, working with NADA, has clarified the regulation, making it perfectly clear that it is the manufacturer who is solely liable in the event of an emission control system failure, and not the manufacturer and dealer.

Under the Clean Air Act, auto dealers are required to give the buyer of a new vehicle a certificate that the motor vehicle conforms to the applicable exhaust emissions regulations. Included is a notice that if the vehicle fails an EPA-approved short test, then the vehicle maker must repair the vehicle free of charge under emission performance warranty regulations.

In the furtherance of these requirements EPA, beginning in 1979, also required dealers to make a visual inspection of the vehicle to assure that all emission-related components had been properly installed and to perform all emission-related preparation required by the manufacturer prior to the sale of the vehicle.

NADA had objected to these requirements on the ground that they could be interpreted to require dealers to do actual testing of emission control devices and systems and make them co-warranters of new vehicles.

Those objections never reached the agency because of a mailing foulup.

- That oversight has now been rectified, with the EPA agreeing with NADA's suggested changes of the regulations. Henceforth, EPA will require dealers to furnish to the car buyer at the time of delivery a certificate stating that "based upon written notification furnished by the manufacturer," he believes the vehicle to be covered by a certificate of conformity; that based on a visual inspection of the emission control systems (the inspection is limited to those emission control devices or portions thereof which are visible without removal or adjustment of any component or system of the vehicle) there are no apparent deficiencies in them; that the dealer has performed all the emission system preparations required; that in the event the vehicle fails an EPA approved emission test, as in a tuneup, prior to the expiration of three months or 4,000 miles (if the vehicle fails an I&M test where sanctions are applied the warranty coverage by the maker is for a minimum of 12 months or 24,000 miles and can be as high as 5 years or 50,000 miles) the manufacturer will pay for fixing it, and that "the dealer certification required by the Clean Air Act shall not be construed as either a representation or a warranty, express or implied, by the dealer that the emission control system or any part thereof is without defect nor that the system will properly perform."

EPA's revisions will be effective Aug. 29. Sample certificates will be made available to the dealers before then.

Dealers must contribute to incentive program

GMAC cuts loan rate to 13.8 pct.

By Edward Lapham and Joseph Bohn

General Motors has fired what might prove to be the opening salvo in the next round of retail incentives by devising a finance charge rate cut for retail contracts purchased by its captive General Motors Acceptance Corp. It rolls back the initial interest rate to 13.8 percent until Aug. 31.

The preferential financing rate program was announced less than one week after Chevrolet General Manager Robert Lund told the Automotive News World Congress GM had no rebate program in the works but might consider dealer incentive programs or value packages to get "more bang" for its buck.

The program was announced simultaneously by GMAC President Robert F. Murphy and GM Marketing Vice President Robert D. Burger. To the retail customer, GMAC said the fixed loan interest rate of 13.8 percent would offer average savings of $550 for cars financed through GMAC.

The fixed rate is available on new-car purchase contracts only, and is applicable to recourse and non-recourse alike. Truck and lease contracts are excluded.

The finance company did say, however, that the savings to individual customers will vary depending on the price of the new car, the amount and length of the contract as well as the prevailing interest rates in local communities.

For example, a GMAC spokesman said, the company has calculated that in Alabama where the interest rate is held to 17 percent by a usury law, the average savings will be about $470, while in Connecticut, where the interest rate is held to 15 percent, the average savings will be about $420 over the life of the contract.

Like other recent GM incentive programs, participating dealers will contribute to the ultimate retail savings. One GM dealer, who said he will participate, explained the contribution.

He said GMAC will pay him only 30 percent of his average reserve for June. That is, he will be contributing about 70 percent of his normal finance profit to the program. For a typical deal, that will mean this dealer will keep $60 rather than $200 on a finance contract.

Last week some dealers grumbled the new program will deprive them of extra income that they can't extract from the retail customer simply by raising the price of the car, as they did with the earlier contributory rebate programs.

Others, however, responded positively. One GMAC official said late in the week the response had been "fabulous" and he expects most GM dealers to participate.

The program is less costly to the dealer than a similar one Ford Motor Co. and its subsidiary Ford Credit ran earlier in the year on certain slow-selling models, one source said.

GMAC also is bearing the entire advertising costs.

The ad program, called the "most comprehensive" in GMAC's history, began last week with full-page newspaper ads in 230 newspapers in 50 top markets.

Newspaper advertising will feature the average savings for the market area, GMAC said, based on prevailing interest rates being rolled back, usury law ceilings and other factors.

The "GMAC 13.8 Percent August Super Saver" will also be touted in network TV, network radio, spot radio and magazines.

Network TV means three major networks with four weeks of primetime commercials, including as many as possible in the newscast slots used effectively in an earlier GMAC campaign. Magazine advertising will include the five major newsweeklies, with two insertions during the weeks of Aug. 3 and Aug. 10.

Network radio advertising involves five networks on which GMAC previously had bought time and was running spots which the finance company began to convert to the new program last week. The network radio ads are scheduled to run until Aug. 15, although GMAC made a spot buy in spot radio

Cancer claims dealer who infiltrated mob

LODI, Calif.—Lou Peters, a Pontiac and Cadillac dealer here who helped send mob boss Joseph Bonanno Sr. to prison, has died of cancer.

Peters, 49, was contacted in 1977 by a group of persons willing to buy his dealership for $2 million, approximately twice its value. Suspicious, he went to the FBI, where agents suspected the mob wanted the dealership as a front to launder illegally obtained money.

At the request of the FBI, Peters worked undercover for the next three years.

He got a legal separation from his wife of 20 years and left his family to work his way into the Bonanno organization. Last summer, he was the key witness in the trial that sent Bonanno to prison on federal charges of conspiring to obstruct justice.

After the trial, Peters remarried his wife Miriam and was reunited with his family.

"I did it for one reason. I felt it was the right thing to do and I didn't want those animals coming into this community," he said in an interview last October.

Earlier this summer, Peters was presented with the Meritorious Service Award for "setting new standards of valor and patriotism" by U. S. Attorney General William French Smith.

Dealer group formed by five in Buffalo area

AMHERST, N.Y.—The Main-Transit Auto Dealers Assn. has been formed by five dealers in the Amherst-Clarence area, near Buffalo.

The dealerships are Glen Campbell Chevrolet, Jim Culligan Pontiac-Volvo, Transitowne Dodge, Al Maroone Ford and Holiday Oldsmobile-Jeep-AMC-Renault.

Downsized luxury model for L-M

Smaller Continental to debut for '82

The name and size are short and sweet for a product with a king-size heritage.

Just call Ford Motor Co.'s newest car the Continental. The 1982 model from Lincoln-Mercury Division will be the company's smallest U. S.-made luxury offering.

It will weigh 3,555 pounds, about 500 pounds less than the regular Lincoln. Its wheelbase (108.5 inches) and overall length (201 inches) match up closely with L-M's Cougar XR-7, making it about a foot-and-a-half shorter than Lincoln and Mark VI four-door sedans.

"We're hoping to sell 30,000 to 40,000 Continentals. That would be nice added volume," Philip E. Benton, vice president of sales operations for Ford North American Automotive Operations (NAAO), told AUTOMOTIVE NEWS.

Continental will be available as a four-door, five-passenger model in three series — base, Signature and Designer (Givenchy). Among other touches, Signature will have dual-shade paint in three special color combinations. Givenchy also gets special paint and rear roof- pillar treatment.

Continental's design starts with a Lincoln-style grille and ends with a Mark VI-inspired spare-tire-type contoured decklid.

"The objective was to achieve a formal, sophisticated, contemporary car, and we were very influenced by aerodynamics," John J. Telnack Jr., NAAO's chief design executive, told AUTOMOTIVE NEWS. "We first developed the total shape of the car, then cut the details in — we didn't add them on."

Telnack adds: "Nothing looks applied, except the spare-tire contour, a very strong identifier."

• The Ford design executive said, "Our engineers outdid themselves on ride and handling."

A test-track drive indicates he's right. That comes in large part from an industry first — gas-pressurized struts and shock absorbers — and four-wheel, hydraulically boosted disk brakes.

Other features include self-sealing tires as standard equipment for the first time on a production car (Lincoln-Mercury marketers are expected to promote it as "super tire").

The tires are mounted on forged aluminum wheels, also said to be a first for a standard-equipped car.

Continental's standard engine will be a new 3.8-liter V-6. At 311 pounds, it weighs 130 pounds less than L-M's 4.2-liter V-8 and 64 pounds less than Buick's 3.8-liter V-6.

The optional powerplant is Ford's 5.0-liter V-8. Both engines team with four-speed automatic overdrive transmission.

Preliminary tests indicate projected fuel-economy estimates of 18 MPG (26 MPG highway) with the V-6, and 16 MPG (24 MPG highway) with the V-8.

The most striking interior feature is a "second generation" electronic instrument panel with message center.

Placed directly in the center of a new instrument-panel layout, it provides time, date, speed, distance and fuel-related data. A 12-button keyboard can be programmed to record and display trip information.

Continental a four-door only

Lincoln-Mercury's new Continental will be offered only as a four-door sedan for 1982. It's the smallest of the division's luxury cars and joins the regular Lincoln and the Mark VI at the top of the line. New features include self-sealing tires mounted on forged aluminum wheels. Inside, there's a "second-generation" electronic instrument panel with message center.

Caserio retires; GM vice president headed 4 divisions

DETROIT. — Martin J. Caserio has retired from General Motors after a 44-year career in which he headed four divisions and was a vice president and group executive. Caserio was 65 on July 16.

He has been vice president and assistant to the president since January of this year. His general manager assignments included the top jobs at Pontiac and GMC Truck and Coach divisions.

Martin J. Caserio

Caserio joined GM in 1937 as a metals researcher for AC Spark Plug Division and rose to chief engineer for automotive products. In 1957, he became manager of the division's Milwaukee operations, involved in missile and space projects.

He was appointed general manager of the then Delco Radio Division (now Delco Electronics) in 1958 and returned to AC Spark Plug as general manager in 1964. He was elected a GM vice president that year.

He was named general manager of GMC Truck & Coach in 1966 and moved to Pontiac as general manager in 1972.

Caserio was promoted to group executive in charge of the Electrical Components Group in 1975 and continued in that post until be became assistant to the GM president early this year.

Special grille

E & G Classics, Inc., Columbia, Md., offers a custom chrome grille for the new Cadillac Cimarron. It's available through the company's distributors.

New-car registrations total 731,000

Month's market lowest since '75

By Richard A. Wright
Assistant Managing Editor

New-car registrations in the U. S. were down a fraction of a percent in May from the year-earlier level and were lowest for the month since 1975, according to figures compiled by R. L. Polk & Co.

New-car registrations in May totaled 731,059, down 0.30 percent from 733,229 a year earlier. It was the smallest May tally since 656,803 in 1975.

May registrations also trailed the April total, down 2.76 percent from 751,845.

The registration decline was entirely in the domestic ranks, as imports were up 4.16 percent to 223,589 from 214,660 a year earlier. It was not a record May for imports—the high mark for the month is 237,289, set in 1979—but it was the fifth best any-month total.

And the import penetration in May of 30.58 percent was highest for any month in history, topping the former mark of 30.51 percent in August last year.

Domestic registrations in May totaled 507,470, down 2.14 percent from 518,569 a year earlier.

For the first five months of 1981, registrations totaled 3,643,403, down 3.49 percent from 3,775,174 for the same period last year.

Domestic registrations in the first five months were 2,591,740, down 4.68 percent from 2,718,976 last year. Import registrations were also off for the five-month period at 1,051,663, down 0.43 percent from 1,056,198 last year.

• General Motors was the only major domestic maker to suffer a decline in market share in May compared with a year earlier. GM's share of total registrations in May was 42.18 percent, down 3.86 percentage points.

Biggest winner was Chrysler Corp., which saw its share of the market jump 1.99 points to 8.48 percent. Ford Motor Co. registered a 0.40-of-a-point gain to 16.78 percent, while American Motors was up 0.18 of a point to 1.96 percent.

Table on Page 48

Imports improved their share of the May total by 1.30 points to 30.58 percent and miscellaneous domestic lines accounted for 0.02 percent of the market, off 0.01 of a point.

Excluding imports, domestic registrations were divided this way in May: GM, 60.75 percent, down 4.35 points; Ford Motor Co., 24.17 percent, up 1.01 points; Chrysler Corp., 12.22 percent, up 3.03 points; AMC, 2.83 percent, up 0.32 of a point, and miscellaneous, 0.03 percent, down 0.01 of a point.

• By size segments, the two ends of the market—subcompact and luxury—improved their shares along with the imports.

Subcompacts accounted for 14.49 percent of the May total, up 2.25 percentage points from a year ago, while luxury cars were up 0.62 of a point to 4.84 percent.

Compacts took the biggest loss, 2.70 points to 19.79 percent. Intermediates were down 0.90 of a point to 20.19 percent and standard cars dipped 0.57 of a point to 10.11 percent.

Registrations by market class in May were as follows: Subcompact, 105,922; compact, 144,655; intermediate, 147,620; standard, 73,934; luxury, 35,339, and import, 223,589.

For the first time since December, 1979, a Ford nameplate was perched atop the top 20 in May, as Ford Escort outregistered Chevrolet Chevette.

The top 20 domestic nameplates in May were:

1—Ford Escort	27,038
2—Chevrolet Chevette	26,537
3—Standard Oldsmobile	22,279
4—Chevrolet Citation	21,695
5—Olds Cutlass Supreme	21,014

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report. Registrations not available for Oklahoma.

Ford expects Ranger to be 'top cat' by '85

TRAVERSE CITY, Mich.—The compact Ford Ranger pickup, which will be introduced as an '83 model next spring, will be the dominant pickup in the company's pickup line by 1985, according to James A. Capolongo, general manager, Ford Truck Operations.

He told the University of Michigan automotive seminar last week that by the middle of the decade more than a million buyers will want compact pickups, and he said Ford is planning to spend an unprecedented $2 billion on new compact-truck product programs in the 1981-1985 period.

The light-truck market today, he explained, is split about 75 percent for full-size vehicles and 25 percent compacts and will be about 50/50 by 1985.

"To meet this demand," Capolongo said, "a full (compact) lineup is planned. Ford will launch 4x2 models next January, add 4x4s, a diesel and a five-speed overdrive transmission and follow those with some special commercial models in later years."

The 4x4s, a chassis-cab model, a snowplow package, the five-speed manual and diesel will be available in the fall of 1982. Early in 1983, a compact Bronco II and a long-wheelbase heavy-duty chassis cab will be offered.

Ford expects to build 300,000 Rangers in the first full year—75 units an hour on two shifts at the refurbished car/light-truck plant in Louisville—and the plant has the flexibility to go to 400,000 units when the demand warrants, Capolongo said.

- The Ranger is about 20 inches shorter overall than the full-size F-Series pickup, 12 inches narrower and six inches lower. It will have more head, shoulder and hip room than the imported pickups, but will have comparable fuel economy, Capolongo said.

The base powertrain is a new 2-liter, four-cylinder engine, rated at 73 HP at 4,000 RPM, with either manual four-speed or five-speed overdrive transmissions. A 2.3-liter, four-cylin-

Ford's rival to imported compact

This is an artist's sketch of the all-new Ford Ranger compact pickup truck which will make its debut next spring in a market segment dominated by the Japanese vehicles since the early '70s. The Ranger will replace the imported Courier in the Ford truck lineup.

Chrysler's big guns aimed at truck market

By Joseph Bohn
Marketing Editor

HIGHLAND PARK, Mich. — Look for Chrysler Corp. to make a stronger assault on the truck market, beginning this fall, aided by a stronger product lineup and its new organization dedicated solely to truck marketing.

Joseph Campana, general manager of Truck Operations, expects to have his organization of about 100 people in place by Oct. 1.

Campana has already named Gordon Cherry, former director of truck product planning, as assistant general manager of Truck Operations, and is in process of selecting a director of sales operations, whose job will be expanded to include sales development and business management.

In the field, Chrysler expects to have almost 40 people, solely concerned with furthering the truck business.

"Instead of concentrating on any day to day sales, their job will be to act as sales development and business management specialists, to help in training and assist in any way they can to further the truck business," Campana said.

Another 60 or so people will work in Truck Operations, to form a complete sales and marketing staff.

Chrysler is putting more money, as well as more manpower, behind its truck marketing effort and will have its own "full set of marketing budgets," including an ad budget.

"This means we will ensure the integrity of allocation of funds toward the truck business," Campana added.

This is another way of saying there would not be any abrupt switches during the year in which truck promotional money is funneled elsewhere to support domestic or imported cars.

Chrysler's truck business may not have received all the support it warranted over the past 1½ years because of the heavy emphasis placed on projects like the K-car, corporate confidence-building ads and other things.

Campana is out to change

1982

Feb. 21-24—Truck Renting & Leasing Assn., fourth annual convention, Canyon Hotel, Palm Springs, Calif.

March 10-13 — National Truck Equipment Assn., 18th annual convention, Louisiana Superdome, New Orleans.

Diesel offered in Isuzu pickup

A 2.2-liter diesel engine is available in the Isuzu P'up compact pickup truck. The 58-HP engine is rated by EPA at 32 MPG in city driving and 44 MPG on the highway in the standard and long-wheelbase models with the standard five-speed manual transmission. The 4x4 P'up is rated at 28 MPG in the city and 35 MPG on the road.

truck industry news

Total only 1,700 short of 200,000

Registrations in May climb to 10-month high

Registrations of new trucks of all types in the U. S. in May were the highest in 10 months and were down less than 5 percent from the same month a year ago.

The May total was 198,392 units, a decline of 4.1 percent from last year's 206,868, according to R. L. Polk & Co. statistics. The count was less than 1,700 units shy of the 200,000 mark, last reached in July, 1980, when 222,249 vehicles were registered.

Table on Page 18.

Five-month registrations totaled 885,049 units, down 18.9 percent from the year-ago 1,091,529. Through May, tallies were down for all three market segments and seven of the eight weight classifications.

Light trucks registered over the five-month span totaled 799,071 units, a decline of 18.5 percent from last year's 980,306. Mediums were off 19.7 percent, from 26,010 in 1980 to 20,882, and heavies dropped to 65,096 units, down 23.6 percent from the year-earlier 85,213.

Group 3, the smallest of the light - truck categories, was the only one of the eight groups to show an increase over 1980. Its total of 5,445 tallies was 80.2 percent higher than last year's 3,022.

Registrations of Group 1 trucks, which include the compact pickups, were down 8.6 percent from a year ago, 442,788 versus 484,598. Imported pickups in this group totaled 118,501 units, down 7 percent from last year's 127,374. They ac-

HD registrations in May highest since December

May registrations of new heavy trucks in the U. S. were the highest for any month since last December, according to R. L. Polk & Co. statistics.

During the month, 14,859 Groups 7 and 8 vehicles were registered, a decline of 7.8 percent below the year-ago 16,121. It marked the first time this year that the decrease from the year-earlier month dropped below 10 percent.

The five-month total, however, was far below the count for the comparable period in 1980.

Through May, 65,096 heavies had been registered, a decline of 23.6 percent from last year's 85,213 units.

The five-month Group 7 count was down 18.7 percent from a year ago, 27,865 units versus 34,291, while the Group 8 tally was off almost 27 percent, from

Economics will demand duals, says Ewing

Dealerships of future seen handling rivals

By Jenny L. King
Staff Writer

It won't be unusual to find today's arch rivals being sold in a single dealership in the near future, multiple franchise dealer Harvey W. Ewing Jr. told the Automotive News World Congress.

Ewing, who once managed dealerships with 14 franchises for the late Bill Harrah, is now head of Modern Classic Motors, Reno, with only four bosses: Datsun, Mercedes-Benz, Rolls-Royce and Ferrari.

"You'll see Ford and Chevrolet retailed from the same facility," he said. "The economics demand it."

But let those who see multiple franchises as the answer to a dealer's prayers beware of the snags and stumbling blocks, Ewing said. There are problems and they are complicated ones.

"In the service area, it's difficult to get trained mechanics who know special cars — if that's what you're handling; and mechanics expect training away from the dealership. Should they be cross-trained? Should they all be paid the same? The service manager has his hands full, too, as does the shop foreman. There are differences in the warranties of the various lines, and each has a different parts numbering system," said Ewing.

Ewing said there is a tendency to carry more parts per line in a multiple-franchise dealership.

"We now have a half-million-dollar inventory that turns 2½ times a year; the ideal turn is four times each year, I think," said Ewing.

- The paperwork with several franchises requires a staff accountant with the patience of a saint. Each auto maker will have a different system and different set of requirements for reporting expenses, he said.

One of the biggest problems of all is a well-trained sales staff with good product knowledge, Ewing said. But can you expect one person to know everything about several different kinds of cars? Can you afford to hire different sales people for each of your various lines?

After a detailed description of the stumbling blocks, Ewing got to the good part: The advantages of running a multiple-franchise outlet. "There is better utilization of fixed costs — things like management, the facility and grounds," said Ewing.

"Also, not every car is going to have one good year after another. When one is down, you have others that are selling well."

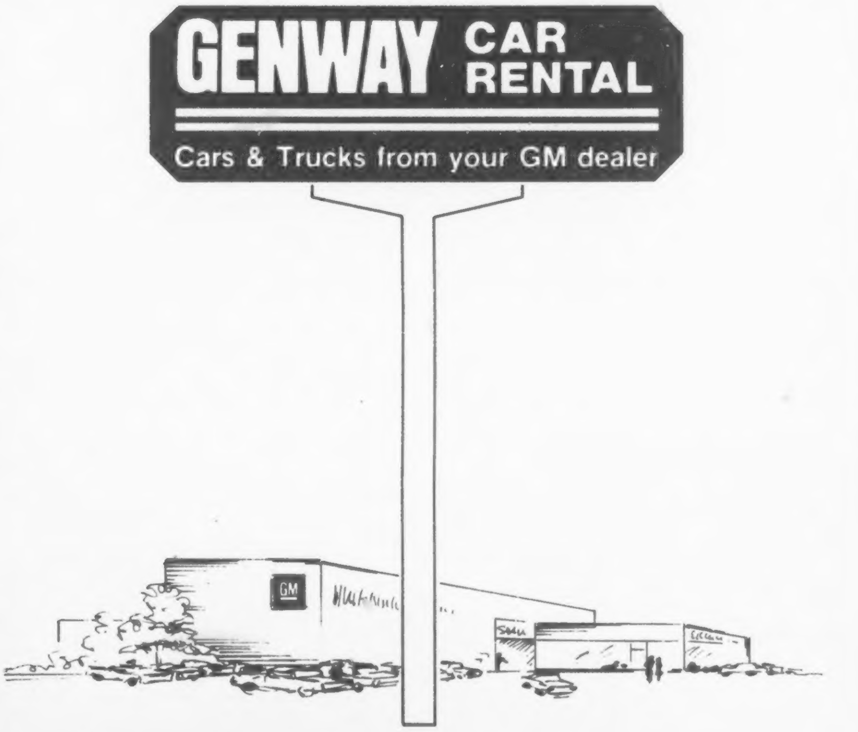
Ewing said he was opposed to import sales restrictions, and not just for the obvious reasons. "Many domestic dealers would have gone under by now if they had not had an import line," he said.

Handling several makes will enhance a dealer's used-car operation, with more diversity in trades.

"But too many lines gives the customer the impression of a supermarket," Ewing said. "A dealer with several franchises should consider scattering them in different locations, if possible. Also, this gives you the opportunity to move your personnel around and they know there is room for professional growth."

Ewing said his annual sales volume is about 1,300 Datsuns, 225 Mercedes, 10 Rolls-Royces and 15 Ferraris.

"I have $3 million in flooring right now," he said. In spite of the pressures and aggravations, though, he looks like a man who enjoys his work.



GENWAY CAR RENTAL
Cars & Trucks from your GM dealer
GM

Make this your sign of success.

Genway has a bold new image, and as a General Motors dealer, you can profit from our move.

A new national identity now provides a single unified image for the nationwide network of General Motors dealers who have the potential of becoming one of the largest rental and leasing systems in the nation.

Domestic sales move ahead; mid-July is 6 pct. above '80

By Jenny L. King
Staff Writer

Domestic new-car sales for the mid-July period were up 6.14 percent over the year-ago total and the three major auto makers all reported gains. July 11-20 sales totaled 160,544, compared with 151,255 last year. The daily selling rate increased 6.14 percent to 20,068 from 18,907.

General Motors reported sales of 99,793, up 2.74 percent over 97,129 in 1980. Ford Motor Co. enjoyed a 14.29-percent jump, to 36,753 from 32,159. Chrysler Corp. was up 27.09 percent, to 17,839 from 14,037.

Estimated sales of American Motors passenger cars were 3,000 units, down 6.25 percent from 3,200, while Volkswagen of America reported a 33.21-percent drop, to 3,159 from 4,730 last year.

GM earned 62.16 percent of the mid-month market, down from 64.22 percent a year earlier. Ford cornered 22.89 percent, up from 21.26 percent. Chrysler sales accounted for 11.11 percent, up from 9.28 percent. VWoA earned 1.97 percent, down from 3.12 percent, and AMC had 1.87 percent, down from 2.12.

Eight U. S. makes reported improved sales compared with year-ago figures, including four of GM's five divisions. Plymouth was up 57.44 percent; Dodge climbed 31.02 percent; Mercury was up 28.82 percent and Ford rose 13.68 percent.

Buick was up 9.32 percent; Pontiac was up 8.39 percent; Cadillac was up 5.00 percent, and Chevrolet was up 1.01 percent.

Chrysler sales were down 39.90 percent; Lincoln was down 36.90 percent; VWoA was down 33.21 percent; AMC was down 6.25 percent, and Oldsmobile was down 2.90 percent.

Chevrolet Citation was the number-one selling nameplate in mid-July, at 13,879 units. It was followed by Chevrolet Chevette at 8,138, Ford Escort at 7,475, Oldsmobile Cutlass Supreme at 6,266 and standard Chevrolet at 5,805.

Year-to-date sales through July numbered 3,579,393, down 2.94 percent from 3,706,283 in 1980.

As mechanics lose wages, benefits

Slump called impetus to unionizing efforts

Continued from Page 12

ance plans plus pensions, two-to-five-week vacations and no overtime or Saturday or Sunday work.

Hopkins said wages in Teamster-unionized shops run between $11 and $15.50 per hour, with non-unionized dealerships paying $2 to $3 less. There is also a 50/50 split for the body shop.

Teamster members have six to 12 sick days a year, 7 holidays, 2-to-5-week vacations, work no overtime or Saturday or Sunday hours, and some have dental and optical insurance in addition to pensions, life and health benefits.

The Teamsters represent both sales people and mechanics, while the Machinists represent only mechanics.

Some non-union deals do offer equivalent benefits, but Hopkins said the recession has given workers the feeling there is no contractural protection. They fear takeaways and are organizing, he said.

Organized sales staffs present some problems for local dealerships, since they do not work Saturdays or Sundays. According to Hopkins, three GM dealers could not participate in a tent sale at the Pontiac Silverdome earlier this year because the sales group would not work the weekend.

Such major-event sales have been common, especially with the recession in the auto industry. Many dealers have complained about poor sales and a general slump in business.

Hopkins, however, said he doesn't believe many dealers have had a bad sales year. He said unless dealers open their books to the union to prove their cases, they should not be given concessions at negotiating time.

"I have no overall picture of their predicament because they are hiding it by refusing to open the books," he said. "I have to assume they are making money overall.

"But we will do anything we can to help a dealership save money, providing it isn't dipping into our pockets," he said.

• Martin said the Machinists work closely with the dealerships and believe they are in trouble. He said his union does not require any dealership to open the books because it works closely with them and is aware of their financial status.

"They don't have any money," he said. "They are having a rotten year. If you don't understand that you don't understand the industry."

The Machinists gave some dealerships in the Detroit area six-month extensions on their contracts to hold off negotiations until the industry picked up.

The recovery didn't happen, Martin said. The six-month extension is now up and bargaining is going on at Detroit-area dealerships. Because of that, no dealers in the area would comment on differences between union and non-union shops.

Some labor lawyers have commented in the past that one great difference between the two is in the quality of work and in job hopping. They say non-union shops have fewer comebacks in the service area because there is no union to protect workers doing poor work. Also, they say, job hopping is common.

Hopkins said there is more job hopping in non-union shops because workers are looking for higher-paying positions and move on when one opens up. He said if all shops were organized with one standard wage, job hopping would almost be eliminated.

Rolls-Royce promotes Nelson and Hollings

LONDON.—The Car Division of Rolls-Royce Motors has promoted Ian D. Nelson to engineering director. He has been director of production resources and special projects for the Car Division since 1976.

John S. Hollings, engineering director for the Car Division since 1968, has been appointed technical director.

Mercedes-Benz announces promotions at U. S. offices

MONTVALE, N. J. — Juergen Otto has been named general manager, product and service engineering, for Mercedes-Benz of North America,

Otto, who was manager of service engineering, assumes the former duties of Karl-Heinz Faber who was named vice president — product compliance and service engineering, earlier this year.

Other changes in the MBNA service administration area include the promotion of Hermann Preissler to group manager — service engineering, with responsibility for technical service, technical literature and dealer facility planning, and a change of job title and responsibility for Hans Thalmann, from manager —product engineering to group manager—product litigation and corporate facilities planning.

Dieter Becker, zone service manager — commercial vehicles in the New York zone, assumes the responsibilities of manager —warranty inspection, commercial vehicles.

Promotions in the marketing department include Gerd Klauss, to group manager—marketing planning; Albert Weiss, to group manager—sales training, passenger cars, and Kenneth Moriarty, to staff manager —product planning.

Charles Jones, as group manager — national distribution in the Mercedes-Benz sales department, has assumed the additional responsibility for European sales distribution.

Lewis Marchiona was promoted to staff manager — special projects, reporting directly to the vice president of passenger car sales.

Richard Towner, manager — passenger-car franchise, became staff manager—field operations support.

Rolf Waldeis, formerly manager of European sales, became assistant to the president.

Another promotion in the president's office was Gerard DeBernardis to department head —administration.

Carl Leidner, on the staff of the senior vice president — finance, was promoted to staff manager — financial systems analysis.

At MBNA's Houston zone, Joseph Grall, district sales manager, was promoted to zone service manager—commercial vehicles.

New Ramos Arizpe point supplies domestic market

GM Mexico plant builds No. 5,000

RAMOS ARIZPE, Mexico. — The 5,000th vehicle was produced at the General Motors de Mexico assembly plant here in late July, about five months after operations began.

Construction of the 900,000-square-foot plant, about 55 miles west of Monterrey began in June, 1979, to supplement older passenger car and truck assembly operations in Mexico City. Vehicles built at the new plant are strictly for the Mexican market.

The new Ramos Arizpe plant was intended to "create new sources of employment to meet the growing internal demand in Mexico for GM products and to penetrate new export markets," according to GM Mexico Managing Director William G. Slocum Jr.

The plant currently builds Chevrolet Monte Carlo and Malibu models at a rate of 15 per hour on a one-shift basis. A second shift is planned in the future.

When it reaches capacity, the plant will produce 20 units an hour, 310 units a day with a workforce of about 2,500.

After about a month-long shutdown for changeover to 1982 production, the plant will begin assembling 1982 Chevrolet, A, G and X-body passenger cars in October, according to Plant Manager Joseph Dell'Ario.

GM's Mexico City facility is being modernized for exclusive truck production.

GM will continue its expansion in Mexico with an 800,000-square-foot engine plane adjacent to the Ramos Arizpe assembly operation. That plant is scheduled to begin V-6 engine production late this fall with a high percentage scheduled for export to the U. S. It will employ about 2,100 people and will produce 100 engines per hour or 1,600 per day at capacity.

According to GM, these two facilities will enable the company to raise its capacity to assemble vehicles in Mexico by 140 percent in the next three years.

At the inauguration of the new assembly plant, GM President F. James McDonald said the two Ramos Arizpe plants "are tangible evidence of our confidence in the continuing growth and prosperity of this nation and of the Mexican people."

325 is net loss in first half

Dealership fatality rate slows

Continued from Page 1

and GM's 135 is down from 185. AMC wasn't quite so fortunate—down 28 this time vs. a slip of only 6 in the first half of 1980. Changes in the number of intercorporate duals also altered the net falloff a year ago.

All figures in this article and in the accompanying tables refer to the net change in the dealership population, both for the individual corporations and car lines and for the domestic industry as a whole.

While the year-to-year comparison is heartening, the domestic industry still has more troubles than it needs in the matter of dealer mortality. This year's figure of 325 has been exceeded only five times in the 21 years that AUTOMOTIVE NEWS has been conducting a semi-annual census.

But the second-quarter performance brought more than a little ray of hope. One industry veteran observed last week that "maybe all the weak dealers have folded, and the ones remaining are strong enough to survive."

Several months ago, AUTOMOTIVE NEWS noted the importance of the second quarter in the dealer census field. The hoped-for improvement became a reality, but the industry now is in another vital period. Last year, the third-quarter loss was 504 outlets. A drastic reduction of that number is a must for the health of the retail segment.

In the franchise area, five of the Big Three makes showed gains for the first half, one was unchanged and six were down.

All four of Chrysler Corp.'s car lines reported advances. There was an increase of 71 franchises for Dodge, 52 for Plymouth, 10 for Imperial and nine for Chrysler. Lincoln was up one, and Cadillac was unchanged.

Ford Division had a decline of 121 franchises, and Chevrolet was off 95. Also down were Mercury, 40; Oldsmobile and Pontiac, 20 apiece, and Buick, 15.

At Chrysler Corp., there was a slip of 41 dealerships for the first half, but the big news was the gain of 10 in the second quarter. The first quarter saw a drop of 51. Last year, Chrysler lost 152 in the first quarter and 261 in the second for a total of 413.

Chrysler had 3,782 car dealers at midyear, compared with 3,823 on Jan. 1.

Franchises totals on July 1 were: Chrysler, 2,677; Plymouth, 2,534; Dodge, 2,422, and Imperial, 421.

In addition to its 3,782 car dealers, Chrysler also has 10 outlets that handle only Dodge trucks. They are not included in the corporation's car-dealer total or the Dodge car-franchise total.

Ford Motor Co. had 5,820 car dealers at the end of the first half, down 141 from the beginning of the year. Quarterly dips were 63 and 78. Last year, Ford showed a decline of 97 in the first quarter and 234 in the second for a total of 331.

The company's franchise totals at midyear were: Ford, 4,949; Mercury, 2,676, and Lincoln, 1,478.

Ford Motor has another 91 dealers that handle only Ford heavy-duty trucks. They are not included in the company's car-dealer total or the Ford Division car-franchise count.

General Motors slipped below 11,000 on July 1 with a total of 10,925 car dealers. The figure was down from 11,060 on Jan. 1. There were drops of 55 and 80 in the two quarters, compared with 30 and 155 a year ago.

Franchise totals for the GM makes on July 1 were: Chevrolet, 5,580; Oldsmobile, 3,230; Pontiac, 3,095; Buick, 2,970, and Cadillac, 1,605.

American Motors had 1,635 car outlets on July 1 and 1,663 on Jan. 1. There was a dip of 17 in the first quarter and 11 in the second. Last year, AMC was up 36 in the first quarter and down 42 in the second.

AMC counted 670 duals with Big Three makes of passenger cars at midyear, down from 729 on April 1 and 706 at the beginning of the year.

Looking back a year, the current total of 21,447 dealerships is down 1,002 from the 22,449 in operation on July 1, 1980.

Peck reports progress

Deregulation said to be on target

Continued from Page 2

creases that would occur from reduced protection and more collision damage. Two top insurers told Consumer Reports (CU's magazine) that their premiums would rise ten and fifteen percent, respectively, if bumper standards were dropped.

Silbergeld claimed the net cost to consumers over five years would be $45 or $110 in higher insurance premiums less the $65 NHTSA claims would be saved on the cost of automobiles due to bumpers that cost less and result in lower fuel use—if NHTSA's $65 claim is accepted.

But, he said, that $65 figure does not take into account a $30 million retooling cost needed to switch to the cheaper bumper. Moreover, the $65 was based on a telephone survey of consumers asking for their "recollection" of bills rather than visual inspection of damage, he said.

CU also attacked NHTSA on procedural grounds for its rescission of the standard dealing with direct fields of view.

Donald P. McHugh, counsel for State Farm Mutual, told the subcommittee that the bumper standard has eliminated entirely hundreds of thousands of small claims and saved motorists time, money and annoyance.

McHugh also attacked the NHTSA bumper cost-benefit analysis, saying its methodology and assumptions are "at the best, highly debatable," and it omits several elements that would significantly enhance benefits.

State Farm also believes the potential savings from repeal of the standards are "likely to be minimal" for the auto makers; instead, it is likely to lead to higher costs because of the need to retool. State Farm said NHTSA did not consider this in its April evaluation of costs and benefits.

- The Insurance Institute for Highway Safety also defended more-protective bumpers, pointing out that designs have changed so they weigh less and yet are more effective. Films were shown of the Ford Escort meeting with zero damage in a 5-MPH front collision into an angle, rear pole at 5 MPH and 10 MPH front into rear of a vehicle—all areas in excess of the standard.

This good performance was in contrast with a Toyota Corolla Tercel which suffered a total of $434 damage for this series of tests not covered by the standard.

IIHS suggested that if the standard is lowered from 5 MPH to 2.5 MPH, the makers will replace energy absorbers with rigid support brackets which would result in very little weight savings and no change in real operating costs but would mean higher damage and higher insurance rates.

General Motors' David E. Martin, speaking for MVMA, disagreed on the bumper standard. He said there is no safety benefit and the economic facts support a change.

Rescission of the standard on direct field of view has benefited makers, he said. In an attempt to put a floor under current practice, he said, the line was drawn so close that some vehicles missed the arbitrary vision angle by a sliver.

It would have meant redesign of vehicles already in production but scheduled to continue beyond the effective date, he said, and it could also have meant design changes for future models at an stimated industry cost of $160 million—paid for by the public—which would have virtually no safety benefit.

GMAC trims finance rate on retail paper

Continued from Page 3

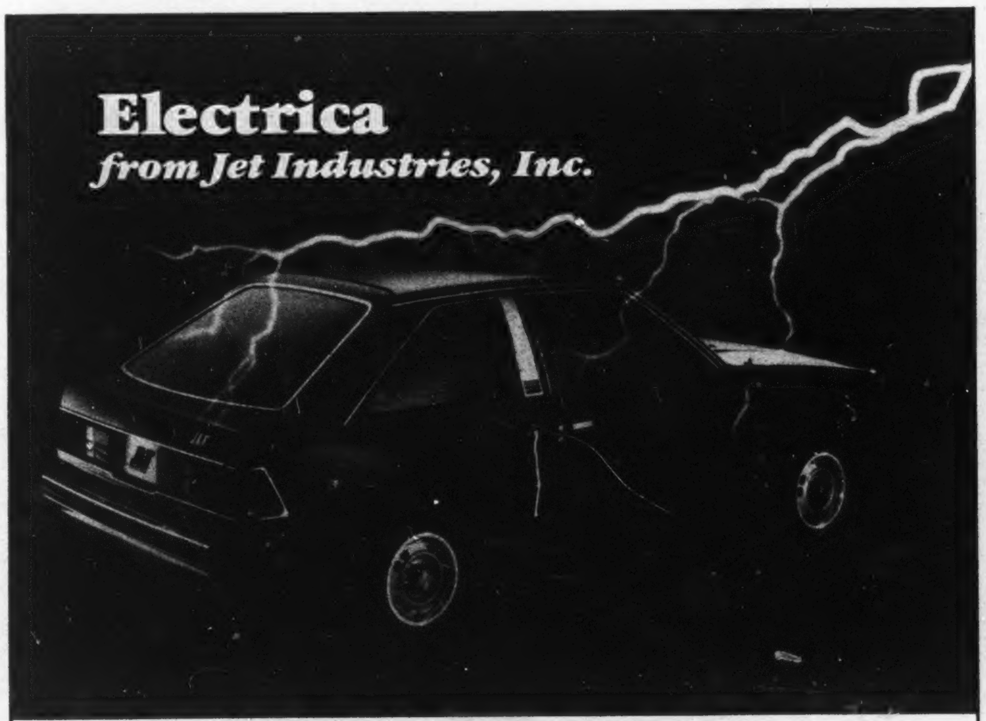
in the 50 top markets for three weeks during July 30 to Aug. 22.

In addition to all of the GMAC advertising, Chevrolet already has decided to run its own ads, and it could be joined by other car divisions.

- The new GM campaign is not likely to be countered immediately by Ford and Chrysler, although officials at both companies are "studying" the "August Super Saver."

Insiders said Chrysler, which earlier had a highly touted rebate plan based on interest rates, cannot afford to counter with a duplicate of the GMAC program, although it could become necessary to upgrade its current buildout program, if GM's rate cut catches on. Ford is in the middle of a dealer cash incentive program and would find it difficult to convert to a retail program now, one source said.

Institution of a retail program now was not unexpected. Wall Street analysts have generally declared GM's J-car launch a failure because it was not able to spark an anticipated market uptick.



The first electric powered passenger car to truly rival petroleum powered transportation.

Electrica is the first competitively priced electric car to offer all the style and comfort of a gasoline powered vehicle with very little maintenance, no polluting exhaust, and less than half the operating cost.

Electrica is a front-wheel drive, four passenger sports coupe, with a manual four-speed transmission. The power source is an advanced lead/acid battery system, complete with on-board charger. Electrica is the first electric car to offer an efficient, compatible air conditioner.

Quiet and economical, Jet Industries' Electrica is the sensible alternative to petroleum powered transportation.

A LEIF JOHNSON AFFILIATE

First-half profits decline 6.8 pct. for Toyo Kogyo

HIROSHIMA. — Toyo Kogyo, Ltd., said its net income for the six months ended April 30 (the first half of the company's fiscal year) declined 6.8 percent to $43.6 million from $46.8 million the year earlier.

Ordinary income, that is, income before taxes and extraordinary items, was off 3.9 percent to $90.9 million from $94.5 million in the preceding year, the Japanese auto maker said.

Operating revenues rose 18.1 percent in the period to $2.7 billion from $2.287 billion last year.

Yoshiki Yamasaki, Toyo Kogyo president, blamed the earnings decline on the overall business climate, a decline in home market sales and weakened overseas profits due to an appreciation of the yen.

Yamasaki said the company is controlling costs and developing new technology in an attempt to keep its Mazda cars and trucks competitive in the increasingly sophisticated world markets.

Total unit sales in the six-month period rose 8.2 percent to 623,142 from 575,848 the previous year despite the 10.3 percent home market sales decline to 183,627 from 204,744.

Export unit sales rose 18.4 percent to 439,515 from 371,104, including an 85.3 percent increase in shipments to Central and South America and an 84.0 percent increase in shipments to Oceania.

The number of Toyo Kogyo employes rose 0.92 percent to 27,951 from 27,696, the company said, and unit production per employe rose 7.1 percent to 22.5 from 21.0 in the corresponding period last year.

Ford Motor Co. owns 25 percent of Toyo Kogyo, which produces Courier pickup trucks for Ford's U. S. dealers.

Opel, Vauxhall report '80 losses of $331 million

LONDON. — Two important General Motors European subsidiaries reported losses for 1980. The deficits totaled $331 million.

Vauxhall Motors, Ltd., the GM unit here, said its 1980 loss was $161 million, substantially larger than the $60 million loss reported the year before. Vauxhall said sales in 1980 declined to $1.5 billion from $1.6 billion on a total unit volume decline of 15 percent to 195,145 from 230,420 the preceding year.

The company blamed increased auto market competition and "drastically declining sales."

In Frankfurt, Adam Opel AG said it lost $170 million in 1980 compared with net earnings of $150 million in 1979. Sales declined to $3.8 billion from $4.5 billion.

The company blamed the loss on reduced sales and costly plant closings and worker layoffs. It was the first loss for the German auto maker since the years immediately following World War II.

Both Opel and Vauxhall said they were hopeful of eventually reversing the losses, but neither was very optimistic about the immediate future.

Subaru deal adds Saab

GREENWICH, Conn.—Subaru Greenwich has added the Saab line.

Breckwoldt buys deal in New Hampshire

Alexander E. Breckwoldt, former vice president of Volkswagen of America, stands before his new dealership, Patriot Motors, Inc., Keene, N. H. Breckwoldt, a native of West Germany, spent 17 years with VWoA. Patriot Motors has franchises for Mazda, Mercedes-Benz and Volkswagen.

It credits higher sales, cost reduction

GM earns $515 million in quarter

By Edward Lapham
Financial Editor

General Motors said "higher factory sales and operating efficiencies resulting from intensive cost-reduction efforts" allowed it to report second-quarter net earnings of $515 million ($1.72 a share) compared with a net loss of $412 million ($1.43 a share) in the same period last year.

Sales in the period rose 30.7 percent to $18.02 billion from $13.79 billion in the April-June period last year.

Chairman Roger B. Smith and President F. James McDonald said the continued improvement which brought the company its third consecutive profitable quarter "reflects the intense efforts of our worldwide organization to control costs and improve profitability, despite the continuing pressure of inflation on labor and material costs."

The second-quarter results pushed net income for the first half of the year to $705 million ($2.35 a share) compared with a net loss of $257 million (91 cents a share) for the first six months last year.

Net sales for the first half of the year rose 14.4 percent to $33.74 billion from $29.5 billion the preceding year.

Smith and McDonald said the company still has an $8 per hour labor cost disadvantage compared with the Japanese auto makers.

- The two executives also said the company's current earnings levels are not sufficient to support the required higher levels of spending for products, plants and technology.

They said that with the higher levels of required expenditures as well as the "attendant higher amortization and depreciation expense," it is "imperative" the company "achieve substantial reductions in labor, materials and other fixed costs in order to maintain and expand the corporation's competitive strength in the worldwide marketplace."

GM's financial position during the second quarter remained relatively stable. Cash and marketable securities on hand rose slightly to $2.2 billion at June 30 from $1.9 billion at March 31, although they were off from $3.7 billion at Dec. 31 and virtually the same as $2.3 billion one year ago.

The company's current assets to current liabilities ratio did slip somewhat in the period, however. At June 30 the ratio was 1.13 to one, compared with 1.19 to one at March 31, 1.26 to one at Dec. 31 and 1.49 to one at June 30, 1980.

GM said its pre-tax income in the second quarter was $892.4 million, representing a turnaround of $1.75 billion from the pre-tax loss of $862.3 million on the same period last year.

GM listed a combined depreciation and amortization total of $1.29 billion in the second quarter and $2.42 billion for the half, compared with $1.14 billion in the April-June period and $2.19 for the first six months last year.

Total stockholders' equity rose in the period to $18.26 billion from $17.88 billion at March 31, although it was down from $18.52 billion at June 30 last year.

- The two top GM officials said the third quarter outlook is "tempered by production declines typically associated with extensive model changeovers, as well as by economic sluggishness aggravated by high interest rates."

GM's factory sales of cars and trucks built in the U. S. totaled 1.456 billion in the second quarter, up 24.8 percent from 1.167 million in the period last year but off 25.9 percent from 1.964 million in 1979.

For the first half, U. S. factory sales were up 2.1 percent over last year to 2.618 million from 2.564 million, although the total was off 30.1 percent from the 1979 total of 3.743 million.

GM's total worldwide factory sales rose 16.7 percent over the comparable 1980 quarter to 2.066 million from 1.771 million, but was off 22.7 percent from 1979's 2.674 million.

The year-to-date total for the first half of the year was 3.756 million, off 1.3 percent from 3.805 million last year and down 27 percent from 5.144 million in 1979.

Working capital at June 30 totaled $1.68 billion compared with $3.15 billion at Dec. 31, $5.35 billion at June 30, 1980, and $8.52 billion at June 30, 1979.

GM said the average cost of an hour worked by U. S. hourly employes was $19.40 in the April-June period, compared with $19.70 in the first quarter, $18.00 in the second quarter last year and $14.85 in the comparable period of 1979.

The average number of worldwide employes in the period was 771,000 up from 758,000 in the first quarter and 732,000 in the April-June period last year, but down from 886,000 in the second quarter of 1979.

AUTO MAKERS' FINANCIAL RESULTS

Study finds cities unprepared

GAO, Reagan at odds on fuel crisis planning

WASHINGTON. — Despite two disruptions in the gasoline supply in the last decade, very few communities have contingency plans to maintain mobility in the event of future shortages, a General Accounting Office study revealed.

While the Congressional investigatory arm urged action both by Congress and the Transportation Department to ensure readiness, the Reagan Administration — in a draft document purported to be the new energy policy — is backing a policy of "primary reliance on market forces to determine the price and allocation of energy supplies."

In particular, the draft attacks any form of gas rationing which the Carter Administration, Ford Administration and Congress thought fairest in a shortage.

Regional contingency plans— not involving gas rationing — use transportation services or urban transit systems to get people to work and recreation. These involve ways to help motorists set up car and van pooling, scattered working hours and ways to increase bus and subway ridership. In 1979, DOT encouraged states and communities to make plans.

- When GAO made the survey in 1980, it looked closely at seven urban areas, 25 urbanized areas each with more than one million population and two smaller areas — Portland and Eugene, Ore. It also collected data from 21 other urbanized areas. It found that only two— Los Angeles and Washington— had completed a regional contingency plan. Others had planned meetings for 1981, but progress was slow.

Some areas had diverted their limited planning resources to other, more urgent, subjects and some had lessened interest because of "no perceived threat of another imminent crisis."

Planners also said delays have occurred because of lack of specific guidance from DOT, because of dearth of information about possible federal or state action in case of a gasoline shortage and because of confusion about the relationship of these contingency plans and the state emergency plans required under the 1979 law.

Because earlier shortages had major impacts on transit systems, six of the seven urban areas had completed contingency plans as early as August, 1979. However, GAO said, these will not be of great use since they are restricted by limits set by equipment, personnel and, sometimes, authority to operate. Besides, transit systems need cooperation from other organizations to carry out their plans.

- Congress should support regional planning, make funds available to communities, and require an approved contingency plan as a condition for receiving federal transportation aid, GAO said.

To expedite workable strategies and correct deficiencies in existing plans, GAO said, DOT should work with the Energy Department to develop specific information on potential gasoline shortfalls; develop specific criteria and advice on the contingency plans; provide guidance on the relationship between regional and state plans, and establish a review process.

In addition to the clear signal that gas rationing plans are not acceptable, the Reagan Administration draft energy policy paper says that cutting back on oil imports, forcing conservation, and developing synfuels may not be in the nation's best interests.

Ohio dealers pay county to process car titles

YOUNGSTOWN, O. — Automobile Dealers Assn. of Eastern Ohio is paying wages of four county clerks in financially strapped Mahoning County to process new- and used-car titles. The county has a backlog of 1,000 titles.

A county spokesman said several dealers had $200,000 to $300,000 in sales awaiting title work. The dealer group is picking up the $4 per hour tab for each of the clerks, expected to work for a month on association members' titles only.

Andersen names Reese

KANSAS CITY.—Jules Reese has been appointed treasurer and chief financial officer of Lloyd Andersen & Co., which provides financial and insurance services to new-car dealers.

Changeovers hold week's output to 102,300

Weary days for auto production

By Patricia Hoffman
Staff Writer

With several plants down for the 1982 model changeover, domestic auto production last week fell below the previous week's total, although output was far above that of the comparable 1980 period.

Last week's output for the auto makers was scheduled at 102,300 units, down 9.22 percent from 112,686 completed in the previous week, but up 64.17 percent from 62,314 in the comparable week last year.

Year-to-date, domestic auto production is 6.40 percent above the comparable 1980 period. The makers have completed 4,109,965 units so far this year, compared with 3,862,724 in the same period last year.

Breakdown for the week by company is: General Motors, 53.92 percent; Ford Motor, 26.83 percent; Chrysler Corp., 12.31 percent; Volkswagen of America, 3.68 percent; American Motors, 3.23 percent, and Checker Motors, 0.03 percent.

Chrysler's Belvidere assembly point scheduled Saturday overtime last week (Aug. 1). The facility has slated downtime beginning tomorrow (Aug. 4) for changeover to '82 models. Operations are scheduled to resume Aug. 10.

Also at Chrysler, the Newark assembly plant has slated downtime beginning this week. The facility is scheduled to return with '82 models Aug. 24.

Chrysler's Jefferson plant, which closed for changeover July 27, is slated to resume operations Aug. 10.

Ford's Wixom assembly point, down for changeover since July 13, will return today.

Other changeover plant schedules are:

GM's Linden plant, which closed July 22, will return Aug. 17 for final assembly of '81 models. The facility is then scheduled to close Aug. 18 for '82 changeover and will resume Aug. 19.

GM's Leeds point, which closed July 31 for changeover to the new J-cars, will return sometime in October.

Also at GM, the Detroit Cadillac plant, down since July 17, will resume Aug. 17. Van Nuys, also down since July 17, will be back Oct. 12.

GM's Janesville plant will close Aug. 7 for changeover to the '82 J-cars with operations slated to resume Sept. 8. GM Lansing, down since July 22, will be back in mid August, and the Flint plant, down since July 13, returns today.

Truck production shows effects of changeover time

U. S. truck production last week dropped considerably below the previous week's total, but output was substantially above the comparable 1980 figure.

Last week, the domestic truck manufacturers scheduled 28,041 units, down 11.86 percent below the 31,814 units completed in the previous week, but up 39.88 percent from 20,046 trucks assembled in the comparable period last year.

Several truck facilities remained idle last week for the 1982 model changeover. General Motors' Janesville and St. Louis assembly points went down July 24, with operations at both plants scheduled to resume Aug. 31.

Lordstown truck point, which closed for changeover July 30, is slated to resume production Aug. 24.

Chrysler Corp.'s Warren truck facility returns today (Aug. 3) with 1982-model production of light-duty pickup trucks and sport-utility vehicles. The point closed for changeover July 27.

Changeovers cut Canadian output of cars, trucks

With several assembly plants down for '82 model changeover, Canadian auto and truck production last week fell below the previous week's output. The total for the week, however, remained above the comparable 1980 figures.

Last week's output for the Canadian auto makers was slated at 11,333 units, down 10.97 percent from 12,730 completed in the previous week, but the total was 69.83 percent above the 6,673 completed in the comparable 1980 week.

Year-to-date output for the auto manufacturers was 525,437 units, 3.39 percent above the 508,212 cars completed in last year's comparable period.

Truck production last week was scheduled at 6,122 units, down 24.64 percent from 8,124 built in the previous week, but the total was 56.21 percent above the 3,919 trucks assembled in the comparable week in 1980.

Chrysler Corp.'s Windsor truck facility, down since July 17 for changeover to '82 models, returns today (Aug. 3).

General Motors' Oshawa truck assembly point, which shut down for changeover on July 31, also resumes operations today.

Downtime for the '82 model changeover continues at several assembly plants. They are:

Chrysler's Windsor car facility, down July 24 with operations slated to resume Aug. 10; GM's St. Therese car point, down July 23 with production resuming Aug. 14, and GM's Scarborough truck plant, down July 29, scheduled to resume Aug. 18.

Volvo's Halifax car point closed today for changeover, with operations slated to resume Aug. 21.

Ford Motor's Oakville (No. 1) point is slated to close Thursday (Aug. 6) for an extensive changeover period. The plant is not scheduled to resume operations until Nov. 29.

Honda rust settlement OK'd fix could cost $10 million

Continued from Page 2

reliability, durability or maintenance.

The theory is that companies knowing of significant problems and how to avoid or minimize them have the obligation to inform owners and that failing to do so obligates them to make repairs or reimburse consumers.

Although this is the first case that involves cars made in Japan, FTC brought similar cases successfully against Ford Motor in the piston-scuffing case and Chrysler Corp. in the rust case.

A case employing the same principle is pending against General Motors involving transmissions and diesel fuel pumps in 1975-80 cars. It could involve as much as $150 million in repair costs.

• The Chrysler rust problem concerned fenders on 1976-77 Volares and Aspens. The estimated cost to Chrysler was $45 million on the premise that about 200,000 of the potential one million cars would exhibit the problem.

The FTC staff said the Honda investigation was started last September and indicated Honda has known of the problem on its early models for at least two years. FTC had about 200 complaints. The '79 and later Hondas do not have the problem.

FTC learned of the situation through individuals and from the Center for Auto Safety.

Schwab appointed

HARRISBURG, Pa. — Karl J. Schwab has been named executive vice president of Intercontinental Service Agency, Inc., affiliated with Black, Bower, Davis & Shue Agency. Intercontinental, with offices in Harrisburg and York, Pa., was developed primarily to provide insurance services to automobile dealers.

FWD crossbreeding

In search of slippery shapes

What looks like an assembly plant mutation or a plant foreman's nightmare is really one of several front-drive hybrids undergoing testing at Ford Motor Co. in Dearborn. Most of the cars — like this Lynx sedan/LN7 crossbreed — appear to be rigged for aerodynamic testing.

Import outlets climb 566 as domestic dealers sign

By Kathleen Hamilton
News Editor

Domestic dealers turned to import franchises in droves the first six months of 1981, the latest AUTOMOTIVE NEWS dealer census shows.

The semiannual count found 566 more dealers handling imports at midyear than at the start of the year. The preponderance of that gain — 511 outlets — were domestic dealerships which added import lines.

The launch of the DeLorean and Isuzu in the U. S., along with the aggressive effort by American Motors to give its dealers Renaults, were mainly responsible for gains in the import-dealership population.

But the strength of the import market was another major contributor. Fed by record first-half sales and relatively unscathed by voluntary import quotas, the number of import dealers increased in every category: Midyear found more single-line import deals, more multiline import deals and more domestics handling imports.

In all, there were 17,247 outlets selling imports on July 1, an increase of 3 percent over the Jan. 1 figure of 16,681.

Of that number, 4,616 were handling only imports — an increase of 55 over the Jan. 1 total. That gain helped mitigate the loss of 325 domestic-car dealers in the same time frame (AUTOMOTIVE NEWS, Aug. 3, 1981).

The total six-month loss in dealerships in the U. S. therefore amounted to 270 outlets, and the total number of dealerships in the U. S. stood at 26,063 at midyear. That is nearly 1,000 fewer dealers than one year earlier.

- Although the overall figures for imports were rosy for the first six months of 1981, the good cheer wasn't spread evenly: 14 makes increased their dealership networks, 14 lost ground and another three maintained their Jan. 1 count.

Not surprisingly, the winners were mostly Japanese and the losers were unanimously European.

Dualing of import lines became increasingly popular, not only among domestic-car dealers but among dealers of exclusively import lines as well. The number of import-only duals increased by 19 during the period.

That was small change compared with the 417 domestic dealers who added non-captive import lines during the same period. Captives are the import makes built by companies owned in part by a U. S. maker and whose U. S. distribution is controlled by the U. S. partner. The captive total went up by 94.

Captives are the Ford Fiesta, Plymouth Champ and Sapporo and Dodge Colt and Challenger. Since AMC doesn't have a stake in Renault, Renault is counted among the non-captive imports.

The increase in the number of non-captive imports dualed with domestic lines was enough to bring that category's total to a new record, 3,518 outlets. The old record of 3,379 had stood

Engineering Editor

DETROIT. — The auto industry just rolled with the punch as a strike by air traffic controllers delayed travel across the country and caused a sharp reduction in flights of all types.

Transportation for auto personnel and parts was rearranged, delayed and—occasionally—canceled.

Some companies resorted to pool cars; chauffeurs were busier than usual, and one dealer pressed an in-stock motor home into service as an interstate limousine.

"We just modified schedules somewhat as far as executive travel is concerned. We still got people in and out as required," said a Chrysler Corp. spokesman summing up strike impact in general.

The Teterboro (N.J.) airport is one of the nation's busiest as it accommodates corporate planes in the New York City area. Its traffic fell off by some 30 percent just as soon as the strike started.

Teterboro traffic is directed by New York controllers and therefore flights under instrument rules were delayed. Bad weather early in the strike curtailed flights under visual rules but a downturn in flying was caused chiefly by fliers waiting to see what developed in the strike, a flight operations manager at Teterboro told AUTOMOTIVE NEWS.

The Los Angeles area provided an exception to the rule — as it often does.

Manager David Shirley at Santa Monica Municipal Airport said pilots with planes available for charter service have been enjoying a small boom.

General Motors' Air Transport Service stayed on the ground for the first day of the strike as managers assayed the strike situation. ATS and its plant-city shuttle planes resumed flying, albeit on a limited basis, on the strike's second day.

GM directors met in Detroit

breaking news

'82 intro dates widely spaced

DETROIT.—Most 1982 domestic models will be introduced Oct. 1 or before, but the newest offerings from General Motors and Chrysler Corp. won't be along until later. Tentative showroom dates are Sept. 24 for American Motors and most GM cars, Sept. 25 for Ford Motor and Oct. 1 for Chrysler Corp. carryovers. The new front-wheel-drive Chrysler LeBaron and Dodge 400 will appear Oct. 29, and GM's X-cars are expected around Nov. 12. Arriving even later will be Chevrolet Camaro and Pontiac Firebird and the new front-drive GM A-cars.

Russia, China eye Wankel license

INGOLSTADT, West Germany. — Audi Chairman Wolfgang R. Habbel has confirmed that contacts have been established with the Soviet Union and mainland China in connection with Wankel rotary engine licenses. He is "cautious" about prospects.

UAW planning ad campaign

DETROIT.—The UAW is working on a possible ad campaign to begin in the fall. According to a union spokesman, the UAW is currently in the process of developing the creative content. The advertising agency is Dave Sawyer and Associates in New York.

Government leaders welcome buy-sell show

Unveiling of World Expo hailed

DETROIT. — The announcement that AUTOMOTIVE NEWS will stage a world automotive business exposition next summer in Detroit has met with positive reaction from government and industry officials.

Plans call for the Automotive News World Expo to be staged in Detroit's Cobo Hall Aug. 24-27, 1982, in conjunction with the seventh annual Automotive News World Congress, to be held at the nearby Renaissance Center's Detroit Plaza Hotel Aug. 22-25.

The World Expo is to serve as a marketplace for all goods and services available to vehicle manufacturers around the world, according to AUTOMOTIVE NEWS Publisher Keith E. Crain.

In a letter to Crain, Robert B. Stone, General Motors vice president in charge of the Materials Management Staff, hailed the project.

"All of us at GM have long strived to emphasize and improve communications with our thousands of suppliers around the world," Stone said. "The World Expo next year should contribute to that goal."

- Michigan Gov. William G. Milliken pledged the support of his office to help launch the European-style show in the capital of the world's auto industry. Purchasing offices will be established on the site to bring buyers and sellers together at the show. Exhibitors will be invited to conduct forums.

"I have asked the Michigan Department of Commerce, Office of Economic Development, to assist you in your efforts to organize and promote the 1982 event," Milliken said in a letter to Crain.

Detroit Mayor Coleman Young saluted the Automotive News World Week as "an excellent example of the special civic spirit which is so characteristic of Detroit's business leadership."

"Nothing could be more supremely appropriate than a Detroit gathering of automobile manufacturers and suppliers, and AUTOMOTIVE NEWS is to be congratulated for its initiative and imagination," Young said in a statement.

Ford, Chrysler and AMC answer GM

Summer incentives, rebates bloom

Continued from Page 2

runs from Aug. 1 to Sept. 23. It covers all new and unused SX-4 and Spirit models sold and delivered during the period, including dealer demos and field units.

The first units of each car line pay $100 each. The second units pay $200 each. All subsequent units pay $450 each.

The 1981 Jeep CJ and Scrambler summer clearance runs from Aug. 1 to Sept. 23. All new and unused 1980 and 1981 CJs and 1981 Scramblers are eligible, including dealer demo and field units. Again payments are based on units retailed and delivered during the contest period.

The first CJ and Scrambler are considered as qualifier units, with no payments. The second unit of each pays $300 and all subsequent units of each pay $600.

There is a separate California program on CJ and Scrambler, again running from Aug. 1 to Sept. 23. It differs slightly. Dealers get $300 for the first and $300 for the second units of each line they retail and deliver. Thereafter, they receive $600 on units in each line.

Finally, there is an Aug. 1-Sept. 30 contest on Renault R-18i and Le Car. Again payments are based on units sold and delivered during the contest period.

The first units in each line retailed pays $100. The second unit of Le Car pays $400 and subsequent Le Cars pay $600. The second unit of R-18i pays $500, and subsequent R-18i units pay $1,000 each.

AMC is currently looking at a Sept. 24 introduction for its '82 models, although date hasn't been finalized.

• Chrysler Corp. went for the straight consumer rebate.

"Our experience has shown the consumer understands and responds to an uncomplicated rebate program that puts a specific amount of cash directly into his pocket," said John Naughton, executive vice president, sales and marketing.

Chrysler's program was viewed as a stronger antidote for currently depressed sales than GM's interest - rate - reduction program and is also getting the full support of national factory advertising.

Chrysler is scheduling network TV through August, spot TV in 34 markets, spot radio in 34 markets, newspaper in 34 markets (probably full page, three insertions), and full page fast-close magazine ads in Time, Newsweek, People and Sports Illustrated to highlight its new rebate program.

This schedule, which may be subject to some change, includes conversion of existing ad time, with some new commercials and others at the divisional level being tagged with rebate references.

Ford indicated it would confine advertising largely to radio, and depend on dealers to do the rest.

The Chrysler program calls for a 50 percent participation from dealers. In effect, they share half the cost of the rebates.

Some dealers were concerned that this might affect the credibility of the program, but said the cost would not present a problem for them.

For one thing, dealers pointed out, if they had to floor-plan a K-car, for example, at $125 per month during August and September, it would end up costing them as much as their half of the rebate.

For another, Chrysler has already given many dealers — those who participated in its earlier buildout incentive program—the money to pay for the current rebate. Under its earlier buildout incentive, Chrysler had given dealers 3 percent and 5 percent allowances, depending on the models, as an inducement to order '81 buildout units.

Its latest program essentially favors those who got into the buildout program. These are the dealers who have the high stocks currently, and under its current rebate a dealer must sell and deliver the unit during August to have it eligible for the money. That means all units must come out of stock.

• Chrysler's consumer rebate runs from Aug. 1 to Aug. 31 and pays from $300 to $1,000 on essentially its high-volume lines.

Excluded from the rebate are Mirada/Cordoba, LeBaron/Diplomat, New Yorker/Newport/St. Regis/Grand Fury and the special Miser versions of Omni/Horizon and TC3/024. The company does not have very high field stocks in these lines.

It pays customers $300 on all imported cars and trucks and the regular Omni/Horizon and TC3 and 024 and $500 on all models of Aries and Reliant and two-wheel-drive domestic Dodge pickup trucks.

Also, it provides $700 on four-wheel-drive domestic pickup trucks, Dodge Ramcharger and Plymouth Trailduster and $1,000 on Imperial.

Overall, Detroit's latest round of incentives and rebates should help clear the decks of '81 models and pave the way for a more successful launch of the '82s.

Analysts have pointed out that '82 orders from dealers had not been coming in like they should. This was true of GM dealers, as well as Ford, Chrysler and AMC dealers.

While dealer orders on '82s will certainly improve as their '81 stocks are depleted, there is still the danger that at the retail level a percentage of pull-ahead sales from the latest programs will affect the industry's sales performance this fall.

Essentially, the industry needs an improvement in overall economic conditions to build a strong, enduring market, as incentives and rebates have proven to have only a short-lived effect on the market.

Car industry adjusts to cope with air controllers' strike

Continued from Page 1

on the first day of the stoppage, declared a dividend, among other things, and managed to find commercial flights out to New York and other far-flung destinations.

A Cincinnati-area Oldsmobile dealer picked up $550 by filling a strike-created void. Five GM execs needed a ride back to Detroit from Cincinnati and the Olds dealer obliged. He rented them a motor home and provided a driver.

• Drivers for Detroit Limousine Service, one of the area's largest, found themselves playing in a new ball game as the strike lengthened.

"The auto company execs have pool cars and chauffeurs but we do a lot of business with suppliers and vendors," said Bob Golob, owner of the firm.

"When the strike started some asked us to do favors for them — little favors. One wiring harness manufacturer in the South asked us to run some errands because their people couldn't get up here.

"We ended up carrying paperwork around, delivering blueprints, samples, purchase orders and quotes."

Carriage Limousine Service, which can trace its roots in Detroit back some 65 years, had an immediate and sharp upturn in out-of-state runs when the controllers walked.

"The customers are mostly chairmen and presidents who have to be at meetings, most of them in Chicago and New York. We can leave here at 6 p.m. and have a man at his board meeting by 9 a.m. the next day. That's what we've been doing," owner Cliff Jay told Automotive News.

At Zantop International, one of the largest freight carriers, an expected boom didn't get off the ground.

In his offices at Willow Run Airport in Ypsilanti, Mich., Executive Vice President Jim Zantop described the strike's impact:

"Business is normal. We thought we were going to fly a few more parts because we thought the scheduled airlines would defer freight and concentrate on passengers.

"That didn't happen," he said.

• Freighters have one distinct advantage over passenger liners in the hours they fly. Most nonscheduled air cargo moves between midnight and 7 a.m. when passenger flights are few.

Hub system lines, such as Zantop and Air Express, funnel all their freight into a single hub airport then fan it to its destination in the wee hours.

An airport manager at Willow Run noted the obvious as he said: "With the downswing in the auto industry, there hasn't been a whole lot of freight anyway."

Chief Pilot Bob Olmsted, of Olsen Flight Service based at Detroit City Airport, said customers adjusted to the strike.

"The strike hasn't affected us as much as we thought it would," he said. "A lot of people just canceled their travel plans. Then, too, salesmen can just drive or rearrange their schedules for when the strike is over."

As folks at other airports did, Olmsted said he noticed fewer aircraft using Detroit City.

"It's not a matter of safety so much as it is extensive delays. People would rather not bother so they just put off trips," he said.

IMPORTED-CAR RETAIL OUTLETS

Import outlets gain sharply as domestic dealers join up

Continued from Page 1

since July, 1959.

Fully 75 percent of all non-captive import franchises were dualed on July 1.

Japanese non-captive makes are most frequently single-line points: Forty-five percent of all Japanese non-captive franchises are single-line points, compared with 11 percent of all European non-captive franchises.

Honda is increasing its single-line dealers, both in number and in the percentage of its total dealer network. Its 356 single-line points represented 45 percent of its network. Six months earlier it had 310 single-line points, representing 40 percent of its total count.

Toyota's 702 exclusive dealers made up 64 percent of its network, and Datsun's 651 exclusive dealers comprised 58 percent of its network. Honda was next in line with its 356 exclusives, and was followed by Volkswagen with 352 exclusives, representing 34 percent of its network; Subaru, 297 exclusives for 39 percent of its network; Mazda, 104 exclusives for 13 percent of its network, and Fiat, 101 exclusives for 19 percent of its network.

Other makes with high percentages of single-line dealers are Aston Martin, whose 4 exclusive dealers comprised 28 percent of its total dealer count.

Audi, DeLorean, Porsche and Rover had no exclusives.

Nine imports had record numbers of dealers on July 1. Beating records set on Jan. 1, 1981, were Honda, Renault, Subaru and Toyota. BMW tied its Jan. 1 record, and Mercedes-Benz equalled its record totals of Jan. 1, 1981, and Jan. 1, 1980.

Ferrari's record number of dealers tied its July 1, 1976, total.

Datsun topped its July, 1980, record by 13.

Maserati, preparing for a smaller, lower-priced and higher-volume car in the U. S. in 1982 or 1983, bettered its Jan. 1, 1977 record of 24 dealers by 12.

Although they didn't set any records, Chrysler Corp.'s Mitsubishi-built captives made some impressive gains in the first half of the year: Champ/Sapporo dealers increased by 92, Colt/Challenger dealers by 116.

Saab increased its dealer total by 9, and Peugeot added 7.

The biggest shakeup in the dealer network during the first half of the year came at Jaguar Rover Triumph. MG production ceased before the year began. The Triumph TR-7 and TR-8, which were to have buoyed JRT dealers' offerings, are now scheduled to go out of production. But JRT added 21 Triumph dealers in the first half.

Meanwhile, its other franchise totals fell: MG, by 25, Jaguar by 17 and Rover — no longer imported here — by 6. Because most of JRT's dealers carry multiple lines, these franchise changes amounted to a loss of 20 outlets, a JRT spokesman said.

JRT plans to have about 250 Jaguar dealers plus a number of service-only points one year from now, when its dealers will be selling only Jaguars.

At midyear, 233 of 350 JRT dealers handled Jaguar.

Other losses in dealer totals were recorded by Fiesta, down 114; Fiat, down 46; Lancia, down 9; Alfa Romeo, down 8; Mazda, down 7; Lotus, down 4; Audi, down 4; Volkswagen, down 3, and Porsche, Rolls-Royce and Volvo, all down 2.

Aston Martin, Mercedes-Benz and BMW recorded no change in dealer numbers during the six months.

The number of import franchises in the U. S. climbed by 679, or 3 percent, during the first half of the year. This was more than the gain in the number of outlets handling imports because of the increase in dualing.

Bill rewards those who invest to modernize

Tax revisions to assist industry

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The auto industry is going to benefit from tax and depreciation breaks, courtesy of the Reagan Administration.

Although there is nothing in the tax bill that specifically addresses the woes of profitless companies or distressed industries, there is a unique leasing provision of special benefit to Ford Motor Co. and Chrysler Corp.

Depending on how the accounting profession handles the transaction on company books—in turn on how shareholders benefit and how it passes muster at the Securities & Exchange Commission—leasing could turn out to be the salvation of companies short of cash. The depreciation changes also will give them a shot in the arm.

The simplest explanation is that the leasing provision passed last week would decrease the minimum investment requirement to 10 percent and create a "safe harbor" that guarantees a transaction would be treated as a lease to allow the nominal lessor to take investment credits and depreciation on the investment.

The intention is to open up the widest possible trading of tax benefits from the money-losers to the money-makers.

In short, Ford, which has accumulated tax credit it can not now use, could buy machine tools or robots, lease to Exxon or Mobil in trade for cash which it needs to pay for those tools or robots.

Ford's and Chrysler's plight arises because of the limits set for carrying forward losses over a limited number of years. Although it is not the refundable tax credits that both Democrats and Republicans refused to give the auto industry, the leasing provisions are every bit as good.

• Further, the leasing provisions should come on board in a few months—once the accounting procedures are figured out—and be better in some ways than tax-deductible losses, which lose value as inflation continues.

The leasing provisions would not cover all the back tax credits—estimated at some $340 million for Ford—but would cover the more than $80 million expected this year.

Chrysler would be in an even better position because it could use its capital cost recovery as well as tax credits in trade. The particular leasing provision helps the losers more than General Motors, for example, although theoretically, Ford could trade its tax benefits to a profitable GM.

Estimates of tax benefits from purchase of $100 million for a machine would be between $20 and $25 million.

The special depreciation rules for leasing means that companies granting the leases could borrow up to 90 percent of the cost of the assets and still be eligible for the depreciation allowance. They are retroactive to Jan. 1, 1981.

• Although a great deal has been written about "supply side" economics and how the theory of tax cuts balanced with reduced government spending — the New Wave economics—will benefit all, very little has been explained about the business tax cuts, which are every bit as revolutionary and perhaps — as even Senate Majority Leader Howard Baker admits — "a river-boat gamble."

The philosophy is just as different as the New Deal was in its day.

In some ways it is easier to explain what it is not. It is not loan guarantees to "bail out" failures. It is not special-interest legislation that the Reaganites would consider a "federal giveaway." It is not "refundable" tax credits to help ailing firms.

Instead, it is philosophically geared to rewarding those who invest capital and who "reindustrialize."

It is oriented to growth and renewal and, except for certain provisions for the oil industry (which were unsuccessfully opposed at the last minute), it is not geared to size of income as the personal tax cuts are.

Suppliers who modernize could benefit more than large auto makers who do not, for example, because the major benefit is for the investors of capital.

• The heart of the Reagan tax law is the incentives for plant, equipment and real property acquisitions. What started as Kemp-Roth campaign promises—or 10-5-3—was changed slightly to 15-10-5-3, but the principle is retained. The enormous complexities of "useful life" have disappeared.

Starting next January and becoming fully operational by 1986, cars, light trucks, R&D machinery, equipment and tools would be depreciated in three years; all other machinery and equipment would depreciate in five years; real property would depreciate in ten years (the 15 years applies to certain public utility properties).

The 10-5-3 items would be depreciated by using the 150 percent declining balance method for the early years and straight-line for the remaining. In addition, these benefits rise in 1985 and 1986 and businesses can elect to expense annually in 1982, phasing up by 1986.

In addition, the investment credit is raised: 6 percent for the three-year class and 10 percent for five-year class.

Moreover, it applies to new and used property and needs no salvage value estimate. Under certain circumstances, companies could also use straight-line methods to avoid generating tax-free dividends for shareholders.

Further, gains on the sale of business assets would be taxed at the ordinary rate until the gain exceeded the amount previously taken in depreciation allowances and then it would be taxed at the lower capital gains rate.

• Also of specific help to the auto industry is a provision that gives tax credit for research, going beyond mere wage outlays and including supplies and other expenses, retroactive to July 1, 1981.

The 25-percent credit would apply to the increment over a previous three-year base period for the first year, but it could rise after that. It was broadened to cover basic research contracted to universities or contributions to tax-exempt research groups and would even include contributions of equipment.

Further general business benefits include special help for rehabilitating old buildings; favorable tax treatment on stock options qualifying as incentive options; and lowering the maximum capital gains tax rate. And there is always the three-year cuts in personal income tax to free up spending, hopefully on new cars.

But the auto industry did not get specifically what it had wanted. In fact, had Jimmy Carter been elected, Democrats might have come closer to the mark. After all, it was the Carter Administration that blessed

Interest-rate cut extended to GM's light trucks, vans

DETROIT. — General Motors Acceptance Corp. last week expanded its preferred finance rate of 13.8 percent to light-duty Chevrolet and GMC trucks (including vans) delivered before Aug. 31.

The program, announced the preceding week, initially included only GM passenger cars.

The expansion, announced jointly by GMAC and the parent General Motors Corp., includes Chevrolet's 10, 20, and 30 series trucks as well as all Blazer, LUV and Suburban models, in addition to GMC Jimmy, Suburban, 15, 25 and 35 models.

GMAC said the early reaction to the program by dealers and consumers was "above expectations."

Soft touch for luxury BMW

The Swiss coachbuilder Emil Frey is doing convertible conversions on BMW models 628 through 635 at a cost of about $10,000 (not including the original BMW). The door frames and rollbar are reinforced. The front part of the roof can be put into the trunk, and the rear soft top can be folded down and covered.

How changes in taxes will benefit dealers

WASHINGTON.—Small businessmen — dealers, some suppliers, repair shops — will benefit from the new tax law.

Extremely small firms with less than $25,000 in taxable income will pay at a rate of 16 percent in 1982 and 15 percent in 1983 — down from the current 17 percent. Those with taxable income between $25,000 and $50,000 will pay 19 percent in 1982 and 18 percent in 1983 — down from the current rate of 20 percent.

The new law also raises the accumulated earnings credit (except for some nonautomotive areas) so that income tax is avoided for a corporation's shareholders. The credit is raised from not less than $150,000 to $250,000, effective for taxable years after Dec. 31, 1981.

For closely held corporations — subchapter S — the limit is raised from 15 shareholders to 25 and certain exemptions are made for trusts.

But of major importance to auto dealers were the provisions added on the LIFO — last-in-first-out-inventory. The conference agreement between Senate and House version means that the average gross receipts that a business must have to use a single dollar-value LIFO pool is $2 million. (The average gross receipts for car dealers is $5 million).

Taxpayers electing LIFO will have three years (beginning with the year of the election) to take back into income inventory writedowns took in prior years. These are effective at the end of this calendar year. (This will help larger dealers.)

Moreover — something NADA has been pushing for — the Treasury will set regulations to simplify LIFO inventory accounting through the use of published government indexes. The Secretary of the Treasury will also make a study looking toward further simplification and make further recommendations for changes to the tax-writing committees of the Congress by the end of next year.

• NADA figures that only about 5,000 dealers used LIFO inventory despite its obvious importance in times of inflation. The reason so few dealers use it is because of its complexity, including figuring out the index instead of using an established index such as the one developed by the Bureau of Labor Statistics.

NADA is expected to work closely with the Treasury in its study and recommendations to allow greater use of LIFO, but even this year, dealers switching to LIFO might be able to generate more capital internally, but deferring taxes.

Also of considerable special interest to dealers are changes made in gift and estate-tax reduction. The exemption from the unified estate and gift tax is increased from $192,800 to $600,000 over a six-year period and the maximum estate-tax rate is lowered from 70 percent to 50 percent over four years.

The $250,000 limit on the gift

GM plant launch in Wentsville, Mo., delayed by rain

ST. LOUIS. — Heavy rains have delayed construction on General Motors' $500 million Wentsville (Mo.) plant.

Plans to complete the plant by early fall, 1982, have now been pushed back to the end of that year. This would delay production startup until the spring of 1983.

Mud and water have prevented steel at the site from being moved and concrete floors from being poured, a GM spokesman here said. Heavy rains have inundated the area since that announcement.

The delay could postpone the employment timetable. Original estimates indicated most of the 4,500 employes who once worked at the North St. Louis complex would be offered jobs at the new, suburban plant.

Nearly 1,700 workers have exercised their transfer rights and have opted to follow the Corvette to its new home in Bowling Green, Ky. GM ceased production of the Corvette in St. Louis July 30 and began phasing in production at Bowling Green on June 1.

The usually high transfer rate meant only 93 of 900 Kentucky residents trained on weekends by GM and the Kentucky Department of Education were actually hired. Most of those were in skilled trades.

A second Corvette shift is scheduled to be added this fall.

Meanwhile, only one truck line is left in the aging Chevrolet plant in St. Louis, and it is scheduled to be phased out next year.

Pestillo ups the ante in off-shore sourcing

17,000 jobs hang in balance at Ford

By Marjorie Sorge
Labor Editor

Ford Motor Co. has upped the ante in its high-stakes offshore sourcing poker game, putting chips worth 17,000 union jobs on the table.

Peter J. Pestillo, vice president, labor relations, said the sourcing decisions will be made before the next round of negotiations in 1982, although some of the job losses would not be played out for three to five years. A UAW official confirmed Ford is looking at offshore sourcing in Japan, Mexico and Bordeaux, France.

Peter J. Pestillo

The next round of negotiations begins next summer and Pestillo already has tipped his hand slightly, saying he wants a four-year-plus agreement instead of the normal three-year pact, a gradual phase-in of benefits based on seniority and changes in the way workers are hired and trained.

Over the past few months, both Ford and General Motors have asked the union to reopen negotiations on the current contract to cut labor costs, but the union has emphatically vetoed the idea. Both companies have threatened to send jobs offshore unless labor costs are cut quickly.

Donald F. Ephlin, UAW vice president and director of the Ford Department, said the union realizes some of the decisions must be made before the contract comes up in 1982 but it sees the offshore sourcing plan as a threat or inducement to the union to reopen the contract.

He said the UAW would urge Ford not to outsource jobs because "we believe we can produce better than anybody else."

• In an Automotive News interview, Pestillo hinted that reopening the contract might save some of the jobs and said "I'm not busy tomorrow (to begin negotiating) but I don't have a table to go to and I don't like solitaire." In reply, Ephlin said the union has no intention of dealing itself a hand right now.

The first decision to be made will involve the production of the powertrains, which Ephlin said would affect the majority of the 17,000 workers. Other areas affected would be some assembly and stamping operations, he said.

Ford is considering shipping those jobs to Japan, Mexico and Bordeaux, France, where Ford already has a transmission plant, Ephlin said.

One U. S. plant that may be affected is the Livonia Transmission operation, which Ephlin said is currently bidding on a job. Pestillo said if the company decided automatic overdrive transaxles for the bigger cars could be built better offshore, the Livonia plant would be "dramatically affected."

Ford is already building an engine plant in Chihuahua, Mexico, which begins operations in late 1983. That plant will build the I-4 engine, some for export to the U. S.

The offshore sourcing decision will be based on capital investment, labor costs, total price and availability and the value of local content, Pestillo said.

Local content has become a major issue with the UAW as it strives to keep jobs from being exported and will be high on the list of priority items in 1982 bargaining, acording to UAW President Douglas A. Fraser. Last month, Fraser introduced a local-content proposal calling for stringent controls.

Under Fraser's proposal, by 1985, auto companies with 200,000 annual sales in the U. S. would need at least 75 percent North American content, while companies with over 500,000 would need 90 percent. In 1980, Ford sold 1.5 million cars and 800,000 trucks.

• Pestillo said local-content legislation would not necessarily be abhorrent to Ford and Fraser's proposal may even get the company's support, depending on the ground rules. However, he said any local-content law would not affect Ford's offshore sourcing decisions because 95 percent of the vehicle's content is North American. That would mean the company could conceivably double its current offshore sourcing and still stay within the limits of Fraser's proposal.

One big worry in sourcing has been labor costs and Pestillo wants the gap between the U. S. and Japan narrowed.

"It is critical that we narrow it and we are working on that," he said. "It's critical to the UAW and ourselves. For them, for the jobs and for us for the competitiveness. They go together. The longer it takes, the more jobs it's going to cost so we had both (Ford/UAW) better get at it soon."

To narrow the gap, Pestillo is suggesting a four-year-plus contract with no openers and phased-in benefits based on seniority.

Negotiating a longer contract would offer more flexibility such as with the inflation index which determines COLA payments, he said. In July, Fraser told reporters three-year contracts may not make sense any more, but most labor observers feel the union is leaning toward a shorter contract rather than the longer one Pestillo has in mind.

Ephlin said he assumes Pestillo's longer contract would mean simply extending the agreement if negotiations were

New-car market stumbles; import share sets record

By Jenny L. King
Staff Writer

New-car sales in July were down for both U. S. auto makers and imports, spurring some domestic rebates, lowered interest rates and various incentive programs as the industry sought to pull out of the long sales depression.

The five U. S. makers reported 8.33-percent decline from last year, and the import total was down 8.72 percent, due largely to sales drops for its two biggest names, Toyota and Datsun. Import penetration, however, reached a record for the year at 29.59 percent.

Total new-car sales in July numbered 706,040, down 8.45 percent from 771,194 a year ago. The domestic figure of 497,151 was down 8.33 percent from 542,349, while imports were down 8.72 percent, to 208,889 from 228,845.

It was the lowest domestic total since 1961 when 419,969 new cars were retailed.

Year-to-date industry sales totaled 5,288,469, down 2.49 percent from 5,423,512 in 1980. The domestic total through July 31 was 3,805,890, down 3.44 percent from 3,941,539 a year earlier. Import year-to-date sales were up 0.04 percent, to 1,482,579 from 1,481,973.

The domestic daily selling rate in July was 19,121, down 8.33 percent from 20,860, and lowest for any month since last January. There were 26 selling days both this year and last.

• Chrysler Corp. and American Motors were the only U. S. auto makers to report sales increases this July. Chrysler was up 15.86 percent, to 58,508 from 50,497 last year, while AMC was up 21.75 percent, to 12,722 from 10,449.

General Motors sales dropped 12.52 percent, to 304,135 from 347,669 in 1980. Ford Motor Co. missed its year-ago mark by 4.99 percent, with 109,031 down from 114,758. Volkswagen of America plunged 32.78 percent, to 12,755 from 18,976.

GM earned 61.17 percent of the domestic market in July, down from 64.10 percent last year. Ford sales accounted for 21.93 percent, up from 21.16 percent. Chrysler increased its share to 11.77 percent from 9.31 percent. AMC cornered 2.56 percent, up from 1.93 percent, and VWoA had 2.57 percent, down from 3.50 percent.

Of the 13 U. S. makes reporting sales both years, five pulled ahead of their July, 1980 levels. Plymouth was up 41.30 percent, AMC was up 21.75 percent, Mercury was up 20.08 percent, Dodge was up 17.30 percent and Cadillac was up 4.38 percent.

U. S. makes with sales declines were: Lincoln, down 46.85 percent; Chrysler, down 41.64 percent; VWoA, down 32.78 percent; Chevrolet, down 17.45 percent; Buick, down 12.41 percent; Oldsmobile, down 11.47 percent; Ford, down 8.77 percent, and Pontiac, down 5.92 percent.

• While top-imported Toyota was down 13.59 percent in July and second-place Datsun dropped 22.52 percent below 1980,

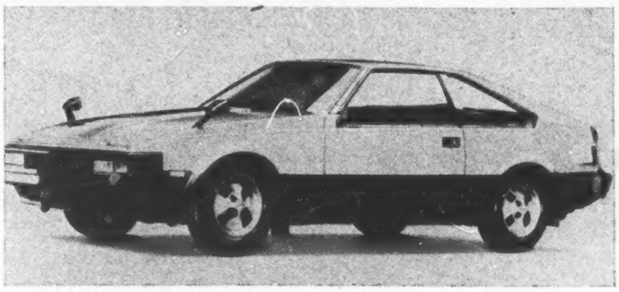
Concours slated at Meadow Brook

ROCHESTER, Mich. — The third annual Meadow Brook Concours d'Elegance will be held Sunday, Aug. 16, at Meadow Brook Hall near here.

Donald E. Petersen, president of Ford Motor Co., is honorary chairman of the event.

Approximately 100 classic cars will vie for awards, including a "people's choice." Hours are from 10 a.m. to 4 p.m. Admission is $4 per person.



New Toyota model bows in Japan

Six-cylinder Toyota Supra features pop-up headlights and a lengthened nose. New on the market in Japan, it is destined for the U. S. this fall as a 1982 model.

Still another air-bag hearing finds witnesses unchanged

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The latest in many years of hearing on air bags and passive belts—this day and a half NHTSA session billed as containing only new data—had almost the same cast of characters except for the chair—Raymond A. Peck, NHTSA head appointed by President Reagan.

Not surprisingly, insurance companies testified for passive restraints and so did some consumer activists including Ralph Nader and the Center for Auto Safety.

Testifying against them were other conservative public interest groups such as the Pacific Legal Foundation and Barbara Keating's Consumer Alert.

Present also were the three major domestic companies, which now want the standard rescinded. All of them have scrubbed whatever air-bag plans they once had and also want very much to drop any plans for passive belts.

Volkswagen of America is now joined its domestic brothers in asking that the standard be rescinded even though its automatic belts already comply. VWoA noted that the passive belts are on only two of the nine models it sells in the U. S.

Mercedes-Benz, which has a driver-only air bag with a three-point belt in Europe, is on hold for its U. S. plans. Toyota said it has found "disappointing levels of public acceptance" for the motorized belts on its 1981 Cressida.

• Suppliers of airbag components also testified—saying they were barely hanging on by their fingernails since all contracts have been canceled except the ones with Mercedes which are on hold.

Talley Industries, an involved supplier from 1969 on, is in a similar plight. It offered to help if Peck will maintain some sort of fleet to keep air-bag technology alive.

Noting that opponents of the standard say air bags will add as much as $1,100 to the price of a new car, Talley responded by giving its own price breakdown to show that, with volume, air bags in 1981 dollars could cost the consumer only $212 per car, including manufacturer profit and dealer 30 percent optional accessory markup.

Figuring the incremental cost reduction for changing from a three-point belt system to a manual lap belt—$27—the actual air-bag cost would be $185, Talley said.

Congress also had its spokesmen represented. Colorado Democrat Timothy Wirth, who heads the House subcommittee charged with NHTSA oversight and authorization, submitted a letter from 18 Congressmen urging retention of the standard. Almost simultaneously, Indiana Republican Elwood Hillis released a letter from his office signed by himself and 57 other Congressmen opposing any mandatory passive restraint standard.

• Much of the hearing was devoted to whether people would use passive belts or would disconnect them; whether disconnect was needed in case of fire, submersion, or crash—or whether belt spool-out was enough; whether people could be educated to use active belts; whether air-bag technology could be kept alive by some sort of fleet use; whether the methodology of the various cost/benefit studies is appropriate; whether insurance cost savings would offset initial costs, and whether philosophically mandating belt use was correct.

But central to the hearing was a question raised by Ralph Nader, who turned the tables and questioned Peck who was supposed to be questioning him.

Nader, noting that all of Peck's superiors in government (President Reagan, OMB chief David Stockman, DOT Secretary Drew Lewis, Vice President George Bush) had publicly opposed air bags, asked Peck why he was holding the hearing and would he make the decision. Would he "defy his superiors," all of whom seem to have prejudged the issue?

Peck put himself in the catbird's seat. NHTSA, he said, is fully prepared to take any action, including no action. He did not accept Nader's assertions that the issue has been prejudged. He added that Congress gave the DOT Secretary the responsibility and the Secretary gave it to him.

"I am prepared to make this decision, period," Peck said. "It is the law of the land."

Peck, through the long hearings, pressed for data and clarification. His position is bound to be difficult because of the outspokenness of his superiors, and he has a thankless task in making such a decision.

Peck has indicated to Congress the possibility of making passive restraints an option, and his sympathetic viewing of the so-called Coleman solution — company fleets to test in real life the adequacy of air bags—and even some sympathy with another Congressional solution that almost made it through the last Congress—putting the burden on the five biggest companies to produce one line of air-bagged cars.

Can Congress finish work on Clean Air Act?

Rollback sought on emissions rules

Continued from Page 2

ones with few if any emission controls.

"What we are recommending is a more reasonable pace toward cleaner air," she said.

• But Richard Ayers, chairman of the National Clean Air Coalition and a member of the National Commission on Air Quality, disputed that assertion.

"This is nothing more than a sugar-coated prescription for dirty, unhealthy air," he said.

He pointed out that the National Commission on Air Quality recommended that only the CO standard be eased to 7 gpm and then only to 1986, and that the 1.0 gpm NOx standard be retained.

Furthermore, cars have been meeting a 2 gpm standard for more than four years already, he said; so to assert that replacing these older vehicles with ones also meeting a 2 gpm NOx standard constitutes progress towards cleaner air seems a bit far-fetched.

"It's disappointing and frightening that the person in charge of this agency doesn't know what the cars on the road are doing, what the law is or what the National Commission on Air Quality has recommended," Ayers said.

In coming forward with recommendations only, the Reagan Administration appears to have decided to take the low road on amending the Clean Air Act.

Gorsuch said no bill would be sent to Capitol Hill, that instead the Administration hoped to work with the various committees to come up with a measure it could support.

Politically, this is viewed by many to be a more viable road for the Administration to take, particularly in the wake of the outcry that emerged following a leak earlier this summer of an Administration proposal calling a far more radical reworking of the Clean Air Act.

• A Clean Air measure has already been introduced in the House of Representatives that closely tracks what both the industry and the Reagan Administration want and no doubt a similar measure will be introduced in the Senate.

The House bill was introduced by Rep. Bob Traxler, the Michigan Democrat, and Rep. Elwood Hillis, the Indiana Republican.

It essentially follows the recommendations of the Motor Vehicle Manufacturers Assn., which are: Raise the CO standard to 7 gpm permanently, raise the NOx standard to 2 gpm permanently, measure only reactive hydrocarbon emissions, allow California cars to be sold nationwide, eliminate certain emission certification procedures, provide for emissions waivers for innovative technology, allow for averaging of emissions, and eliminate the 1984-and-beyond high altitude requirements.

Whether Congress can finish work on amending the Clean Air Act this year remains to be seen, however. Most observers would say not, but that assessment was made based on earlier positions taken by the Administration.

Whether the new Reagan approach will alter that perception remains to be seen. Environmentalists will definitely fight to prevent their enactment.

New-car market stumbles; import share sets record

Continued from Page 4

the European luxury-car makers had a boom month.

BMW reported an any-month high with its sales at 4,424 units. Audi sales were up 35.27 percent, Mercedes-Benz was up 15.30 percent to a July record of 5,651 units, Peugeot was up 51.36 percent and Volvo reported a 28.34-percent sales increase to a July record 6,757.

Imports not only had their best penetration level of the year in July, of 29.59 percent, they cornered the largest segment of the total market. U. S. compacts accounted for 20.27 percent, intermediates were 18.47 percent, subcompacts were 16.76 percent, standards were 10.49 percent and luxury models were 4.42 percent.

The top five U. S. nameplates for the month were: Chevrolet Citation at 28,020, Chevrolet Chevette at 24,679, Ford Escort at 21,503, Oldsmobile Cutlass Supreme at 20,757 and standard Chevrolet at 18,168. A year earlier, the top five were: Citation, Chevette, Cutlass Supreme, Chevrolet Malibu and standard Chevrolet.

Domestic sales for the final 10 days of the month totaled 204,468, a decline of 13.47 percent from 236,293 last year. For the period, Ford was up 14.66 percent, Chrysler was up 10.17 percent, GM was off 21.00 percent, VWoA was down 38.19 percent and AMC was down an estimated 28.00 percent.

GM earned 62.62 percent of the third-period domestic market, Ford had 20.59 percent, Chrysler stood at 11.85 percent, VWoA had 3.18 percent and AMC had 3.18 percent and AMC earned 1.76 percent.

New head, name change for Drennen Cadillac

BIRMINGHAM, Ala. — Drennen Cadillac has changed its name to Drennen Cadillac Co., Inc. The announcement was made by Ralph Quinn III, who will become president of the new company replacing his father, Ralph Quinn Jr., who is retiring after 30 years in the Drennen organization.

As part of the new ownership and management operation, Tom Williams Buick, will be a major partner.

Lutz describes extensive forward planning

Ford of Europe ready for future

By Richard Feast
European Editor

Ford of Europe has left the door of its normally top secret research establishments slightly ajar.

In these tough times it wants the world to know that it is working hard to secure a place in it at the end of this century. Robert A. Lutz, chairman of Ford of Europe, writes in a foreward to volume 1 of *Ford Energy Report*: "Ford engineers throughout the world are working with a common interest as at no other time in history.

"Such is the integration and communication within the Ford world that the results of any program are readily available to all other areas.

"It does not matter whether research is in South America or Detroit, Dunton or Merkenich, Australia or California, by mail and by computer, by satellite and by oceanic cables, data is exchanged on a wide range of projects.

"The depth and scope of this work is so extensive I think the time has come to talk more openly about the issues, the research and the development taking place within Ford today.

"Every time I review progress or look at the hardware being put together, be it long-term experimental, medium-term prototype or short-term pre-production, I get excited at the prospects ahead of us."

- Among the first projects which Ford is talking openly about are a "breakthrough" with automatics for the mid-'80s, a Fiesta honed to give additional mileage, a joint gas turbine project in the U. S. and a worldwide assessment of alternative fuels.

An experimental Granada sedan with computer - controlled automatic is now running with predicted economy gains of up to 27 percent compared with a conventional automatic.

The transmission dispenses with a torque converter and employs five epicyclic ratios. Mechanically, it is a derivative of the current three-speed with the addition of two extra ratios and a twin-plate wet clutch.

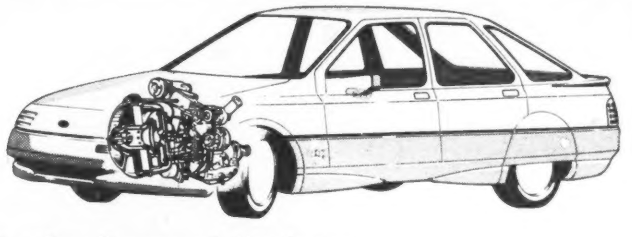
Instead of direct connection between the accelerator and the carburetor there is a position sensor and a small electric motor, both connected to the onboard computer which controls the whole system.

At present, that computer occupies a good deal of trunk space—but will be replaced by a matchbox-sized module as development progresses.

Eventually, the unit can be programmed to provide either sporting or economy characteristics.

Ford emphasizes that potential savings of more than a quarter have been computed, but it is too early to say whether such gains could be maintained on a production run.

Of more immediate interest are the two Fiestas built to investigate the numerous small steps Ford is working on to make cars go further on less. None of the changes to the vehicles — code - named F.E.R.V. (Fuel Economy Research Vehicle) — is very major but they add up to some impressive results.



Ford's glimpse of the future

Early sketch of the gas turbine car Ford is working on in the U. S. as part of a project with Garrett AiResearch. Ford says up to half a million cars of this type could be on the road within the next decade. Gains in fuel economy up to 60 percent over a conventional three-liter engine are spoken of.

The project began nearly two years ago. Changes to the bodywork, including a longer, sloping nose and rear spoiler, have improved the drag coefficient by 10 percent (to CD 0.38).

At the same time, the relationship between engine characteristics and gear ratios was revised to bring the normal operating range to a more efficient part of what Ford calls the fuel economy map.

- The objective throughout is to maintain top - gear acceleration while improving gas mileage. Peak torque of the 1,117-cc Valencia engine was adjusted to occur at 2,500 RPM (rather than 3,000 RPM) and top gear was raised from 3.93 to 2.70.

The result is to increase top speed from 81 to 89 MPH and an improvement in economy of 14 percent.

Some of these changes will be incorporated into 1982 production Fiestas, while others may have to wait because of investment and tooling considerations.

On alternative fuels, Ford vehicles in West Germany are being run on a mixture of gasoline and 15 percent methanol. In the U. S., 40 new Escorts have been converted to run on pure methanol in a program sponsored by the California Energy Commission.

Following the introduction of propane-powered trucks into its Kentucky plant, similarly powered cars will be made in Canada and go on sale there during the 1982 model year.

Other areas being investigated range from a methane car with five lightweight pressurized tanks to a car using refrigerated methane which stays below freezing point for up to eight days.

Also under test are electric vehicles employing either battery power or a hybrid combination of batteries and generating sets.

John Oldfield, vice president of product planning at Ford of Europe, said: "Our production

Continued on Page 17, Col. 1

The chairman drives into the future

Ford of Europe Chairman Robert A. Lutz at the wheel of the Fiesta-based F.E.R.V., or Fuel Economy Research Vehicle. Some ideas from this two-year project will be incorporated into the 1982 production schedule for Fiesta.

Ford mixes it in Germany

Ford of Germany has a fleet of 150 Granadas converted to run on gasoline with 15 percent addition of methanol under a government program. Early indications are that the fuel tank, fuel lines, fuel pump and carburetor need special treatment to avoid corrosion.

Doubling of sales is predicted

Jaguar is in to stay, U.S. dealers assured

By Richard Feast
European Editor

More than 80 U. S. Jaguar dealers descended on the company's headquarters at the beginning of July to hear more about the quality drive and the new models that are in the pipeline.

The words (by chairman John Egan) and music (by Edward Elgar, of course) were suitably stirring.

"We are quite capable of maintaining a profitable presence in North America purely on the basis of a Jaguar product range," declared Egan afterwards.

He dismissed rumors that Jaguar would pull out of North America as "nonsense."

But Jaguar's poor quality and reliability have proved a considerable handicap—a position it is firmly convinced it can overcome with its current quality campaign.

Egan's declared aim is to match—"and better"—the quality of West Germany's Mercedes-Benz and BMW rivals.

He reported that in May U. S. sales overtook those of the UK and that by the end of the year that would permanently be the case. Year-end sales would double to around 4,500, and dealers were committed to an additional 50 percent on top of that next year.

Part of the plan includes faster introduction of new models into the U. S. market.

"This year our 1982 model year build began exactly on schedule on June 22 and the cars will be in our North American showrooms right at the beginning of the 1982 model year selling season in October," reported Egan.

UK exporters have complained long and hard about the strength of sterling. But the U. S. is not Jaguar's problem—it is Europe, where the pound remains strong against the franc, deutschmark, lira and so on.

"We are satisfied with the pound at $2.30, so at $1.88 we're quite happy," quipped Egan with a grin.

Clearly, though, Jaguar needs some lighter, more aerodynamic models than the XJ sedans and XJS coupe, whatever the gas consumption gains from the May head now fitted to the V-12s.

One of the penalties of being part of a controversial state-owned group like BL is that forward planning has to be done in a goldfish bowl—to prove to taxpayers that something is being done to cement the future.

BL's product planning for the '80s must be among the most exposed in the motor industry and that includes Jaguar's future.

Next up will be the diesel-engined sedans, destined for the 1983 calendar year and essentially aimed at the U. S. market.

Initially Jaguar will use a bought-in unit, pending development of its own diesel engine. It will be a six-cylinder turbocharged unit, one of a family of engines designed and built by VM in Italy. A four-cylinder version has already been seen in the Alfa Romeo Alfetta.

Jaguar is unclear over just how important the diesel will be in its sales pattern. It is a market it has never entered and Jaguar talks in general terms of 10 to 15 percent.

Whatever, extra mileage is not the main reason behind the introduction of the diesel.

Egan forecasts: "We will get the thermal efficiency of the diesel with our forthcoming gasoline engine. It's for fiscal reasons like the price of diesel fuel that we need it."

The six-cylinder gas engine will be an all-alloy lightweight unit, undoubtedly employing May combustion chambers. Jaguar says there will be a high performance cylinder head option — believed to employ four valves per cylinder.

It will be used initially in the XJS, probably in late '83 or early '84, but is mainly to be used in the lightweight XJ40 sedan scheduled for the mid-'80s.

Jaguar pins comeback hopes on quality

Continued from Page 14

is Jaguar's open attack on (mainly) U.K. component suppliers. The sector has always been held up as one of the more successful areas of the country's none-too-healthy motor industry.

Neither has there been such a condemnation from other users of U.K. components. Have they been experiencing poor quality, has their own internal quality control rejected what has been offered, or has the rough treatment been reserved for Jaguar?

Whatever these questions, John Egan maintains, every objective indicator shows competitive levels of quality and reliability have been achieved.

"Research is proving that the Jaguar worker can produce a car which is in every way competitive and in many ways better than his much vaunted German competitors," he said.

Testing plastic manifold

Ford of Europe, in cooperation with BTR Permali and Fibreglass, Ltd., is testing a Cortina inlet manifold made of plastic. The compound, a polypropylene maleate resin with an acrylic thermoplastic additive, costs one-quarter its aluminum equivalent. Other possible uses include water, fuel and oil pumps. Above, right, is a one-piece manifold, plus a fusible metal molding core.

DuPont hybrid

To showcase its automotive materials, duPont engaged Ogle Design to unite the multi-sourced parts into a pleasing shape.

Lutz describes extensive forward planning

Ford of Europe ready for future

Continued from Page 16

experience of alcohol cars in Brazil and propane vehicles in Canada, combined with our European methanol trials and U. S. test fleets, puts us right at the front of the new technology required should any of these alternatives become widely available and viable in Europe."

Ford has released more details of the gas turbine work it is undertaking with Garrett AiResearch — a program that is little known in Europe.

Prototypes are scheduled for delivery in 1985 under a contract with the U. S. Department of Energy and NASA.

Production, it says, could begin by the end of the decade and the eventual goal is to produce between 300,000 and 500,000 a year by 1991.

The Ford / Garrett engine is designed to develop 130 HP at 100,000 RPM. It will run on a wide variety of fuels, in both liquid and gas form, which makes it attractive when high quality gasoline is not available throughout the world.

To provide maximum performance without the throttle lag, an electronic control system using micro-processors will monitor all engine and transmission functions. Predictions for the vehicle using a split-torque automatic transmission of the type being used in the U. S. Escort show a fuel economy gain (using gasoline) of almost 60 percent over today's three-liter Otto engines.

Says Bob Lutz: "There is no miracle solution to the world's energy problems, so every improvement, however small, is a worthwhile step in the right direction.

"As fast as we can we are introducing production changes to take advantage of our research achievements and I am confident that by the end of this century we can make a vehicle which can return a consumption about half of today's European average."

Fiat, Alfa probe areas of possible cooperation

Uneasy calm hangs over Italy

TURIN, Italy—The announcement that Fiat and Alfa Romeo are in the advanced stages of a cooperation study brings an uneasy peace to the two companies which have often spent more time picking at each other than tackling the opposition.

There is to be no merger or financial link. The moves are being seen in the longer term as creating the foundations for a more closely knit Italian motor industry.

At present the two companies talk about joint component manufacture and possibly the development of a new engine of two-liter capacity. One reason behind the suddenly discovered friendship must be the decision just over a year ago by the Italian government to make 4,500 billion lira (around $3.7 billion now) available for the restructuring of key industries in the country—and that includes the motor industry.

Fiat's resentment at the continued loss-making activities of Alfa Romeo was little disguised.

It included the Alfasud project, which brought employment to the depressed south around Naples, a strong mid-range competitor for Fiat's 128 model, and, as it turned out, even greater losses for the parent Alfa Romeo company.

Then came the controversial link with Nissan by Alfa Romeo —a project attacked by Fiat not so much on account of the number of vehicles it would produce (60,000 a year), but the principle it involved.

- It gave the Japanese a toehold in Fortress Italy, where Japanese imports are limited to just over 2,000 annually.

But while the two were carping at each other, the major sales slump had swept across most of Europe. But not across the whole of it, for in Italy itself demand for new cars confused everyone by rising by a fifth.

Exports, though, began to suffer, and after yet more gains earlier this year, sales in the domestic market have begun to fall back.

An idea of the dramatic drop in exports this year can be gained from study of statistics compiled by ANFIA, the Italian auto industry's association. In the first quarter of this year exports dropped away by 38.2 percent to 136,262 units compared with the same period last year.

Alfa Romeo was down 15.2 percent at 21,313, but Fiat plummeted a massive 45.1 percent to 99,978.

As a proportion of production, exports in the first quarter of last year amounted to 44.4 percent. This year's equivalent figure was 31.3 percent.

- Nevertheless, because of the continued domestic demand in the early part of the year, Fiat was able to claim the leading market share in European registrations in the first quarter.

According to its definition of Western Europe (which excludes Spain for some odd reason), Fiat enjoyed 13.1 percent, compared with 12.9 percent for Ford, 12.7 percent for Renault, 12.5 percent for VAG, 12.3 percent for PSA, 11.2 percent for the combined Japanese and 8.6 percent for GM-Opel.

One year earlier the order was very different—PSA (14.6 percent), Renault (13.5), VAG (12.6), Fiat (12.1), Ford (11.8), GM-Opel (9.7) and the Japanese (9.0).

Some of Fiat's rivals have different ideas on what comprises Europe, so their figures may differ.

Low export demand and a diminishing home market forced Fiat to put two-thirds of its 114,000 workforce on layoffs this summer. This is in addition to the 23,000 redundancies which followed last fall's bitter, month-long strike.

Last year Fiat's auto making interests contributed a loss of 130 billion lira ($107 million) towards the group's overall profitability.

Alfa Romeo recorded a loss too ($36 million), but an internal reorganization allowed it to register a nominal profit.

Thus, against such a background, closer ties between the two major Italian car producers appears an inevitable move.

But production tops year-ago month

July output lowest since February

By Patricia Hoffman
Staff Writer

Domestic auto production in July was the lowest for any month since February of this year, but the output for the month was up considerably from July of 1980.

The auto makers completed 516,613 units in July, up 23.88 percent from 417,038 cars assembled in the comparable month last year. The total was the highest for that month since July, 1979, when the auto manufacturers finished 583,765 units, but it was the lowest for any month since the 482,074 cars completed in February, 1981.

Last week, the auto makers scheduled 83,061 units, down 11.79 percent from 94,167 completed in the previous week, but up 36.91 percent from 60,669 in the comparable week last year.

Year-to-date, the makers have completed 4,202,551 units, up 6.97 percent from 3,928,616 built in the comparable period last year.

Breakdown for the week by company is: General Motors, 63.60 percent; Ford Motor, 26.00 percent; Volkswagen of America, 4.53 percent; American Motors, 3.79 percent; Chrysler Corp., 2.05 percent; and Checker Motors, 0.03 percent.

Chrysler's Jefferson assembly point, down for model changeover since July 27, resumes operations today (Aug. 10).

Also at Chrysler, the Belvidere plant, down since Aug. 5 for changeover, resumes production today, but Newark, down since Aug. 3, will remain idle until Aug. 24.

General Motors' St. Louis assembly point has ended production of the Corvette, transferring assembly of the car to the Bowling Green (Ky.) plant. St. Louis truck will continue production of light Chevrolet and GMC trucks.

Pickett joins U. S. company planning Korean T-bird

By Edward Lapham
Financial Editor

MADISON HEIGHTS, Mich.— North American Classics Corp. has retained William S. Pickett, former American Motors executive, to develop the company's distribution network.

Thomas W. Elkins, chief operating officer of NAC, confirmed that the company has retained Pickett as a consultant.

"He is consulting for us on a variety of subjects on which he has experience and expertise," Elkins said.

NAC, principally owned by a handful of Ford dealers, is negotiating with Hyundai Motor Co. to build a '57 Thunderbird replica in Korea for sale in the U.S. (Automotive News, July 20).

Pickett, who retired as American Motors (Canada), Ltd., president in June, told Automotive News he believes the NAC/Hyundai project has a good chance to succeed.

"I don't believe in freak things," Pickett said, "And I don't think this is a freak thing. I went over their market studies and checked things out. I think it can work, I think they can sell 5,000 of the Thunderbird replicas a year."

Pickett, a veteran world trader with experience in Korea, said he would not be involved in the negotiations with Hyundai, but as a consultant he would probably go to Korea several times.

"My area is market representation, not negotiating," Pickett said.

"I'll be doing a variety of things," he said. "I'll be helping set up the dealer body, establishing the franchise and franchise system, establishing the warranty claim system, setting up procedures, as well as handling advertising and new product introduction."

Elkins said the company is still negotiating with Hyundai and has yet to seek any additional capital through equity or debt financing, although the company will be raising more capital shortly after the final agreement with Hyundai is signed.

AMC appoints Nomm

SOUTHFIELD, Mich. — Rein Nomm has been appointed manager of stockholder and financial communications for American Motors. He has been a senior procurement analyst for AMC since joining the company in 1979.

Truck production for July tops '80; 124,618 assembled

U. S. truck production in July rose substantially above the comparable 1980 month and the total was the highest for that month since 1979.

The domestic truck manufacturers completed 124,618 units in July, up 39.47 percent from 89,353 trucks assembled in the comparable month last year. The total was also the most for July since the 205,265 units built in 1979, but it was the lowest for any month since August, 1980, when the truck makers completed 78,464.

Production last week was slated at 16,894 units, down 38.79 percent from 27,599 in the previous week and down 4.41 percent from 17,673 in the comparable week last year.

Ford Motor's Kansas City, Louisville, Norfolk, San Jose, St. Paul and Twin Cities truck facilities were all idle last week (Aug. 3) for changeover and inventory adjustments. They are slated to resume work today (Aug. 10).

American Motor's Toledo (Jeep) facility closed July 20 for model changeover. The point is scheduled to resume production Aug. 17.

Volkswagen of America's Westmoreland point has slated downtime beginning Aug. 28 for '82 model changeover. The plant is scheduled to return Sept. 8.

July production in Canada climbs to 4-year high

Canadian auto production in July was the highest for that month since 1977, but it was also the lowest for any month since January of this year.

In July, the auto makers completed 61,118 units, up 14.99 percent from the 53,152 assembled in the comparable 1980 month. The total was the highest for that month since the 66,416 produced in 1977, but the lowest for any month since January of this year when the makers built only 46,423 cars.

Canadian truck production in July was 35,633, a gain of 62.48 percent over the 21,931 units in the comparable 1980 month, and the total for the month was the most since 1977 when the truck makers built 38,537 units. It was the lowest for any month since August, 1980, when the makers assembled 26,422.

Last week's production showed the effects of the changeover period.

The auto manufacturers slated 4,441 units, down 62.70 percent from 11,906 in the previous week, and down 35.0 percent from 6,832 in the comparable 1980 week.

The truck makers scheduled 1,732 units last week, down 72.90 percent from 6,391 in the previous week, and down 53.89 percent from 3,756 in the comparable week last year.

So far this year, the truck manufacturers have completed 319,385 units, up 3.02 percent from 310,027 in the comparable period last year.

Chrysler's Windsor car facility, idle for 1982 model changeover since July 24, resumes operation today (Aug. 10).

General Motors' Scarborough truck point, down for changeover since July 29, will begin production of 1982 models Aug. 18.

Can Congress finish work on Clean Air Act?

Rollback sought on emissions rules

Continued from Page 2

ones with few if any emission controls.

"What we are recommending is a more reasonable pace toward cleaner air," she said.

• But Richard Ayers, chairman of the National Clean Air Coalition and a member of the National Commission on Air Quality, disputed that assertion.

"This is nothing more than a sugar-coated prescription for dirty, unhealthy air," he said.

He pointed out that the National Commission on Air Quality recommended that only the CO standard be eased to 7 gpm and then only to 1986, and that the 1.0 gpm NOx standard be retained.

Furthermore, cars have been meeting a 2 gpm standard for more than four years already, he said; so to assert that replacing these older vehicles with ones also meeting a 2 gpm NOx standard constitutes progress towards cleaner air seems a bit far-fetched.

"It's disappointing and frightening that the person in charge of this agency doesn't know what the cars on the road are doing, what the law is or what the National Commission on Air Quality has recommended," Ayers said.

In coming forward with recommendations only, the Reagan Administration appears to have decided to take the low road on amending the Clean Air Act.

Gorsuch said no bill would be sent to Capitol Hill, that instead the Administration hoped to work with the various committees to come up with a measure it could support.

Politically, this is viewed by many to be a more viable road for the Administration to take, particularly in the wake of the outcry that emerged following a leak earlier this summer of an Administration proposal calling a far more radical reworking of the Clean Air Act.

• A Clean Air measure has already been introduced in the House of Representatives that closely tracks what both the industry and the Reagan Administration want and no doubt a similar measure will be introduced in the Senate.

The House bill was introduced by Rep. Bob Traxler, the Michigan Democrat, and Rep. Elwood Hillis, the Indiana Republican.

It essentially follows the recommendations of the Motor Vehicle Manufacturers Assn., which are: Raise the CO standard to 7 gpm permanently, raise the NOx standard to 2 gpm permanently, measure only reactive hydrocarbon emissions, allow California cars to be sold nationwide, eliminate certain emission certification procedures, provide for emissions waivers for innovative technology, allow for averaging of emissions, and eliminate the 1984-and-beyond high altitude requirements.

Whether Congress can finish work on amending the Clean Air Act this year remains to be seen, however. Most observers would say not, but that assessment was made based on earlier positions taken by the Administration.

Whether the new Reagan approach will alter that perception remains to be seen. Environmentalists will definitely fight to prevent their enactment.

New-car market stumbles; import share sets record

Continued from Page 4

the European luxury-car makers had a boom month.

BMW reported an any-month high with its sales at 4,424 units. Audi sales were up 35.27 percent, Mercedes-Benz was up 15.30 percent to a July record of 5,651 units, Peugeot was up 51.36 percent and Volvo reported a 28.34-percent sales increase to a July record 6,757.

Imports not only had their best penetration level of the year in July, of 29.59 percent, they cornered the largest segment of the total market. U. S. compacts accounted for 20.27 percent, intermediates were 18.47 percent, subcompacts were 16.76 percent, standards were 10.49 percent and luxury models were 4.42 percent.

The top five U. S. nameplates for the month were: Chevrolet Citation at 28,020, Chevrolet Chevette at 24,679, Ford Escort at 21,503, Oldsmobile Cutlass Supreme at 20,757 and standard Chevrolet at 18,168. A year earlier, the top five were: Citation, Chevette, Cutlass Supreme, Chevrolet Malibu and standard Chevrolet.

Domestic sales for the final 10 days of the month totaled 204,468, a decline of 13.47 percent from 236,293 last year. For the period, Ford was up 14.66 percent, Chrysler was up 10.17 percent, GM was off 21.00 percent, VWoA was down 38.19 percent and AMC was down an estimated 28.00 percent.

GM earned 62.62 percent of the third-period domestic market, Ford had 20.59 percent, Chrysler stood at 11.85 percent, VWoA had 3.18 percent and AMC had 3.18 percent and AMC earned 1.76 percent.

New head, name change for Drennen Cadillac

BIRMINGHAM, Ala. — Drennen Cadillac has changed its name to Drennen Cadillac Co., Inc. The announcement was made by Ralph Quinn III, who will become president of the new company replacing his father, Ralph Quinn Jr., who is retiring after 30 years in the Drennen organization.

As part of the new ownership and management operation, Tom Williams Buick, will be a major partner.

Three-wheeler

Minicar is economy giant

Weighing less than 600 pounds and measuring but 91 inches long, this two-passenger Cub commuter car is scheduled to go into production this fall in Taiwan. It will be marketed by Convenient Machines, Inc., New York. Targeted price is $3,945, and estimated MPG is 60 to 80. Story on Page 4.

New-car stockpile climbs to record 87½-day supply

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory continued to climb to Himalayan levels during July as the industry moved into what looked like a difficult cleanup period.

The domestic new-car inventory on Aug. 1 totaled 1,675,192, an 87½-day supply, highest ever for that date. (The unit count has been higher—in fact, it topped 2 million Aug. 1, 1979—but the days-supply figure is highest ever for an August opener.)

A year ago, the industry had 1,506,681 new cars in inventory, a 72-day supply.

The Aug. 1 inventory was up only slightly from 1,664,871 on July 1, but the days-supply figure was up from 83½ days because of a continuing slackening of the sales pace.

Ford Motor Co. was the only domestic corporate maker to trim its unit count during July, and American Motors was the only maker to cut its days-supply level.

Biggest gain was again notched by General Motors, which had well over a million cars in stock, sufficient for 89 days at the current sales rate. A month earlier, GM had an 85-day supply.

Table on Page 57.

Ford Motor Co. opened August with an 83-day supply, up slightly from 81 days a month earlier. Chrysler Corp. boosted its stockpile to 90 days from 86, while AMC sliced its supply from 75½ days to 66.

Volkswagen of America had a 113-day supply Aug. 1, up from 90 days a month earlier.

The Aug. 1 domestic inventory was divided this way: GM, 62.09 percent; Ford Motor Co., 20.77 percent; Chrysler Corp., 12.11 percent; VWoA, 3.12 percent, and AMC, 1.91 percent.

A month earlier, the inventory was divided as follows: GM, 60.98 percent; Ford Motor Co., 23.91 percent; Chrysler Corp., 11.64 percent; VWoA, 1.78 percent, and AMC, 1.69 percent.

- By size class, all segments except compacts increased in supply. Changes were small, except for subcompacts, which jumped from a 70-day stock to 83 days.

The industry had a 93-day supply of compacts, off from 94; a 95-day stock of intermediates, up from 91; a 73-day supply of standards, up from 72½, and an 87½-day supply of luxury cars, up from 85.

The Aug. 1 inventory was divided this way by size segment: Subcompact, 22.34 percent; compact, 30.55 percent; intermediate, 28.45 percent; standard, 12.39 percent, and luxury, 6.27 percent.

A month earlier, the inventory was divided as follows: Subcompact, 20.18 percent; compact, 30.51 percent; intermediate, 30.04 percent; standard, 12.77 percent, and luxury, 6.50 percent.

- The Aug. 1 days-supply figures by market class were:

Subcompact — Escort/EXP, 78; Lynx/LN7, 80; T-1000, 83; Chevette, 84; J-2000, 87; Cavalier, 87½; Horizon, 93; Omni, 110; Rabbit, 113, and Spirit, 117.

Compact — Concord, 37; Zephyr, 77; Firebird, 85; Camaro, 88½; Reliant, 89; Capri, 91; Fairmont, 92; Skylark, 93; Mustang, 100; Citation, 100; Aries, 100½; Omega, 107; Eagle, 124, and Phoenix, 135.

Intermediate — Diplomat, 45; LeBaron, 55; Cutlass, 66; Century, 68½; Cougar, 74; Cordoba, 79; Malibu, 89; Supreme,

Chevrolet pushed from top spot after 21-year reign

Oldsmobile takes lead in sales per dealer

By Jenny L. King
Staff Writer

Oldsmobile dealers sold more cars per outlet than did those of any other domestic make in the first half.

It was the first time in 21 years that Chevrolet had not held down the top spot.

Average sales of domestic units per new-car dealer climbed slightly in the first half of 1981, compared with the corresponding period a year ago, as dealer attrition continued and sales stayed near 1980 levels.

Average for the domestic new-car outlets was 144, up from 140 a year earlier, according to AUTOMOTIVE NEWS calculations.

Low average for the past 10 years was 132 sales per outlet in 1975; record average was 205, notched in 1973.

General Motors was the only major domestic auto maker to show a decline in sales per dealer for the first half.

GM dropped to 182 from 187 a year earlier and 224 two years ago.

Ford Motor Co. dealers averaged 127, up from 123 in the first half of 1980. Chrysler Corp. dealers scored an average of 105 sales per new-car outlet, up substantially from 78 one year ago and moving closer to the 1979 average of 110.

American Motors' average was 46, the same as the first half of 1980 and up from 44 two years ago.

Although there were no record high averages for any of the U. S. makes (Volkswagen of America is not included as a domestic), there was a realignment in rankings, as noted above.

Oldsmobile counted 140 sales per dealer, up from 127 a year earlier. Chevrolet's 137 was down from 159. Buick held on to third place with a 126-per-dealer average, up from 116. Ford was fourth with 107, identical to its 1980 first-half average.

No. 5 spot went to Pontiac, with 93 sales per dealer, compared with 99 a year ago. Plymouth leapfrogged from tenth to sixth place, at 73 sales per dealer, up from 45. Dodge, with 69, moved to seventh from eighth place, Cadillac, at 68, was eighth and Mercury, 67, dropped to ninth from seventh.

AMC, with a 46 average, was tenth, followed by Lincoln, 22,

1 pct. over prime for '82s, up from 0.75 pct.

GMAC increases floor-plan rate

By Edward Lapham
Financial Editor

General Motors Acceptance Corp. has increased its effective floorplanning rate to one percentage point over the prime interest rate from 0.75 percentage points over prime, the finance company confirmed.

The rate increase becomes effective with the delivery of 1982 model GM cars and trucks, at the same time the company begins offering dealers a floorplan assistance program (AUTOMOTIVE NEWS, Aug. 10).

One GM dealer last week told AUTOMOTIVE NEWS he believes the auto maker stands to make an additional $480 million based on its new program, which offers reduced floorplan rate but adds an invoice surcharge.

"One-third of the cars go out immediately, one-third are sold within 60 to 90 days and one-third are on the lot longer than 90 days," the dealer said. "It's going to cost me $18,000 next year to have GM do me this favor," he said.

NADA Executive Vice President Frank E. McCarthy wrote a letter to GMAC President Robert F. Murphy asking the finance company to reconsider the floorplan rate hike.

"We at NADA continue to believe that manufacturers and their subsidiaries have responsibility to share with dealers the burden of financing the American automobile inventory," the letter said.

He went on to say GM should consider "the full impact of that action on your nationwide sales force, the American GM dealers."

Raphael Cohen, executive vice president of the Independent Dealers Committee Dedicated to Action, said the entire floorplan assistance program was "a bookkeeping trick."

Cohen said it is "a Mickey Mouse plan where GM is telling the dealers, 'you can pay me now or you can pay me later, but pay me.' That's all it is."

Ford Motor Credit Co., which also has a floorplan assistance program for its dealers, said it already charges one percentage point over prime for wholesale loans, and has no present plan to raise the rate.

Jan. 14 intro for newest GM cars

DETROIT. — Latest reports indicate that the newest General Motors cars won't be in dealer showrooms until mid-January. The corporation is looking at a Jan. 14 introduction date for the Chevrolet Camaro and Pontiac Firebird and for the front-wheel-drive intermediate-size A-cars—the Chevrolet Celebrity, Pontiac 6000, Oldsmobile Ciera and Buick Century. The Buick and Oldsmobile versions of the J-cars will arrive even later, probably around the time of the Chicago Auto Show, which opens Feb. 27.

Isuzu to start J-car output earlier

TOKYO.—Isuzu Motors, Ltd., at the request of its U. S. partner, General Motors, will advance the startup of J-car production by six months to a year, according to reports published here. Isuzu will supply General Motors-Holden's with KD kits for the Australian market, beginning next spring, at the rate of 50,000 a year.

Constitutional issue raised by dealer

High court to review two odometer cases

WASHINGTON. — The Supreme Court has agreed to review two cases involving odometer tampering — one from a used-car dealer who claims he was unjustly convicted, another from a dealer who claims the law that convicted him is unconstitutional.

Little Motor Co., a Georgia dealer and plaintiff in the first case, in 1977 sold a 1967 Chevrolet to Brenda Lee Suits Inc. At that time, the odometer showed 000,073 miles, and Little put "unknown" on the odometer disclosure statement in the sales contract.

Later, Brenda Lee sued Little, claiming Little had attempted to defraud the company on the odometer reading. A Georgia district court found no intent to defraud, and ruled in favor of Little.

The Fifth Circuit Court of Appeals, however, reversed the ruling, finding "no substantial evidence" on behalf of Little, and holding that the district court should have granted Brenda Lee's motion for summary judgment.

Little, in its petition, said the appeals court substituted "its opinion of the evidence for that of the trial court judge and the jury." The company also said that the appeals court was mistaken in using the case of *Ryan vs. Edwards,* from the Fourth Circuit appeals court, as a precedent.

"In *Ryan*, the automobile involved was a four-year-old car that had been advertised in the newspaper by the seller as 'low-mileage pampered family car'," Little said, adding that the car's actual mileage had been 32,000 miles while both the odometer and the odometer disclosure statement said slightly over 13,000 miles. There was an obvious intent to defraud in *Ryan vs. Edwards,* Little claimed, unlike its own case.

- William Thibadeau, petitioner in the second case, was accused with his son Patrick and his business associate, Norman Harris, of violating federal statutes against odometer tampering. The defendants moved for dismissal on grounds that the statutes are unconstitutional "because no federal jurisdictional basis exists for criminalizing intrastate odometer tampering."

District Court Judge Jose A. Cabranes denied the dismissal on the grounds that "Congress may legislate so long as there is a rational basis for finding (the) regulatory schemes necessary to the protection of commerce." William Thibadeau then pleaded guilty, and was sentenced to a one-year suspended jail sentence, three years' probation, and a $20 000 fine.

Thibadeau appealed to the Second District Court of Appeals, which upheld the lower court.

In his petition, Thibadeau claimed that "the government is not required to prove any nexus or impact upon interstate commerce in order to sustain its burden . . . Congress has intruded into a purely state matter over which it has no jurisdiction."

Taking delivery

John H. Schrieffer, second from left, takes delivery of the 50th Chrysler (ninth Imperial) he has purchased. From left are Skip Kellogg, president of Clark Chrysler-Plymouth, Casselberry, Fla.; Schrieffer; Ray Torre, Schrieffer's salesman at Clark Chrysler-Plymouth, and Greg Harvison, Schrieffer's grandson and another Chrysler enthusiast.

GM price increase on '82s averages $617, or 5.8 pct.

Continued from Page 3

ve the quarterly increases of prior years. GM will hold introductory prices as long as possible into the 1982 model year, depending on economic cost increases and competitive factors."

Last year, GM announced introductory prices on Aug. 15 and then raised them on Sept. 30, a few days after the '81 models went on sale. There were additional boosts in January and April.

Increases on 1982 models varied widely. A Chevrolet Chevette two-door hatchback carries a sticker of $5,513, up $253, and a Chevrolet Citation four-door is $6,899, up $376. The boost is $513 on a Buick Regal coupe, now $8,712, and $588 on an Oldsmobile Delta Royale Brougham four-door, now $9,293. A Cadillac deVille two-door went up $904 to $15,249.

All of those models except Chevette have added equipment or product improvements for 1982.

The increase on the Citation X-car and the lack of a boost on the Chevrolet Cavalier J-car reduces the spread between those two classes. At $7,137, a Cavalier four-door is $238 more than an '82 Citation at $6,899. The Cavalier is $614 more than an '81 Citation at $6,523.

The price spread has not helped Cavalier in the early going. Despite its higher tag, Cavalier is smaller than Citation. Cavalier has more standard equipment than Citation, but this point often is overlooked by shoppers comparing stickers.

Buyers will be paying more for optional equipment on the '82 GM autos. Manual air conditioning is up $30-$75, and automatic transmission rose $25-$26. Power locks are $7-$10 dearer, and tinted glass climbed $6-$7.

Other examples: Tilt steering wheel, up $7; intermittent wipers, up $3; rear-window defogger, up $9-$10; cruise control, up $10-$11; power windows, up $13-$19, and power trunk release, up $3-$6.

Olds takes lead in sales per dealer

Continued from Page 1

and finally Chrysler, which dropped to an average of 18 from 26. Last-place Imperial was new to the chart in 1981; it had a 7-per-dealer average.

Oldsmobile Cutlass Supreme again was the top-selling nameplate in terms of sales per outlet, with a 44-unit average. A year earlier the nameplate averaged 39 and tied with standard Cadillac. First-half second place was Cadillac at 43. Plymouth Reliant was third at 38, followed by Chevrolet Chevette at 37 and Buick Skylark and Regal, tied for fifth at 36 each.

Oldsmobile Cutlass was sixth at 34, Ford Escort was seventh with a 32 average, followed by Plymouth Horizon and Dodge Aries, both at 30, and Chevrolet Citation at 29.

Nameplate leaders by market segment were: Chevrolet Chevette (subcompact), 37; Plymouth Reliant (compact), 38; Oldsmobile Cutlass Supreme (intermediate), 44; standard Oldsmobile (standard), 38, and standard Cadillac (luxury), 43.

Best-selling nameplates by make were as follows: Cutlass Supreme (Oldsmobile); Chevette (Chevrolet); Skylark/Regal (Buick); Escort (Ford); Grand Prix (Pontiac); Reliant (Plymouth); Aries (Dodge); standard Cadillac (Cadillac); Lynx (Mercury); Concord (AMC); Mark VI (Lincoln), and LeBaron (Chrysler).

Dealer discount pared, too

GM hikes '82 prices by $617, or 5.8 percent

By John K. Teahen Jr.
Managing Editor

General Motors has found perhaps the best way of all to stimulate sales of 1981 cars in dealers' hands:

Announce a tremendous price increase on the 1982 models which will be virtually unchanged from the present ones.

GM has done just that. It has posted tentative introductory prices for 1982 which are up an average of $617, or 5.8 percent, from comparable 1981 units.

GM also has cut the dealer discount rate for 1982 as part of its new floor-plan assistance program. The cuts amount to one percentage point on Chevrolet Chevette and Pontiac T1000 and 1.3 percentage points on all other cars.

The floor-plan program (AUTOMOTIVE NEWS, Aug. 10) includes a surcharge on the dealer invoice. GM said it is a temporary measure designed to cope with high interest rates and that "the discount structure will be readjusted accordingly" when interest rates return to more normal levels. Discounts on optional equipment are not changed.

Prices were announced early because GM will permit preselling of most 1982 models before the official introduction dates of Sept. 24 and Nov. 12. No prices have been listed for the new Camaro and Firebird and the new front-wheel-drive A-car intermediate lines which are slated to arrive Jan. 14.

Prices of the J-cars were not increased. The J-cars — Chevrolet Cavalier, Pontiac J2000 and Cadillac Cimarron — were introduced in May as 1982 models.

The GM hike consists of three parts — $404 on base sticker prices, $103 on options for the average-equipped car and $110 for what GM called "product improvement."

GM didn't include the product improvement segment in its announcement. It said the hike was $507, or 4.8 percent.

In reply to queries, GM said "product improvement" consists of such things as electronic fuel injection, automatic transmission torque clutch converter, high-pressure tires, more corrosion protection and drag-free brakes. These features appear on selected models.

GM provided no lengthy explanation of its price hike, as it sometimes does. The corporation said simply that the boost "is substantially less than GM's cost increases for material and labor which have exceeded 10 percent annually."

• The huge increase ($617) could backfire on GM if its competitors decline to go along. The other domestic makers and the imports haven't acted as yet on 1982 prices.

GM's action also could have a very adverse effect on the domestic industry's efforts to climb out of the sales doldrums in the '82 season. Prices (of '81s) are already high, and sticker shock has been cited by countless shoppers for their no-buy decision.

GM didn't mention an average price of its average-equipped car for '82, but the arithmetic involved puts it at $11,255.

The $617 boost follows a year of heavy increases by GM. The average hike on 1981 cars was $914, capped by a $351 bump in April. Adding the latest $617 means that GM's prices for '82 are an average of $1,531 higher than they were at the end of the '80 model year.

There is also an average hike of $45 in destination charges for '82 models.

As noted, prices of the J-cars were not increased, but this hold-the-line action was not factored into the overall rise. If it had been, the corporate boost would have been less than $617. Perhaps the J-cars were omitted from the reckoning because they are already '82 models.

How firm are these tentative introductory prices? A GM spokesman said there may be some minor realignments on individual models before introduction, but dealers are price-protected at the tentative levels for fleet business and retail sales, so there will be no impact on sold orders.

GM is abandoning one maneuver it has used in recent seasons: Interim pricing.

A spokesman said last week, "GM does not intend to contin-

'82 Futura ready for the road

The first 1982 Ford Fairmont Futura prepares to roll off the line at Ford's Kansas City assembly plant. The driver, A. L. Whiteman, Division fleet, leasing and rental manager, stands to the right, while Bill Steufer, left center, and president of UAW Local 249, climbs aboard. Paul Nolan, plant manager, is at far left. For the 1982 model year, Fairmont and its Futura have been consolidated into a single three-car series, Futura.

GM freight charges to be same for all U. S.

DETROIT. — The $45 average hike in destination charges is not the only change in General Motors' shipping fees for 1982.

The company also is equalizing its destination charges, making them the same for dealers throughout the U. S. (except Alaska and Hawaii) on a specific model.

On many lines, it will mean considerably higher charges for dealers (and customers) close to the Detroit area. Dealers farther from Detroit also will be paying more because of the $45 boost, but their fees will be the same as those of the near-Detroit dealers.

In the past, destination charges varied by the dealers' distance from a "central zone," which differed for each car division. In effect, the central zone was the division's headquarters.

The new GM move extends to all car lines a practice that was adopted on '81 models for Chevrolet Chevette, Pontiac T1000, the X-cars, the J-cars and Corvette.

On '81 models, the destination charge on a Chevrolet Caprice was $308 in Detroit and $435 in Los Angeles. For '82, it will be $460 for each. On an '81 Monte Carlo, the charge was $306 in Detroit and $363 in Los Angeles. For '82, it will $399 for each.

GM said destination charges consist of three ingredients: Shipping parts to assembly plants, shipping the completed cars to dealers and buying the protective devices to cover the cars in transit. GM said destination charges to dealers recover these costs and represent no profit to the corporation.

Destination charges also play a part in retail prices since the dealer must recover his costs in pricing his cars.

Going public with newly created 'umbrella'

DeLorean files stock prospectus

By Edward Lapham
Financial Editor

John Z. DeLorean's empire is going public.

The former General Motors executive, who has started his own auto company and is now selling Belfast-built stainless steel sports cars, has filed with the Securities & Exchange Commission a preliminary prospectus for the sale of 2.25 million common shares in the recently created DeLorean Motors Holding Co.

The preliminary prospectus said the price of the stock when issued will be between $10 and $14, probably $12.50 per share.

The holding company, formed in May, will become the copporate parent of DeLorean Motor Co., and in turn of its subsidiaries, DeLorean Motor Cars, Ltd., which builds DeLorean sports cars in Northern Ireland, and Composite Technology Corp., which is developing the Elastic Reservoir Molding process.

The prospectus, like others DeLorean has used to generate capital through startup companies, carried the obligatory warning that "investment in the common stock involves a high degree of risk and should be considered only by those who can afford a total loss of their investment."

Bache Halsey Stuart Shields, Inc., is listed as the underwriters.

The current restructuring of the DeLorean empire seems to have two basic effects. First, it takes a rather complex structure and imposes another level of complexity (See AUTOMOTIVE NEWS, Feb. 5, 1979).

Secondly, the restructuring pushes a more consolidated control — financial and organizational—up the organization chart and under the aegis of the holding company.

As part of the restructuring, DeLorean Holding will acquire 9.95 million of the 10.0 million DeLorean Motor Co. shares held by DeLorean Mfg. Co., formerly John Z. DeLorean Corp., in exchange for 9.95 million shares of DeLorean Holding shares.

The holding company also will acquire at least 85 percent of the outstanding 1.4 million common shares held by car dealers and the additional 2 million common and 99,995 shares of $8 cumulative convertible preferred stock outstanding.

The third step of the restructuring is for the Northern Ireland Development Agency, which contributed $36.3 million to the project, to exchange 10 percent of its Class A preferred stock in DeLorean Motor Cars, Ltd., for 700,000 shares of DeLorean Holding common stock and convert its option to acquire DeLorean Motor Co. stock for an option to acquire DeLorean Holding stock.

The final step is to acquire 85 percent of the DeLorean Research, Ltd., partnership for up to 2.7 million shares and $17.25 million. DRLP contributes $15.5 million to the venture and currently holds rights to the sportscar and the ERM process. Under the terms of the agreement, the company must pay certain royalties to the partnership.

Sorting out the various new relationships, the result is that John Z. DeLorean will own 100 percent of CRISTINA, a Nevada corporation. CRISTINA owns 100 percent of DeLorean Mfg. Corp., formerly John Z. DeLorean Corp., which will own 49 to 51 percent of the new DeLorean Motors Holding Co., which will own DeLorean Motor Co. and its subsidiaries. If all options are realized, John DeLorean will own 49 percent of the venture.

Also disclosed in the prospectus were salaries for the five top-paid company executives during the fiscal year ended Nov. 30, 1980.

Eugene A. Cafiero, DeLorean Motor Co. president was paid $375,000. Thomas W. Kimmerly, executive vice president, $133,509. Charles K. Bennington, former managing director of DeLorean Motor Cars, Ltd., was paid $218,877. C. Richard Brown, vice president, was paid $172,038. Pursuant to an employment consulting contract, DeLorean Mfg. was paid $443,555 for the services of John Z. DeLorean.

The company said $20 million of the anticipated $28.125 million offering will be used for capital projects like developmental work on the sedan; $3.1 million would be used as part of a scheduled payment to the partnership and $2.4 million will be used to pay certain restructuring process fees.

Only 60 for sale in U. S.

Aston Martin's Sport Coupe, the company's first new car in the U. S. in more than two years, is based on the V-8 Coupe but has a new rear-end treatment, revised bumpers and a new hood. Power is provided by a 5.4-liter aluminum V-8 with four overhead camshafts and four twin-barrel carburetors. The interior combines leather and wool pile carpeting with burled walnut trim. The Aston Martin lineup ranges in price from $95,000 to $116,000. The new coupe, either as convertible or hardtop, will be imported in numbers totaling only 60 in 1981.

Grant from GM

EDMONTON, Alta. — General Motors has awarded a $15,000 grant to the University of Alberta to conduct analytical studies of acoustic absorption in vehicle interiors.

Cross-suits settled; Series III debut advanced

Clenet teeters on legal tightrope

By Kathleen Hamilton
News Editor

The two stockholders of Clenet Coachworks have reached a settlement on lawsuits they had brought against each other, thereby avoiding Chapter 11 reorganization and providing funding for the launch of the Series III 1930s-styled luxury roadster.

The negotiated settlement calls for an increased share of the company for the minor stockholder, S. Prestley Blake, who made his millions as one of the founding brothers of the Friendly Ice Cream Corp. chain of restaurants. His son, Ben, is his partner in the Clenet venture.

Their share was increased from 25 percent of the stock to 49 percent, the result of the capitalization of "a very substantial amount" of the short-term loans Blake had made to Clenet.

Alain Clenet, major shareholder in the privately-held firm which bears his name, said the agreement will provide sufficient funds for the production of the Series III, and he will not seek an additional investor in the immediate future.

The core of the dispute between the partners differs according to who is telling the story. A representative for Blake claimed it centered on Clenet's failure to pay interest on the notes Blake held, and Clenet's failure to pay any rent on the new, $4.5 million assembly plant in Goleta, Calif.

Clenet's representatives claimed Blake was trying to seize control of the operation by calling all his investments in just as the company was tooling up for its new line.

Blake had reneged on his agreement to bankroll the operation, they said. And they disputed Blake's claim to full ownership of the assembly plant, even though Blake held title to the land.

The out-of-court settlement spells out terms—"favorable to the company" — of a 29-year lease for the plant, according to Clenet corporate attorney Anthony Romasanta.

Alain Clenet said both parties have agreed to drop their litigation.

This puts an end to the court-ordered attachment of more than $1.66 million worth of Clenet assets as security for loans and a payment of $290,000 to Volkswagen which Blake made for the firm.

Clenet representatives said the firm had gone so far as to draw up Chapter 11 papers and was prepared to file for reorganization in U. S. Bankruptcy Court in an attempt to keep Blake from seizing the assets.

Alain Clenet said the negotiated settlement will void the possibility of Chapter 11 proceedings.

Still, court documents show the company's financial picture as far less shiny than Clenet officials have portrayed to the press. For example, The Santa Barbara News-Press reported Aug. 8 that the presiding judge in the case, Patrick McMahon, found the company was in trouble in 1980. July, 1980, assets were put at $2.1 million, outstanding loans at $1.15 million, and stockholders' equity at a negative $13,000.

In November, 1980, Blake provided $1 million so the company could meet its monthly payroll, according to Blake's attorney, Chuck Bargiel. It was the last loan Blake made to the company.

Court documents filed by Bargiel put Blake's total investment in the firm at $5 million over 1½ years, although a source close to Blake put the total at $7½ million.

A spokesman for Blake said he had received no interest during 1½ years on loans of $2.5 million, and had received no rent in the 11½ months since

Sales increases reported by all domestic makers

By Jenny L. King
Staff Writer

Domestic new-car sales took a definite turn for the better in early August, with all U. S. makers reporting retail increases. Sales totaled 154,572, up 31.00 percent from the year-ago 117,996, as incentives, special interest rates and customer rebates began to take effect.

General Motors led the advance with a 33.86-percent improvement. Its five divisions turned in 100,811 sales compared with 75,310 in 1980. Ford Motor Co. reported an increase of 24.75 percent, going to 30,036 from 24,076.

Chrysler Corp. sales numbered 17,009, up 24.32 percent from 13,682 last year. Volkswagen of America retailed 2,816 new Rabbits, up 3.23 percent from 2,728, while estimated sales of American Motors passenger cars totaled 3,900, up 77.27 percent from 2,200.

GM increased its share of the domestic market to 65.22 percent from 63.82 percent last year. Ford saw its segment shaved to 19.43 percent from 20.41 percent. Chrysler slipped to 11.01 percent from 11.60 percent. AMC's estimated share was 2.52 percent, up from 1.86 percent, and VWoA dropped back to 1.82 percent from 2.31 percent.

Every make except Chrysler showed a sales gain Aug. 1-10. Mercury was up 56.58 percent; Oldsmobile was up 56.52 percent; Plymouth was up 39.38 percent; Pontiac was up 37.23 percent, and Dodge was up 36.32 percent.

Buick sales were up 35.02 percent; Chevrolet was up 25.00 percent; Ford was up 16.95 percent; Lincoln was up 9.01 percent, and Cadillac was up 5.75 percent.

EPA considers a formula to adjust mileage numbers

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — The advertised mileage of new cars may be closer to reality in the years ahead if EPA goes ahead with a plan it has under consideration to adjust these numbers, based on actual road experience.

Mileage claims have long been a sore point with the agency and consumers alike because experience has shown that few if any motorists are able to achieve them in actual use.

The EPA, which tests for mileage under very special procedures, warns car buyers in its mileage booklets that the numbers listed may not necessarily be the mileage the buyer will achieve and that they should be used for comparative purposes only, but complaints still pile in.

Hoping to rectify that situation, the agency early on went from reporting both a city driving MPG estimate and a highway driving MPG estimate to reporting only a city driving MPG estimate. It found however, that even this number, while more accurate, was not infallible and of limited use.

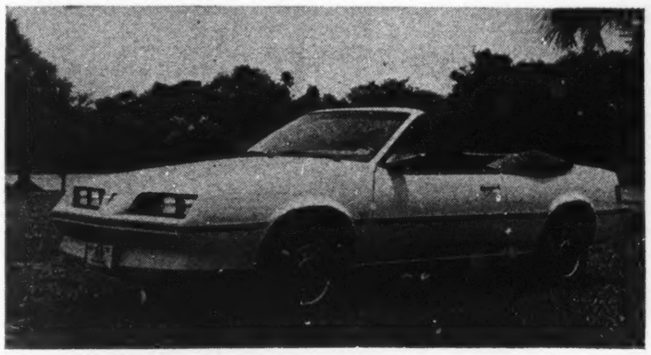
Now the agency has under consideration what it hopes will be the final answer to this problem, the application of road adjustment factors in the range of 0.8 to 0.9 to compensate for the normal 10-to-20-percent mileage shortfall in EPA estimated fuel economy.

According to studies done by the agency, application of the road adjustment factors would make the city driving number accurate within plus or minus 2 MPG for 70 percent of the city driving population.

EPA says 33 percent city driving MPG experience now falls more than 2 MPG below the EPA city value.

In highway driving conditions, application of the adjustment factors would make the EPA highway number accurate for more than 60 percent of all drivers, whereas no more than 3 percent now achieve a highway mileage figure within 2 MPG of what the EPA says the vehicle should achieve.

EPA expects to reevaluate the road adjustment factors on a yearly basis, given that new technology is always being developed and that the adjustment factor should recognize this.



J2000 loses its top

A convertible conversion for the Pontiac J2000 has been designed by Coach Builders Limited, Inc., Ft. Lauderdale, Fla., and is now in production. The conversion features reinforced body, padded roof, safety glass in rear and side quarter windows and CBL's special top system. CBL-designed Pontiac J2000 convertibles also are available from Armbruster/Stageway, Inc., Fort Smith, Ark., and from Compliment in Camanche, Ia.

Three-wheel minicar Cub to reach market this fall

A three-wheel minicar with room for two people and several parcels and which gets from 60 to 80 MPG will be produced by Convenient Machines, Inc., a New York corporation, beginning this fall.

The diminutive commuter car, called the Cub is the brain child of Richard Arbib, whose futuristic Time & Space car created a sensation back in 1956 at the International New York Automobile Show.

Convenient Machines, Inc., is involved in a $76-million coventure with the Sui Tong Corp., a Taiwan-based operation which encompasses seven sister companies, according to Sam Mizrahi, president of Convenient Machines.

"We hope to produce 10,000 Cubs our first year," he said. "They will begin arriving in the U. S. around the first of December."

The Cub, because it has three wheels, is classified as a motorcycle, he said. "It has passed all government safety requirements," he said.

Power is provided by a 300cc Honda-built engine.

"We recently sent letters about the Cub to new-car dealers in several East Coast states and had 400 replies. About three dozen already have signed up to sell them," he said.

Convenient Machines commissioned Arbib to design a small economy car. The resulting 91-inch, 600-pound Cub features an aerodynamic high-strength fiberglass body and welded steel frame with built-in roll bar.

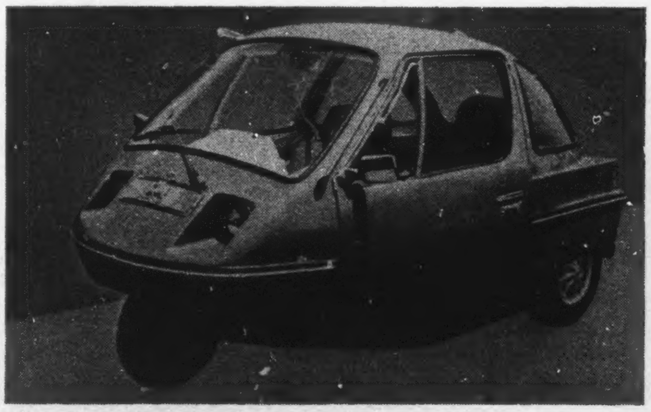
A four-cycle gas engine and two-speed automatic transmission, electronic ignition and rack-and-pinion steering are standard. Full-size doors make entrance and exit comfortable.

• The three-wheeler, with a pricetag of $3,945, has a lockable hatchback at the rear, fully operable windows and vents, vinyl and woven fabric interior, plus carpeting in the passenger area. Cargo capacity is 8 cubic feet.

The instrument console features a tachometer, speedometer, fuel and amp gauges. An optional hi-fi AM-FM stereo radio and tape deck system with twin speakers can be ordered.

Exterior features include a full perimeter neoprene bumper, two-speed windshield wiper, dual sealed-beam headlamps and three-stage taillights. The Cub is available in six colors.

Convenient Machines, Inc., intends the mini car to be used primarily for in-town and short distance traveling, like home-to-work trips, for shopping and errands. The company claims its product has pickup and passing speed acceleration that are more than adequate for normal traffic flow.



Three-wheel wonder

Designed to carry two commuters in comfort, the three-wheel Cub, from Convenient Machines, Inc., New York, features a lockable hatchback covering eight cubic feet of cargo space. With a pricetag of $3,945, the mini car will go into production this fall, with units available through dealers by the end of the year.

All the luxuries of home

Two 60-by-90-inch walk-in sleepers have been introduced by Marmon Motor Co. for its conventional trucks. The raised-roof design improves aerodynamics and provides stand-up room for persons up to 6 feet 4 inches. Options include two built-in cabinets, air conditioning, color television, stereo, AM/FM radio and tape player, microwave oven, toilet and closet space.

truck industry news

Totals off sharply in all market segments

July sales down 18.2 pct. from 1980

Retail sales of new trucks of all types in the U. S. in July dropped 18.2 percent below the year-earlier total, and the seven-month count was off 11.6 percent, according to preliminary reports.

During the month, franchised dealers and factory outlets retailed an estimated 191,066 units, compared with 233,681 in July, 1980. The seven-month total of 1,389,905 units was off 11.6 percent from last year's 1,572,881. Estimates include sales of the non-captive Japanese compact pickup trucks.

In July, sales were down significantly from a year ago in all three market segments, with heavy trucks hurting the most from a percentage standpoint.

Light-truck sales totaled 169,617 units, a decline of 19 percent from last year's 209,270. Mediums were down 15.7 percent, from 8,999 a year ago to 7,590, while the heavies were off 20.4 percent to 13,859 units, compared with 17,412 in 1980.

Going into August, the number of unsold trucks in retailers' inventories was about 1,000 units fewer than at the same time last year.

The Motor Vehicle Manufacturers Assn. reported that inventories totaled 550,123 units at the end of July, compared with 551,352 in 1980.

Light-truck stocks were up 5 percent, from 464,469 vehicles in 1980 to 487,872 on Aug. 1. Mediums totaled 23,114, down 30.7 percent from last year's 33,404. Heavies were off 26.9 percent, from 53,479 a year ago to 39,107.

Table on Page 22

Sales of compact pickup trucks in July dropped 20.5 percent below the year-ago total, with declines for both captives and non-captive imported nameplates.

During the month, dealers retailed 38,370 units, compared with 48,276 last year. Sales of the captives totaled 10,957 units, down 42.8 percent from the

V-6 now standard in F-100

Ranger's base engine a 2-liter 4 from Brazil

By Jack Walsh
Truck Editor

A new 3.8-liter V-6 engine will be the standard power plant in Ford's F-100 full-size pickup trucks for 1982, while a modified 2-liter, four-cylinder unit built in Brazil will be the base engine in the all-new Ranger compact pickup.

The optional power plant in the Ranger, which will be introduced next March as a 1983 model, will be a 2.3-liter, four-cylinder unit produced at Ford's Lima (O.) engine plant.

In the F-100 models, the 4.9-liter I-6 will remain the base engine in California and will be an option elsewhere.

A four-speed manual transmission from Japan's Toyo Koygo, which builds the Courier, will be the standard transmission in the Ranger. A three-speed automatic and a five-speed manual, also from Toyo Koygo, will be optional.

The new SelectShift automatic transmission with locking torque converter that increases fuel economy by reducing slippage will be available with the 3.8-liter V-6 and 4.2-liter V-8 engines in the full-size F-Series trucks.

The F-Series engine lineup also will include the 5.0, 5.8 and 6.6-liter V-8s.

• Also new for 1982 will be a specially equipped short-wheel-base Styleside F-100 with a mileage rating which Ford expects to exceed the fuel-economy label leader (21 MPG) among its 1981 pickups.

The F-100 mileage leader, which has a restricted option list, will have the 4.9-liter I-6, a four-speed manual overdrive transmission, 2.47 axle ratio and a front spoiler.

Among the major functional improvements is a stamped front axle with camber adjustability, standard on the Ranger, F-100 and F-150 models.

Trim levels on F-Series trucks have been redesignated. They now are standard, XL, XLT Lariat and XLS models. All models will have a new grille

Top speakers slated at Truck Symposium

TEANECK, N,J, — Sixteen leaders from industry and academia will discuss the global status and future of heavy-duty trucking Sept. 24-26 at the 1981 World Truck Symposium & Exposition at Cobo Hall in Detroit.

The combined symposium-exposition, designed to focus on the international challenges and opportunities confronting the industry in the decade ahead, is co-sponsored by the Motor & Equipment Manufacturers Assn. and the American Trucking Assn.'s Maintenance Council.

The admission-free exposition will feature the latest products and services by hundreds of vehicle, component, accessory and equipment manufacturers, and related firms. Hours of the exposition will be noon to 5:30 daily.

The symposium will consist of a daily general session from 9 a.m. to noon. Each session will be devoted to a specific theme.

Each afternoon, two executive forums, which are extensions of the general sessions, will be held from 1:30 to 3 p.m. and 3:30 to 5 p.m. Six major topics will be discussed at the forums: Fuel, world highways, maintenance, capital management, human resources and trucking's image.

• Following are the daily symposium times, speakers and the executive forum topics:

Thursday, Sept. 24: General session theme: The Economics of the Trucking Industry. Speakers — M. Anthony Burns, president, Ryder System, Inc; Dr. William K. Hall, professor, Uni-

Swingout spare

The "E-Z Spare" swingout tire carrier holds the tire in a steel cradle which is connected by a swiveling arm to a cranking mechanism mounted to the frame of pickup trucks, according to Cook's, Inc., Algona, Ia., U. S. distributor. The carrier is designed to fit most domestic and imported pickups.

More robots and new design strategy to aid S-truck assembly

Quality factored into new GM plant

PONTIAC. — At GMC's S-truck plant here — one of three General Motors plants building the first GM domestic compact pickup — product quality is the No. 1 priority.

Containing nearly 1.4 million square feet of work space, the facility includes a body shop, paint and final assembly line. Ultimately, the S-truck will be built on two shifts here, employing about 1,700 workers.

The unique net design of the S-truck, combined with a high degree of welding automation, will help assure that the S-truck will be a quality-built vehicle, according to Robert W. Truxell, GMC general manager.

"The net-design concept allows parts to mate together the same way each time with no tolerance buildup," he said. "Each part contains gauge holes that will line up accurately and consistently during the assembly process."

Common clamping points are designed right into the parts to mate exactly with the clamping fixtures used during assembly for joining sheet metal to insure good fits in the final product.

• In the body shop, 23 robots and 12 automated welders perform 87 percent of the total required welds to the pickup cab and box. Tabs and slots are used for precision pre-assembly of the pickup box, and the box's welded construction is fully automated to help insure quality net design.

All automated welding machines and robots have their own programmable logic controller (PLC) for smooth product flow and to help reduce machine downtown.

The entire body shop will be monitored by computer to alert maintenance personnel immediately of machine problems, Truxell said.

A central equipment-monitoring computer is being connected to each piece of equipment. The programs that run the robots and welding machines will be stored in each PLC control memory as well as the central computer.

If the individual programmer control should "forget" what to do, Truxell explained, the central computer can reprogram the welding machine or robot to refresh its memory, thus

Robots at work in S-truck plant

These are some of the 23 robots at the GMC S-truck plant body shop in Pontiac, which, along with 12 automated welders, perform 87 percent of the required welds to the all-new compact pickup's cab and box.

Volvo unit seeks $1 million bond for White branch

BALTIMORE. — Volvo White Corp., a subsidiary set up by AB Volvo of Sweden to run White's heavy-truck business, has asked Baltimore County to issue a $1 million industrial revenue bond for the operation of a White sales and service branch near Dundalk.

In exchange for the proposed bond, the company said it would retain all 24 hourly workers at the White facility.

A county spokesman noted that requests for industrial bonds are fairly common when new industry moves into an area because they enable a firm to reduce its borrowing costs by taking advantage of local government powers to off tax exemptions and low interest rates.

The Swedish truck builder's offer to buy White Motor Corp.'s truck - manufacturing business for about $75 million, is awaiting approval by the U. S. Bankruptcy Court. Hearings on the proposal are scheduled this week in Cleveland.

CONVERTIBLE CONVERSIONS OF THE MERCEDES-BENZ 280 CE & 300 CDs

All market segments decline

July truck sales drop 18 pct. below '80 level

Continued from Page 10

year-earlier 19,167. The non-captives were off 5.6 percent, from 26,438 to 24,966.

For the first seven months, compact sales declined 8.6 percent from a year ago, 290,743 units versus 318,017.

Seven-month sales of the non-captives, however, showed a small gain over a year ago. They were 1.1 percent higher, from 162,453 in 1980 to 164,215.

The captives' total through July was 106,180 units, a decline of 24.1 percent from the year-earlier 139,804.

The captives are the Ford Courier, Chevrolet LUV, Dodge Ram 50 and Plymouth Arrow. Non-Captives include Toyota, Datsun, Mazda and Isuzu.

Retail sales by Big Three dealers and factory outlets in July dropped 20.4 percent from the previous year, 145,973 units versus 183,272. The seven-month count was off 13.8 percent, from 1,264,268 a year ago to 1,089,514.

• During the month, Ford boosted its lead over Chevrolet by almost 6,000 units, and its margin at the end of seven months grew to slightly more than 21,000.

Ford dealers sold 60,774 trucks in July, down 20.1 percent from last year's 76,083. The total included 4,696 compact Courier pickups, compared with 6,716 in 1980.

The seven-month count was 442,649 units, a decline of 10.6 percent from the year-earlier 495,062. Through July, dealers retailed 39,350 Couriers, compared with 46,793 a year ago.

Chevrolet reported that its dealers sold 54,865 vehicles during the month, a drop of 13.1 percent below last year's 63,125. The count included 3,936 compact LUV pickups, versus 6,581 in 1980.

Through July, Chevrolet sales totaled 421,399 units, a decrease of 13.2 percent from the previous year's 485,550. The LUV count dropped from 54,302 units a year ago to 43,340.

Chrysler-Plymouth and Dodge dealers retailed 16,070 trucks in July, off 35.2 percent from last year's 24,782. The seven-month total of 117,374 vehicles was down 27.3 percent from the 161,413 sold in 1980

• July sales of the Dodge Ram 50 compact pickup totaled 1,755 units, down substantially from the year-ago 4,246. The seven-month count dropped from 26,634 a year ago to 17,601.

Sales of the Plymouth Arrow compact pickup also were off dramatically for the month and January-July period. In July, only 570 units were sold, compared with 1,625 a year ago. The seven-month total was off from 12,075 to 5,889.

GMC dealers and factory outlets retailed 14,264 trucks during the month, a decline of 26 percent from the year-earlier 19,282. Through July, the total was 108,092, off 11.6 percent from the 122,243 sold in the same period in 1980.

Sales of four-wheel-drive Jeep vehicles were down for both the month and calendar year. July sales totaled 6,658 units, off 15.5 percent from the year-ago 7,882. Seven-month deliveries dropped 24.1 percent, from 49,444 units to 37,510.

For the first time this year, monthly sales of Volkswagen compact pickups failed to exceed the count for the year-earlier period.

In July, 2,447 units were retailed, a decline of 8.4 percent from the 2,671 sold in July a year ago. The seven-month count, however, was 29.1 percent higher than last year, 20,348 units versus 15,760.

Dealers sold 279 Mercedes medium and light-heavy trucks during the month, a decline of 16.2 percent from the year-earlier 333 units. Through July, the count was 2,110, off 5 percent from the 2,220 sold in the same period in 1980.

Toyota dealers retailed 12,501 compact pickups in July, a decline of 13 percent from last year's 14,365 units. The seven-month total was down 7.5 percent, from 86,467 a year ago to 79,948.

Sales of the Datsun compacts were off in July but up slightly for the seven months. July deliveries totaled 9,602 units, down 14.8 percent from the year-ago 11,271. Through July, the count was 70,889, compared with 70,546 in 1980.

Dramatic increases for both the month and the January-July period were reported for Mazda. Dealers sold 1,420 pickups in July, up 77.1 percent over last year's 802, and 9,559 units through July, a gain of 75.3 percent over the year-earlier 5,440.

Sales of the compact Isuzu pickups, which were not introduced until the second quarter, totaled 1,443 units in July, bringing the year-to-date count to 3,819.

Peugeot adds 2 dealers

LYNDHURST, N. J. — Peugeot has added two dealers. They are Steve Hull Ford, Wichita, headed by Stephen L. Hull, and Bob Dance Dodge, Longwood, Fla., owned by Robert M. Dance.

EVA
2¢ PER MILE
70 MPH

YOUR FUTURE HAS ARRIVED.

The electric car America has waited for is here. Now. The EVA EVcort. It is no toy.

The EVcort is the first high-performance, production model electric car in America. It is a substantial vehicle. With everything Americans expect from any car—comfort, styling, safety, speed.

• Range—60 to 100 miles on one charge, depending on speed and conditions. • Operating cost: 2¢ per mile. • Top speed: 70 mph.

For years, we have been successfully selling the EVcort—and other electric models—to business, industry and the government. Now we're ready to sell to the consumer. We think the consumer is ready to buy.

If you agree, please contact us. Because we're looking for a few good dealers who can recognize the future when it arrives.

Contact: Marc P. Girod, Marketing Manager, Electric Vehicle Associates, 9100 Bank Street, Cleveland, Ohio 44125. 216-524-8418.

Domestics up ante for ad spending

By Joseph Bohn
Marketing Editor

The domestic car companies, with the exception of General Motors, upped the ante on advertising in 1980 with expenditures of nearly $800 million.

Special circumstances called for big spending, particularly at Ford Motor and Chrysler Corp.

Chrysler Chairman Lee Iacocca's TV appearances to build confidence in his struggling company cost nearly $40 million, swelling Chrysler's total expenses by 27.44 percent over the previous year.

Meanwhile, both Ford and Chrysler were spending heavily to introduce new models, promote rebate campaigns which ran in tandem with regular product pitches, and fight off soaring import penetration as well as a generally flat sales market.

General Motors, however, shaved advertising costs, partially because several divisions, including Chevrolet, Pontiac and Cadillac, saved part of their normal fall funds for the splashy spring effort on behalf of the J-cars, reported to have cost about $50 million.

The 1981 J-car effort, coupled with introductions of new models this fall, should swell GM's budget sharply this calendar year, when the final tally is made.

Overall, domestic car firms spent $791,751,000 in advertising and promotion last year, according to Advertising Age, up sharply from the $701,002,600 of the previous year.

Tops in terms of increases was Ford whose $279,832,100 outlay was up 30.15 percent from $215,000,000 in 1979. Ford accounted for 35.34 percent of domestic spending compared with 30.67 percent the previous year.

Chrysler's expenditures shot up 27.44 percent, reaching $150,-

Lincoln-Mercury's downsized 1982 Continental will be positioned as the ultimate in contemporary status symbols and "the most unconventional Continental in 40 years."

Luxury gets a lift at L-M

By Joseph Bohn
Marketing Editor

The stylized touch of Lincoln-Mercury's advertising continues this fall, with ads aimed at promoting the image of fuel-efficient, well-crafted and highly contemporary cars.

Notably new is a special Lynx effort in women's publications, a special Capri and LN7 push in college publications and new dealer association ads, different from the factory's and geared to the local level hard sell.

Generally, L-M will put most of its effort on luxury cars, particularly Continental, at one end of the market and small cars on the other, with lesser emphasis in the fourth quarter on Zephyr, Cougar and XR-7.

Dealer groups that have a good market for these cars can heavy up advertising on them, with specially created ads, and there are special spots for Lynx, Capri, Marquis and Lincoln Town Car, as well.

As Ad Manager John Vanderzee noted, the division's budget is only so big, and it now has 10 lines of cars to market. Therefore, associations are being counted on to carry some of the load.

Overall, L-Ms budget is about even with last year's, with two-thirds in TV, about one-third in magazine. There is no radio, and some Wall Street Journal newspaper.

Some money has been diverted from advertising into heavier merchandising and public relations on the Continental. It will be displayed at airports, at the American Realtor's convention, in fashion shows (Saks, I. Magnum), tied into designer Givenchy's fall line and appear in opera brochures.

Small cars

The Lynx cat is still trotting through a surrealistic desert setting this fall, its "search for quality" leading it to a "new kind of American car . . . built to give . . . more than just exceptional fuel economy."

The new five-door Lynx,

Continued on Page E-32

Cadillac seeks new buyers

By Joseph Bohn
Marketing Editor

Cadillac Division, seeking to broaden its appeal, particularly among young professionals, is making a bigger TV pitch this fall.

"We're fishing in a bigger pond," said Richard Welday, national merchandising manager.

Cimarron, as the big drawing card, will get disproportionately heavy advertising support, Welday confirmed, as Cadillac seeks to capitalize on its traffic-building success.

Even with its push for new buyers, the division will continue to tout its heritage and address buyers "who have been brought into our showrooms and ownership of our cars . . . over the years" with the overall '82 theme, "Best of all . . . It's a Cadillac," Welday said.

As part of its "dramatic" shift into TV, Cadillac will devote 64 percent of the fall budget to programs like "20/20," AMC's "Nightline," NFL Football and five-day-a-week early and late news broadcasting, compared with 50 percent TV last fall.

The NFL Football sponsorship begins in late September and continues right through fall into the playoffs and the Super Bowl.

With its budget up only marginally to offset inflation, Cadillac shifted money out of magazines to pay for the TV. It will use about 16 publications to introduce its regular Eldorado, deVille and Seville lines, down from 30 last fall. These overlap somewhat with the same 15-magazine schedule on Cimarron, first used to introduce that car, being used again.

Cimarron will have its own TV commercial, heavily oriented toward performance in the mode of BMW.

The car line itself will continue to be refined throughout '82, with running modifications based on results of consumer clinic tests of its strengths and weaknesses.

The first conspicuous change will be the introduction of a

Pentastar image rises at Chrysler

By Joseph Bohn
Marketing Editor

HIGHLAND PARK, Mich. — More corporate identity and greater brand awareness are Chrysler's goals for '82, although company merchandising and advertising appear to be taking separate routes to achieve them.

On one hand, K-labels are physically coming off Aries and Reliant. Even the Aries and Reliant name insignia is being removed from the sides of those cars, although it will still be featured in back.

Where the K-label was once prominent on the rear right side, Chrysler is substituting a mammoth colored Pentastar to draw attention to corporate identity, as the cars move down the road. (Other Dodge and Plymouth models will feature the Pentastar, as well.)

On the other hand, Chrysler's advertising agency appears to be intent on retaining "K" as a reference in some '82 ads.

Some at Chrysler felt that if the K-label had attained a good reputation and lots of public awareness, why drop it? And if "K" is good, what's wrong with a Super K?

But top officials apparently are afraid to have the K-label rub off on the new Dodge 400 and Chrysler LeBaron, which they are anxious to present as all-new '82 models, the "first front-wheel-drive, mid-size cars" in their class.

So, after a hundred million dollars of publicity, "K" appears to be destined for obscurity, although it will hang on for a time.

• Overall, Chrysler is returning to a more normal ad format this fall. No one set of cars will dominate advertising, the way Aries and Reliant did last fall, and media has been restored to a more balanced mix.

Instead of TV grabbing 85-90 percent of the budget, there will be about 60 percent TV, 25 percent magazine, 10 percent newspaper and 5 percent radio in the schedule, according to Chrysler advertising sources. (This mix does not include dealer co-op funds.)

Ad dollars also have been redistributed to give imports and trucks a fair share, rather than putting all the money into domestic cars, as happened last year during Chrysler's fight for survival.

Chrysler's recent creation of separate Import Sales Operations and Truck Sales Operations staffs, each with its own group of 100 people and separate marketing budgets, guar-

*—GM's total expenditures in 1980 were $316,000,000, according to Advertising Age, down 2.29 percent from $323,395,900 the previous year. However, these included component divisions and other expenditures.

"Unmeasured" includes dealer association funds for Ford and Lincoln-Mercury, as well as other expenditures like sales promotion. In the case of Chrysler-Plymouth and Dodge, unmeasured refers solely to dealer association funds.

Source: Advertising Age

370,000 from $117,996,000 in 1979. Chrysler accounted for 19.00 percent of domestic industry spending compared with 16.84 percent in 1979.

American Motors, with a bigger job to do as it launched new cars like the R-18, increased its spending to $45,548,900 from $44,611,600 the previous year. It accounted for 5.75 percent of expenditures against 6.38 percent the previous year.

Down overall was GM, which spent $316,000,000 against $322,-395,000 in 1979. Although only off 2.29 percent in actual spending, the corporation's cutback was much larger when inflation is factored in. GM would have had to increase its budget by over 10 percent just to maintain the same volume as the previous year.

Withal, GM accounted for 39.91 percent of the dollars spent by Detroit, compared with 46.13 percent in 1979.

General Motors

GM's six car and truck divisions spent $249,785,900 on advertising and promotion in 1980, according to Advertising Age, down sharply from $307,134,400 the previous year.

Chevrolet spent $127,985,500 on car and truck ads, down from $148,363,600 in 1979.

Buick spent $35,576,500, down from $48,350,100.

Oldsmobile spent $35,449,100, down from $42,713,500.

Pontiac spent $33,207,000, down from $46,364,900.

Cadillac spent $14,193,400, down from $18,035,100.

Among the various media used, network TV was still far and away the most popular for the six divisions. Network TV took $97,520,700 of the divisions' budgets, a decline from $112,-246,700 in 1979.

Newspapers as a category were also off, slipping to $52,-104,700 from $68,760,700 in 1979.

Magazines commanded $41,-720,600 compared with $65,165,-100 in 1979.

Spot radio showed an increase, however, jumping to $31,001,700 from $23,938,800.

Spot TV fell sharply to $17,-479,200 from $28,068,100 in 1979.

Outdoor advertising was the only other media to show an increase, rising to $7,413,900 from $3,520,600 in 1979.

Network radio was also off, falling to $2,545,100 from $5,-434,400 in 1979.

Ford Motor Co.

At Ford Motor, Ford car and truck advertising climbed to $188,539,900 from $148,901,300 in 1979.

Lincoln - Mercury Division's advertising was also up, reaching $91,292,200 from $66,098,700.

Figures for both divisions include dealer advertising association funds (FDAF and LM-DA), which are considerable.

Ford, like GM, showed a penchant for network TV advertising, investing some $125,-701,400 in the medium, compared with $86,524,400 in 1979.

Newspaper spending at Ford totaled $10,960,400 compared with $10,622,700 in 1979.

Magazines, however, jumped to $38,859,600 from $35,808,200.

Similarly, spot TV was up, reaching $29,298,500 from $27,-756,700.

Spot radio hit $11,440,000 from $9,252,000 in 1979.

And network radio totaled $5,-572,200, compared with $1,361,-300 in 1979.

In the "unmeasured category," which includes dealer ad association funds, Ford spent $58,000,000 compared with $36,-784,000 in 1979.

The company boosted this fund because individual associations, with sales way off, had cut back on their advertising efforts, and the factory wanted to maintain a strong local-level effort.

Chrysler Corp.

At Chrysler, Chrysler-Plymouth spent $54,300,000 on advertising compared with $57,-590,000 in 1979.

Dodge spent $56,200,000 compared with $5,746,000.

Corporate advertising at Chrysler jumped to $39,800,000 from $9,6[illegible]0,000 in 1979.

Like its two major competitors, Chrysler spent the lion's share of its funds in network TV.

Network TV spending totaled $79,700,000, up from $51,174,000 in 1979.

Magazine spending amounted to $23,930,000, down from $24,-609,000 in 1979.

Chrysler's spot radio expenditures reached $19,100,000 from $10,349,400 in 1979.

Spot TV totaled $9,700,000, down from $17,249,000 in 1979.

Newspapers accounted for $6,-990,000, down from $8,279,000.

Network radio amounted to $1,058,000, down from $3,334,100 in 1979.

Chrysler, too, had an "unmeasured" amount of expenditures totaling $8,971,000, compared with $3,001,500 in 1979.

American Motors

American Motors' expenditures were largely confined to newspapers, magazines and TV, with a fractional amount spent on outdoor.

Network TV took $17,733,900 of the budget, compared with $15,900,000 in 1979.

Spot TV totaled $15,233,900, compared with $21,600,000 in 1979.

Magazines totaled $9,824,900, up from $5,300,000 in 1979.

Newspapers accounted for $2,-748,900, up from $1,550,000 in 1979. Outdoor added another $7,300 to AMC's budget compared with $161,600 in 1979.

Import ad bucks piled into trucks

By Joseph Bohn
Marketing Editor

Car advertising by most major importers was up last year but is expected to stabilize, at least among Japanese firms, in the wake of import quotas.

Japanese firms generally expect to run into shortages of cars for '82 (trucks and station wagons are exempt from quotas), and therefore are not required to boost ad spending.

The one exception may be Datsun which, over the near term, faces a major job in changing its brand name to Nissan. The move, expected to take several years, is estimated by some ad sources to cost the company between $125 million and $150 million to accomplish.

A lot of import ad dollars, particularly Japanese, will go into truck marketing in '82.

Aside from the fact that Japanese firms can still sell all the trucks they want next year, they face stiff new competition from General Motors—and later Ford and Chrysler—mini pickup trucks, which only adds to the competitiveness.

Overall, importers continued to be big advertising spenders, relative to the number of vehicles they sell in the U. S.

Leader Toyota spent $85,128,-000 in advertising and collateral merchandising activity, according to Advertising Age and industry reports. Toyota's budget was up from $80,256,200 the year before.

Reports have it that Toyota has continued to outdistance Datsun in its mid to lower series of car lines, where most of the volume is, although Datsun continues to hold up well in the higher - priced segment with models like the 510 and 280-ZX.

Generally, Datsun's ad spending remained on a fairly even keel, according to Ad Age and industry estimates, totaling $67,-365,700 against $67,682,900 in 1979.

Volkswagen, with its proliferation of models and attempts to retain market share in a very tough year, upped spending to $70,720,300 in 1980 from $56,-842,100 in 1979.

Volkswagen has been having a tougher time than its major competitors in trying to fight against a price-sensitive market with its relatively high-priced lines of subcompacts.

Among the secondary tier of import advertisers, Mazda continued to sell its cars with a relatively modest budget of $39,-116,000, up from $35,308,100 in 1979.

Honda similarly maintained a modest program of $34,248,000 against $28,410,000 in 1979, according to Joseph Haight, ad manager.

Haight added that media wouldn't shift much for '82. CBS football is being considered again, and more sports generally are on the agenda.

Honda had planned, for example, TV ads on Chicago White Sox and Cincinnati Reds baseball telecasts which were disrupted this year. It is planning to get into advertising on game brochures for '82, the kind available at stadiums, which might total about $800,000 of its budget.

Generally, Honda has stayed a very strong magazine advertiser, its spending in the medium up sharply to $9,354,000 in 1980 from $7,400,000 in 1979. Network TV came in at $12,-471,000 last year, up from $11,-400,000.

Fiat's spending was up to $13,-575,000 from $12,900,000 in 1979, according to unofficial sources. Its budget is expected to decline over the next several years, as it phases out cars like Brava and Strada and switches from trying to be a high-volume competitor to a specialty marketer of Italian cars.

Jaguar Rover Triumph's ad expenditures were up last year by a little over $1 million over 1979. But it also had a last big advertising fling.

Expenditures in 1981 have been running 70 percent below calendar 1980. Rover received very little advertising this year, although some models still were left in the pipeline. MG received only co-op dealer ad support.

Triumph advertising is way off. Although '81s are still being sold, both the TR-7 and TR-8 are being phased out. Only Jaguar advertising is up for 1981, and that is where the future of Jaguar Rover Triumph lies.

1980 direct media ad expenditures by major importers

(IN THOUSANDS OF DOLLARS)

	Magazine	Net TV	Spot TV	Newspaper	Net Radio	Spot Radio	Outdoor	Unmeasured	1980	1979
Toyota	$ 6,994.3	$22,945.3	$33,035.6	$7,023.3	....	$3,587.0	$1,542.5	$10,000.0	$85,128.0	$80,256.2
Datsun	7,404.8	18,150.0	15,384.3	6,870.0	....	5,850.4	706.2	13,000.0	67,365.7	67,682.9
Volkswagen	21,708.6	19,434.7	12,953.6	4,949.4	....	94.8	579.2	11,000.0	70,720.3	56,842.1
Mazda	6,296.3	20,335.1	2,760.0	573.4	....	....	151.2	9,000.0	39,116.0	35,308.1
Honda	9,354.0	12,471.0	....	411.0	....	50.0	....	11,962.0	34,248.0	28,410.0
Subaru	5,000.0	6,500.0	2,000.0	500.0	....	....	....	10,000.0	24,000.0	21,000.0
Fiat	3,900.0	....	8,300.0	525.0	....	850.0	....	....	13,575.0	12,900.0
Jaguar Rover Triumph	7,100.0	4,800.0	500.0	250.0	....	....	....	....	12,650.0	11,500.0

Toyota, Datsun, Volkswagen and Mazda figures are Advertising Age estimates, with the "unmeasured" portion of their expenditures supplied by industry sources.

Subaru's figures are based on direct company reports, although individual media breakdown is estimated. Subaru reported spending a total of $24 million last year, including $4-$5 million in shared advertising costs with its distributors and $4-$5 million in production costs and public relations. Actual media dollars spent were $14 million, according to Harvey Lamm, president.

Honda's figures are from direct company reports and do not include motorcycle advertising. Honda's unmeasured includes $7,606,000 for dealer advertising allowance. Dealers do not have to contribute matching funds to get this money. Other "unmeasured" includes $126,000 for yellow pages, with the remainder in brochures, shows and exhibits and production costs, etc.

Fiat is based on industry estimates. Jaguar Rover Triumph ad figures are based on company reports.

Take your pick of '82 forecasts

By Edward Lapham
Financial Editor

The outlook for next year's U. S. auto market is (1) good, (2) moderate, (3) bad, (4) all of the above, or (5) none of the above.

The experts who make a living forecasting the auto industry are unable to agree exactly what the future holds.

In fact, even though the current year is nearly three-quarters gone, there is some honest difference of opinion about how 1981 will end.

Generally, however, the statistical sages are in harmony on a few basics. First, they agree that the U. S. auto market is not going to rocket out of the current sales trough to boom levels tomorrow morning.

Second, they predict that car sales are going to trend upward over the next several years.

Finally, the forecasters believe a boom of at least some proportion is indeed coming, although they tend to disagree on exactly when.

In a recent AUTOMOTIVE NEWS survey, a panel of experts pegged car sales for the 1981 calendar year at between 9.0 million and 9.3 million with a composite average of 9.19 million. That is roughly in line with current auto-manufacturer thinking.

Ford President Donald E. Petersen said he expects 1981 to close at 9.0 million, while Chrysler Vice Chairman Gerald Greenwald said he sees 9.2 million new-car sales.

The divergence of opinion widens considerably for the 1982 calendar year, however, with a spread of 2.5 million units. Arthur G. Davis, Prescott, Ball & Turben analyst, is on the low end with a forecast of 10.0 million cars and 2.7 million trucks; J. D. Power & Associates is at the high end with a sales forecast of 12.5 million cars and 3.4 million trucks.

Davis, who believes there will be a 90-day contract strike against General Motors next year, said the 1982 market also will be restricted by consumer delays of purchases.

"I think there will be a big demand deferral next year, as consumers wait for all of the new small-car products due in 1983," Davis said. The analyst believes 1983 sales will climb to 11.8 million.

- On the other hand, J. D. Power & Associates believes that an economic improvement will lower interest rates, create new buyers, increase spendable dollars, make cars affordable and release pent-up demand, blasting the industry to the 12.5 million-unit level in 1982.

Power's Dave Pulaski said the move away from family transportation to personal transportation, a forecast 14 percent increase in the number of licensed drivers during the 1980s and other factors will keep the trend strong for the rest of the decade.

Pulaski believes the trend will be maintained, regardless of the price of gasoline. He also said his company expects Japanese auto makers to maintain a 20 to 25 percent share of the market through the decade.

Despite the differences of the Davis and Power forecasts, all analysts and forecasters combined had a composite sales-forecast of 10.78 million cars and 3.06 million trucks in 1982.

Arvid Jouppi, John Muir & Co. vice president, tended to agree with Davis that the recovery will be "pulled back."

"The industry is moving into a pretty good period," Jouppi said. "There is ambient demand of between 10 and 11 million units right now," he said. "But consumer income and confidence must catch up before consumer demand can be released."

William Pochiluk, of Chase Econometrics, which has forecast an 11.2-million-car and 3.3-million-truck year for 1982, believes, like Power, that the economy will improve enough to support a full-scale automotive recovery.

Pochiluk said the tax cut will help stimulate the car buyer. He also said all-new intermediate-size A-body cars from GM will get the recovery rolling with the 1982 model year launch.

Harvey Heinbach, vice president of Merrill Lynch Pierce Fenner & Smith, said he has pushed back the recovery to 1984. His moderate forecast of 10.5 million cars and 3.0 million trucks for 1982 does not reflect a UAW strike, although he also said there seems to be a good possibility of a UAW walkout against GM.

Heinbach noted there seems to be a trend toward longer-term car ownership, which could soften the long-range trend through the 1980s, although he tentatively has estimated 1984 sales at 12.0 million cars and 3.5 million trucks.

David Eisenberg, Sanford C. Bernstein & Co. analyst, has charted a moderate recovery, which is very close to the composite numbers generated by the survey.

According to Eisenberg, his forecast of a coming recovery of 10.5 million cars in 1982, 11.5 million cars in 1983 and 12.5 million cars in 1984 is the basis of an improving trend.

He said that as "bleak" as the auto market looks for the next several months, "forces are evolving which will create a surge in demand to alltime record levels."

The Wall Street analyst said 25 million cars, or about a quarter of the car population, are four to six years old, making them prime candidates for trade-in. He also said the relatively low average fleet fuel economy also means more trading up will occur when the economy improves.

Unlike Power, Eisenberg said he believes there is still a big market demand of two million units annually, just to maintain the nation's 20 million six-passenger-car fleet.

- Eisenberg also believes cars are still relatively affordable, and in fact will become more affordable. He said the average monthly automobile payment in 1980 was 10.2 percent of a family's monthly disposable income, and that by 1983 it will be down to about 8.9 percent of the average monthly family budget.

Eisenberg also assumes that the U. S. economy is going to improve dramatically, with the inflation rate, as measured by the Consumer Price Index, moving to the 7 to 8 percent range, and prime interest rates falling to about 9 percent.

Some difference of opinion among analysts and other forecasters is not uncommon; even the brightest crystal balls fog occasionally.

However, the broad divergence of opinion concerning the 1982 car and truck outlook and beyond suggests there is going to be an improvement next year, although the exact proportions are unknown.

Even Davis' low-ball 10.0 million cars would represent an 11 percent gain over 1980's 9.0 million-unit minimum estimate and a 7.5 percent gain over a 9.3 million maximum performance.

New Car Affordability Trends

	Average Term (In Mos.)	Average New Car Payment	Average Contract Price[1]	Monthly DPI per Household	Monthly Car Payment (% DPI)

Smooth skiing for SoA

By John A. Russell
New York Staff Writer

PENNSAUKEN, N. J.—A sports promotion must be an extension of the marketing position of the product, and in the case of Subaru of America, its involvement with the United States Ski Team has fit the bill entirely.

According to Alan Ross, vice president of communications for the company, the involvement with the ski team on a promotional basis has worked to the benefit of both parties in increasing awareness among the general public.

Ross noted that a primary consideration in any promotion effort, and especially this type, is that it gives a base for the advertising effort and is easily translatable to the consumer through the advertising.

"Just to put your name on a tournament doesn't necessarily give the base," he said. And it was a credible base that Subaru was striving for, he added.

Subaru began sponsoring the U. S. Ski Team in 1976 and this year signed a contract for four more years. The relationship has not been without controversy which centered on the fact that while Subaru of America is an independent U. S. company, it is the importer of Japanese automobiles.

But Ross noted that when the sponsorship became available to the company, the U. S. Ski Team did approach many companies including the U. S. auto makers, but none expressed an interest.

The company fills the transportation needs of the ski team. Forty-five Subaru four-wheel-drive cars and a number of domestic vans are supplied by the company. The vans were purchased by Subaru for the ski team and met the team's specifications.

Ross has stressed that the involvement goes beyond supplying vehicles and includes almost day-to-day involvement with the team.

In the marketing program, Ross noted that when the team uses the Subaru vehicles it is a demonstration that people can see. And the team uses the cars in adverse climates. He said the underlying thought for the potential consumer who sees the cars in action is "if this vehicle will do this here, think about what it will do for you."

But Ross again stressed that any promotion has to be a relationship that recognizes the needs of both groups and there has to be a pragmatic relationship in order for it to be important.

Subaru supports the promotion with advertising which includes both the vehicle and the U. S. Ski Team as well as public relations efforts.

During the involvement with the Ski Team, Subaru has expanded to include sponsorship of ski races, such as the Subaru World Cup, held this year in Aspen, Colo., and ski team activities. It has also progressed to its becoming the "official car" of the U. S. Ski Assn. and the U. S. Ski Team Sports Medicine Program.

The company also extends its effort to the regional level with its distributors, and dealers work with the distributors in various promotions.

The promotion has been a coordinated marketing effort for the four-wheel drive vehicles. Ross noted that this is not for the "short haul," but the concept fits the need and the product fits the concept.

30.58 percent of market in May

Import registrations hit record share

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars in May were up 4.16 percent from a year earlier and imports reached their highest market penetration in history, according to figures compiled by R. L. Polk & Co.

May import registrations totoled 223,589, up from 214,660 in May last year. Record for the month is 237,289, set in 1979. That total was highest for any month in history. This May's was the fifth highest for any month.

Imports took 30.58 percent of total May registrations in the U. S., the highest monthly penetration ever, topping the previous record of 30.33 percent, set in April this year.

Year-to-date import registrations through May totaled 1,051,663, off just 0.43 percent from 1,056,198 last year.

Imports accounted for 28.86 percent of total U. S. registrations in the first five months, compared with 27.98 percent last year.

Of the top 10 imports in May registrations, Volvo logged the biggest gain in market share compared with a year earlier and Datsun suffered the biggest loss.

Volvo took 3.03 percent of May import registrations, up 1.13 percentage points from the similar period last year. Other gainers were Mazda, up 1.04 points to 6.75 percent; Honda, up 0.91 of a point to 15.23 percent; Toyota, up 0.89 of a point to 24.13 percent, and Subaru, up 0.14 of a point to 5.28 percent.

Datsun lost 3.01 points to take 18.69 percent of May import registrations. Also losing market ground were Volkswagen, down 1.49 points to 9.41 percent, and Fiesta, down 0.62 of a point to 1.90 percent.

The top 10 imports accounted for 88.90 percent of the May import total, compared with 89.77 percent a year earlier. Year-to-date the top 10 accounted for 88.72 percent, compared with 88.86 percent last year.

- Japanese nameplates accounted for 73.78 percent of import registrations in May, down 1.59 points from a year earlier. German-built cars also slipped a bit from a year earlier, down 0.29 of a point to 17.91 percent.

Swedish cars were up 1.30 points to 3.59 percent; French, up 0.51 of a point to 1.90 percent, and Italian up 0.12 of a point to 1.85 percent. British cars dipped 0.05 of a point to 0.97 percent.

Registrations by country of origin in May, with year-earlier figures in parentheses, were: Japan, 164,953 (161,793); West Germany, 40,040 (39,068); Sweden, 8,035 (4,919); France, 4,256 (2,974); Italy, 4,145 (3,711), and United Kingdom, 2,160 (2,195).

Registrations by country of origin for the first five months of 1981, with 1980 figures in parentheses, were: Japan, 793,907 (793,579); West Germany, 183,409 (190,865); Sweden, 31,161 (25,891); France, 19,002 (14,933); Italy, 15,910 (21,314), and UK, 8,273 (9,616).

- Registrations of imported trucks in May totaled 44,469, up 1.72 percent from 43,719 a year earlier.

Registrations of imported trucks in May, with year-earlier figures in parentheses were: Toyota, 10,498 (11,268); Datsun, 10,254 (9,384); Chevrolet LUV, 7,500 (6,675); Ford Courier, 5,579 (6,031), and others, 10,638 (10,363).

The truck import total for the first five months of 1981 was 202,090, down 11.43 percent from 228,158 last year.

Registrations of imported trucks in the first five months of 1981, with 1980 figures in parentheses, were: Toyota, 48,431 (58,835); Datsun, 45,537 (46,251); Chevrolet LUV, 32,548 (38,857); Ford Courier, 28,698 (33,471), and others, 46,876 (50,744).

Recycling is credited

Aluminum makers trim energy use

WASHINGTON. — The aluminum industry reported a 13 percent reduction in the amount of energy needed to make a pound of aluminum through the second half of 1980 compared with the base year of 1972, the Aluminum Assn. said.

In a report to the Department of Energy, the association listed 78 examples of energy-saving activities undertaken by companies in the industry's voluntary conservation program.

Most of these projects involve capital expenditures for new energy efficient equipment and the conversion to more energy efficient equipment and design.

Some of the items listed included installation of new furnaces in various melting and process operations, recovery systems to make use of waste heat, units to produce aluminum sheet directly from molten metal and additional control equipment on production processes to reduce energy consumption.

- In addition, a substantial portion of the improvement over the 1979 conservation level can be attributed to the industry's rapidly expanding recycling efforts, according to Allen C. Sheldon, chairman of the association's Energy Committee.

"It was recycling that was mainly responsible for our almost three percent improvement. We expect recycling to continue to make important contributions to reaching our goal of a 20 percent reduction by the end of 1985," he said.

Recycled aluminum is produced with less than 5 percent of the energy required to make metal from bauxite ore.

Percentages of improvement are based on 1972 energy use and exclude the amount of energy used to operate environmental control equipment put into service since the base year.

Bloom elected in New York

BROOKLYN, N. Y. — Eli Bloom, president of Myrtle Motors Pontiac, Queens, has been named president of the Greater New York Automobile Dealers Assn. He succeeds Mal Davis, of S & W Dodge.

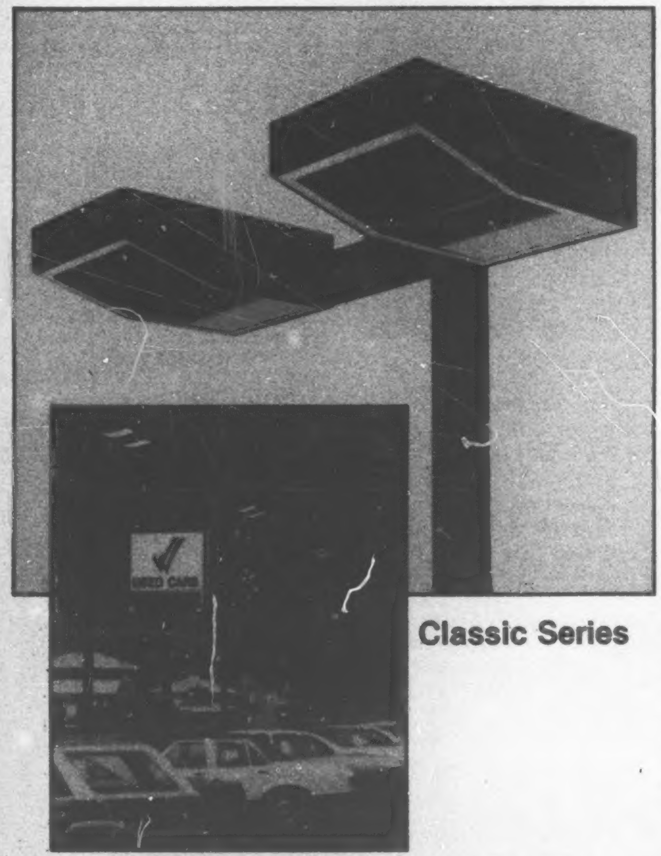
Elected vice presidents were Irwin Katz, Kayson Chevrolet, Croton-on-Hudson; Jack Mark, of Mark Chevrolet, Brooklyn, and Thomas Nemet, Nemet Datsun, Jamaica.

Neil Spare Jr., South Shore Motors, Sayville, is secretary, and Richard Perfit, Harper Oldsmobile, Brooklyn, is treasurer.

DuPont repair finishes available for J-cars

WILMINGTON, Del. — Lucite acrylic lacquer and Centari acrylic enamel repair finish colors by duPont are now available for the Pontiac J2000 and Chevrolet Cavalier J-cars.

Complete cabinet stock is available through duPont refinish jobbers. For more information, contact duPont Co., Refinish Sales, Wilmington, Del. 19898.



With Larger Car Inventories, We Can Help You Now More Than Ever!

Moving your larger car inventories may mean more after dark selling. And with more cars than ever on your lot, be sure your display lighting is doing all the selling it can do.

LSI **Metal Halide** lighting was designed to give you the sales edge you need night and day. By night, our energy saving Metal Halide systems will provide outstanding illumination for nighttime merchandising. By day, our handsomely sculptured LSI lines make a valuable statement about your dealership.

In times like these you can use all the help you can get. So why not let your customers see you in the best light possible? Look into LSI. . . you may learn to love your evenings again.

For more information, write or call for a full color brochure describing our energy saving systems.

Saleable items for sophisticated buyers

Technical innovations abound on '82 models

Continued from Page 16

Reliant K-cars.

Ford's new V-6, lightest in the industry, weighs about the same as the Ford 2.3-liter four-cylinder engine.

Ford engineers say it has more horsepower than Ford's 4.2-liter V-8.

Each Ford engine carries a bar code-marking, and eye-readable letters and digits. If an engine malfunctions in the hands of a consumer, the code can be read and fed back to the engine plant.

At the plant, employes can pull the engine's inspection dossier from the computer memory and learn its history.

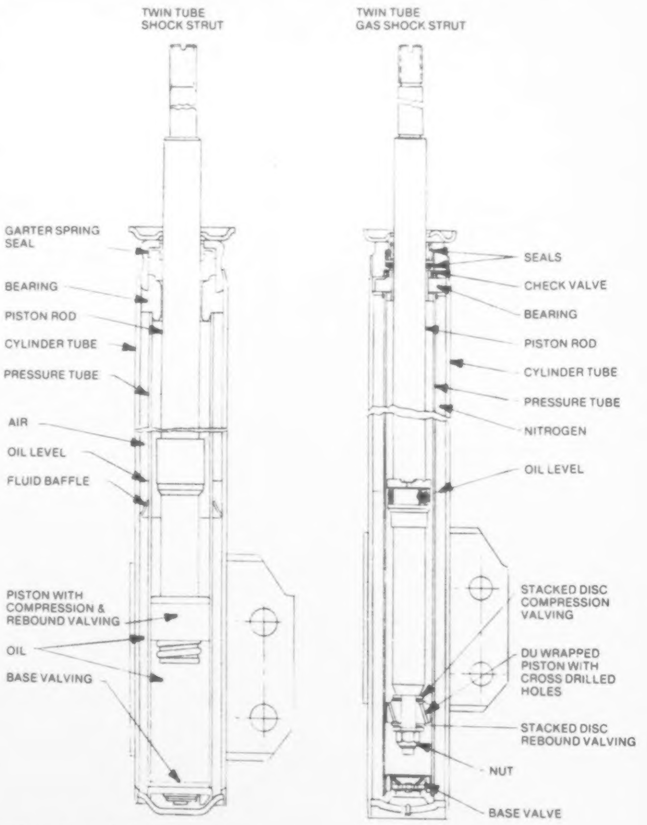
It can be determined if the engine failed a particular check, whether there is some sort of failure in the system, or that there is a design problem to be corrected.

There is an interesting quality-control program under way at Ford. For the Continental, for example, each supplier is asked to run a sample of 300 components. From that run, six to 10 samples are selected for a battery of tests.

These include layout inspections, material analysis and engineering specification tests to confirm that all parts meet Ford requirements.

In the past year and a half, Ford has established a supplier rating system. It has some 1,300 suppliers rated within 170 commodity groupings. They are scored from zero to 100 percent and ranked among like suppliers. Only top suppliers are approached by Ford when it comes time to make purchases.

Among the criteria Ford uses in ranking vendors are: Initial sample performance, supplier quality surveys, process capability data, in-process objectives, assembly plant problems, supplier dock-audit results, purge/stop shipment wires and warranty or field problems.



Shock with pressure

In the 1982 model year, Ford Motor Co. introduces an advance in shock absorber technology. Shown at right, the new gas-shock improves ride, noise vibration and handling by providing immediate rebound response and stabilized dynamic control.

AUTOMOTIVE NEWS ADS PRODUCE EXCELLENT RESULTS

Total well ahead of week ago, year ago

U.S. auto production moves upward

By Patricia Hoffman
Staff Writer

U. S. auto production last week was well above that of the previous week and the comparable 1980 week.

The domestic auto makers last week slated production of 97,091 units, up 39.04 percent from 69,827 in the previous week, and up 42.77 percent from 68,004 in the comparable 1980 period.

So far this year, the makers have completed 4,286,408 cars, up 7.23 percent from 3,997,253 in the comparable period last year.

Breakdown for the week by company is: General Motors, 59.17 percent; Ford Motor, 25.04 percent; Chrysler Corp., 8.65 percent; Volkswagen of America, 3.87 percent; American Motors, 3.24 percent and Checker Motors, 0.03 percent.

General Motors' Detroit facility, down for model changeover since July 17, returns today (Aug. 17).

Also returning today at GM after being idle for model changeover are the Linden assembly point, down since July 22, and the Pontiac and Baltimore facilities, both down since July 31.

GM's Leeds point, down since July 31, and the Van Nuys plant, down since July 17, are slated to return Oct. 12.

Also at GM, the Lansing plant, down since July 22, is scheduled to return in late August, and the Janesville assembly point, down since Aug. 7, has slated production for Sept. 8.

American Motors' Kenosha facility, which went down for changeover July 20, resumes operations today.

Chrysler's St. Louis plant, down since July 31, is slated to return in late August.

Chrysler's Newark point, down for changeover since Aug. 3, has slated 1982 production for Aug. 24.

All other Chrysler facilities are scheduled to work regular shifts this week.

All of Ford's assembly points are also scheduled to work this week with Wayne slated to work daily overtime. The plant will work two 10-hour shifts.

Canadian output level rises on gains by Ford, Chrysler

Canadian auto and truck production last week was up substantially from the previous week's output. The total also rose considerably above the comparable 1980 week's figures.

Last week, the auto makers estimated production at 7,458 units, up 66.29 percent from 4,485 completed in the previous week, and up 25.60 percent from 5,938 units in the comparable week last year. Increases by Ford and Chrysler more than offset a decline by General Motors.

Year-to-date, output for the auto manufacturers was 535,588 units up 2.48 percent from 522,645 in the comparable period last year.

Truck production last week was slated at 8,448 units, nearly four times as many as 2,276 the previous week, and up 52.35 percent from 5,545 in the comparable 1980 week.

So far this year, the truck makers have completed 328,377 units, up 3.42 percent from 317,512 assembled in the same period last year.

Both of Chrysler's Windsor car and truck facilities will be operating on normal shifts this week building 1982 models.

General Motors' Oshawa (Number One) car-line, down since July 16 for 1982 model changeover and originally scheduled to resume operations Aug. 18, will remain idle until Aug. 31 due to inventory adjustments.

The Oshawa (Number Two) car line, which went down Aug. 6 for changeover, will remain idle until Nov. 9.

GM's Oshawa truck facility worked only one shift last Tuesday and Wednesday due to a material shortage which occurred when the plant began production of 1982 models on Aug. 3. The point returned to normal two-shift operations last Thursday (Aug. 13).

Ford Motor said that it will begin conversion at its Oakville facility in December, 1982, in preparation for the front-wheel-drive compact car to be produced in 1983.

The company is currently adding a second workturn at the Oakville point to make it Ford's sole source of LTDs for the North American market. According to Ford, when production of the compact model begins sometime in February, 1983, LTD production would be relocated to a U. S. facility.

All of Ford's assembly points will be in operation this week with production of 1982 models.

General Motors' Scarborough truck facility, down for model changeover since July 29, resumes Tuesday (Aug. 18).

GM's St. Therese car point, idle for changeover since July 23, returned last Friday (Aug. 14).

Volvo's Halifax facility, which closed for model changeover Aug. 3, is scheduled to resume production Friday (Aug. 21).

Truck production climbs for week; total is 24,837

Domestic truck production last week jumped considerably above the previous week's total, and output also exceeded that of the comparable 1980 week.

Last week, the truck makers scheduled production of 24,837 units, up 71.40 percent from 14,490 in the previous week, and a gain of 13.59 percent from 21,864 in the comparable 1980 week.

Year-to-date, truck production was 1,096,281 units, up 12.49 percent from 974,478 in the comparable period last year.

General Motors' Baltimore truck facility, idle for changeover since July 31, resumes operations today (Aug. 17).

American Motors Toledo (Jeep) facility, down for changeover since July 20, also returns today.

General Motors' Janesville and St. Louis points, both down since July 24, will return to normal operations Aug. 31.

Volkswagen of America's Westmoreland point will close for 1982 model changeover Aug. 28 with operations scheduled to resume Sept. 8.

Volvo chooses Greensboro, N.C., as truck home

WASHINGTON. — AB Volvo has tentatively chosen Greensboro, N. C., as the site of its new truck corporation if it is given the go-ahead by a federal court in Ohio to buy the bankrupt White Motor Corp.

According to the Greensboro Daily News, official announcement may occur as early as this week after Volvo corporate officers acquire White and inspect the Greensboro site.

Should the purchase of White go through, the new corporation would employ between 300 and 500 local people, with about 75 executives from the U. S. and Sweden moving to Greensboro.

Meanwhile, the Commerce Department has announced a $2.5 million federal grant to help Smyrna, Tenn., develop the site of Nissan Motor Mfg. Co.'s new pickup truck plant.

The money from the Economic Development Administration will be used to finance new water, sewer and similar facilities for the plant which will open in 1983.

Earlier this year, there had been some concern that funding for the EDA program would be eliminated in the Reagan Administration budget cuts.

Dealers for 13 makes post first-half gains

Import sales averages up

By Kathleen Hamilton
News Editor

Import-car dealers generally sold more autos apiece in the first half of 1981 than they did in the first six months of 1980.

Computations by AUTOMOTIVE NEWS showed 13 of the major importers improving their average sales per dealer in 1981—including six which set alltime records — while only seven major imports saw increases in average sales per dealer.

The biggest improvements were logged by Mazda dealers, who averaged 25 more sales in the first half of 1981 than they did in the first half of 1980, and Volvo dealers, who improved their average sales by 24. Volvo's average of 92 sales per dealer topped its old record, set in 1979, by 17.

Both Mazda and Volvo maintained stable dealer networks during the periods, so the gains are not attributable to steady sales in a shrinking dealer network.

Biggest loss in sales per dealer was recorded by Datsun, whose dealers averaged 34 fewer sales than in the first six months of 1980. Meanwhile, the year-to-year gain in Datsun's dealer network was just over one percent.

- Besides Volvo, five other imports set records in sales per dealer. Toyota's average of 300 is up five sales per dealer from the 1980 record and is the highest average for any import or domestic make in the 23 years AUTOMOTIVE NEWS has been computing first-half figures.

Subaru's record of 103 is 7 sales more than the old record set in 1979. Mercedes-Benz's new record of 80 average sales is 10 higher than the 1979 high.

BMW's new record of 55 average sales topped the old record of 49 which was set in 1977 and repeated in 1979 and 1980. Peugeot's average of 25 is up 2 sales from the former high set in 1979.

Other imports which bettered their 1980 first-half averages were Honda, up 11; Audi, up 9; Triumph, up 5; Saab, up 3; Jaguar, up 3, and Porsche, up 1.

The newly launched Isuzu averaged an estimated 44 sales per dealer in the first half of 1981.

Chrysler Corp. dealers averaged fewer sales of the captive

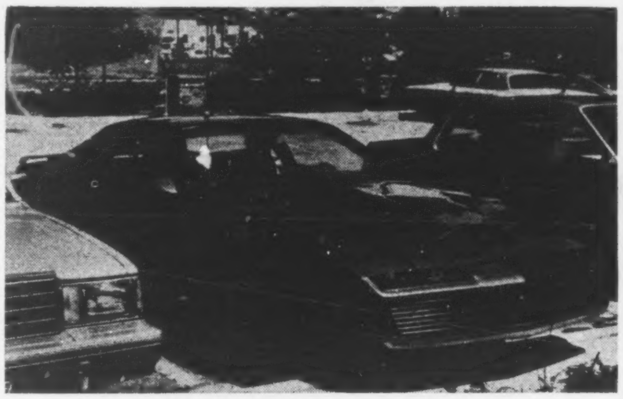
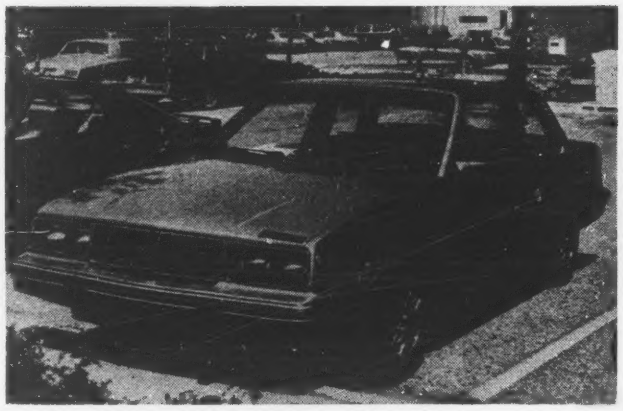
A Pontiac pair



'82 Firebird and 6000 due in January

New-from-the-ground-up Pontiac Firebird, above, is due to hit dealer showrooms Jan. 14. It will be available with a four, a V-6 or a V-8 and will retain rear drive. The front-wheel-drive Pontiac 6000, due at the same time, is a new intermediate. A four will be standard, with V-6 diesel and 2.8 or 3.0 liter V-6 gas engines as options.



44-day supply is riddled with shortages

Import inventory slashed to bone

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. continued to dwindle during July as sales held strong and the import industry opened August with a shortage-riddled 44-day supply.

The inventory of new imported cars and pickup trucks in dealer stocks and in importer and distributor hands August 1 totaled 414,700 units, a 44-day supply at the current sales rate.

This compared with a domestic inventory Aug. 1 of 1,675,192 cars, a heavy 87½-day supply.

The Aug. 1 import inventory was down from 441,000 units a month earlier, which was a 51-day supply.

Most importers like to carry an inventory of around 60 days, because generally it takes cars longer to move through the import pipelines than the domestics. So most of the import lines were short of cars and many were so lean as to put a lid on sales.

- Toyota, for example, was down to a meager 18-day supply and Honda was almost as strapped for cars with a 21½-day stockpile. Datsun appeared to be in a good position to jump the sales gun on these two rivals with its healthy 52-day stock.

Mazda had a 47-day supply Aug. 1 and Subaru had a 42-day stockpile. In stronger positions were Isuzu, with a 75-day supply, and Chrysler Corp.'s captive Mitsubishi lines, which were in 136½-day supply.

(Inventory figures for Toyota, Datsun, Mazda, Isuzu and Mitsubishi include pickup trucks.)

The total inventory of Japanese-built cars was good for only 37 days as the public's appetite for these units continued unabated despite moves to throttle back deliveries.

German cars were in 66-day supply Aug. 1, with the high-priced luxury lines in the leanest shape. While Volkswagen had a 92-day supply of imported cars (this does not include U. S.-built units), Mercedes-Benz had an estimated 45-day supply, BMW had a 57-day stock and Audi a 58-day supply.

Volvo's supply was also on the light side at 54 days.

Total Japanese cars in stock was 288,400, which was 69.54 percent of the total.

After eight years, FTC issues its used-car rule

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Eight years after it first began its investigation into the abuses in the used-car business, the FTC has issued a final rule.

It will require dealers to post a window sticker in each used car notifying potential customers to take care and have all promises put in writing, what warranties are being offered with the vehicle and whether the vehicle has any defects.

Neither as stringent as the mandatory inspection rule the commission had under consideration in 1978 nor the optional inspection rule tentatively adopted by the commission in May, 1980, the requirement has nonetheless stirred the ire of the various dealer organizations.

NADA has filed suits here and in New York. The National Independent Automobile Dealers Assn. said it was "very disappointed by the commission's action."

NIADA had a board meeting scheduled for late last week to take up the FTC rule. Executive Director Dan Ray said he and members of his organization would definitely be talking to their congressmen, though.

Edward Connelly, chairman of the American International Automobile Dealer Assn., said he "resented being lumped together with a bunch of crooks," and that the FTC's approach to doing something about the few bad apples in the used-car business was "absolutely unrealistic."

Like the others, he said members of his organization would begin immediately to contact their congressmen and that it would support the NADA legal fight.

- In support of its decision to go ahead with the used-car sticker rule, the FTC said the record clearly showed that abuse was occuring in violation of the federal trade laws.

"The record demonstrates that used-car dealers and their agents have engaged in deceptive sales practices by often misrepresenting the mechanical condition of a used vehicle, by failing to disclose, prior to sale, any material defect in the mechanical condition of the used vehicle known to the dealer, by representing that the used ve-

University of Michigan survey finds optimism elsewhere

Auto-buying mood remains grey

ANN ARBOR, Mich. — Consumers are feeling much better about the economy and the government's economic policies but are holding firm to their negative attitudes on buying autos, according to the latest survey by the University of Michigan Institute for Social Research (ISR).

One-third of those surveyed said high prices were a deterrent to buying autos, but many more than in the past mentioned the mitigating effects of rebates and price reductions.

Twenty-two percent of those polled in the quarterly Survey of Consumer Attitudes said high interest rates made car-buying conditions unfavorable. That was just short of the record high level of 25 percent who cited high interest rates both one quarter earlier and one year earlier.

The most recent survey was conducted between March 23 and June 22, before the latest round of incentives and interest-rate reductions. It confirmed what the sales figures have been showing: A price-sensitive market.

Consumers have maintained low levels of enthusiasm for car-buying since mid-1980, according to the ISR surveys. Those who hold favorable views of market conditions have ranged from 38 to 40 percent, while those holding unfavorable views have ranged from 47 to 52 percent.

Because so many consumers mentioned price reductions as incentives to buy cars (an average of 20 percent during the last year, as compared with an average of less than 10 percent in the prior several years), ISR concluded high interest rates were the main deterrent to a rebound in consumer attitudes toward car purchases.

Confidence in the government's economic policy is at a 10-year high, the survey found.

Consumer sentiment was "much improved" over year earlier levels, although it had gained little in six months.

"Despite widespread unfavorable evaluations of current economic conditions, the proportion that expected future improvement has grown substantially, mainly due to the anticipated impact of President Reagan's economic policies," Survey Director Richard T. Curtin said.

"Before vigorous and sustained recovery in consumer sales can take place, the recent gains in optimism, which have been based on expected improvement rather than actual developments, need to be reinforced by cumulative improvements in the economy as a whole, as well as in the financial situations of consumers," Curtin said.

In comparing attitudes before the 1964 tax cut, ISR found about the same proportion of consumers planning to save their tax bonus.

But in 1963, most of those planning to spend it said they would make new purchases; in mid-1981, most said they would use the money to help meet current expenses and pay bills.

ISR theorized the change is the result of "the harsh impact (of) inflation."

Baranco opens

William L. Sparks, left, Pontiac Atlanta assistant zone manager-service, supervises the cutting of the ribbon opening the new facility for Baranco Pontiac, Inc., Decatur, Ga., by Juanita and Greg Baranco. Baranco's former dealership was in East Point, Ga.

RV shipments top 20,000 in June

Continued from Page 12

the most expensive, were up 78.6 percent in the six-month period, soaring from 4,200 units a year ago to 7,500.

Chopped vans, including mini, low-profile and compact, totaled 9,000 units, an increase of 25 percent over the year-ago 7,200.

Shipments of van campers (Type B) in the first six months totaled 2,200 units, up 46.7 percent over last year's 1,500.

Through June, manufacturers delivered 46,500 multi-use vehicles, an increase of 44 percent over the 32,300 shipped in the same period in 1980.

RVIA defines the multi-use vehicle as one designed for the transportation of people and/or property and altered by the RV manufacturer for esthetic or decorative purposes.

RV report

Continued from Page 12

Chevrolet 6.2-liter diesel due in an RV chassis early next year.

The Recreation Vehicle Dealers Assn. is taking over sponsorship of the annual Miami International Travel / Camping Show, one of the largest trade shows in the RV industry.

Jim Summers, RVDA executive vice president, said the show — slated next year at Tamiami Park in Miami Jan. 27-31—will provide additional business and educational seminars for dealer/members and others, as well as encouraging wider communications with user groups through rallies at the park.

Summers said RVDA also is planning to have a dealer convention again in 1982 in Nashville, but no firm dates have been set. The annual conventions were discontinued after the 1979 Orlando (Fla.) event because of the slump in RV sales.

The extra round of post-season professional baseball playoffs has forced the RVIA and the Western Manufactured Housing Institute to postpone for one week the 1981 Recreation Vehicle and Manufactured Housing Show at Dodger Stadium in Los Angeles.

New dates for the 29th annual show are: Nov. 10, manufacturer/supplier day; Nov. 11-13, dealer and press days, and Nov. 14-22, public days.

Sid McClellan, chairman of RVIA's Dodger Show Committee, said this year's exposition will be larger than a year ago, with 63 RV manufacturers reserving 160,290 square feet. Last year's show covered 132,000 square feet.

Lake signs GM dual

LEWISTON, Pa. — William S. Lake has opened Lake Chevrolet-Oldsmobile here.

Michigan strike delays work on new auto plants

DETROIT.—A strike by Michigan sheet metal workers has delayed progress on numerous construction projects, including plans by General Motors and Volkswagen to build new assembly plants in the state.

The 2,000 members of Sheet Metal Workers Local 80 struck the Sheet Metal and Air Conditioning Contractors of Metropolitan Detroit June 1 in a dispute over cost-of-living adjustments (COLA). The union is opposed to a contractors' proposal to lower those COLA rates.

The strike is delaying roof-enclosure work at GM's new $500 million Orion Township assembly plant, which will eventually replace the old Pontiac Division and Fisher Body facilities in Pontiac. It is not the first delay for the project, which ran into opposition from local residents. It is now scheduled for completion in early 1983.

The strike has also stalled work on Volkswagen of America's new $300 million assembly plant in Sterling Heights. That plant, a conversion of a former Army missile plant, is scheduled to begin production of 1983-model Volkswagen vehicles next summer.

In addition, the strike has also caused a 1½-month delay in the expansion of engine-testing facilities at GM's Detroit Diesel Allison Division complex in Romulus, Mich. Much of that work was to have been completed in October.

A DDA spokesman said the strike not only affects future engine development at GM but is also stalling the relocation of company employes to new headquarters.

ELDORADO "PARIS" COUPE

"Custom Built Limited Edition Series"

"American Custom Coachworks, Ltd., is very proud of their concept on the popular "4" passenger Eldorado Coupe. The "Paris" Coupes are selling very fast and very well for dealers throughout the country. Base units can be drop shipped by the dealer to one of our manufacturing plants, or some open factory (pool cars) presently in build can be made available."

As '82 models bow for press

Pontiac lowers curtain on big cars, gas V-8

By **Jenny L. King**
Staff Writer

DETROIT. — Electronic throttle body fuel injection for its 2.5-liter engine highlighted an unusually quiet new-car preview for Pontiac, with the now-intermediate Bonneville Model G and station wagon and Grand Prix the only 1982 models debuting in September.

Pontiac General Manager William E. Hoglund rang down the curtain on the gasoline V-8 engine, on the full-size (B-body) Pontiac and, he hoped, on depressed sales as he touted the new electronic fuel injection for Pontiac-built 2.5-liter four-cylinder engines of which the company plans to produce 1.2 million.

The new Bonneville is built on the former LeMans frame. The LeMans name has been dropped. It retains the Bonneville look, bringing along its grille and tail lights and look of luxury, and has room inside for six.

"Our major concern . . . was how not to desert our full-size customers who had been loyal to Pontiac since the Catalinas and Bonnevilles were introduced back in the '40s and '50s and still zero in on our definitive market" — youthful, expressive, sports-oriented consumer groups, Hoglund said.

Nearly 60 percent of the division's 1982 startup production will be small cars—subcompacts and compacts, he said. Two years ago it was 23 percent; last summer, 37 percent were small.

The A-special Grand Prix, which was restyled with a more aerodynamic shape for 1981, remains basically unchanged for '82.

The 1982 Phoenix also looks the same as it did for '81, but the standard engine is the new 2.5-liter engine with fuel injection. Ride and handling improvements make it more attractive to the youth and sports-oriented market, Hoglund said.

"A change in the computer command control system will eliminate the initial acceleration lag in the J2000 line," Hoglund said. "We plan to sell 35,000 J-cars during the 1981 model year (which began last May for J-2000): 15 percent coupes, 38 percent sedans, 29 percent hatchbacks and 18 percent station wagons."

Pontiac introduced its subcompact T1000 in April. The car will have a new five-speed manual transmission available this fall. Hoglund said his division is studying the possibility of a small diesel engine for the T-1000, but said Chevette has claim on all the diesels for the time being.

"I don't really like to do this, but I will make a sales prediction," he said. "We see total sales of between 10 and 10.6 million in model year 1982, and Pontiac's goal is 800,000, or 7.5 percent of the industry total." The prediction for nameplate breakdown is as follows: T1000, 94,000; J2000, 200,0[illegible] Phoenix, 70,000; Firebird, 90,000; LeMans/Bonneville G, 80,000; Pontiac 6000, 130,000; Grand Prix, 120,000, and remaining 1981 Bonneville/Catalina models, 16,000.

The 6000 is the new front-wheel-drive intermediate that will be introduced in January.

• "Our goal is a sales jump of 37 percent, but it's not unrealistic — sales climbed dramatically after the 1974-75 recession and they can this year if the economy strengthens," Hoglund said.

He said imports will stay near 2.5 million sales.

"By the end of this year we will have made one of the biggest changes in our lineup ever," Hoglund said. The T1000 debuted in April, the J2000 in May, an intermediate Bonneville now, and the front-drive Pontiac 6000 and an all-new Firebird are due early next year.

He said he thought the pattern of introducing new cars as they are ready would continue in the future, although it won't entirely replace the traditional early-autumn introduction.

Hoglund said inventory levels will be better for the A-body (6000) and F-body (Firebird) cars when they go on the market. J-car supplies have been a problem for dealers and customers ever since May.

Hoglund had no specific encouragement for dealers. He said the division was working hard to train dealers and their staffs, but did not comment on the recent changes in dealer discount, floor-planning rates and destination charges.

Givens promoted to top marketing post at Chrysler

DETROIT. — John K. Givens has been appointed executive director, marketing, for Chrysler Corp.

Givens is responsible for advertising, market research and analysis, marketing plans and programs, merchandising, sales analysis and forecasting activities, and for sales planning and programing.

Givens most recently served as general manager of Import Operations, and before that was director, Sales Operations, U. S. Automotive Sales.

His appointment follows the recent departure of Charles LaBelle, who resigned as marketing vice president to join Nissan as sales operations vice president.

Futuristic personal transportation

Sleek personal transportation for the near future, the M/S Rhoades was commissioned by Luntz Corp., of Canton, O., as a study in uses of steels. Driven by a turbine engine or an air-cooled piston V-8, the vehicle features a stainless steel frame, body and removable top. It measures 193 inches in length and weighs 2,262 pounds.

Plant would build 4WD Niva from Russia, Canadian parts

Lada eyes Nova Scotia assembly

By **Jim Plegue**
Staff Writer

AJAX, Ont. — Lada Cars of Canada has singled out a location in Eastern Passage — near Dartmouth, Nova Scotia — as the likely spot to assemble the Niva, a four-wheel-drive vehicle the company currently imports from Russia.

Lada has hired Austin Co., Ltd., a Cleveland engineering/design firm, to complete a feasibility study on the proposed plant site — a vacant lot adjacent to and owned by Autoport in Eastern Passage. The study should be completed by late September, acording to a Lada spokesman. (Autoport is a port of entry and prep point for cars,)

Lada officials in Russia and officers of AvtoExport, the trading arm of the Soviet Union, have given preliminary approval to the plan and the study. If the proposal receives the final OK, Niva production could begin by early 1983 at a start-up rate of 5,000 units per year.

The Lada of Canada spokesman said the company favors assembly of partially-knocked-down (PKD) Niva units with locally sourced parts comprising 50 to 60 percent of the vehicles, a necessity in order to achieve duty-free status in Canada.

The Austin Co. feasibility study is being partially funded by Industrial Estates, Ltd., (IEL), a crown corporation of the Nova Scotia government. Lada Cars of Canada has been negotiating with IEL, as well as Autoport (which is owned by Canadian National Railways), for assistance in building and operating the plant.

One possibility is that IEL may fund construction of the assembly plant on the Autoport lot, then lease it to a contractor who, in turn, would build Niva models and sell them to Lada Cars of Canada for sale to dealers.

The Canadian-owned company, which has been selling Lada sedans since the fall of 1978, began offering the Niva model in November, 1980. It has sold 1,000 Nivas since introduction and is expanding into Western Canada where demand will be greater.

Assembly of the Niva would ease the supply situation and open potential export markets. Likely markets would be Central and South America and the United States through Satra. the U. S. - Soviet trading company.

Lada officials prefer the Dartmouth/Halifax area of Nova Scotia for the plant because it is a year-round deep-sea port offering good rail connections and a ready supply of available skilled labor.

Lighter, brighter, whiter

A new glass headlamp unit, right, that is 23 percent lighter than its forerunner will be manufactured by General Motors' Guide Division, Monroe, La., for use on all 1982 GM cars with two-lamp headlighting. Produced in tungsten and tungsten-halogen sealed-beam versions, the new lamps features a whiter light with twice the output on high beam and a 36-percent energy saving on low beam, Guide Division said.

Buick to supply cars for 1984 Olympics

DETROIT. — The Los Angeles Olympic Organizing Committee finally found a domestic car to be its official car of the 1984 games: Buick.

Domestic makers had been reluctant to become the official sponsor for the games because of the costs, the difficulty of getting much publicity from the sponsorship and the timing of the summer games, when stocks are being cleared and makers have nothing new to show, and the winter games, after models are already introduced.

In fact, just over one year ago, General Motors turned down the Olympic sponsorship.

But a number of major importers — German, Japanese and Swedish were anxious to sign the contract. The organizing committee was reluctant to sign a foreign make because of the sensitivity of the import issue.

Four months ago the Albuquerque-based ad agency Competitive Edge signed an option agreement with the Olympic committee to try to find a GM sponsor.

Competitive Edge, which says it handles some 700 dealer clients, mostly Buick, agreed to sponsor the games itself if it did not find an auto maker.

"We had an idea about creating a special Olympic car to be sold across the U. S., targeted toward import buyers," said Competitive Edge President Lee Galles.

"We presented the idea to GM and suggested that Buick be the division named to be the official official car. GM was receptive . . . Buick was very enthusiastis," he said.

Buick is now studying possibility for a limited-edition production car along these lines.

As official car, Buick will offer 500 new cars over the next three years for the Olympics. These will be a mixture of models. Competitive Edge will produce and promote advertising tying together the Olympics and Buick.

Another part of the agreement calls for Buick to sponsor a youth-oriented athletic activity, extending beyond the scope of the '84 Olympics. Buick is said to be studying four proposals for facilities or national youth programs.

Lemley heads L-M deal

MEDFORD, Mass. — Fraser Lemley has become president of Sentry Lincoln-Mercury.

Makers see eventual success

Alcohol cars turn sour in Brazil

By Laurie Wentz
Crain News Service

SAO PAULO, Brazil — Sales of Brazil's 100-percent-alcohol-fueled cars — hailed last year as the savior of this nation's auto industry — have plummeted with the slumping economy and Government's contradictory stance on the alcohol program.

After peaking at 55,777 alcohol vehicles last November, monthly output fell to 5,459 in June and an estimated 2,500 in July as manufacturers slashed production further in an effort to unload stocks.

Little immediate improvement is expected.

"Demand for alcohol cars reached 90 percent last year; now it's 10 percent (of new-car demand) and we expect it to level off at 35 to 40 percent," said Derek Barron, Ford of Brazil's marketing director.

Brazil is 80 percent energy dependent on oil imports and is spending more than $5 billion—including $250 million from the World Bank's first-ever loan for alcohol production — to bring alcohol-from-sugar-cane production to 10.7 billion liters per year by 1985 and replace 45 percent of the country's gasoline consumption with ethanol (ethyl alcohol).

By 1985, two million alcohol-burning cars and light trucks were scheduled to be circulating on Brazil's roads.

• The meteoric rise of alcohol burners produced by Ford, General Motors, Volkswagen and Fiat began last year when the Iran-Iraq conflict threatened threatened Brazil's oil imports and motorists feared there would be no gasoline.

The downturn started when sales slipped to 39,500 cars in January and to 18,300 by March. First-half sales of 121,000 fell far short of the goal of 180,000.

Not only alcohol cars have been affected. Hard-hit by Brazil's recession, domestic January-July auto sales plunged 38.5 percent below the first seven months of 1980 to 334,180 vehicles.

An export drive boosted first-half foreign sales by 17 percent to 112,990 vehicles and Volkswagen aims to double its 1980 export earnings to $600 million.

Despite the export surge, the auto industry has fired 14,600 workers this year and Volkswagen — responsible for 43 percent of Brazil's auto output—is offering three month's severance and continued medical and educational benefits to any employe willing to quit his job. During the first week of the offer, a thousand VW employes volunteered to quit.

• GM, Ford and VW executives cite the following reasons for the drastic decline in car sales:

1. To discourage excess consumption, the government has pushed the price of alcohol from between 35 and 50 percent of the price of gasoline to 64 percent of the price of Brazil's gasoline — the world's third most expensive at $3.04 per gallon.

2. "Ill-advised and conflicting statements" by top government officials about continued availability of alcohol fuel sparked fears among car buyers of an alcohol shortage and undermined public confidence in the alcohol option.

3. Massive illegal and inefficient "backyard" conversions of gasoline vehicles to run on alcohol caused rapid engine corrosion and atrocious mileage, giving the alcohol car a bad name.

4. The last straw, for many alcohol-car owners, is a mandatory car sticker required in order to fill up on alcohol, beginning Aug. 20. The sticker is obligatory, but it keeps falling off the car.

Ford's alcohol models have gained a reputation for greater fuel efficiency and a better cold start, enabling the company to capture about one half of the much diminished alcohol-car market in recent months.

• With $25 million invested in developing the alcohol car in Brazil, Ford is betting on an upturn in sales.

Alcohol cars came to 10 percent of Ford's July output but will make up 15 percent in August and about 35 percent the rest of the year, according to Ford's Barron.

Although lack of public confidence is expected to hamper alcohol-car sales over the short term, auto industry leaders and government officials alike say they are convinced of the ultimate success of Propalcool — as the alcohol program is called—because Brazil has no alternative.

"There are already 400,000 alcohol cars and 5,000 alcohol service stations in Brazil," says a prominent Sao Paulo energy energy expert. "Proalcool is irreversible."

EPA proposes a retreat on noise-control standards

WASHINGTON. — All record keeping and reporting requirements for existing noise control standards for medium and heavy trucks, motorcycles and motorcycle replacement exhaust systems, garbage trucks, construction equipment and portable air compressions is proposed for revocation by EPA.

Comment due date is Sept. 14.

The medium and heavy truck noise control standards, set in April, 1976, and effective as of 1978 models are for 83 dbA and are scheduled to drop to 80 dbA in January, 1983. These standards remain in effect until Congress decides what really happens.

The Reagan Administration plans to deregulate in the noise control area—turning it over to the states—despite the opposition of the motorcycle and truck makers, who fear conflicting regulations by the states.

The EPA proposal says it is now holding in abeyance all compliance checking of noise levels and all verification of labels and it plans to eliminate those particular regulations after the suitable comment period.

Even though the government will have no way of knowing whether the vehicles do comply with standards, the citizens' suit provisions remain in case any individual wants to challenge the makers.

The Senate has moved to scrub noise-control federal regulations except for interstate carriers and railroads but has left a gray area for trucks. The House bill would retain federal preemption for trucks and autos.

Although autos do not have noise-control standards, federal preemption might protect them also from conflicting state standards. Under the Quiet Communities Act, states and localities can control use of vehicles; the objection of federal preemption is to ban state and local control of the manufacturing process.

Deciphering ad is no easy task

DETROIT. — The word game is one anyone can play. That becomes apparent with a look at an ad run in the Detroit News by Ramchargers, a three-location parts concern.

One of a dozen items mentioned was a "Test Tube. Verify the need to replace catalytic converters. Easy to install. From $8.50." An AUTOMOTIVE NEWS query brought this explanation: "It's used to bypass the catalytic converter."

Sao Paulo street scene

Parked on a busy thoroughfare in Sao Paulo, Brazil, is an alcohol-powered Volkswagen owned by the phone company, Telesp. Ford, General Motors and Fiat also produce alcohol cars in Brazil. Sign on deck lid advises that the VW is powered by alcohol.

Electric Vehicle Corp. files under Chapter 11 in Minn.

MINNEAPOLIS. — Electric Vehicle Corp., a Twin Cities company charged recently with consumer fraud by the Minnesota Attorney General's Office, has entered U. S. Bankruptcy Court with more than $2.5 million in debts owed to more than 300 individuals and companies.

The bankruptcy action filed under Chapter 11, could ultimately pin losses on 100 consumers across the nation who paid up to $24,000 for cars marketed under the Bradley GT nameplate that were never delivered.

Consumers and employes of the company report that the cars and unassembled car kits that were shipped often lacked key components and had substantial deficiencies such as missing windows and doors that wouldn't close.

Moreover, most of the Electric Vehicle customers bought cars based on a sales promotion that the Attorney General's office charges was deceptive and fraudulent.

At the center of the controversy is Dell Gustafson, the Minneapolis businessman who was under federal investigation earlier this year for his deals involving a Las Vegas gambling casino. Gustafson was found in violation of federal securities laws, although he has denied any links to organized crime.

In the Chapter 11 filing by Electric Vehicle, about $2.5 million in debts are owed to some of the nation's largest and most prestigious publications, such as the Harvard Business Review, for advertising that Electric Vehicle used to generate telephone sales. The largest creditor is Media Networks of New York City for $87,343. Other creditors include such firms as IBM, 3M and Northwestern Bell Telephone.

However, the greater hardships could fall on the customers who paid in full for undelivered cars — people such as Wayne and Melanie Gunn, farmers in Jay, Fla., who wrote a check for $23,945 for a Bradley GT-2.

The Gunns hoped to become "brokers" which the Minnesota attorney general's office says was a fraudulent promotion used by the company to lure customers into buying a car.

The Gunns said they were told they would become exclusive representatives for Electric Vehicle in their area, which would earn them profits. They said they were told that joining the broker program would qualify them for a discount on their own electric car, reducing the price from $27,000. They said they were told that they would receive tips on prospective customers in their area.

But the sales pitch was a deception and a fraud, according to the complaint filed by the Minnesota Attorney General's Office. Thomas Barrett, special assistant attorney general in the Consumer Division, said that all the customers received discounts, that there were no tips on prospective customers and that the marketing areas were not exclusive.

Gengras family honored

HARTFORD.—The E. Clayton Gengras family, active for many years in Connecticut automotive retailing, has been cited by the Hartford Jewish Community Center for its endowment of the infirmary at the center's Camp Shalom summer youth facility.

Repossessors, U.S. settle charges of price fixing

WASHINGTON. — A proposed consent decree filed by the Justice Department would end the civil suit against Time Finance Adjusters, an association of repossessors based in Daytona Beach, Fla.

The proposed settlement, awaiting court approval, was filed in federal court in Orlando, Fla.

The suit, filed last January, alleged violation of the Sherman Act in conspiring to fix prices, restrict territories and limit membership throughout the U. S.

The proposed settlement would prohibit the defendant from fixing, advertising and publishing prices for repossession services. It would prohibit communicating with representatives of other repossession associations on prices.

It would also prohibit any activity with the purpose or foreseeable effect of allocating, restricting or otherwise influencing the service area or territory in which any of its members operate or advertise that they operate, and establishing or maintaining unreasonable fees for TFA membership.

Imports buoy June total

Month's registrations gain 10 pct. on 1980

By Richard A. Wright
Assistant Managing Editor

Buoyed by a record import total, new-car registrations in the U.S. climbed in June compared with a year earlier, according to figures compiled by R. L. Polk & Co.

New-car registrations in June totaled 747,405, up a healthy 10.55 percent from 675,964 a year earlier. While it was a welcome increase it was far from one of the industry's better Junes. Record for the month is 1,068,869, set in 1973.

June registrations were also up from the preceding month, a gain of 2.22 percent from 731,059 in May.

While most of the increase was accounted for by imports, which posted a record 222,508 total, up from 199,413 a year earlier, domestic new-car registrations also gained, up 10.12 percent from 476,551.

For the first six months of 1981, new-car registrations totaled 4,390,708, off 1.36 percent from 4,451,138 in the first half of last year.

Table on Page 11

Domestic registrations in the first half totaled 3,116,537, down 2.47 percent from 3,195,527 last year. Import registrations were up slightly for the six months to 1,275,171 from 1,255,611.

Biggest gainer in market share in June compared with a year earlier was Chrysler Corp., which took 8.18 percent of the total, up 2.07 percentage points. Ford Motor Co. accounted for 17.61 percent, up 0.21 of a point.

General Motors suffered the largest market share loss, down 2.19 percentage points to 43.08 percent of June registrations. American Motors dipped 0.33 of a point to 1.32 percent.

Imports accounted for 29.77 percent, up 0.27 of a point, while miscellaneous domestic lines accounted for 0.04 percent, down 0.03 of a point.

Excluding imports, June domestic registrations were divided as follows: GM, 61.35 percent, down 2.86 points from last year; Ford Motor Co., 25.03 percent, up 0.40 of a point; Chrysler Corp., 11.64 percent, up 2.98 points; AMC, 1.87, down 0.47 of a point, and miscellaneous, 0.06 percent, down 0.05 of a point.

By size segments, subcompacts and luxury cars again posted gains in market shares compared with a year earlier, as did imports. Subcompacts accounted for 15.37 percent of June registrations, up 2.75 points, while luxury cars were up 0.15 of a point to 4.41 percent.

Compacts took the biggest loss, down 2.18 points to 19.99 percent. Intermediates were also off 0.17 of a point to 20.16 percent, and standards dipped 0.82 of a point to 10.30 percent.

Registrations by market class in June were: Subcompact, 114,885; compact, 149,358; intermediate, 150,659; standard, 76,943; luxury, 32,952, and import, 222,508.

• Ford Escort continued to hold onto the top spot among the nameplates, with Chevrolet Chevette and Citation in strong pursuit.

The top 20 domestic nameplates in June registrations were:

1—Ford Escort	28,998
2—Chevrolet Chevette	26,431
3—Chevrolet Citation	24,315
4—Olds Cutlass Supreme	22,225
5—Standard Oldsmobile	21,288
6—Chevrolet Malibu	21,034
7—Olds Cutlass	19,826
8—Standard Chevrolet	17,927
9—Buick Regal	16,952
10—Buick Skylark	16,846
11—Plymouth Reliant	16,288
12—Ford Fairmont	15,744
13—Ford Mustang	14,102
14—Buick Century	13,131
15—Chevy Monte Carlo	12,089
16—Plymouth Horizon	11,792

18—Standard Buick	11,353
19—Dodge Aries	11,346
20—Cadillac	10,683

'Spy' reported in computer of Cadillac V-8-6-4 engine

By Marjorie Sorge

Cadillac's new computer not only controls its V-8-6-4 engine, it also squeals on its owners.

In "Big Brother" fashion, the computer records any speed over 85 MPH and labels its owners "negligent" if the car is not brought to a repair shop within 30 engine starts after the "check engine" light comes on, according to the Electronic Engineering Times.

The computer also controls the V-8-6-4 engine which changes cylinders — depending on driving requirements to improve fuel economy — and the digital fuel injection system, among other parts of the vehicle.

Owners of the V-8-6-4 have complained bitterly about spending a great deal of time in the repair shop because the "check engine" light comes on frequently. In a previous AUTOMOTIVE NEWS story, R. J. McMillin, director of engineering for Delco Electronics, said the "check engine" light would come on when the computer detects any defect in the system. He said it would remain on until the car is brought into the shop for a checkup.

Besides a glowing "check engine" light, owners have said the V-8-6-4-powered cars are "experimental," that they die on the road without warning, stall and then jerk forward, ride rough and are a safety hazard. Others have reported fires. There is currently a class-action lawsuit pending in New Jersey against Cadillac.

Dealers have complained that the computer is "too sophisticated" for the car and is difficult to fix. Mechanics often replace the entire computer, but McMillin said two-thirds of the time the computer is perfectly good. He said the mechanics often don't have the training necessary to work with the computer.

The actual problem can be read in the dealership by using certain codes to probe the car computer's memory of the defect. According to EE Times, owners can tap the computer themselves. The publication said certain key voltages and fault codes can be read out on the digital speedometer when the turn signal, brake pedal and climate-control buttons are pushed simultaneously.

Some owners have seen the warranty-covered repair bill — up to $2,000 for the electronic control unit (ECU) and the peripherals. And many owners say the car fails again after the repairs.

Cadillac recently extended its warranty on the V-8-6-4 to five years or 50,000 miles without charge to the customer in the wake of criticism of the engine. The warranty covers the engine, the digital fuel injection system and the computer, plus other related parts, for the original and subsequent owners.

Spokespersons for Delco Electronics and Cadillac declined comment on the EE Times story on the basis of the pending litigation.

Luxury for Latin American market

Ford's luxury line in Latin America now includes the Del Rey, in two and four-door versions and two trim levels: Del Rey and De Rey Ouro. Base priced at about $8,200 for the gasohol-powered two door, the Del Rey features a 1.6-liter four and is the size of the U. S. Fairmont. The cars are built at the Sao Bernardo plant, Sao Paulo, Brazil, for sale in that country and elsewhere in Latin America.

Fuel produced from coal runs pickup in Alabama test

WILSONVILLE, Ala.—A 1981 General Motors pickup truck was fired up with a laboratory-produced liquid produced through a solvent refined coal process at a demonstration of how a utility company hopes to further turn coal into a liquid fuel.

The site was one of two pilot plants in the country and is being operated by Southern Co., a holding company for utilities in Georgia, Alabama and a part of Florida.

The fuel that went into the pickup was laboratory refined especially to operate the truck and was different from the product the plant is producing for fuel for electric generating plants and hopefully will refine into gasoline, home-heating oils and possibly fuel for other uses.

It was the first public demonstration at the plant south of Birmingham showing how a range of sulfur-free, clean-burning solids and liquids can be made.

Researchers said they believe a commercially feasible method of converting coal to a liquid fuel is about to appear.

The plant here is one of the few in the world which can take raw coal and convert it into a liquid fuel, said Dr. William B. Harrison, vice president for research and development for Southern Co. Services.

He made the statement at a press briefing.

• It was recalled at the press briefing that Germans developed a method of producing fuels from coal during World War I.

But, Harrison said, the process under development here uses a different system which removes pollutants from the coal, leaving a clean-burning solid which can be further refined into a liquid and as an automobile fuel.

Southern Co. officials said they believe a commercial-size plant would be able to produce liquid fuel at a cost of about $37 a barrel, which would be close to what a barrel of oil now costs on the world market.

The facility here has been told by the U. S. Department of Energy that it can expect an additional $3.2 million.

While funding for several synthetic fuel projects has been cut back or eliminated by the Reagan Administration, Wilsonville appears to be in a favorable position to continue its research work.

Further, a conference committee of Congress has promised to provide $135 million to International Coal Refining Co. for a large-scale plant to be erected in Western Kentucky. The purpose will be to test still further the process developed here and more fully determine whether the system is commercially feasible.

The Kentucky operation would produce about 100,000 barrels of liquid per day using 30,000 tons of coal.

This would be in contrast to the production of 15 gallons of liquid daily from six tons of coal here.

To produce a liquid, the solvent refined coal is mixed with hydrogen and a solvent and then passed through a hydrogeneration reactor to increase the hydrogen content of the fuel, which is then again distilled.

Mercedes deal expands truck horizon

Egypt: Near East automotive center

By Jan P. Norbye
Staff Correspondent

STUTTGART, West Germany. — News of the Daimler-Benz contract has brought Egypt into focus as the center of motor vehicle production in the Near East.

Under the recent agreement, the Stuttgart firm will hold a 25-percent share of a joint venture, Mercedes Misk Co. Government-approved plans call for the construction of a plant on an industrial site near Cairo estimated to cost $45 million, for assembly of 3,000 light trucks, 3,600 heavy trucks, and 1,000 buses a year, all powered by Mercedes-Benz diesel engines.

Local content will start modestly, with such elements as frames, springs, tires, cabs, bodies, seats and trim, while the major mechanical components will be delivered from West Germany.

The plant is scheduled to come on stream in the early part of 1983.

This project will give Egypt its first real base in the commercial-vehicle industry. Up to now, local production of heavy vehicles has been restricted to about 2,500 Magirus-Deutz medium-duty trucks and buses a year, with up to 60 percent local content. This operation is conducted by Nasco, a subsidiary of El Nasr Industries (a Fiat licensee).

• The signing of this deal with Daimler-Benz could spell curtains for the Ford project, which has been under discussion at various times in recent years.

Ford formerly operated a truck assembly plant at Amreya outside Alexandria, but it was closed in 1966 when the Arab League put Ford on the blacklist for trading with Israeli firms.

The latest Ford plan, presented at the end of 1977, called for investments of $200 million to manufacture 50,000 diesel engines and 10,000 trucks a year.

Ford was to subscribe for a 30-percent share, matched by local private interests, with the Cairo Government coming in for a 40-percent share.

El Nasr Industries has been producing Fiat cars under license since 1961 and now holds a 65-percent share of the Egyption car market, with 2,500 workers and a production of 15,000 to 16,000 cars a year at the Helwan plant near Cairo.

An ambitious tripartite expansion plan announced in 1978 with Spanish collaboration and Iranian financial participation has apparently not been affected by Fiat's retreat from its Spanish associate, SEAT, and the domestic troubles of the Misr Iran Bank.

The plan includes a foundry, a forge and complete machine shops for engine production, and will raise El Nasr's capacity to 35,000 cars a year by 1983. Current models include the 128, 133, 125 and 131.

• But the Egyptian Government long ago started looking beyond a Fiat monopoly on domestic fabrication. Finally, in January, 1979, after five years of negotiations, the Sadat government signed an agreement with Volkswagenwerk and its Brazilian subsidiary for local assembly of 10,000 Beetles and Transporters a year from CKD shipments sourced in Brazil. The number was to double in three years.

One problem that took time to solve was Volkswagen's insistence on majority control of the enterprise. Volkswagen's investment is estimated at $35 to $40 million, and the stake of the Egyptian Government is expected to fall between 33 and 49 percent, putting the total cost in the area of $55 to $85 million.

Land was found in Ismailia, on the banks of the Suez Canal, near the Great Bitter Lake. Ismailian Governor Abdel Moniem Amera has announced that a work force of 6,000 trained Egyptians will be available for the VW plant, due to come on stream in the spring of 1982.

The U. S. auto industry's leading representative in Egypt is American Motors, with an annual production of about 5,000 Jeeps, Wagoneers and pickup trucks. The agreement was signed in November, 1977, and production began in April, 1979. The $100-million plant is located at Heliopolis, near Cairo and was set up by a joint subsidiary of the Arab Organization for Industrialization, which owns 51 percent, and American Motors, which holds the remaining 49 percent.

The AOI was formed in 1975 by Egypt, Saudi Arabia, Qatar and the United Arab Emirates, with the latter providing the bulk of the financing. The plant will ultimately have capacity for 10,000 four-wheel-drive vehicles a year.

Minor members of the Egyptian auto industry include Etramco and Ramses. Etramco is located at Helwan and began production in 1975, building about 500 Honda minibuses a year.

Egyptian Automotive Co. began building the Ramses under NSU Prinz license in 1958, and was making 1,000 cars a year by 1964. When Prinz production ended in 1970, Ramses switched to the Polish ZUK light commercial vehicle line, now built in an annual volume of about 1,500 units.

St. Louis Buick deal finds 18 months enough

ST. LOUIS. — Larry Mazzuca Buick-Opel, Inc., a new facility at 2244 South Kingshighway Blvd, is liquidating after being in business for only 18 months.

However, the point will not be closed since Mazzuca will be selling his interest. Motors Holding has partly financed the operation.

Dealer leader and Saab president

Investigating a new display for Saab dealers is H. Herald Friedley, right, Friedley Saab, Cedar Falls, Ia., with Robert J. Sinclair, president, Saab-Scania of America, Inc. They met at company headquarters in Orange, Conn., where Friedley chaired meetings of the Saab National Dealer Advisory Council.

FTC cites antiknock firms for price-fixing practices

WASHINGTON.—The nation's four makers of lead-based antiknock gasoline compounds are guilty of violating antitrust laws in order to maintain identical prices for their products, a Federal Trade Commission judge has ruled.

Although not engaged in a conspiracy, said Chief Judge Ernest G. Barnes, the four manufacturers — Ethyl Corp., DuPont, PPG Industries and Nalco Chemical — engaged in similar anticompetitive practices, including:

1. Thirty-day advance notices of price increases.
2. Issuance of press releases announcing price increases.
3. Uniform prices for delivered shipments, regardless of distance.
4. Use of "most-favored-nation" clauses in contracts, which promise customers the lowest price extended to any other customer.

Use of these marketing practices, Barnes said, results in "chilling the vigor of price competition." The four companies, under the judge's order, may no longer use these or other anticompetitive practices.

Antiknock compounds, which raise the octane levels of gasoline and prevent engine "knocking," enjoyed sales of $550 million last year. Such compounds were used in about two-thirds of the gasoline produced in the U. S.

U. S. wins round on restraint of competition charges

Trial ordered in M-B parts case

WASHINGTON. — Mercedes-Benz cars and Mercedes-Benz replacement parts are separate products, as far as the U. S. District Court in Northern California is concerned, but a trial is needed to determine whether Mercedes-Benz of North America has restrained competition in the parts market and whether Mercedes has shown a legitimate business justification for the tie-in of parts and car sales to its franchised dealers.

This was the latest decision in the ongoing suit the Justice Department brought against MBNA alleging a per se violation of Section 1 of the Sherman Act in allegedly tying the sale of Mercedes parts to the sale of Mercedes cars.

Some 400 Mercedes dealers operate under a franchise agreement requiring the use of "genuine" parts or parts approved by the parent company, Daimler-Benz AG.

MBNA said the arrangement should not come under a per se ruling. Using the rule of reason, the agreement is not a restraint of trade, it said. But the judge did not agree.

Most of the cases cited support the theory that Mercedes-Benz may condition the sale of cars on the use of the Mercedes-Benz trademark, the court ruled.

The court also suggested that by restricting dealers' source of parts, prices could rise and dealers could find it hard to compete with independent distributors.

The court decided the two products are separate because Mercedes has separate price lists, separate personnel and separate sources of supplies — some made by the parent company and others by outside suppliers.

While the court noted that the "approved source" clause in the franchise agreement may negate a finding of an illegal tying arrangement in the case of the Mercedes franchise, the government has shown that "no formal system for approval of non-MBNA parts exists in the DBAG/MBNA network and that crucial MBNA officers are unaware of established procedure for testing the quality of non-MBNA-supplied parts upon dealer request for DBAG approval."

"The evidence discloses that the approved source provision exists on paper only and does not represent a true alternative for dealers wishing to avoid the effects of a tie-in," the court said.

The court spelled out three ways the government could show M-B has enough economic power to impose appreciable restraint of competition in the parts market: That Mercedes has a dominant position in the tying product; that MB parts have sufficient, advantageous differences not shared by its competitors, or that M-B has economic power based solely on the number of customers who have accepted the tie-in.

The government is using the last two arguments. The court indicated dissatisfaction with the last argument, saying it also needs to be shown that there are no explanations for the acceptance of the agreement except the seller's economic power.

Mercedes-Benz said use of its replacement parts is essential to the continued high quality and reputation of its cars and trademark. MBNA also said it is impractical or impossible to publish engineering, manufacturing and testing procedures for its 25,000 replacement parts.

As the court sees it, the question may turn on whether quality control inspection done by DBAG can be duplicated since the specifications for making many of the parts already exist.

In order to get the court to rule in favor of MBNA's business justification arguments, the court said MBNA must show the need for its quality control procedures and the "unavailability of comparable mechanically necessary replacement parts from non-MBNA sources."

MBNA recently settled another parts case, brought in 1977 in Maryland by private parties. In a consent agreement, MBNA said it would not make or maintain any agreements with dealers that fix the price, margin, discount or markup of M-B parts sold to independent garages (AUTOMOTIVE NEWS, Aug. 3).

Makers assemble 104,425 for week

Car output rises as plants return

By Patricia Hoffman
Staff Writer

U. S. auto production last week fared better than the previous week's output, and the total remained above that of the comparable 1980 week.

The car makers scheduled 104,425 units last week, up 9.02 percent from 95,785 the previous week, and up 8.15 percent from 96,556 completed in the comparable week last year.

So far this year, the auto manufacturers have assembled 4,389,527 units, up 7.05 percent from 4,100,498 a year ago.

Breakdown for the week by company is: General Motors, 56.55 percent; Ford Motor, 30.19 percent; Chrysler Corp., 9.86 percent; American Motors, 3.02 percent; Volkswagen of America, 0.36 percent and Checker Motors, 0.02 percent.

Several assembly points resumed operations last week with production of 1982 models.

GM's Detroit facility, down for changeover since July 17, returned Aug. 17. So did Pontiac and Baltimore, which had been down since July 31.

GM's Linden assembly plant, idle since July 22 for model changeover, resumed operations last Wednesday (Aug. 19).

AMC's Kenosha assembly point, down for changeover since July 20, reopened Aug. 17.

Chrysler's Newark facility, idle since Aug. 3, returns today (Aug. 24).

GM's Janesville point closed last week (Aug. 17) for changeover to the 1982 J-cars. The plant is slated to reopen Sept. 8.

GM's Leeds and Van Nuys assembly points, both down for model chanegover, are scheduled to return with 1982 production Oct. 12.

Chrysler's St. Louis point, idle since July 31, is slated to return late this week.

Davies adds VW in Hawaii; worldwide auto chain grows

HONOLULU. — Theo. H Davies & Co., Ltd., has expanded its automobile distribution activities in Hawaii by purchasing a majority interest in Volkswagen Maui, Inc., in Kahului.

C. W. Shafer, vice president of Theo. Davies and president of Davies Euromotors, said the Volkswagen Maui name will be changed, but the dealership's car lines — Volkswagen, Audi, Jaguar and Triumph — will be retained.

The acquisition marks Davies' entrance into automobile distribution on Maui. The firm handles Mercedes-Benz in Honolulu and Hilo through Davies Euromotors and Honda on the Island of Hawaii through Big Island Honda.

Volkswagen Maui sold 454 new and used cars in 1980, totaling more than $4 million. Davies Euromotors' sales on Oahu and the Big Island topped $11 million in 1980, including 526 new and used cars.

Euromotors has increased its share of the luxury new-car market (cars costing $12,000 or more) in Hawaii from 7 percent in mid-1979, when Davies acquired Euromotors, to 11 percent at the end of 1980.

"We are optimistic about the automobile market on Maui and are pleased to diversify further in a business where we see growth potential," Shafer said. "We think that our total automobile operations may have the potential of $20 million in sales by 1982."

Robert Sutton, president of Theo. Davies, said the acquisition is compatible with the expanding automobile business of Davies' parent company, Jardine, Matheson & Co., Ltd., based in Hong Kong.

In June, Matheson & Co., a Jardine subsidiary in England, purchased a three-quarter interest in the Lancaster Motor Group, which distributes Mercedes, Porsche, Audi, Volkswagen, Volvo and other cars from six locations in southeast England.

Jardine franchises in Hong Kond include Mercedes, Subaru, Fiat, Ferrari and Chevrolet, while an affiliate in Saudi Arabia is the agency for Chrysler and British Leyland.

Truck production declines for week but tops year ago

U. S. truck production last week fell below the previous week's output, but the total was higher than that of year ago period.

Last week, the truck manufacturers scheduled 23,935 units, down 5.89 percent from 25,432 trucks completed in the previous week, but up 10.31 percent from 21,697 last year.

So far this year, the truck makers have completed 1,120,811 units, up 12.53 percent from 995,992 in the same period in 1980.

General Motors' Lordstown (van line) assembly point, idle for model changeover since July 30, returns today (Aug. 24).

GM Fremont down for changeover since July 17, resumes operations today as does the Pontiac (medium, heavy-duty and bus) facility, which closed Aug. 17 for inventory adjustments.

The GM Baltimore assembly plant returned last week (Aug. 17) with 1982 production. The plant had been idle since July 31.

Returning next week at GM will be the Janesville and St. Louis assembly points. The plants went down for model changeover on July 24, and are both slated to resume Aug. 31.

Volkswagen of America's Westmoreland assembly point will be idle for changeover beginning Friday (Aug. 28) and is scheduled to resume operations Sept. 21.

Week's output of cars, trucks rises in Canada

The Canadian auto makers last week upped production from the previous week's output, and the total also was above that of the comparable 1980 week.

The estimated auto production for the week was 12,042 units, up 45.68 percent from 8,266 in the previous week, and up 17.05 percent from 10,288 in the comparable week last year.

So far this year, the car manufacturers have completed 548,438 units, up 2.89 percent from 533,021 in the comparable period last year.

Canadian truck production for the week was planned at 9,704 units, up 31.06 percent from the previous week's output of 7,404 units. However, the total dropped 12.99 percent from 11,153 trucks completed in the same week in 1980.

Year-to-date output for the truck makers is 337,037 units, up 2.27 percent from 329,548 in the comparable period last year.

General Motor's Oshawa (#2) car facility, which was idled Aug. 6 for changeover to the 1982 front-wheel-drive cars, will continue down until Nov. 9.

GM's Oshawa (#1) car point, down for changeover since July 16 and originally scheduled to resume Aug. 18, will remain idle until Aug. 31 for inventory adjustments.

Also at GM, the Scarborough truck facility, which went down for changeover July 29, resumed operations last week (Aug. 18).

Volvo's Halifax assembly point, down for changeover since Aug. 3, returns today (Aug. 24).

New-car sales surge ahead; rebates help

By Jenny L. King
Staff Writer

Domestic new-car sales purred in mid-August as customers returned to showrooms to take advantage of various pricing and financing programs and dealers and factories alike again were reminded: What a difference a rebate makes.

Chrysler Corp. and Ford Motor Co. both had customer rebate plans in effect Aug. 11-20, while General Motors dealers offered an attractive interest rate to new-car buyers. The three companies reported sizeable sales gains during the period.

Total domestic new-car sales numbered 204,678, up 19.86 percent from 170,765 a year ago. With nine selling days in the period, the daily rate averaged 22,742, up 19.86 percent from 18,974. It was the best rate since the 24,697 average in the last period in May.

Mid-August also was an improvement (up 32.42 percent) over the first period, when sales totaled 154,572.

Chrysler Corp. reported the biggest gain: Its sales jumped 42.93 percent, to 22,853 from 15,989 last year, and its Reliant K-car was among the five best-selling nameplates during the period. GM was up 19.75 percent, to 134,949 from 112,688. Ford Motor Co. sales of 37,034 were up 11.51 percent from 33,212 a year earlier.

Volkswagen of America dealers sold 4,842 new Rabbit sedans, down 14.69 percent from 5,676, while American Motors sold an estimated 5,000 units, up 56.25 percent from last year's 3,200 estimate.

- GM earned 65.93 percent of the mid-month domestic market, down slightly from 65.99 percent last year. Ford sales accounted for 18.09 percent, down from 19.45 percent. Chrysler picked up the slack and captured 11.17 percent, up from 9.36 per-

Regal increases its presence

The Buick Regal lineup for 1982 includes coupes, sedans and the Regal Estate Wagon. New standard equipment features include body side moldings, whitewalls and color-coordinated seat belts. Base Regal engine is a 3.8-liter V-6. A new 4.3-liter V-6 diesel is offered for coupes and sedans. Story, other pictures on Page 37.

1982 auto bargaining may plow new ground

By Marjorie Sorge
Labor Editor

There may be a separate rulebook for each auto company when negotiations began with the UAW in 1982 as pattern bargaining goes out the window, according to a noted analyst.

Maryann N. Keller, vice president, Paine Webber Mitchell Hutchins, Inc., said company-specified contracts may be attempted in 1982 rather than industrywide settlements because of the varying financial states of the Big Three.

All of the domestic auto makers have suffered serious financial setbacks over the past two years and will be attempting to save money in 1982 bargaining. But, according to Keller, "no rollback on the present contract terms is possible . . . and the best the industry would hope to accomplish would be to hold hourly wage costs constant through the life of the next contract."

Cost cutting might appear in longer agreements, phased-in benefits, profit sharing in lieu of a portion of future wages or a reduction in holidays, Keller said.

In the past, the UAW has picked a target company to set the pattern for an agreement. If that company was struck it suffered competitively as the manufacturing processes ground to a halt, which often hastened the bargaining process.

However, in 1982, it is agreed by most analysts that the auto companies will not be back on track financially and their economic status will play an important role in negotiations.

According to Keller, Ford will be only marginally profitable in North America in 1982, while General Motors should be reporting decent earnings. Chrysler, still the underdog, will not be recovered enough for a catch-up contract after it got over $1 billion in concessions from the UAW in the last agreement.

Ford and the UAW seem to have a mutual understanding of each other's objectives and even

Dealers cheered by tidy cleanup; shortages loom

By Jim Plegue and Joseph Bohn

"This will probably be the best cleanup I've experienced."

"One of the nicer cleanups . . . going back to 1972."

"We're doing exceptionally well. We're moving a lot of stock."

Cashing in on one of the briskest cleanups in recent years, dealers contacted last week by AUTOMOTIVE NEWS were happy, if not downright elated, by the way '81 sales are winding up. Many expected to have a thin supply of '81s by the end of September.

Some even predicted shortages, if current rebates and interest subsidies are extended. And reports had General Motors, Ford and Chrysler extending their programs for about three weeks into September.

October and the '82 launch is another question altogether. How sales will fare after manufacturers go from rebates/price reductions to stiff new increases remains to be seen.

For the time being, though, dealers are enjoying the sales boom.

Generally, the product shortages dealers are already experiencing seem to be in larger cars, which some were overly timid in ordering.

Small-car stocks, particularly at Ford and Lincoln-Mercury, are in greatest quantity, though Escort is a notable exception. Ford authorized preselling on '82 Escort/Lynx to keep up with demand.

Some General Motors dealers, particularly Chevrolet, still have ample X-body stocks.

There's generally more discounting than normal going on, but it is offset by the higher volumes.

And some dealers are getting a good mix of highly resaleable used cars which in itself is a good sign.

- On the subject of grosses, Gary Tursi, new-car sales manager for Derio Oldsmobile, Caldwell, N. J., said, "The deals we're making are very competitive, and our average gross has dropped by about $70 (per car). Discounts are higher than average, ranging from $70 to $100 per car more . . ."

"Our individual grosses are slightly behind last year," added Henry Faulkner, Faulkner Olds, Philadelphia. "But increases (in sales) volume have taken up the slack. There's a lot more discounting. It's a much more highly competitive year than '81."

An exception to the general trend was Koons Ford, Falls Church, Va., where grosses are averaging about $750, up $200-$250 from the norm, according to John Fee, sales manager.

Dealers uniformly credit Detroit's programs with bringing customers in. The public doesn't seem to be aware yet of the '82 increases to come, and dealers aren't using the "buy to beat the increase" line in their ads yet.

At Koons Ford, customers are opting for the rebate, rather

Support for changes is widespread

Clean Air hearings begin Sept. 14

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The UAW, the Japanese Automobile Manufacturers Assn. and NADA have joined the domestic auto makers in supporting changes in the Clean Air Act sponsored by Michigan Rep. Bob Traxler and Indiana Rep. Elwood Hollis.

Hearings are scheduled for the House subcommittee chaired by California Rep. Henry Waxman for Sept. 14 and 15.

The Traxler-Hillis bill to change Title 2 of the law would set the CO standard at 7.0 instead of 3.4 grams per mile and change the NOx standard from 1.0 to 2.0 grams/mile, for both diesels and gasoline-powered vehicles.

Waiver provisions would be scrubbed.

The bill would also require that EPA relate the auto emission standards to national ambient air quality needs and require that EPA consider the cost of auto pollution control standards as well as their effect on competition and energy use in setting new auto standards.

To set more stringent standards, EPA would have to allow a minimum leadtime of 48 months for HD vehicles and

Dealer-contributed rebates may be outlawed

COLUMBUS, O.—A new ruling by the Attorney General's Office outlaws rebates in Ohio where dealers contribute, effective Aug. 28. Chrysler pulled ads for revision, and Ford is expected to do the same on trucks. A GMAC spokesman felt the company wouldn't be affected, but Assistant Attorney General Barbara Roman thought it might since dealer contributions to the finance program could affect bottom line price. The act says it is "deceptive and unfair" for manufacturers to "represent a rebate or words of similar import" in advertising or selling motor vehicles if dealers are required to contribute. Key phrase is "rebate or words of similar import."

Schmuecker due back in October

WOLFSBURG, West Germany.—Toni Schmuecker, chairman of Volkswagen, is expected to resume his duties in October. He suffered a heart attack in June.

Renault leads in Common Market

PARIS.—Renault of France continued as the leading auto maker in the nine-county Common Market in the first six months, with a penetration of 13.9 percent. Its market share in France was 41.5 percent; in Spain, 34 percent; in Italy, 10.2 percent, and in West Germany, 4.4 percent.

Dial banks on turbo diesel

Peugeot sets its course for growth in America

By Robert M. Lienert
Editor

DETROIT. — Peugeot is deadly serious about penetrating the U. S. auto market and has sent its top-ranking marketing whiz — an expatriate American — on a whirlwind tour of North America to map out a proper assault.

N. V. (Vic) Dial, 42, director of marketing for Peugeot of France, stopped briefly in Detroit last week on a quick tour of the U. S. and Canada, visiting Peugeot dealerships and chatting with auto executives and newsmen.

"I really don't know the American market — I'm out of touch," Dial said. That is doubtless the truth.

Dial, who joined Peugeot last March, had previously spent 20 years with Ford Motor Co.—the most recent 18 in overseas assignments. Just prior to his move to Peugeot, he had served as president of Ford of France.

Last week he was on his way to California to examine the auto culture there.

Asked whether he believed that visiting California was the best way to get a handle on the American market, Dial smiled and replied, "California isn't the U. S., but you can't understand the U. S. market without seeing California."

Besides, he added, the West is one of Peugeot's strongest markets in North America.

- Dial is trying to immerse himself in American needs and preferences because, he says, Peugeot must make some fundamental product decisions over the next few years.

"We must answer such questions as, 'What is Peugeot's place?' and 'What should our strategy be?'" he said.

Peugeot has been in the North American market since the 1950s but has never been considered a major force among the imports.

Dial would like to change that and he figures that now is the time to do it — while the company "is transforming itself."

He was referring to Peugeot's changed position in Europe, where for a long time it was among the Top Ten makers with a reputation as a family-owned firm with an extremely conservative outlook.

Then, in a matter of months, Peugeot acquired Citroen and Chrysler Europe. It moved virtually overnight from an also-ran to the position of No. 2 auto maker in Europe.

As Dial puts it, "We quickly became a multi-national with plants in the United Kingdom and Spain — with multi-national problems."

Admitting that Peugeot has many organizational and administrative problems in swallowing the big chunks it has bitten off in Europe, Dial insists Peugeot is going to become a marketing force to reckon with in the world's auto markets.

He is still making decisions as to how wide a selection of models Peugeot should attempt to offer in North America.

He all but rules out bringing in the smaller Peugeot models and says, "We feel we are on the right track with the 505, particularly the turbo-diesel."

About 75 percent of 18,000-or-so cars Peugeot will sell in the U. S. this year will be 505 diesels, and most of them will be turbocharged. Sales of the higher-priced 604 will amount to less than 10 percent of U. S. sales this year, he said.

Although Dial says he is studying the entire potential market range in the U. S., it would be surprising to many observers if Peugeot would opt to move into the lower-priced, smaller-car segment.

As Dial put it, "We are in business to make money, not just to move cars.

"We market a quality car at a quality price and we do not knock off $1,000 to make deals."

That is a reference to domestic debates, but it is obvious that he is drawing a bead on the likes of Mercedes-Benz and BMW as he lays his plans for expansion in North America.

Medfly spraying ruins auto paint; Calif. claims filed

SAN FRANCISCO.—At least 800 Northern California automobile owners have joined thousands of farmers in the area as victims of the current invasion of the Medfly.

The vehicle owners have filed claims against the state for damage to automobile paint resulting from intensive aerial spraying of Malathion to repel the insect.

Jerry Scribner, who heads the state-organized battle to control the Medfly invasion, told the Sacramento County Agricultural Commission, "The claims filed by automobile owners may well turn out to be the most costly part of our effort to contain the Medfly infestation.

"Many of the vehicles being damaged by the Malathion being sprayed from the air," Scribner said, "unfortunately are turning out to be the more expensive kind of cars with costly paint jobs and expensive paint repairs necessary."

The Malathion pesticides bait sprayed from helicopters over hundreds of miles of the San Francisco Bay Area South of San Francisco is a type which literally cuts through a vehicle's outer coating of paint as well as the primer paint.

Scribner added that "in many of the claims we are now getting, a complete repainting of damaged car or truck is costing as much as $1,200 or more."

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson Avenue, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 740 Rush Street, Chicago, IL 60611.

Clearing the decks f[illegible]

Twenty new-car dealers in Harrisburg, Pa., staged a three-day tent sale to hype the cleanup of 1981 models. The dealers sold 713 new cars during the three days, with one dealer moving 118 units.

Dealers in Harrisburg sell under Big Top

HARRISBURG, Pa. — Twenty new-car dealers sold 713 autos in a three-day "$12 million Auto Tent Sale" here in August, despite an evening rainout. The sale was held at the parking lot of the Farm Show Complex.

It was followed by a used-car sale at the same location, using the carnival-like props to move 344 used automobiles. Individual dealership sales ran as high as 26 vehicles.

It was the second annual year-end clearance event, the brainchild of Robert D. Lilley, secretary of the 34-member Harrisburg Automotive Trade Assn. He said the demand for space was so great it had to be allocated by lottery. Last year, a three-day sale moved 566 new cars.

The sales bash cost participating dealers $1,875 each, according to Lilley. He said, "You don't have to bring in professional promotors to stage an event like this."

S & H Pontiac-Honda, Harrisburg, scored highest, selling 118 new cars in three days, compared with 65 last year.

At the start of the new-car event, dealers had 1,000 1981 vehicles on display; 1,500 used were available. The sale included trucks.

Complete salesroom services were available. Four banks set up facilities, and credit life representatives were on hand to help the dealers. Dealers had to obtain special licenses from the state to sell outside their authorized salesrooms.

A special "invitational" presale for regular customers was held on the eve of the public sale.

A clean-up crew was on duty 24 hours a day at the sales site to process trade-ins for resale in the used-car portion of the event.

The sale was promoted vigorously, with a 20-page insert placed in the Harrisburg Patriot-News newspapers and extensive radio and television time.

Under a barrage of high-floating balloons and a small promotional blimp belonging to one of the participating dealers, the event included clowns, strolling musicians and a free baby-sitting service. Food and drinks were available.

Lilley said, "An auto tent sale is a way to bring the cars to the public, instead of their shopping at eight different dealerships (his estimate for new car buyers) over several weeks. The consumers are busy. They don't have time, nor do they enjoy shopping around."

Merpi and Hall win key posts at AN World Expo

Appointment of Tony Merpi as managing director of Automotive News World Expo was announced by Keith E. Crain, publisher and editorial director of AUTOMOTIVE NEWS.

The first annual Automotive News World Expo will be held next Aug. 24-27 at Detroit's Cobo Hall, running in tandem with the seventh annual Automotive News World Congress, which will be held Aug. 22-25 at the Detroit Plaza Hotel.

Crain also announced the appointment of Mark Hall as director of exhibit services for Automotive News World Expo.

"Appointment of Merpi and Hall is only part of the forward planning necessitated by the enthusiastic early response to our initial announcement of the World Expo," Crain said.

Merphi joined AUTOMOTIVE NEWS five years ago and has covered Michigan and Ohio as sales representative.

Hall comes to AUTOMOTIVE NEWS from National Exhibition Service, Inc., where he was director of sales.

Ford to reveal all recalls in policy change

By Marjorie Sorge

DETROIT. — Ford Motor Co. will publicly announce all safety recalls in order to avoid any "misunderstandings" in the future, according to Chairman Philip Caldwell.

Caldwell said Ford will now announce its recalls at the same time the company tells affected owners.

Both Ford and Chrysler Corp. were the subject of heavy criticism earlier this month because neither had announced a total of nine recalls involving 222,758 vehicles in the 1981 model year. Those included 222,538 Ford Escort/Lynx-type cars and 220 Chrysler K-cars. Chrysler announced another recall involving 110,000 Aries and Reliant models after a story appeared in the Detroit Free Press about the unannounced recalls.

A Chrysler spokesman said the company was planning to announce that recall but was scooped by the paper.

Chrysler Chairman Lee A. Iacocca said that announcement was the "one and only recall of those K-cars which were in consumer's hands" and that "a previous recall of only 220 cars to check brake fluid was not announced because the cars were still in the company's control."

Iacocca said Chrysler would "match the low level of recalls against any company's new car — domestic or foreign — in its first year of production."

Previously, the companies said they had not issued news releases because they were confident they could inform owners easily since the recalls involved only 1981 vehicles. They said decisions on issuing news releases are based on the age of the vehicles involved with the older vehicles getting more publicity because the owners are harder to trace. The decisions are also based on the number of vehicles involved and the seriousness of the defect.

However, heavy criticism of this practice caused Ford to resume issuing releases on recalls because of the "spate of bad publicity" and "to avoid any misunderstandings."

Previously Ford, and other auto companies, issued press releases because NHTSA issued them and the companies wanted to get their point across, a spokesman said. But NHTSA did not issue releases on any of the Chrysler or Ford recalls since the first of the year.

It was thought that NHTSA was relaxing its policies under the new administration but Raymond Peck, NHTSA administrator, denied this.

He said if the problems were significant, involved a substantial number of vehicles and involved immediacy or urgency, releases would be issued. However, he said the Ford and Chrysler recalls did not meet those criteria.

Although the grand total of Ford and Chrysler cars recalled is impressive, company spokesmen said the numbers involved in any of the individual recalls was not that great.

A Chrysler spokesman said the company would continue to issue news releases on recalls "at appropriate times" when necessary to alert owners who might not be reached by registered mail.

As first of '82 models bow

Buick extends Regal nameplate

Buick is saving its biggest '82-model surprises for January as the GM division brings back most of its '81 cars with slight appearance and comfort revisions and several performance changes for a late September and mid-November introduction.

The intermediate Regal commands immediate attention, as its name is attached to the four-door sedan and four-door station wagon that were Century models last year. This is in addition to the Regal coupe, which is carried over.

Regal coupes and sedans get a new V-6 diesel engine option for 1982. The electronic climate control system that has been available in the Riviera, Electra and LeSabre is now offered for all Regals.

Regal, LeSabre, Electra and Riviera are scheduled for a Sept. 24 dealer introduction. The 1982 Skylark goes on sale in mid-November.

The all-new front-drive Century and a Riviera T-type coupe will debut sometime after the first of the year.

The current 1982 lineup includes 23 models.

Skylark

The 1982 Skylark features a new front end panel with vertical grille hiding its standard 2.5-liter L-4 with electronic fuel injection. There is an increase in horsepower of 7 percent.

Available for the first time this fall is a new High Output (H.O.) version of the 2.8-liter V-6 for Skylark buyers seeking extra performance. It promises a 20 percent increase in horsepower compared with the regular 2.8-liter six, which also is an engine choice.

The H.O. six is available with either four-speed manual or automatic transmission. For Skylarks equipped with either V-6, the automatic has a converter clutch for improved fuel economy.

Skylarks with V-6 engines also have a new tri-pot drive joint instead of the double offset joint ordinarily specified.

Skylark's front suspension has been refined and its engine cradle redesigned for improved serviceability. The engine has been repositioned slightly to reduce driveline vibration, and the rack-and-pinion steering system has been relocated from the body to the frame for better isolation and road feel.

Vinyl areas of the seats have been replaced by a new felt knit cloth for a more finished look and feel.

The fuse block has been relocated to the glove box for easier accessibility. Cruise control, previously available only with automatic transmission, now is available on Skylarks with the four-speed manual transmission.

Low-rolling-resistance tires have pressure increased to 35 psi for greater economy. New standard equipment for 1982 includes power steering, power brakes, color-coordinated seat belts and convenience and underhood lights.

The six Skylark models include base Skylark in coupe and four-door sedan, Skylark Sport in coupe and sedan and Skylark Limited in coupe and sedan.

Regal

Buick's Regal nameplate gets even more exposure in 1982 as it is fastened on new sedan and station wagon models. The sedan, available in base and Limited versions, features the familiar formal roof line from the 1981 Century series. The Regal coupe has a swingaway grille.

The Regal series gets the 4.1-liter V-6 engine as an option for 1982, replacing the larger 4.3-liter V-8. The base engine remains the 3.8-liter six. Available in all body styles, the 4.1-liter, with four-barrel carburetor, offers an estimated 11 percent improvement in EPA city fuel economy and 7 percent highway over the V-8 it replaces.

The 4.1-liter engine gets electronic idle speed control, previously used on the 3.8-liter engines, and electronic spark control is standard with overdrive transmissions.

Regal coupes and sedans have two optional diesels for 1982: The big 5.7-liter V-8 and a new 4.3-liter V-6.

The Regal Sport Coupe boasts improvements to its standard turbocharged 3.8-liter V-6. Performance has been boosted and maintainability has been improved. Modifications in the lubrication system (a five-quart oil pan is used plus a high-output oil pump and a new oil passage) have increased the recommended oil change interval from 3,000 to 7,500 miles.

Regal for 1982 also receives the electronic touch climate control system. Low drag front brake calipers will be used on Regal and all 1982 Buicks.

Regal models number six and include base Regal in coupe and four-door sedan, Regal Sport Coupe in coupe and sedan, Regal Limited sedan and Regal Estate Wagon.

LeSabre, Electra

The full-size LeSabre for 1982 has minor exterior changes, including a new grille design. The base series is redesignated LeSabre Custom, with additional interior and exterior trim items added as standard equipment.

Base engine for LeSabre continues to be the 3.8-liter V-6. The larger 4.1 V-6, a 5.0 V-8 and the 5.7-liter V-8 diesel are available.

Other options include electronic climate control, special V-6 trailering package, electronically tuned radios, cruise control memory light and Gran Touring suspension.

There are five LeSabre models: LeSabre Custom Coupe and four-door sedan, LeSabre Limited coupe and sedan and LeSabre Estate Wagon.

The luxurious Electra for 1982 includes some new convenience features to enhance its unchanged exterior. A "memory seat" and sail panel reading lamp options will be available. Additional equipment made standard includes tilt steering column, whitewall tires, tinted glass and convenience light.

The Electra Park Avenue will have as standard remote trunk release, power door locks, six-way power seat for the driver, tilt steering column and resume cruise control.

Base engine on the Electra continues to be the 4.1-liter V-6, with the 5.0-liter V-8 and 5.7-liter diesel available.

The five Electra models are Electra Limited coupe and four-door sedan, Electra Park Avenue coupe and sedan and Electra Estate Wagon.

Riviera

Buick's front-drive luxury nameplate Riviera features minor changes for 1982, including the addition of automatic transmission with overdrive as standard fuel-saving equipment. Depending on the engine selected, the highway MPG improvement ranges from an estimated 10 to 25 percent.

Standard engine on the Riviera continues to be the 4.1-liter V-6 with four-barrel corpuretor. Optional are a 5.0-liter V-8 and a 5.7-liter diesel V-8. A revised Riviera T-type, the second of two models, will debut after Jan. 1 and will feature the turbo 3.8-liter V-6 as standard, with the 4.1-liter V-6 and the 5.0-liter eight optional.

Black bumper rub strips are new to the Riviera.

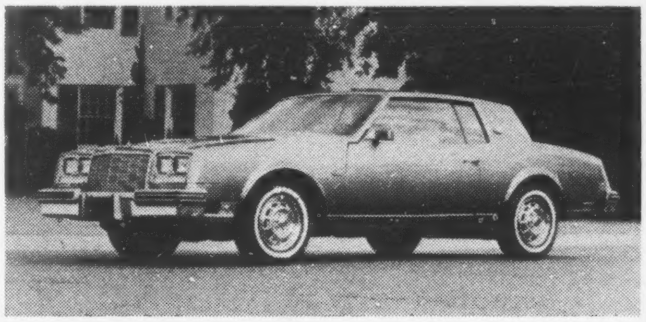
Efficient engine, better handling

The 1982 Skylark has important changes under the hood. Standard engine is a 2.5-liter four with electronic fuel injection replacing last year's two-barrel carburetor. The Gran Touring suspension is also available on Buick's smallest car, Skylark, with springs, shocks and stabilizer cars tuned to increase road feel and handling.



Another Riviera on the way

The sleek Riviera for 1982 will be joined by a revised Riviera T-type sometime after Jan. 1. Riviera has automatic transmission with overdrive as standard equipment in '82. The T-type will feature the turbocharged 3.8-liter V-6 as standard, with the 4.1 V-6 and 5.0 V-8 as optional engines.

LeSabre new up front

The Buick LeSabre will have a new grille with more prominent vertical lines for 1982. Interior trims are upgraded, and a long list of options can be ordered to increase comfort and convenience. Base engine for the LeSabre is a 3.8-liter V-6. Three others, including a 5.7-liter diesel, are available.

Rebates hype new-car sales

† Estimate

Only three of the 13 makes reporting both years turned in sales declines: Chrysler was down 43.43 percent, Ford was off 0.18 percent and VWoA was down 14.69 percent.

On the rise were: Plymouth, up 68.36 percent; Dodge, up 56.16 percent; AMC, up 56.25 percent; Mercury, up 52.18 percent; Oldsmobile, up 38.47 percent; Cadillac, up 35.22 percent; Lincoln, up 31.13 percent; Buick, up 30.14 percent; Pontiac, up 24.86 percent, and Chevrolet, up 3.45 percent.

Top nameplate in mid-August was Chevrolet Citation with sales of 12,260. It was followed by Oldsmobile Cutlass Supreme at 10,400, Buick Regal at 8,584, Chevrolet Citation at 8,331 and —a newcomer to the top five— Plymouth Reliant at 7,043.

Year-to-date sales totaled 4,164,870, down 1.55 percent from 4,230,300 last year.

Mack adds special-purpose vehicle

Mack Trucks, Inc., has a new entry in its line of extra-heavy, long-wheelbase vehicles, the RD800 Series. The company said this version of the DM800 Series is ideally suited for logging and oil-field applications, with special design features to facilitate heavy loading and off-road operation.

Market woes stifling recovery efforts at IH

CHICAGO.—International Harvester's efforts to stem the flow of red ink aren't making much headway in the face of the nagging presence of high interest rates, weak markets and the industrywide price discounting to relieve swollen inventories.

The company has reported losses from continuing operations in the first three quarters of fiscal 1981 and the outlook for an operating profit in the final quarter isn't bright.

Actually, Harvester had a net income of $101.4 million in the third quarter as a result of the sale of its Solar Turbines International Division and a reduction in companywide inventories.

The three-month net included a $275.3 million gain from the Solar sale, which was offset by a loss of $168.3 million from continuing operations and an operating loss of $5.6 million from discontinued operations.

Archie R. McCardell, chairman, said the third-quarter loss from continuing operations was higher than expected because of the high interest rates, reduced demand and the price discounting.

"If interest rates continue to remain at their current high levels, it is unlikely that the company will be able to report an operating profit in the fourth quarter," he said.

For fiscal 1981's nine months ended July 31, Harvester had an operating loss of $353.8 million on sales of $5.3 billion. In the like period of fiscal 1980, there was a loss of $391.1 million from operations on sales of $3.8 billion. Net loss was down from $417.5 million a year ago to $74.2 million.

Third-quarter sales this year were down slightly, from $1.7 billion a year ago to $1.6 billion. Last year, there was a net income of $61.9 million and operating profits of almost $60 million.

The last time that Harvester reported a quarterly profit was in the last three months of fiscal 1980, when the figure was $20.2 million.

McCardell said the company expects to complete its $5 billion debt-restructuring plan during the fourth fiscal quarter which ends Oct. 31. Originally, it had set May as the target.

Meanwhile, Harvester has taken exception to reports that it is pressuring suppliers to make

But second-quarter tallies were up sharply over first 3 months

6-month registrations drop 16.6 pct.

Six-month registrations of new trucks of all types in the U. S. dropped 16.6 percent below last year's total, and the gap would have been wider had it not been for an impressive rally in the second quarter.

Table on Page 33.

Through June, according to R. L. Polk & Co. reports, 1,085,915 trucks were registered in 49 of the 50 states, compared with 1,302,202 in the like period a year ago. Oklahoma figures have not been available for more than a decade.

The first-half total was the lowest since 1975, when the count hit 1,071,948 units. The all-time six-month high of 1,866,559 tallies was achieved in 1978, the only year in which retail truck sales have topped the four-million mark.

In the April-June period, 585,185 new vehicles were registered, an increase of 17 percent over the first quarter's 500,730 and only 8.4 percent below the year-earlier 638,945.

First-quarter registrations were down almost 25 percent from the same period a year ago, 500,730 versus 663,257.

Last year, the first three months were stronger than the second three. The January-March total of 663,257 units was 3.8 percent higher than the second quarter's 638,945.

• This year's first half ended on a solid beat, with the June tallies topping the 200,000 mark for the first time since last July. During the month, 200,866 units were registered, off 4.7 percent from the year-earlier 210,673.

Last July, the total was 222,249, down 23.4 percent from the 290,070 tallied in the same month in 1979. The low point in the last 12 months was reached in January, when the count fell to 161,508 units.

Over the six-month span, all three market segments and seven of the eight weight classifications had fewer registrations than a year ago.

Light-truck tallies (Groups 1 through 3) were down 16.3 percent from last year, 981,350 versus 1,171,995. Mediums (Groups 4 through 6) were off 16.8 percent, from 30,238 in 1980 to 25,163. Heavies (Groups 7 and 8) totaled 79,402, a decline of 20.6 percent from the year-earlier 99,969.

Group 3 was the only one of the eight to show an improvement over a year ago, and the total was relatively close to doubling the 1980 count. The first-half saw 6,411 tallies in this group, 72.8 percent higher than last year's 3,710.

Group 1, with the independent imported pickups providing the principal support, was off only 6.3 percent from the previous year. The six-month count was 542,037 units, compared with 578,184 in 1980.

• Through June, registrations of the independent imported Group 1 pickups totaled 145,412 units, a decline of 3.6 percent from the record 150,887 tallied in 1980 before the increase in the tariff from 4 to 25 percent.

This year, these vehicles, accounted for 26.8 percent of the Group 1 total in the first half. A year ago, they represented 26 percent of the six-month count.

The biggest drop in unit registrations was suffered by Group 2. The first-half total of 432,902 units was down 26.6 percent from the 590,101 tallied in 1980 when Group 2 was the largest of the eight in both sales and registrations.

Only eight Group 4 trucks were registered in the first six months of 1981, a decline of 94.7 percent from last year's 150 units. With the collapse of the RV market starting in 1979, the number of Group 4 tallies has dwindled rapidly.

Group 5 registrations through June totaled 853 units, off 28.9 percent from the year-ago 1,199, while the Group 6 count dropped from 28,889 in 1980 to 24,302, a decline of 15.9 percent.

Six-month tallies of Group 7 trucks were down 16.4 percent from last year, 33,815 units versus 40,450. The Group 8 total of 45,587 vhicles was a decline of 23.4 percent from the previous year's 59,519.

HD registrations in second quarter increase 21.5 pct.

In spite of the sluggish heavy-truck market, registrations of new Groups 7 and 8 vehicles in the second quarter were up significantly over those in the first three months.

According to R. L. Polk & Co. statistics, 43,557 heavies were tallied in the April-June period, an increase of 21.5 percent over the first quarter's 35,845 units.

June registrations topped the 14,000 mark for the third month in a row. The month's total of 14,306 units was down only 3 percent from the 14,756 registered in the same month a year ago.

For the six-month period,

High interest rates, truck-price resistance hurting, survey shows

Outlook for dealer profits is bleak

High interest rates and steep truck prices continue to squeeze dealer sales and profits, and in spite of optimism here and there, the outlook for a meaningful upturn in the near future isn't bright.

"It'll be at least another 18 months before things can get back to normal," commented a Northwest Peterbilt dealer in response to an AUTOMOTIVE NEWS survey on first-half dealer profits and prospects for the last six months of the year.

He said his January-June earnings were about the same as a year ago, and that he expects more of the same for the remainder of the year.

"A reduction in dealer inventories will have the greatest influence on increased profits in the months ahead," he noted. "Too many trucks in stock plus high flooring rates equal panic selling and lower profits."

Slightly more than a third (35.4 percent) of the survey respondents reported an increase in earnings over a year ago. Some of them said they lost money in the first half of 1980.

A decrease in six-month earnings this year was reported by 44.6 percent of the dealers, while the remaining 20 percent said their profits were about the same as those in the first half of 1980.

• For the final six months, 41.3 percent of the respondents said they look for a gain in profits and the same percentage reported theirs probably will be lower. The remaining 17.4 percent said earnings wil be about the same.

Many dealers said one way

SAE truck banquet to hear GM's Mair

DETROIT.—Alex C. Mair, vice president and group executive in charge of the General Motors Technical Staffs Group, will be the principal speaker at the banquet Nov. 9 during the annual SAE truck meeting in Dearborn Nov. 9-12.

Mair, a former general manager of GMC Truck & Coach Division, will discuss the challenges and opportunities facing the truck industry, as well as changes in truck design and engineering.

High interest hurts, survey shows

Profit outlook is bleak for U. S. truck dealers

Continued from Page 20

that manufacturers could help ease dealer inventory expenses would be to extend free floor-planning periods. A number of them also called for factory pools from which they could draw trucks for which they have a demand.

"We can't sell from an empty wagon, and we can't afford to stock trucks," said an International dealer in the Northwest. "We must have a longer free floor-plan period or, at the very least, a considerable reduction in (floor-plan) rates."

Increases in truck prices were blasted by many respondents, who called a hold-the-line policy, or better still, a rollback vital to both the manufacturer's and dealer's interests.

"There is more resistance today than ever to price increases," commented a Rocky Mountain Peterbilt dealer, who predicts "six more months of poor used-trucks and 12 more months of poor new-truck sales."

A GMC dealer in the Southeast, who thinks interest rates will remain high for several years at least, called large corporations "almost totally irresponsible" in the battle against inflation.

- "It was more profitable to them to keep their plants running by avoiding a strike and give labor whatever they demanded," he said. "The purchaser has been repeatedly gouged by the resultant increase in the price of goods. Now he can't stand it.

"The time is here for the companies to begin thinking in terms of price rollbacks, which will likely bring a confrontation with labor, maybe even a strike," he added. "Bitter medicine indeed, but the sooner taken, the sooner cured."

This dealer had a substantial loss in the first half of 1980, but a small profit this year. "We expect to stay in the black but do not anticipate much improvement," he said. "Maybe 1982 will be better."

A Midwest International dealer called for a "sound, stable pricing policy" from the truck producers.

"Manufacturers are continually raising prices and then giving assistance to dealers and branches to make a sale," he noted. "The result is that salesmen and dealers are often uncertain where they should price trucks.

"This uncertainty is causing many difficulties at the dealer level," he added. "Customers sense this condition and hesitate to purchase because the price may be lowered. It's time for manufacturers to price trucks competitively and give the business back to the dealer and his salesmen."

- A number of dealers reported a strong market in good, late-model used trucks.

A Midwest Ford dealer said "clean used units are in demand; in fact, it is a sure bet that there will be a shortage of clean used units for at least six months."

Said another Ford dealer in the same section of the nation: "As long as new-truck sales are down, the used market should remain strong. The only problem here is finding good quality used trucks."

A Rocky Mountain International dealer reported that the "used market is strong for clean conventional tractors in the $20,000-to-$35,000 price range," and added: "We are reorganizing to place more emphasis on parts and service and less on new-truck sales."

He said his first-half profits were 95 percent lower than a year ago and that they would continue to be lower until interest rates drop to between 10 and 12 percent.

Several Chevrolet and GMC dealers said they are counting on the new General Motors domestic compact pickup and Chevrolet's all-new 6.2-liter diesel engine to improve their sales and profits in the 1982 model year.

Market woes stifle recovery efforts at IH

Continued from Page 20

price concessions and that its payments to them are being delayed beyond normal practice.

- A spokesman said Harvester's objective in supplier relations "is to stabilize our costs and to reduce them whenever possible to be cost-competitive. It is not an effort to cut supplier prices, but to cut our costs.

"We are exploring the possibility of arrangements with suppliers that would be of mutual benefit to them and us," he added. "Individual arrangements would be tailored to the situation concerning each supplier involved, based on volume of business, prices and services, such as scheduling and delivery."

He admitted that payment schedules have been revised over the last two years "to what we believe to be a competitive level."

"Others in our industry were paying 45 to 60 days after receipt of materials or services and that also has become our policy," the spokesman added.

He indicated that payment within 30 days after shipment no longer is "normal business practice."

Class action involves alleged Park-Reverse slippage

New suit filed on Ford automatics

Continued from Page 6

140 deaths and more than 1,700 injuries have been linked to the alleged failures to hold certain vehicles in Park.

In the latest action, the plaintiffs use the 1975 Magnuson-Moss Warranty Act.

The first count charges breach of the implied warranties of merchantable quality and trade usage. The second charges breach of written warranty. The third charges negligence in designing, manufacturing, testing and equipping said vehicles with said transmissions. The fourth charges strict tort liability under state law.

Plaintiffs include those who incurred property damage or economic loss, personal injury, or liability for personal injury or economic loss or damage or who own one of the affected vehicles. Included are the plaintiffs themselves and others similarly situated.

Excluded are those others who have already sued Ford.

In other words, there are some who have experienced specific Park to Reverse incidents who ask for damages and correction and others who merely own such vehicles with the alleged defect who want mainly equitable relief and others acting under state law negligence and strict tort liability claims who may be eligible for both.

Those experiencing failures are estimated to be in the tens of thousands, the owners in the millions, and the others in the thousands. If Ford loses, its costs could be much more than the many millions it would have cost to recall and correct the alleged problem last year.

Among questions raised are: Was Ford's 12/12 limited warranty "conscionable" or of "reasonable duration?" Did Ford actively conceal defects in its transmissions so as to toll the statute of limitations for claims of owners of '76 and '77 vehicles? Also: Was Ford's attempt to disclaim liability for consequential or incidental economic loss or damage as a breach of implied warranties a violation of the Magnuson-Moss Warranty Act? Did Ford discover various mechanical defects in the said transmissions before expiration of the written warranty and, if so, did Ford breach its written warranty by failing to recall and correct?

Also: Was Ford negligent in designing and equipping vehicles with said transmissions? Were the transmissions defective in such a way as to make Ford strictly liable in tort? Was Ford's conduct such as to entitle plaintiffs to punitive or exemplary damages? Was the likelihood of vehicle operator negligence as a cause of slipping from Park to Reverse so remote as to be de minimus and legally disregardable as a defense?

The suit claims that from July 5, 1975 — the date the Magnuson-Moss Act became effective — through the 1979 models, Ford equipped various vehicles with the five types of transmissions which were not fit for the ordinary purpose for which they were intended. (One of the claims NHTSA made earler was that Ford transmissions were inferior to those made by General Motors and Chrysler.)

For the 1980 model year, Ford changed its design.

Ford's 12/12 written warranty was an attempt to limit liability, it is claimed, for there is no necessary connection between the alleged slippage and time. The suit also claims that Ford knew of its defective designs, but failed to notify owners or to correct the situation or to inform its dealers.

In fact, says the suit, Ford tried to disclaim liability in contravention of some states' laws banning such limitations or disclaimers. The suit cites not only Ford's failure to notify but its continued denial of defect and claims that Ford's continuing sales of such transmissions are negligence.

Something to cheer about

There are four doors plus plenty of room for gear in the rear of the 1982 Escort four-door hatchback scheduled to go on sale at Ford dealerships this fall. With the rear seat folded down, there are 31 cubic feet of cargo space, in addition to a number of functional, trim and drivetrain refinements added to the Escort for '82.

Hatfield Auto Auction builds new facilities

HATFIELD, Pa. — Hatfield Auto Auction, Inc., is building new facilities which will permit the operation to expand from two lanes to four lanes.

The new complex also will include a car wash, a cafeteria and a computerized system for registering cars. Tentative opening date of the new quarters is Oct. 6.

AUTOMOTIVE NEWS CLASSIFIED ADS
PRODUCE EXCELLENT RESULTS

Year's total edges past 4.5 million

Auto output holds steady at 108,274

By Patricia Hoffman
Staff Writer

There was little change in domestic auto production last week as output rose just a fraction above that of the previous week.

The auto makers planned 108,274 units, a slight gain from the 107,454 assembled a week earlier, and up 5.16 percent from 102,963 units completed in the comparable 1980 week.

Breakdown for the week by company is: General Motors, 56.11 percent; Ford Motor, 24.81 percent; Chrysler Corp., 13.02 percent; Volkswagen of America, 3.13 percent; American Motors, 2.91 percent and Checker Motors, 0.02 percent.

So far this year, the makers have assembled 4,500,830 units, up 7.63 percent from 4,181,579 cars built in the comparable period last year.

Chrysler's St. Louis assembly point began its pre-production phase last week on the new front-wheel-drive Chrysler LeBaron and Dodge 400. There is no date as yet for the full production startup. The point went down for model changeover July 31.

Chrysler's Newark point, down for changeover since Aug. 3, resumed production last week.

GM's Framingham, Doraville, Fremont, Van Nuys, Leeds and Janesville plants all remained down last week for model changeover.

VWoA's Westmoreland assembly plant began downtime last Friday (Aug. 28) for model changeover. The point is slated to resume operations Sept. 21.

Ford Motor's Dearborn car assembly point will be idle for one week beginning today for inventory adjustments.

Daily overtime is scheduled this week at Ford's Wayne and Metuchen facilities. The plants will work two 10-hour shifts each day this week.

Truck production declines 35 pct.; week totals 15,404

With several truck assembly points idle for 1982 model changeover and inventory adjustments, U. S. truck production last week fell substantially below the previous week's output. The total, however, remained above the comparable 1980 figure.

Last week, truck production was slated at 15,404 units, down 35.52 percent from 23,889 units completed in the previous week, but a gain of 23.59 percent from 12,464 trucks in the comparable week last year.

So far this year, the truck manufacturers have assembled 1,136,169 trucks, up 12.70 percent from 1,008,137 completed in the same period in 1980.

General Motors' Janesville and St. Louis assembly points remained idle last week for model changeover. Both facilities, down since July 24, are scheduled to resume operations today (Aug. 31).

Chrysler's Warren truck facility, down for inventory adjustment last week (Aug. 24) is slated to resume today.

Volkswagen of America's Westmoreland assembly point scheduled downtime beginning last Friday (Aug. 28), with operations slated to resume Sept. 21.

GM announced that it won't recall the second shift of 1,200 employes at its North St. Louis assembly plant. The plant, which assembles half-ton pickups, employed about 2,600 workers before shutting down July 31 for inventory adjustments. GM said, however, that there is a possibility that the second line might be recalled if consumer demand picks up later on.

Ford Motor's Norfolk and Twin Cities truck assembly points will continue downtime this week for model changeover. The plants went down Aug. 24.

Hanosh new president of New Mexico dealers

LAS CRUCES, N. M.—George Hanosh, Hanosh Chevrolet Co., Grants, N. M., was installed as president of the New Mexico Automotive Dealers Assn. at the state convention here.

Other officers installed were Vice President John Chandler, Frontier Ford, Albuquerque; Treasurer C. L. Hunter, Hunter Motor Co., Espanola, and Secretary Henderson Baker, Baker Volkswagen, Las Cruces.

Canadian output rises 13 pct. to 13,939 for week

Canadian auto production last week was above the previous week's total, and output also topped that of the comparable 1980 week.

Last week's auto production was slated at 13,939 units, up 13.89 percent from 12,239 completed in the previous week, and up 2.89 percent from the 13,547 cars in the comparable week last year.

Year-to-date output for the auto manufacturers was 562,574 units, up 2.97 percent from 546,361 in the comparable period last year.

Truck production last week also showed improvement from the previous week's total as General Motors' Scarborough assembly point completed its first full week of assembly since its August 18 return from model changeover.

The makers estimated 10,630 units last week, up 12.10 percent from 9,483 trucks completed the previous week, but down 4.16 percent from 11,091 in the comparable 1980 week.

So far this year, the truck manufacturers have assembled 347,446 units, a gain of 3.41 percent from 335,994 in the comparable period last year.

GM's Oshawa (No. 2) car assembly point remained idle last week for 1982 model changeover to front-wheel-drive cars. The plant, down since Aug. 6, is scheduled to resume operations Nov. 9.

Also at GM, the Oshawa (No. 1) car point, idle for changeover since July 16, is slated to return today (Aug. 31).

Volvo's Halifax plant returned last week after being down for changeover since Aug. 3.

Ford Motor's St. Thomas assembly point has scheduled downtime beginning today (Aug. 31). The plant, which will be down for model changeover, is slated to resume Sept. 28.

COLA is rising 21 cents an hour at GM and Ford

DETROIT. — UAW members at General Motors and Ford Motor Co. will have their cost-of-living adjustment raised 21 cents to $1.79 per hour effective the week of Sept. 7.

The increase affects 385,000 hourly employes at GM and 126,000 at Ford plus salaried workers covered under the two contracts. The salaried workers will receive a quarterly payment of $930.80 on Dec. 15 for the September-November period.

Workers at Chrysler Corp. gave up their COLA payments in the last round of bargaining to enable the auto maker to qualify for federal loan guarantees. That COLA suspension gives Chrysler an average $2.07 hourly labor cost advantage over Ford and GM.

New FWD 'family sedans' will shrink to compact size; X-cars may be X'd out

GM plots drastic big-car overhaul by 1985

By Paul Lienert
Contributing Editor
Copyright, 1981, by Automotive News

General Motors will drop its full-size family cars by 1985 and may kill the popular X-cars as well, according to plans sketched out last week for AUTOMOTIVE NEWS by industry sources.

A new series of front-wheel-drive family sedans is now scheduled to appear in the 1985 model year to replace the present full-size models. While some will carry current big-car nameplates like Caprice and Bonneville, they'll be no larger than today's compact cars.

A new line of luxury sedans also bows in '85, replacing the Cadillac, Oldsmobile and Buick C-cars. The new front-drive models, like the smaller family sedans, will be based substantially on the compact X-car.

Insiders indicate an all-new Chevrolet Caprice in '85 will be about the same size as the current Chevy Citation, while the new Cadillac deVille in '85 will be only slightly larger than the X-car.

In addition, GM still plans to introduce smaller two-door specialty and luxury models based on the subcompact J-car in 1984½.

The front-drive replacements for the Monte Carlo (G-car) and its sister models, as well as the new Eldorado (E-car) and its companion cars, will be only marginally larger than the Chevy Cavalier, sources say.

See chart on dimensions, Page 50

The restructuring of its new-model program for 1983-85 will probably save GM several billion dollars, while providing it with new products that will be small enough to compete on equal footing with similar models planned by the major import powers.

It also spells the death of the big car at GM, as Americans know it today.

A GM spokesman did not deny reports that the company will drastically reduce the size of its largest cars by 1985, but said, "We're going to have very comfortable six-passenger vehicles then."

He added, "The whole matter of how you designate a car — whether it's 'full-size' or whatever—is changing. Fuel efficiency and interior dimensions are what we're looking at."

In response to the report that GM might drop the present X-car line in '85, the spokesman said, "We just aren't going to talk about product programs that are that far out."

GM is expected to lock up its '85 model programs within the next 12 to 18 months. The final decision on whether to drop the X-car may not be made until 1983.

With a new line of front-drive A-cars scheduled to debut early in 1982, using the basic platform of the X-cars, GM will be crowding six or seven car lines by 1985 into what are now considered the compact and subcompact segments of the market. Basic underbody components will differ little from car line to car line, and there will be only about a six-inch spread in wheelbases, according to current plans at GM.

Although GM officials would not confirm any plans to dispose of the X-car in 1985-86, the eventual demise of the popular front-drive compact series would still leave the corporation with a substantial array of small, fuel-efficient front-drive products in the mid '80s, ranging from the high-volume J-cars on a wheelbase of 101.2 inches to the luxury sedans that will replace the C-cars on a wheelbase of about 107.5 inches

"What it means is that Detroit won't have any more 'compacts,' 'intermediates' or 'full-size' cars in '85, just 'big' and 'small,'" was the way one source described the impending changes at GM. Similar moves to shrink and consolidate car lines are under way at Ford and Chrysler.

Chrysler will base most of its future U. S. car lines on just two front-drive platforms, while Ford is planning to build its

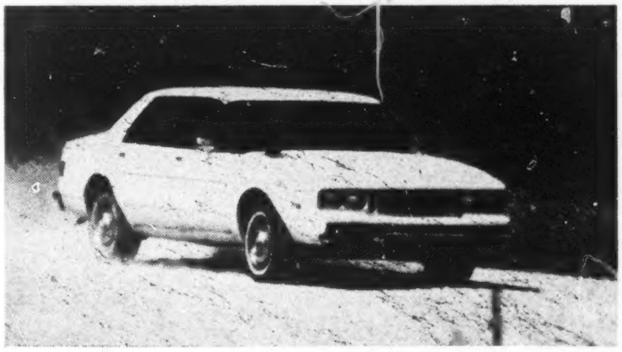
GM's new family sedan



'Full-size' prototype undergoes testing

Captured on GM's Michigan test track is this early prototype of what is believed to be new rear-drive sedan that will replace present B-body models (Caprice, LeSabre, Delta 88) in '83. Platform is to be shared with G-body intermediates. Smaller front-drive replacements for GM's 'family sedans,' based on present X-car line, are scheduled for '85. Larger C-body replacements will be built on stretched X-car platform, sources say.

Administration preps own Clean Air Bill

By Helen Kahn and
Jake Kelderman
of our Washington Bureau

WASHINGTON. — The Reagan Administration, which only a month ago, announced it would not have a Clean Air Bill of its own but would work with Congress instead to amend the pivotal environmental law, would appear to be reneging on its word.

A copy of a complete bill the Administration has ready for Congressional consideration dated Aug. 20 has been obtained by AUTOMOTIVE NEWS.

The measure is largely unchanged from a draft bill leaked to Rep. Henry Waxman, the California Democrat and chairman of the House Energy and Commerco's Health subcommittee, at least on automotive issues except that it calls for a 2-grams-per-mile NOx standard instead of the 1.5-gram standard espoused in the earlier document.

The Administration caught a tremendous amount of flack earlier, when the draft of its Clean Air bill leaked out, with critics calling it a "blueprint" for the gutting of the legislation.

Subsequently, the Administration backed off introducing any kind of measure, opting instead for working with Congress on developing amendments to the act under 10 guiding principles enunciated by EPA administrator Anne Gorsuch at an Aug. 5 press conference.

- "Working with the key Congressional leaders, we are confident that specific legislation based on these principles can be drafted which will ensure we choose the most effective means to maintain continued

NEWSPAPER

But rate of growth slows down

Service Index posts volume gain

By Francis J. Gawronski
Service Editor

Although the rate of growth of service and parts business conducted in the nation's new-car dealerships in July slipped below the level achieved the previous month, the volume still managed to register the second biggest advance of the year.

According to the Automotive News Service Index, shop volume in July amounted to 109.8 percent of the business done in July, 1980. In June, there was a gain of 16.6 percent over the volume recorded in the corresponding month a year earlier for the biggest increase in 30 months.

July also marked the fifth consecutive month in which service and parts business in new-car dealerships has shown an increase over the comparable year-earlier figure. The streak is the longest since June, 1979, when a 57-month string of monthly gains was broken.

Table on Page 45

In July, four of the five indicators used in the Service Index scored good gains. The only indicator to register a decline was repair orders written, down 4.7 percent.

The biggest increase was recorded by gross profit on all labor, parts and P&A sales—the most import indicator from the dealers' viewpoint—up 16.6 percent.

In the runnerup spot in July was sales of all parts and accessories with an increase of 14.6 percent over the year-ago figure. Shop parts sales (those used on customer-paid and warranty repairs) were up 10.2 percent, while total labor sales (customer-paid and warranty) in-

Postcard notification covers Mitsubishi engine problem

Chrysler, FTC settle oil-filter case

By Helen Kahn
Washington Bureau Chief

WASHINGTON. A settlement between Chrysler Corp. and the FTC over bad information disseminated by the company on replacement oil filters allows Chrysler to send postcards to more than 700,000 owners of Mitsubishi vehicles and take ads in AUTOMOTIVE NEWS, but does not offer any redress to owners whose wrong filters may have caused engine damage amounting to as much as $500 each.

Cost to Chrysler is estimated at only $90,000. First-class mail would have cost an estimated $50,000 more.

The fine print of the order — but not the Chrysler news release — indicates a similar problem with Omnis and Horizons if consumers failed to heed the owners manuals.

The notification covers only Mitsubishi-built cars marketed by Chrysler. The problem arises not merely from aftermarket filters made by 16 non-OE makers but from early filters marketed by Chrysler Mopar itself and sent to dealers.

Moreover, separate statements by individual commissioners show disagreement about another "design" problem encountered by Chrysler when it introduced balancer chains to reduce engine vibration.

In Washington, there was speculation that the cost of the balancer-change recall fix would have been $7 million, and that Mitsubishi would have paid for it.

A Chrysler spokesman confirmed that the company indeed signed documents with FTC staff in which it agreed to recall and replace the balancer chains, but this was not carried over into the still-to-be-finalized consent agreement.

Most of the affected engines have already been fixed, he said. Without the fix, small, hard particles of lead from the gasoline were absorbed by the lubricating oil during the combustion process.

Finally, this settlement — which remains on the public record until Nov. 9, after which the FTC may accept or reject it — may not be the only one in the works.

In its Aug. 18, 1980, issue, AUTOMOTIVE NEWS reported similar investigations had spread to Volvo, Saab, Honda, Subaru, Volkswagen of America and General Motors. Since FTC investigations are secret until settled or litigated, no one knows whether the Chrysler settlement is unique or merely the first of a series.

• The FTC investigation revealed that oil filters which meet a hydrostatic burst strength of 200 PSI are not good enough for Omni/Horizon or for many Mitsubishi vehicles.

The oil filters must be strong enough to withstand pressure of at least 256 PSI for Mitsubishis and at least 290 PSI for Omni/Horizon.

But since owners of Omni/Horizon were informed via their manuals, the FTC order addresses only owners of 1971-1980 Mitsubishis with 1,600-cc engines and 1974-1980 Mitsubishis with 2,000-cc engines.

These include Dodge Colts, Colt hatchbacks, Challengers, and D-50 pickups as well as some Plymouth Arrows. Arrow pickups, Sapporos and Champs.

Because Chrysler failed to correct innaccurate data in a materials standard, it will have to inform 16 aftermarket makers of oil filters — including Ford Motor Co. and GM, which are suppliers — as well as advertise in six AUTOMOTIVE NEWS issues having service management sections, that correct and current data is available at a reasonable cost.

FTC was careful to note that Chrysler's problem is not a design one, but even though, the company recommended using a "high-quality filter only," it did not mention the pressure problem. A number of reputable brands failed to do the job and resulted in costly engine problems.

• Linda Dorian, deputy director of FTC's Bureau of Consumer Protection, described the agreement as providing relief for owners without having a major adverse impact on a financially troubled company.

But there was not total agreement within the FTC. Commissioners Paul Rand Dixon and Michael Pertschuk voted to accept the settlement for comment, but disagreed with the FTC's failure to require Chrysler to provide redress for another engine problem in certain Mitsubishis.

Because there are now only four commissioners — with Dixon set for retirement in September and replacement by James C. Miller — it is possible that questions may be raised about the agreement on oil filters and further questions raised about the balancer chains Chrysler has provided for some vehicles to reduce engine vibration.

Without the commissioners' statements, in fact, this vibration problem might not have become publicly known.

Pertschuk feels the FTC should have required Chrysler to pay its customers for early failure of the balancer chain, a $150 to $299 device to reduce engine wear.

It affected as many as 38,000 Colts and Arrows from the start of '76 models through the middle of the 1977 model year. Pertschuk said Chrysler failed to tell its customers of the problem after it learned about it.

• Pertschuk disagreed with his colleagues — Acting Chairman David Clanton and Commissioner Patricia Bailey -- because he feels Chrysler had a duty to disclose the problem even though it moved promptly to find a fix and found it several months later.

Chrysler changed the material

DeLorean jobs top 2,000 goal 4 years early

DUNMURRY, Northern Ireland. — Employment at the DeLorean Motor Cars, Ltd., sportscar plant here nosed past the 2,000 level last week, a company official said.

The 2,000-employe bench mark is important because the terms of the company's loan and grant agreements with Northern Ireland government agencies stipulate that 2,000 is the ultimate minimum employment goal.

Under the terms of the agreement, DMCL was to have reached the 2,000-employe mark by five years after the commencement of production. It has reached the goal more than four years ahead of schedule.

There are other employment minimum requirements which would trigger forfeitures of grants if not met. The company, however, has said it is likely to continue to meet or exceed all of the employment requirements.

Production rate at the plant was up to 55 units a day on one shift last week.

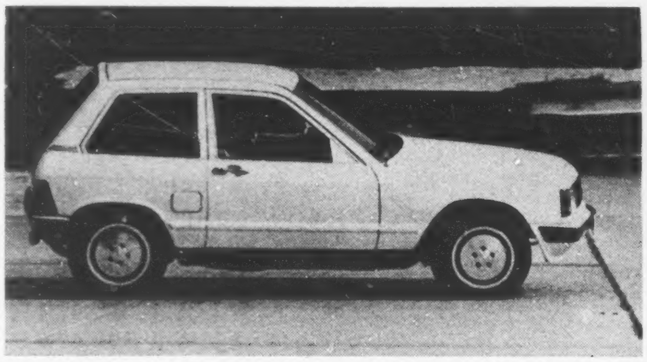
Spying on a baby Mercedes

This bob-tailed Mercedes-Benz, caught during test runs in Germany by unofficial photographer, is not intended for production, but is a fully finished design study. The small Mercedes which will go into production is a notchback. Should Daimler-Benz reverse itself and decide to produce the version shown, it could not reach the market before 1985 at the earliest.



New aluminum V-8 for '82

Cadillac predicts 21 pct. sales gain

By Richard A. Wright
Assistant Managing Editor

LIVONIA, Mich. — A 21 percent increase in sales was predicted for Cadillac by General Manager Edward C. Kennard at the press introduction of the division's 1982 models and its new 4.1-liter aluminum V-8 engine.

Speaking at the plant in this Detroit suburb where the new engine is produced, Kennard estimated '81 model-year sales at 227,000.

"For the 1982 model year, we project that Cadillac will sell 275,000 cars," he said. Breakdown of that projection is standard Cadillac, 143,100; Eldorado, 55,300; Seville, 34,600, and Cimarron, 42,000.

"We base our forecasts on a belief that the U. S. economy will turn around for the better during the fourth quarter of the 1981 calendar year and will continue a steady upward climb through the balance of the 1982 model year," he said.

Also, Kennard said, the addition of the Cimarron will provide "non-traditional Cadillac prospects with the incentive to look at and buy a Cadillac for the first time."

In response to a question, Kennard said that all Cadillac dealers are now franchised to sell the Cimarron.

• Big news from Cadillac for 1982 is its new HT-4100 (for High Technology 4.1 liter) V-8 engine with aluminum block, free-standing iron cylinder sleeves and digital fuel injection which embodies a throttle-body fuel delivery system.

"In the functioning parts, where it needs to be tough, it's iron," Kennard said, "iron heads, iron sleeves, iron crankshaft.

"But in the non-functioning parts, what we have done is replace 200 pounds of bulk with about 20 pounds of aluminum, which gives us a much higher power-to-weight ratio."

Kennard noted that the size of Cadillac's V-8 engine has been sliced in half since 1976. That year, Cadillac had an 8.2-liter (500 inches) engine, this year a 4.1-liter (250 inches).

The engine is standard on all Cadillac models except limousines and the Cimarron. Limousines will continue to be powered by the 6.0-liter modulated displacement V-8-6-4 which was standard on all models last year except Seville. A diesel was standard on the '81 Seville.

• Asked why Cadillac dropped the V-8-6-4, around which controversy has been swirling of late, an engineer at the preview said it could not meet gas guzzler tax requirements.

"It could meet it last year with a combined MPG figure of 17, but this year the gas guzzler limit went to 18.5," he said. "The combined figure on the new 4.1-liter V-8 is about 20.5, so that gives us some breathing room."

The V-8-6-4 was retained for the limousines, however, because the 4.1 would not provide the power needed for the heavier vehicles.

Asked what effect the new Lincoln Continental might have on Seville sales, Kennard said it would probably help. "It shows acceptance of the Seville styling approach," he said.

More than one way to sell a Rolls-Royce

LONDON.—Rolls-Royce recently invited a group of enthusiasts to watch the firm's new models go through their paces at the British Motor Industry Research Assn.'s test grounds.

They were so impressed that they placed orders valued at $1.2 million for 12 Rolls-Royces and Bentleys.

Crain acquires London-based Rubber Journal

Crain Communications, Inc., and MacLaren Publishers, Ltd., London, have agreed in principle for Crain to acquire the publishing assets of European Rubber Journal from MacLaren for an undisclosed amount of cash.

Crain Communications is publisher of AUTOMOTIVE NEWS, Rubber & Plastic News and a group of other trade publications.

Subject to completion of the transaction, it is anticipated that Crain will publish its first issue of the Journal in October. The publication will celebrate its 100th anniversary next year.

Ernest H. Zielasko, editor and publisher of Rubber & Plastic News, will become publishing director of European Rubber Journal.

What about promise to work with Congress

Administration preps Clean Air bill

Continued from Page 1

improvement in the quality of the air that all Americans breathe," Gorsuch said at the time.

According to reliable sources, however, the Administration has been at work on a bill of its own since it took office with revisions being made on a near-weekly basis, with the only exception being the mobile source section where the Administration has opted to follow the auto industry's wish list and support an easing of the CO standard to 7 gpm; an easing of the NOx standard to 2 gpm mile, and a change in the HC standard to allow for the exclusion of non-reactive methane.

For heavy-duty engines, the draft would change the statutory NOx to what is achievable by diesels, which are harder to control for NOx. This is needed, it is said, because of the increasing fraction of diesels over gas-fueled HD trucks and buses.

The law would also be changed in the HD section to eliminate time restrictions for changing the HD engine standards so EPA could revise them when technological considerations warrant a change. EPA would also be able to change the duration of the HD standards from the current three-year fixed period. And the current four-year lead time would be changed to "adequate" lead time — presumably defined by EPA.

The high-altitude section of the law would be changed. The draft now would give EPA discretion to require that current high-altitude standards for autos (82-83) be continued through 84 and later models. This would be true for HC and CO but not for NOx, which would be 1.5— or the same level as for low-altitude cars.

This would allow manufacturers to remove expensive emission control equipment from all light-duty vehicles rather than only from low-altitude vehicles. In short, even high-altitude cars would not need three-way catalysts.

In another section of the law, the draft would allow — but not require — EPA to set up an in-use compliance program based on averaging of emissions from cars, light trucks and/or HD engines. (In a separate section dealing with state implementation plans for meeting air quality standards, no state or locality would be required to have inspection/maintenance programs.) This would allow EPA to start its bubble concept first on cars "where it is most workable and most needed." The draft does not revoke the existing certification program, assembly-line testing, penalties for non-conformance and recall authority, but those programs would not apply once a bubble became operational for a class of vehicles.

Under the draft proposals, EPA could check on standards compliance for HD engines and motorcycles by using the production-weighted average emissions without any reliance on in-use testing.

- The centerpiece of the auto-related draft provisions is the bubble or averaging allowed after a threefold findings: The economic impact; effects on air quality and effects on competition, "including the effects on manufacturers producing a limited number of models of vehicles or engines."

This last provision would allow Chrysler and certain importers to make their cars on how the bubble is to be defined.

EPA could define that bubble according to "classes or categories of vehicles or engines" and enable EPA to expand or reduce them. In other words, the bubble could be gas-fueled or diesel-fueled or both; it could be big cars and little cars; it could be a manufacturers' fleet as proposed by Volkswagen and General Motors, but opposed by Chrysler; it could even be by engine family — as they are now certified — although it is doubtful so many would be needed.

In addition, EPA could set a maximum emission level — a ceiling — for the bubble.

After setting up the bubble, EPA could levy fines against manufacturers whose vehicles exceeded average standards in-use or at the end of the model year or an applicable ceiling. But the fees would be assessed no more often than once a year, so the company would have a year to improve its fleet average by modifying its in-use vehicles (by recall) or reducing emissions from future production.

The fees (In the draft, they are never called "fines" although that is what they are) would be set at a level "to remove any economic incentive to exceed standards."

- In addition to the "fees," emission debits would be charged against makers exceeding standards and these could be applied to future emissions or be eliminated by voluntary recalls.

Emission credits would also exist for those makers averaging emissions below standards and they could be carried forward (banked) or traded (sold). (Under the fuel economy law, manufacturers are allowed to carry forward and carry back credits but they cannot sell them.)

Under the draft proposals for Clean Air, EPA could limit the term for use of credits and it would register credits. But before taking this step, EPA would have to find that economic benefits outweigh the administrative costs and that these provisions would not have significant anticompetitive effects and would protect air quality.

In the current law, dealers have to furnish to buyers a certificate that the vehicles conform to applicable emission standards, but that is unforceable since failure to comply was omitted from the prohibited acts section. The draft would retain the dealer certification section and include it among the prohibited acts.

It is reasonable to expect NADA to oppose this since that certification is a mere formality meaning the dealer has not tampered with the system; otherwise, he has no way of knowing whether the vehicle complies or not.

At present, dealers, manufacturers, repair facilities, and fleet operators are liable for fines for removing or rendering inoperable vehicle emission controls. The draft proposals would prohibit the sale of devices used to circumvent emission controls where their use is reasonably forseeable.

Other proposed changes in the law would allow EPA administrative law judges to assess fines for violations of the law, thus eliminating the need for district court hearings and saving both time and money. This would also apply to dealer certifications and the sale of defeat devices.

EPA could require the manufacturers to provide data relevant to setting standards.

Other clarification of authority would be granted for violation about using improper fuels — nonleaded for leaded. The draft also proposes delaying the particulate study until 1984.

There are those who argue that if the auto industry gets everything it wants, U. S. automobiles will once again be free of catalysts and capable of running on leaded gasoline. Interestingly enough, the Reagan Administration recently recinded EPA rules aimed at phasing down the amount of lead in gasoline.

A complete acceptance of the auto industry's proposal would also comport with an earlier Administration idea to have two fleets of automobiles, one free of emission controls to operate in relatively clean areas and one with omission controls for those areas with dirty air.

The auto industry proposal would likely result in most, if not all cars being catalyst-free (certainly the smaller and lighter ones) but using electronics to burn fuel very efficiently, efficiently enough to get not only good fuel economy but (in the eyes of the auto industry) reasonable emission control.

Congress will begin consideration of the auto industry (Reagan Administration) proposal Sept. 14 and 15 in the House Health subcommittee.

New radial

Inspectors at Firestone's tire plant in Albany, Ga., check early production HPR radial tires, to be available in five sizes by late summer. The new tire has both steel and aramid in its tread belt.

Judge rules two provisions of smog decree can lapse

By Helen Kahn
Washington Bureau Chief

WASHINGTON —Federal District Judge Jesse Curtis has allowed two provisions of the "smog conspiracy" consent decree to lapse because of a stipulation filed by Antitrust Chief William Baxter, the four domestic auto companies and MVMA.

In the Carter Administration, NHTSA and EPA had recommended the continuation until 1989 of the ban on cooperative pollution control research and restrictions on joint safety filings.

These provisions involve the exchange of restricted data on how to control auto emissions and ban the joint filing—through an association or otherwise—of positions on safety matters to a regulatory agency.

The Center for Auto Safety called the government's change in position a "clear betrayal of the public trust" and is raising serious questions about the legality of the action.

At Baxter's first press conference, he indicated he might let the litigation run its course before taking a position. But President Reagan on May 5 asked the Justice Department to assess the question.

Last April 23, the Ninth Circuit Court remanded the question of extension of the two key provisions to the lower court with lengthy instructions on how to come to a defensible decision including how to determine the effect on competition of the restrictions. This was after the Administration indicated its intentions of letting them drop.

The 10-year consent decree resulted from allegations that General Motors, Ford, Chrysler and American Motors and their association conspired to delay the installation of emission control technology on California cars in the 1960s.

Judge Curtis first extended the provisions. Then Ford Motor Co. claimed it was being injured by latitudes granted by the Justice Department to AMC (to have emissions testing done by GM) and by those given to Chrysler (for help on the passive belt requirement from GM).

Ford moved to drop the two provisions of the consent decree and Curtis reversed himself.

But the Justice Department challenged Curtis' decision in favor of Ford, and the Ninth Circuit then reversed and remanded the lower court decision once again to Curtis. He had not yet acted when the Justice Department — in line with the thinking of the Reagan Administration—got together with the auto industry and withdrew its opposition to letting the two provisions drop.

The rest of the consent decree, some of it dealing with cross-licensing agreements, remains in effect in perpetuity.

Service Index shows good gain

Continued from Page 1

creased 9.0 percent over the year-earlier volume.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

Service and parts business in the January-July period amounted to 105.4 percent of the volume done in the same period of 1980.

Gross profit and sales of all parts and accessories were up an identical 9.6 percent for January-July, while shop parts sales increased 5.7 percent of the same year-earlier period.

Labor sales increased 3.0 percent, and repair orders written declined 3.4 percent.

SERVICE INDEX
109.8*

	July, '81 vs. July, '80	7 mos., '81 vs. 7 mos., '80
Gross Profit on All Labor and P&A Sales	+16.6%	− 9.6%
Repair Orders Written	− 4.7%	− 3.4%
Total Labor Sales (Customer & Warranty	+ 9.0%	− 3.0%
Shop Parts Sales (Customer & Warranty)	+10.2%	+ 5.7%
Sales of All P&A	+14.6%	+ 9.6%

*—Survey by Automotive News shows that dealers' service and parts business in July, 1981, was 109.8 percent of business in July, 1980. Service business in the seven months of 1981 was 105.4 percent of business in the corresponding period in 1980.

Swedes take helm at Carolina HQ of Volvo White

Continued from Page 22

Europe, added investments in the U. S. provide us with a wide volume base and greater opportunity for further growth," Langenius said.

AB Volvo purchased White Motor's inventory and fixed assets relating to its truck business, including the assembly facilities at New River Valley; Ogden, Utah, and the fabricating facility of a subsidiary, Gemini Mfg. Corp., Orrville, O.

- Purchase price for those assets was $17 million in cash and $34.1 million in notes, both subject to post-closing adjustments.

For a cash payment of $17.8 million, Volvo also acquired other assets, consisting primarily of receivables, and assumed certain current White Motor liabilities.

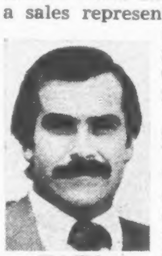
This part of the deal is subject to White Motor's obligation to repurchase receivables, at a later date, which are not collectible, and the Volvo payment also is subject to post-closing audit adjustments.

In addition, Volvo paid $1.5 million to White Motor for reimbursement of certain costs incurred by White, which has been operating for the last year under Chapter 11 of the U. S. Bankruptcy Code.

White Motor Credit Corp., a subsidiary also operating under Chapter 11, will continue to provide financing for Volvo White's dealer organization and their customers.

Weber is named to sales position

Kirk Weber has joined AUTOMOTIVE NEWS and AUTOWEEK as a sales representative and will be based in a newly opened Cleveland office.



Kirk Weber

He will cover Ohio, and West Virginia, along with portions of Tennessee and Kentucky, and will have certain agency responsibilities in Detroit.

Weber formerly was a regional manager for Penton/IPC, Inc., and a district sales manager for Chilton Co.

Developed by small engineering firm

New automatic excites Europe

By Richard Feast
European Editor

A small, unknown engineering company in England has set the European bus industry on its ear.

It has designed a new type of automatic transmission which it claims is lighter, more economical, simpler, smoother and offers vastly improved serviceability.

"People keep saying to us that it's so simple it's amazing no one has thought of it before," comments the man who designed it, Peter Windsor-Smith.

The company is Maxwell Bus Transmissions, of Loughborough, run by Windsor-Smith and Raymond Tailby. Neither will say so, but it is clear that the bus application is simply the first of a family that could find widespread use in many other commercial vehicle fields.

The Maxwell does away with a torque converter. Instead, it is a multi-layshaft design, the first production model having four layshafts grouped around the input shaft. Multi-plate pneumatic clutches (one per layshaft) select transmission ratios under the control of a selector switch acting through a Lucas-CAV electronic control unit and an electro-pneumatic valve supplied with compressed air.

The control unit includes a retarder function provided by simultaneous partial engagement of the first and second gear clutches when the vehicle is in third or fourth gear.

As all gears are engaged, the unit changes clutch rather than changes gear.

The complete gearbox, with its all-aluminum housing, weighs 319 pounds less than the leading equivalent automatic transmission pack. It is also considerably smaller.

But Maxwell believes the real bonus is servicing. It is an area which is causing tremendous down-time for operators.

• London Transport, which operates 2,400 buses, reckons a gearbox subjected to constant stop-start operation, needs a gearbox overhaul in less than a year.

But because of the complexity of the units currently in use, a strip down lasts several days and costs more than $2,000. Neither is it a job which most passenger transport authorities will tackle. The unit usually has to go back to the makers.

By contrast, Maxwell estimates that almost anyone can change all clutches in around 20 minutes.

The clutches are mounted at the outer ends of the layshafts furthest from the engine. Each clutch has a quickly removeable cover. When this is removed the clutch can be withdrawn from the splined shaft and replaced within minutes.

Furthermore, the very simplicity of the Maxwell opens vast sales potential in Third World countries which would not normally contemplate using an automatic. Maxwell will also offer a semi-automatic without the electronic selector.

By way of example, Ray Tailby reports that Malaysian authorities had rejected automatics in favor of manual gearboxes. "But after examing the Maxwell fitted to a Dennis chassis, they decided they could use it and are even asking for a license to manufacture."

• It was this sort of example which convinced Maxwell of the potential sales and licensing. It has rapidly revised its expectations upwards.

"We have learned that Voith makes 4,000 bus-type transmissions a year of this type. But if they can't sell into markets like Malaysia and we can, it must be the same for other Third World countries," speculates Tailby.

Thus Maxwell sees a potential market far in excess of the 80 or so a week made by J.M. Voith GmbH, the respected West German maker which dominates the European scene.

At present Maxwell is geared up to produce 30 a week from its 20-man workforce and buying in components from subcontractors. That could supply domestic demand, but beyond that it is negotiating licenses and sales "with major gearbox makers in many countries of the world," comments a cautious Windsor-Smith.

The Maxwell's simplicity means that the company could be in a position to dictate market prices because it will be cheaper to manufacture.

Neither would any potential licensee need lots of sophisticated manufacturing equipment. "Someone in, say, Brazil with a machine shop, the gear cutting facility and other tools could be in business for less than $200,000, maybe $150,000," Windsor-Smith estimates.

• Maxwell has also taken a cautious look at the U. S., where it believes its gearbox shows considerable advantages — not the least in fuel consumption — over widely-used two-speed automatics.

Its concept has been patented in the UK, Europe (including Spain), Japan, Taiwan, Brazil, South Africa, Canada and the U. S.

"We think it's cost us a lot, but to a company like GM it must be peanuts," said Windsor-Smith on the patenting.

In fact, the project has been financed almost entirely by the work undertaken by the parent Maxwell Engineering company. The exception has been a grant of 25 percent towards the cost of six prototypes by the Department of Industry.

Nor is the company short of capital, which is not always the case with projects that explore new ground. Windsor-Smith says: "Companies have been approaching us, offering us deferred credit, because they want to be involved. One has to ask why substantial companies want to get involved with a small one like ours — it's because they understand and can see the potential."

• In the workshops, just delivered, was a brand new Volvo chassis waiting for conversion sent by the company after officials had seen and ridden in a prototype.

But it is not just original equipment Maxwell is looking at. It believes there will be a very healthy business in retrofitting existing fleets with its own units.

Peter Windsor-Smith is modest about his invention. "Yes, we feel it's a breakthrough, but all we've done is shuffle around existing technology. It might have been a little more satisfying to have done something more sophisticated," he said.

It is all a far cry from the time when Windsor-Smith made his name as chief designer for the Coventry Climax engine company.

In those days, in the late '50s and early '60s, Coventry Climax V-8 engines won four Formula I World championships in seven years of Grand Prix motor racing. At the time it was the most successful GP engine in history — a position since taken by the Cosworth-Ford.

When Coventry Climax withdrew from racing in 1965—its exciting 1½-liter flat-16 unraced — Windsor-Smith became chief engineer for the Daimler bus division.

Jaguar had taken control of Coventry Climax and Daimler, but was itself part of what is now BL. After the group decided to concentrate on bus production at Leyland in the early '70s, Windsor-Smith has been a consultant engineer.

It was a time which gave him the opportunity to nurse a pet project — to design an automatic bus transmission without the basic problems and inefficiencies.

Making the most of that wedding

With the Royal wedding interest reaching fever pitch in the UK, an automobile promotion was a natural. One of the garages in the large Heron Motor Group offered a limited Vauxhall Astra known as the CD—for Charles and Diana.

For medium, high-volume dealers

AWC unveils new sales program

LOS ANGELES. — American Warranty Corp. (AWC) has introduced a new program for medium to high-volume dealers that is designed to increase the dealer's profits on the sale of service contracts.

Called Profit Plus, the program offers dealers who sell more than 20 AWC contracts a month a new net rate schedule, plus the opportunity of earning additional money long after the sale is made.

Under the new program, when a service contract is sold, according to AWC, a portion of the revenue from that sale is placed in a reserve account to cover any claims which may be made against the contract. These funds are collected by AWC and forwarded to its parent company, United Equitable Corp., for investment.

Dealers who sell up to 20 contracts a month receive 25 percent of the income accrued on the investments, and dealers who sell more than 40 contracts receive 50 percent.

At the end of the contract period, 100 percent of the funds remaining in the claims reserve account, less claims costs, are returned.

In addition, dealers are provided with semi-annual accounting of their credited investment income, according to AWC.

Jere Maudsley, AWC president, said the "Profit Plus program can make a real difference in the bottom line earnings of most dealerships."

"AWC has maintained its leadership position in the extended service contract industry by continually improving the quality of service and programs it provides its dealers," he said. "With our new Profits Plus program, we are offering something compatible with today's economy that can help bring the dealer additional profit at a time when it is most needed."

The Profit Plus program has other advantages for the dealer, Maudsley said.

In addition to setting highly competitive net rates which allow the dealer to individually establish the retail price of the contract, Maudsley said AWC has also introduced a method of providing the customer with an official contract document at the dealership.

"We feel it will be a lot easier for everyone if the contract can be handed directly to the customer at the time of purchase," Maudsley said. "Paperwork is eliminated at the dealership and the customer can be clearly shown what is and what isn't covered right away.

"Our new net rates, which we set after actuarial studies on each car, are now broken down into six broad categories, allowing easier access to the proper rate by the salesman or finance-and insurance person," he said. "In the past, we had long lists of rates for various car models. Now, we have eliminated this and made procedure a lot simpler."

- AWC has also introduced new coverage in its Preferred Plus Program.

Prefered Plus covers all of the major components included in the standard AWC service contract plus the newest electronic and highly technical components built into many current-model cars, including such items as fuel injection metering pumps, module computers and electronic ignition parts, according to Maudsley.

AWC's standard program covers all major drivetrain components including engine, manual or automatic transmissions, axle assembly, front suspension, steering, air conditioning, brakes, electrical, seals and gaskets.

Either plan may be purchased on a five year/50,000 mile basis or a three year/unliimted mileage basis.

Vauxhall seeks return to black ink

Continued from Page 9

in the U. S., the target looks a tall order. He seems undeterred.

In the first half of this year GM's slice of the UK new-car market — including Opels and U. S.-made models — was 8.8 percent. The new front-drive Cavalier will boost that a bit, adding 1.5 percentage points to the old model's 2.5 percent.

The introduction of the Astra (Kadett) into Ellesmere Port this November will help ease the supply problems on this small economy model. Like other cars in the class—new Escort and Golf — demand for the Kadett outstrips capacity.

• But the major boost will come with the introduction in early 1983 of the Spanish-made S-car. GM has no competitor in this small front-drive sector, and Bagshaw reckons the model will add 3 percentage points to his market share.

It is a big segment in the UK, amounting to nearly a quarter of all sales. The top two sellers, the Ford Fiesta and BL Metro, alone account for 15 percent of all new-car sales.

Vauxhall recently decided to merge its 581 Vauxhall and 220 Opel dealers. It now has 654 dualled Vauxhall-Opel dealers.

According to Bagshaw, "Let me make it clear that Opels will continue to be sold alongside Vauxhalls.

"While the Vauxhall name retains its substantial following, particularly among pro-British fleet operators, around half the new-car buyers in this country are choosing imported cars and our dealers, with the GM franchise, can meet both needs."

The unofficial theory, however, is that Vauxhalls will be represented by the cheaper Astra and Cavalier ranges, while Opels will take a more up-market, expensive role.

European J-cars reach market months after U. S.

Continued from Page 9

drive has liberated more space for passengers and luggage, it has not resulted in a reduction in weight. The new range weights are in the order of 2,076 to 2,302 pounds, compared with 1,973 to 2,138 pounds for the old models.

By way of example, a rear-drive 1.3 weighed 2,017 pounds, compared with 2,116 pounds for a front-drive 1.3.

• Russelsheim-made Asconas will benefit from the recent completion of the new $195-million paint plant.

Opel describes it as one of the most modern of its type anywhere in the automobile industry.

Its size has turned it into one of the direction-finding aids used by pilots on their approach to nearby Frankfurt airport. Not that sharp eyes are needed to spot it, as it covers an area of 1,300 feet by 260 feet.

The system used in the paint shop is cathodic electrocoating, said to provide a very high quality prime coating.

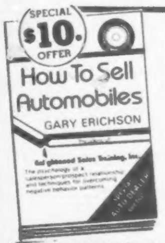
Honda for Burger

Had Burger, left, is congratulated on the opening of his new Lompoc Honda dealership, Lompoc, Calif., by Cliff Schmillen, vice president, national manager of sales, American Honda Motor Car Co.



Most "self help" books do not work because ingrained behavior patterns and points of view are almost impossible to change. This hard cover book WILL work thru a unique concept in communication. The author stresses the necessity to understand oneself, which will lead to an expanded awareness of why prospects respond as they do.

HUMAN BEHAVIOR, INTEGRITY, AND SALES TECHNIQUE ARE COMBINED INTO A DYNAMIC, HUMOROUS, AND EASY TO READ SALES GUIDE FOR IMPROVING SALES, PROFITS, COMMUNICATION AND SATISFACTION. Perfect for experienced AND inexperienced salespeople; sales managers AND dealers.

ABOUT THE AUTHOR: Gary Erichson was an award winning auto salesman, sales manager, dealer, and is the creator of the LEAD (selling) SYSTEM. He is currently the President of Enlightened Sales Training, Inc., where he markets the LEAD SYSTEM and conducts a school and placement service for persons interested in becoming auto salespeople.

DEALER BONUS OFFER: Included at no cost are three highly advanced LEAD SYSTEM forms which include the "Survey", an ingenious way for your salespersons to obtain the answers to eighteen qualifying questions "automatically". Another will open the door to AFTERSALE PROFITS, and the "Reconditioning Estimate" will assist you in appraising and closing the deal at higher gross. All forms come with complete instructions, and two are camera ready for inexpensive offset reproduction. GUARANTEE: Money back AT ANY TIME if you are not totally satisfied. MAIL $10 PLUS $1.50 SHIPPING TO: . . . . . DEPT. AA

Import registrations soar to a peak

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars in June set a record for that month, the third monthly high mark in the first half, according to figures compiled by R. L. Polk & Co.

June import registrations totaled 222,508, up 11.58 percent from 199,413 in June last year. The June figure topped the previous record for the month, which was 212,026, set in June, 1979.

Imports took 29.77 percent of total June registrations in the U. S., down from the preceding month's 30.58 percent, highest for any month in history. A year ago, imports took 29.50 percent of June registrations.

Import registrations for the first half totaled 1,274,171, up 0.81 percent from 1,255,611 last year. It was the first time that year-to-date total has pulled ahead of last year.

Imports accounted for 29.02 percent of total U. S. registrations in the first half, compared with 28.21 percent last year.

- Of the top 10 imports in June registrations, front-running Toyota logged the biggest gain in market share compared with the year-ago month, while second-place Datsun was the biggest loser.

Toyota took 24.65 percent of import registrations, up 1.68 percentage points from a year earlier, while Datsun accounted for 18.19 percent, down 3.07 points.

Other makes gaining in market share were Volvo, up 1.45 points to 2.98 percent; Mazda, up 0.86 of a point to 7.20 percent; Mercedes-Benz, up 0.62 of a point to 2.52 percent, and Subaru, up 0.37 of a point to 5.83 percent.

Other losers were Volkswagen, down 1.15 points to 9.64 percent, and Honda, off 0.41 of a point to 14.43.

The top 10 imports accounted for 89.40 percent of the June import total, compared with 90.11 percent a year earlier. In the first half, the top 10 accounted for 88.61 percent, compared with 89.03 percent last year.

Japanese nameplates accounted for 74.16 percent of import registrations in June, down from 75.65 percent a year earlier.

Registrations by country of origin in June were:

	June, 1981	June, 1980
Japan	165,007	150,852
West Germany	39,758	36,442
Sweden	7,755	4,552
France	4,038	2,800
Italy	3,741	2,734
United Kingdom	2,204	2,041
Ulster	5	0

Registrations by country of origin for the first half were:

	6 mos., 1981	6 mos., 1980
Japan	958,914	944,431
West Germany	223,167	227,307
Sweden	38,916	30,435
France	23,040	17,733
Italy	19,651	24,048
United Kingdom	10,477	11,657
Ulster	6	0

Registrations of imported trucks in June totaled 41,485, up 4.87 percent from 39,559 a year earlier. Registrations of imported trucks in June were:

	June, 1981	June, 1980
Toyota	11,014	10,290
Datsun	9,482	8,641
Ford Courier	5,158	5,409
Chevrolet LUV	5,021	5,551
Others	10,810	9,668
TOTAL	41,485	39,559

The truck import total for the first half of 1981 was 243,575, down 9.02 percent from 267,717 in the first six months of 1980. Registrations of imported trucks in the first half were:

	6 mos., 1981	6 mos., 1980
Toyota	59,445	69,125
Datsun	55,019	54,892
Chevrolet LUV	37,569	44,408
Ford Courier	33,856	38,880
Others	57,686	60,412
TOTAL	243,575	267,717

Buick dealers score high following All Star Game

CLEVELAND. — For Greater Cleveland Buick dealers, there was an All Star ending to the baseball strike that gave its 10 participating dealers a promotion showcase for the sale of 150 official courtesy cars.

The dealers in Buick's advertising group welcomed the opportunity to take over official status for their cars for the National League-Ameriacn League All Star Game originally scheduled for July 14 in Cleveland.

They did not suspect the event would be postponed by a long strike, followed by a sudden decision to play which would give them but 48 hours to do their thing. The game was finally played Aug. 9.

"It took us two months to put the July 14 package together," said William Veselick, Buick zone manager. "We would supply the cars and do the necessary paperwork; ball club officials would furnish the drivers and make sure the baseball greats would have transportation.

"We thought the strike, after it started, would end soon," Veselick said, "and so we maintained the fleet. However, by Aug. 4, we saw no end in sight and decided to recall all the cars. Almost the next day the strike was settled and we had to return the cars and get our plan back into operation."

Both ventures had happy endings: The All Star Game was a success and the sale of the 150 official courtesy cars went well, Veselick said. An advertising campaign with billboards, TV and newspapers helped promote the products.

"We would do it again if we had the opportunity," Veselick said. "Strike or no strike in baseball, regardless of the problems, it was a great promotional event."

Buick dealers also were involved with the World Series of Golf in Akron, supplying 50 cars to participating golfers. Buick provided another 50 cars at Firestone headquarters.

Jill Green in business

Jill A. Green signs an agreement with Chevrolet making her dealer-operator of Jill Green Chevrolet-Buick, Inc., Metamora, Ill. James F. McDonald, Peoria zone manager, is witness. Her father, Ray Green, owns Green Chevrolet, Inc., Danville, Ill., and her sister and brother-in-law manage Ray Green Chevrolet, Inc., Jacksonville, Ill.

Waldrep appointed

RED OAK, Ga. — Warren H. Waldrep has been appointed director of fleet services at the Atlanta Auto Auction. He has been with the auction for 11 years.

Production schedules call for 467,356 cars

September target lowest since 1961

U. S. auto makers have targeted production of 467,356 cars during September, the lowest forecast for that month in 20 years and an indication the companies don't expect a sales upswing in the near future.

The September forecast is the lowest for the month since September, 1961, when the companies built 355,202 cars. If it comes in as planned, September production will be the lowest monthly output since January of this year when the total was 462,284 cars.

The company breakdown for September output is General Motors, 253,000 cars; Ford Motor, 131,000; Chrysler Corp., 63,000; American Motors, 14,000; Volkswagen of America, 6,016, and Checker Motors, 340.

Both VW's and Ford's September targets are up from actual production during September, 1980 — increases of 121.42 percent for VW and 7.21 percent for Ford. GM is planning the largest drop for the month, down 25.93 percent from the 341,553 cars built during September, 1980.

Domestic auto production rose 2.36 percent last week, mainly because of a slight increase in GM output. The makers slated output of 107,071 cars, up from the 104,600 built the previous week and a 12.36-percent gain from the 95,288 of the comparable 1980 week.

GM's Leeds, Framingham, Doraville, Fremont, Van Nuys, Norwood, Linden and Janesville plants remained down last week for model changeover, but the Cadillac Detroit home plant reopened on a one-shift basis, helping boost the week-to-week GM tally.

Ford Motor's Dearborn plant was down last week for inventory adjustment. It will reopen Sept. 8.

American Motors reported all plants open last week. They will also be open this week, the company said.

All Chrysler plants were reported open last week. A spokesman said all plants would work this week, also.

The first production model 1982 Chrysler LeBarons and Dodge 400s will come off the St. Louis assembly line Sept. 9. Chairman Lee Iacocca will lead a parade of other dignitaries in driving one of the first models off the assembly line there. The plant will operate on one-shift, building two-door versions of the new front-drive cars. Chrysler spent more than $75 million converting the St. Louis assembly plant, which has been closed since July 31.

No overtime was reported last week. All plants will be closed today (Sept. 7) for the Labor Day holiday.

VW continued its combined model changeover/inventory adjustment downtime last week at the Westmoreland plant. The assembly point closed Aug. 28 and will remain down until Sept. 21.

Checker last week announced that it has cut production from 25 to 20 units per day and will suspend assembly operations this week (Sept. 8 to 11) to balance inventories.

Breakdown for last week's production was: GM, 58.16 percent; Ford, 24 87; Chrysler, 14.01; AMC, 2.94, and Checker, .02.

Year-to-date, the domestic makers have built 4,604,227 cars, up 1.42 percent from the 4,269,433 assembled during the equivalent period last year.

Truck production exceeds 25,000; GM Chrysler up

Despite six plant closures, a substantial rebound in both General Motors and Chrysler Corp. output boosted truck production 27.93 percent last week.

The makers planned output of 25,148 units last week, up from the 19,657 assembled the previous week and a whopping 36.90-percent boost from the 18,369 built during the comparable week last year.

Ford Motor's Norfolk and Twin Cities truck plants continued model-changeover downtime last week. Those plants closed Aug. 24. Volkswagen of America's Westmoreland (Pa.) plant closed Aug. 28 and will remain down until Sept. 21 for combined model changeover and inventory adjustment.

GM reopened its St. Louis assembly plant Aug. 31 after a month of model-changeover downtime. GM's Janesville plant also reopened after a month of changeover downtime but it, as well as plants No. 1 and No. 2 at Flint, were forced to close Sept. 3 because of a shortage of transmissions for '82 trucks. Janesville and the Flint lines will reopen Sept. 14, according to a GM spokesman.

GM also closed its Lordstown (O.) van plant last week for model changeover.

Chrysler Corp.'s Warren truck plant reopened last week after a one-week work stoppage to balance high inventories.

No overtime was scheduled last week.

Year-to-date, the truck builders have assembled 1,165,570 units, up 13.61 percent from the 1,025,889 built during the comparable period last year.

Dealer fined for high level of CO in shop

GREENSBORO, N.C.. — Bob Dunn Ford, Inc., of Greensboro, has been ordered to pay a $1,180 fine for allegedly exposing service workers to higher than allowable levels of carbon monoxide.

Dunn was cited by North Carolina Occupational, Safety and Health Administration inspectors in 1977, but appealed the finding.

The final decision was filed recently in Guilford County Superior Court.

The dealership was accused of failing to use feasible engineering controls to lower levels of carbon monoxide.

AM General will no longer be figured in with North American trucks.

Ford downtime cuts Canadian auto production

Canadian auto production dropped 21.25 percent last week as Ford Motor Co. began an inventory adjustment downtime period at its St. Thomas plant.

The Canadian manufacturers scheduled output of 12,620 cars, down 21.25 percent from the 16,026 assembled the previous week and a 4.86-percent dip from the 13,928 built during the comparable 1980 week.

Ford's St. Thomas plant closed Aug. 31 and will remain down until Sept. 14. It then will work one week and close the next week, returning Sept. 28. The plant builds EXP and LN7, and will begin building the five-door Escort/Lynx Oct. 13.

General Motors increased production slightly last week, a result of the reopening of Oshawa No. 1 car point, which had been down for changeover since July 16. Oshawa's No. 2 line, however, will remain down until Nov. 9 for extensive changeover to build front-wheel-drive cars.

American Motors announced that it will add a second shift Oct. 17 to its Brampton (Ont.) plant, boosting production from 720 to 960 units per week. The plant will hire an additional 500 workers.

Year-to-date, the Canadian auto makers have built 577,281 cars, up 3.42 percent from the 558,188 assembled during the equivalent period last year.

Canadian truck makers built 11,464 units last week, up 11.19 percent from the 10,310 assembled the previous week and a 21.90-percent increase from the 9,404 built during the comparable 1980 week.

Domestic stocks slashed to orderly 64-day supply

By Richard A. Wright
Assistant Managing Editor

Armed with factory rebates, sweetened finance deals and an assortment of special price packages, new-car dealers hacked away almost 200,000 units during August from the domestic new-car inventory which had been growing ominously for several months.

The result was a sharp decline in the cleanup stockpile to a 64-day supply Sept. 1 from a record 87½-day level on Aug. 1.

The domestic new-car inventory totaled 1,485,692 on Sept. 1, down substantially from 1,675,192 a month earlier. A year ago, the industry had 1,336,395 new cars in stock Sept. 1, a 69-day supply.

The multi-faceted sales effort transformed in a single month a blossoming burden of new cars into an orderly cleanup stock.

Approximately 519,000 of the 1,485,692 vehicles in stock as September opened were 1982 models.

Most of the inventory reduction during August was accomplished by General Motors, which opened September with a 60-day supply, down from 89 days a month earlier, by slashing its million-plus stockpile down to 882,000.

Ford Motor Co. had a 75-day supply Sept. 1, down from an 83-day stockpile on Aug. 1.

Combining a healthy cut in its unit count with an even healthier gain in its daily sales rate, Chrysler Corp. cut its stock from a 90-day supply to a 62-day stock Sept. 1.

Table on Page 57.

American Motors had a 79½-day supply Sept. 1, up from a 66-day stock, in part because short stocks of Concord held the lid on the selling rate. Volkswagen of America had a 76-day supply of U. S.-built Rabbits Sept. 1, down from 94 days.

The Sept. 1 domestic inventory was divided this day: GM, 59.65 percent; Ford Motor Co., 23.71 percent; Chrysler Corp., 11.61 percent; VWoA, 3.01 percent, and AMC, 2.02 percent.

A month earlier, the inventory was divided as follows: GM, 62.09 percent; Ford Motor Co., 20.77 percent; Chrysler Corp., 12.11 percent; VWoA, 3.12 percent, and AMC, 1.91 percent.

By size class, all segments were down in terms of days supply. The industry had a 66-day supply of subcompacts, down from 83 days a month earlier, and a 67-day supply of compacts, down from 93 days.

It had a 63-day stock of intermediates, down from 95 days, a 50-day supply of standards, down from 73 days, and a 56-day supply of luxury cars, off from 87½ days.

The Sept. 1 inventory was divided this way by size segment: Subcompact, 25.58 percent; compact, 31.08 percent; intermediate, 26.92 percent; standard, 10.93 percent, and luxury, 5.49 percent.

A month earlier, the inventory was divided as follows: Subcompact, 22.34 percent; compact, 30.55 percent; intermediate, 28.45 percent; standard, 12.39 percent, and luxury, 6.27 percent.

• The Sept. 1 days-supply figures by market class were:

Subcompact — Chevette, 37½; J-2000, 47; T-1000, 53½; Cavalier, 56; Escort, 73; Omni, 76; Rabbit, 76; Horizon, 85½; Spirit, 90; Lynx, 92; LN7, 99, and EXP, 154.

Compact — Camaro, 47; Reliant, 51; Firebird, 54; Aires, 57; Fairmont, 58; Concord, 63; Omega, 66; Skylark, 72; Capri, 74; Zephyr, 81; Mustang, 92; Eagle, 93; Citation, 110, and Phoenix, 111.

Intermediate — LeBaron, 31; Cutlass, 46; Supreme, 48½; Diplomat, 51; XR-7, 60; Century, 62; Grand Prix, 63; Regal, 66; Malibu, 67; Bonneville/LeMans, 67; Cougar, 73; Monte Carlo, 74½; Cordoba, 76½; Granada, 81; Thunderbird, 83, and Mirada, 92.

Standard — Gran Fury, 12; Olds 88, 28; Mercury, 38; Olds 98, 42; Pontiac, 46; St. Regis, 49; LeSabre, 53½; Ford, 55; Chrysler, 58; Chevrolet, 67, and Electra, 78.

Luxury — Toronado, 34½; Riviera, 36; Corvette, 44; Lincoln, 55; Cadillac, 56; Eldorado, 64; Cimarron, 75; Imperial, 78; Mark VI, 82, and Seville, 102½.

Special issue to mark GM's 75th anniversary

In commemoration of General Motors' diamond year, Automotive News will publish a special General Motors 75th Anniversary Issue on Friday, Sept. 16, 1983, official anniversary of the corporation's founding in 1908.

In announcing the special edition, Keith E. Crain, publisher and editorial director of Automotive News, said, "As an automotive company, GM helped change life in the Western world. As an industrial company, it has touched the lives of all Americans since the early part of the century."

Crain added: "Our goal is to present an overview of GM that's never been seen before in a business publication."

Roger B. Smith, chairman of GM, said, "Obviously, I'm delighted you think that General Motors merits an anniversary issue, and I trust you'll find enough to write about."

Overall theme of the special issue will be 75 years of GM history, although it will take a many-faceted look at the company's past, present and future.

Fully illustrated with photographs and artwork, the issue will pay particular attention to the far-ranging aspects of GM as an industrial enterprise, and how the company has conducted its business over three-quarters of a century.

According to Crain, editorial content will include interesting and perhaps long-forgotten aspects of GM's rich heritage — "its people, products and operations, and insights into events that have contributed to GM's impact on the U. S. and the world."

Automotive News is setting up a special editorial operation for the vast, two-year project, in which staff members and additional editorial specialists will participate. They will be under the direction of Al Fleming. The publication also will enlist the cooperation of GM and its divisions in providing access to historical information and materials.

"We believe this very special project will contribute a meaningful perspective not only to the history of General Motors, but to that of the entire industry," Crain said.

Nissan rebodies Skyline series

The Nissan Skyline, one of the better-selling large cars in Japan, has been rebodied with a crisp wedge shape and deep side windows. Wheelbase is 103 inches and overall length is 181 inches. Skyline is not sold in the U. S. Story, other pictures on Page 6.

Two-door Honda Civic spectacular winner in 35-MPH crash tests

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The 2-door 1981 Honda Civic has come out with spectacular results from continuing high-speed NHTSA crash tests, while the Toyota Starlet and the top-of-the-line, passive-belted Cressida did not.

Neither did the 1981 Audi 5000 nor the 1981 VW Jetta, both of which exceeded head injury criteria for both driver and front-seat passenger dummies. The Renault 18i also showed bad head results.

But a passenger in the 1981 Honda 4-door version of the Civic also did not fare nearly as well as in the 2-door version, where the belts are fastened further back. And the passenger dummy in the Ford EXP was clobbered.

In a separate development, the 1979 Volvo which earlier had some miserable results, sailed through with flying colors when NHTSA shortened the belts eight inches.

NHTSA Administrator Raymond A. Peck now has under consideration running multiple tests as a check on the repeatability of the test procedure. Auto makers have questioned results of the controversial 35-MPH tests started by his predecessor, Joan Claybrook, and included in her controversial best seller, The Car Book.

The test procedure is the same used for compliance with standards 208, 212, and 219 as well as 301, except that the test speed used is 30 MPH. (Testing at 35 MPH is about 36 percent tougher than at the lower speed, but it means that those cars which failed at 35 MPH and had passive belts — the Cressida and the Jetta — will have to be retested at 30 MPH for a compliance failure and possible civil penalties.)

• The problem with multiple testing is that the results may reflect either weaknesses in the procedure or merely variations among production models — a manufacture problem of quality control. Moreover, multiple testing is so expensive it also means fewer models can be tested.

In addition, there would always be arguments over what are minor variances expected of any even very good procedures and what is major—especially around those injury criteria set in concrete for compliance purposes.

The test is the same one challenged when the auto makers first took NHTSA unsuccessfully to court over air bags and which was remanded for repeatability many years ago.

Since that time, the dummies used are General Motors developments and the question of repeatability was not raised in any substantial way by the manufacturers until cars started to fail the high-speed tests.

The new test results were obtained by Automotive News under the Freedom of Information Act. But Peck had every in-

breaking news

Page elected to Ford board

DEARBORN.—Thomas C. Page, 61, has been elected a director of Ford Motor Co. Page, a 29-year veteran at Ford, is currently executive vice president of the company's Diversified Products Operations. He previously had served in International and North American Automotive positions both here and abroad. He was elected a vice president in 1975.

No manual shift for '82 Corvette

DETROIT.—The 1982 Chevrolet Corvette will be available with the new General Motors four-speed automatic transmission replacing the three-speed automatic. No manual transmission will be offered because the car with that equipment failed to pass government emission tests. The '82 Corvette will be the first since the '54 to be automatic only.

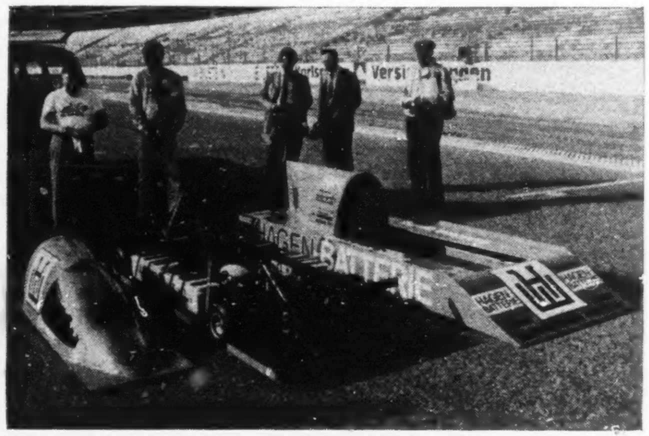
Hagen-Elobil is a speed demon

The Hagen-Elobil, developed by W. Knobloch, Kassel, West Germany, holds the world speed record for electric-powered vehicles. It is fitted with Hagen-sprint batteries from Wilhelm Hagen AG, Kassel. The record is 158.9 kilometers per hour. The Hagen-Elobil accelerated to 99.7 kilometers per hour in one kilometer.



Program retroactive to first '82 shipments

Chrysler offers help on floor-plan

By Edward Lapham
Financial Editor

Chrysler Corp., following a pattern established by General Motors and Ford, has instituted a "1982 model year supplemental floor-plan assistance" program retroactive to initial '82 model shipments.

The plan was announced in a letter to Chrysler dealers from John B. Naughton, sales and marketing executive vice president. It includes all domestic and imported cars and trucks.

Like the other plans, the Chrysler plan was termed "insurance" against high floor-plan interest rates.

Chrysler emphasized to dealers that its floor-plan assistance program "is much simpler to understand than competition's programs and does not affect either your 3 percent holdback or the existing 15 days free floor-plan currently received."

Like the other floor-plan assistance programs, Chrysler's includes a charge. It is $100 for cars and $105 for trucks, which was included in the tentative wholesale prices announced earlier.

In addition to the normal 15 days of free floor-planning, the supplemental program provides for a payment to the dealer of 10 percentage points of interest per day, up to 75 days for cars and 100 days for trucks.

The payment to the dealer will be made 30 days after the company receives the new-vehicle delivery report. The program will be reviewed every 90 days.

By way of an example, Chrysler said that an average car with an $8,000 invoice floor-planned for the maximum 90 days of "coverage" would receive 15 days free, worth $75, plus 75 days at $2.24 insurance per day (one-tenth the current floor-plan rate), worth $168, for a total of 90 days protection and $243 value of interest-rate protection. This total of $243 less the $100 invoice charge and the regular 15-day $75 value leaves real savings to the dealer of $68.

In another example, again of an $8,000 invoice, in inventory for 50 days, the dealer receives the $75 value for 15 free days plus 35 days protection at $2.24 per day for $76 in additional protection and a total of $153. That total less the $100 invoice charge and the normal $75 15-day value means a real cost of $22 to the dealer.

Raphael Cohen, executive vice president of the Independent Dealers Committee Dedicated to Action, agreed that the Chrysler plan is simpler than the GM and Ford plans but said it is the "kind of assistance" dealers "can well live without."

"These are not floor-plan assistance programs," Cohen said, "They are additional monies the factory is adding to the invoice which gives them the additional funds to use free for 30 days."

Cohen also said the program will "further erode profit". for dealers with "sold" orders or who turn over inventory quickly.

Naughton's letter said the purpose of the program is not only to give dealers relief from high interest charges but also to enable dealers "to stock vehicles in sufficient quantities" to offer potential customers "a wide selection."

"We believe that dealers who take advantage of this program will be able to carry an inventory of new vehicles that will help them increase their sales and profits during the 1982 model year," Naughton said.

Despite the difference of opinion over the real value of the program to Chrysler's dealers, two points were clear: While the program won't work any miracle with cash flow, it won't hurt cash flow. The program also may make it easier for the factory to convince dealers to build inventory, which will directly improve factory profitability.

Two ex-officials of Lada sentenced in parts fraud

TORONTO. — Two ex-managers of Lada Cars of Canada pleaded guilty in Ontario Provincal Court here to charges of accepting secret commissions through parts sales to their former employer.

John Dill, former vice president and general manager of Lada, and Bob Clifford, former Lada national service manager, were sentenced by Provincal Judge P. B. Parker to 60-day jail terms and ordered to pay $9,250 each in damages to Lada Cars of Canada.

Other charges of fraud, conspiracy and robbery stemming from the parts scam were withdrawn by the crown.

The managers were fired by Lada Cars of Canada and charges filed last November after it was discovered they had been purchasing plastic fender liners for Lada automobiles from the Quebec manufacturer, then selling them to Lada Cars of Canada through a secret company they had founded.

Dill and Clifford entered guilty pleas after a third man charged in the scheme, Bertrand Boisvert, an ex-Lada dealer in Montreal, pleaded guilty to accepting secret commissions. Boisvert was ordered to pay Lada Cars of Canada $18,500 in damages but received no jail sentence.

Data is inadequate, VW study finds

Emission rules called too strict

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Auto emission standards are far stricter than needed for air quality, according to an analysis of the last decade's major air quality studies done for Volkswagen of America by Environmental Research and Technology, Inc.

In fact, the CO standard — currently 3.4 gpm — could be somewhere between 9.0 and 15 gpm, and it would be enough for all cities to reach the needed ambient air quality level, the study concluded.

Moreover, 2.0 gpm for NOx— the level sought by the auto makers and endorsed by the new EPA — is adequate, the study found. Decreasing NOx too much will actually increase oxident levels in some situations, it said.

Even more surprising is the finding that the HC emission level for vehicles could rise from the current 0.41 gpm (which even the auto makers accept) to 1.0 gpm as far as ozone is concerned. But even if HC were lowered to zero, some U. S. cities would still not meet the ambient air quality level for ozone, the study said.

ERT scientists who reported these remarkable results are Indur M. Goklany, formerly the chief technical person at the National Commission on Air Quality; Alan C. Lloyd, formerly at the Statewide Air Pollution Research Center, University of California at Riverside, and once a visiting scientist at the Commerce Department, and Fred Lurmann, who has had specific experience in Santa Barbara, Calif., along with Eric Stork as a senior consultant. Stork was in charge of EPA's vehicles emissions program from 1970 to 1980.

The ERT conclusions derive from what was essentially a literature study — 11 major and 3 minor studies — that estimated the impact of vehicular emissions on ambient carbon monoxide, nitrogen dioxide and ozone.

Most used the "rollback" technique — assuming a linear relationship between rates of emissions and ambient levels.

While this is appropriate for nonreactive pollutants, it is less so for reactive ones because it ignores atmospheric chemistry and physics. Thus, for example, the finding for CO — nonreactive — is probably firm.

But NOx is reactive and influences both nitrogen dioxide and ozone levels. ERT's analysis said none of the studies was good enough to show exactly what level of NOx control for vehicles is needed to reach the adequate ambient level.

All studies except one tended to underestimate the impact of lower mobile-source NOx on nitrogen dioxide levels, the scien-

Toronto Automobile Centre opens

The Toronto Automobile Centre, new home of four dealerships and future home of more if all goes according to plan, is officially opened with a ribbon-cutting ceremony by, from left: Roy Poss, president, Roy Poss Pontiac-Buick, Ltd.; James R. Rinehart, president, General Motors of Canada Ltd.; F. Alan Smith, GM executive vice president, finance; Richard M. Colcomb, general manager, GM of Canada, and Noel Croxon, president, North York Chevrolet-Oldsmobile.

Dealer can refuse to refund deposit if buyer reneges

INWOOD, N. Y.—A state appellate court, in a two-to-one decision, upheld the right of a dealer to refuse to refund a deposit on a new car when the customer cancels the sales contract.

The court found that Mickey Kaiserman, of North Woodmere, N. Y., was not entitled to the refund of the $1,000 deposit he placed with Martin J. Ain, Ltd., a Jaguar-Rover-Triumph dealer here.

The court reversed a decision in the small claims section of the district court and said dealers are entitled to recover loss of profit when a customer cancels the contract.

This particular sales contract contained a liquidated damages clause which provided for 20 percent of the purchase price in damages against which the deposit was to be credited, according to court papers.

The court said no one has found the 20 percent damages unreasonable and since the deposit did not reach this level, the customer was not entitled to restitution.

The court also found that under recent decisions, a dealer is entitled to recover his loss of profit.

Data is inadequate, VW study finds

Emission rules called too strict

Continued from Page 3

tists said. Literature so far shows no difference between 1.0 gpm — the current level — and 2.0 gpm — the one being asked by makers, they said.

As for reactive HC, ERT said little confidence can be placed in any of the studies because the data from smokestacks (the largest component) is poor, and atmospheric chemistry — which was ignored in the studies — is of "critical importance."

Even so, the studies indicate that even if the standard were changed one hundred percent in either direction, there would be only a negligible impact on ambient ozone. Further, a shift from a total-HC standard to a nonreactive-HC standard would make no perceptible difference in ozone levels.

Whatever happens to HC, there would still be a few areas with ozone problems, ERT concluded.

The last 10 years of studies, ERT found, are not really good enough for a clear choice among various standards. But the scientists speculated that if the studies were repeated using better data and better modeling techniques, HC levels could be more than doubled, CO could be tripled or quadrupled and NOx could be doubled.

- In short, this means that controlling these emissions is not cost effective. The scientists recommended a number of new studies.

(Among the papers studied was one used by the Senate Public Words Subcommittee in writing the original standards for automobiles. Not surprisingly, ERT found its methodology "seriously flawed" — a point which the auto companies through former Senator Robert Griffin, Michigan Republican, pointed out at the time of passage of the 1970 act. Nonetheless, ERT called the effort "pioneering" in its attempts.

Although the ERT paper is only an analysis of existing and inadequate studies and not a recommendation for change, it is expected to be taken seriously. It may influence Congressional decisions about new standards.

Even though the findings suggest much looser control of automobile emissions, control would still have to exist. An EPA study in the '70's showed emissions from an uncontrolled vehicle equal approximately 8.7 gpm HC/87 gpm CO/3.5 gpm NOx.

What would it mean if standards were changed to 1 HC/9 CO or 15 CO/2 NOx instead of the current 0.41 HC/3.4 CO/1 NOx or the 0.41 HC/7 CO/2 NOx asked by the auto makers?

One expert in the field said that 1/9 or 15/2 could do away with electronic feedback control, the three-way catalyst, the air pump and a complex EGR although still proportional.

The oxidizing catalyst would stay, he said, because it would cost too much in fuel economy to retard spark as much as would be needed. (General Motors went across the board to an oxidizing catalyst in 1975 when the standards were 1.5/15/3.1. Ford and Chrysler followed as they could because of fuel savings.)

But another expert felt that with the advanced state of electronics, companies could scrub all catalysts.

Materials tower shows role of steel in autos

CHICAGO. — An "ultra-compact car," in the form of a eight-foot tower of materials in modern automobiles, has been added to the steel exhibit at the Chicago Museum of Science and Industry.

The tower dramatizes the variety of materials in today's autos and highlights the importance of steel for strength, safety and styling.

Steel accounts for 60 percent of the materials in the typical car, whether a six-passenger, full-size model or a two-passenger subcompact.

Current models weighing 2,400 pounds use about 1,440 pounds of steel, which is more than all other materials combined. By contrast, less than 200 pounds each of aluminum and plastics are used in these models, according to the American Iron & Steel Institute.

California 'lemon bill' moved to back burner

SACRAMENTO.—The so-called "lemon bill" introduced by Los Angeles Democrat Assemblywoman Sally Tanner to "protect California buyers of new automobiles" has been lobbied by the state's new-car dealer associations onto the Legislature's back burners.

Committee hearings scheduled to act on the Tanner proposal adjourned before even bringing up the "lemon bill" without amendments. The measure thus will be held over until Jan. 1 when the second half of this legislative session is scheduled to begin.

New Buick dealership in Denver

Boost appears smallest for Big Three

Ford price hike averages $430

Continued from Page 2

$2 less than last year's $6,421. The Mercury Zephyr Z-7 coupe is $6,319, up $8.

The base Ford Escort and Mercury Lynx models are up $360. Prices are $5,518 for Escort and $5,559 for Lynx. The Escort L two-door hatchback is $6,046, up $297. Ford noted that the Escort L is more than $900 less than the lowest-priced Chevrolet Cavalier subcompact J-car. Equipment variations are a major factor, however.

Ford said it was holding the line on the sporty Escort EXP and Lynx LN7 "except for equipment upgrades." The EXP is $7,387, up $134, and the LN7 is $7,787, up $37.

An example of the equipment additions is the Mustang two-door notchback, designated GL for '82. New standard features include left-hand remote rearview mirror, black window frames, sport steering wheel, black rocker-panel molding, interior accent group, accent paint stripes and turbine wheel covers.

The '82 price is $6,844, up $481 from '81, but Ford said the extra equipment accounted for $330 of that amount.

The increases are greater on Ford Motor's larger cars than on the smaller ones, in keeping with Benton's comments on limiting its hikes in the "particularly price-sensitive segments of the market."

Thunderbird has a sticker of $8,492, up $560 from the 1981 tag of $7,916, and the Mercury Marquis four-door sedan is $8,674, up $564.

In the luxury segment, the Lincoln four-door sedan is $16,100, up $1,115 from the final 1981 sticker, and the Mark VI two-door is $19,452, up $1,513. Ford said that additional standard equipment accounted for $228 of the increase on the Lincoln and $451 of the increase on the Mark VI.

As announced earlier, the new Continental from Lincoln-Mercury will have a sticker price of $21,302.

A few examples of hikes on optional equipment for 1982 are: Air conditioning for Granada, $676, up $52; power steering for Fairmont and Granada, $195, up $15, and power brakes for Mustang, $93, up $6.

Police endorse full-size cars

FARMINGTON, Conn.—Some 25 police officers of this Hartford suburb, nearly all of them off-duty, attended a special session of the Town Council to endorse acquisition of six new large-size cruisers for the Police Department.

The councilmen unanimously approved purchase of the Ford LTDs from Stephen Ford, Bristol, Conn., for $47,167, the price including tradein value for six cruisers in use.

Police Chief LeRoy Bangham said he prefers the larger cars because their mileage is as good or better than mid-size cars and because a cruiser, considered to be an office - on - wheels, should be comfortable.

Court overturns FTC ruling in Francis Ford repo case

Continued from Page 2

would create a national interpretation of the Uniform Commercial Code," the court said.

"Under these circumstances, the FTC has exceeded its authority by proceeding to create a new law by adjudication rather than by rulemaking."

NADA President Wendell H. Miller hailed the court decision as a "significant victory" for dealers and some "good news" at a time when dealers are being pressed on all sides by high interest rates and slow sales.

No doubt it also pleases the NADA because — unlike Ford Motor Co. and its financing subsidiary and General Motors and its financing subsidiary, plus one GM dealer who all settled with FTC early in the case—NADA and Francis Ford saw the matter through.

Under the consent agreements reached between the FTC and Ford and GM, the companies are required only to attempt to impose on dealers a formula that does not allow a charge for indirect expenses.

Chrysler and its credit company were also party to the case but action against them has been suspended since December, 1978.

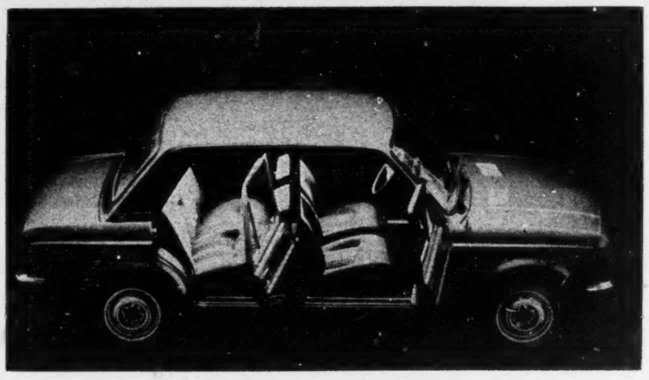
NADA intervened in the Francis Ford case and related cases against the auto companies to oppose the FTC's attempt to impose the new accounting system for repossessions.

NADA's Legal Defense Fund gave Francis Ford a large amount of financial support in its appeal and submitted a "friend of the court" brief on behalf of all NADA members. The court relied heavily on NADA's arguments in overturning the FTC order.

The court decision is not yet final and the FTC may seek a rehearing before the entire panel of the Ninth Circuit. Because the decision has wide implications for all federal agencies, there is a strong likelihood the FTC may ask the Supreme Court to review the decision should its rehearing request, if one is made, be denied.

Bailey adds Peugeot

SPARTANBURG, S.C. — Vic Bailey Lincoln Mercury, Inc., has added a Peugeot franchise.



Argentina's 68-million-peso Fiat

This Argentine-produced Fiat Europa 1300, was priced at 68,839,028 pesos as of mid-August. That was up from 48,689,230 pesos in June. With inflation running at 10 percent a month, even more astronomical price figures can be expected.

Domestics gain, imports slip; total new-car sales up 17 pct.

By Jenny L. King
Staff Writer

Domestic new-car dealers took advantage of the many incentive programs available to them and their customers during August to reduce their year-end inventories and set the stage for the '82s.

Domestic sales leaped nearly 24 percent while the imports held steady with year-ago levels and slipped to 24.85 percent of the total. It was the lowest penetration for the imports this year and was down from 28.98 percent for the month in 1980.

Domestic sales were up 23.71 percent in August, to 601,741 from 486,420 last year. Sales of imported new cars totaled 198,984, up 0.56 percent from 197,869 the preceding year. Combined sales reached 800,725, up 17.02 percent over 684,289.

Domestic year-to-date sales were 4,407,361, down 0.47 percent from 4,427,959 last year. Sales of new imported cars for the first eight months were up 0.14 percent, to 1,682,573 from 1,680,269. Combined year-to-date sales numbered 6,089,934, off 0.30 percent from 6,108,228.

Of the five major U. S. auto makers, the biggest—GM, Ford and Chrysler — were up substantially in August. Volkswagen of America squeezed past its year-ago sales by 0.01 percent, and American Motors was down.

General Motors sales climbed 21.70 percent, to 384,755 from 316,142 in 1980. Ford Motor Co. was up 28.07 percent, to 119,804 from 93,544. Chrysler Corp. reported a 43.45-percent sales increase, going to 72,216 from 50,344.

VWoA sales totaled 15,183, up slightly from 15,085, and American Motors dropped 13.46 percent. to 9,783 from 11,305.

- GM earned 63.94 percent of the domestic market in August, down from 65.00 percent. Ford Motor Co. sales accounted for 19.91 percent, up from 19.23 percent. Chrysler Corp. cornered 12.00 percent, up from 10.35 percent. VWoA dropped to 2.52 percent from 3.10 percent, and AMC stood at 1.63 percent, down from 2.32 percent.

Chrysler and AMC were the only domestic makers that did meet or surpass their year-ago

New AMC rebate pays $500 to Concord buyers

SOUTHFIELD, Mich.—American Motors launched a new consumer rebate on '81 Concords, paying $500. Contributions of $200 from dealers are included in that amount.

In Ohio and Texas, states that don't allow dealer-contributed rebates, AMC has lowered the amount of the Concord rebate to $300.

The rebate program runs from Sept. 4 to 23. A car must be sold and delivered by that date to qualify, putting the emphasis on out-of-stock sales, rather than orders for future vehicles.

In tandem with the rebates, the company is still offering dealer cash incentives of $100 to $450 on Spirit, Eagle SX/4 and Kammback; $300 to $600 on CJ-5, CJ-7 and Scrambler models, and $100 to $1,000 on Renault 18i.

The cash incentives on Spirit/Eagle and CJ/Scrambler models run to Sept. 23 and on R-18i to Sept. 30. This program goes back to Aug. 1, and represents no change.

AMC has repriced the '81 Le Car in line with reductions for '82 on that line.

The company is promoting its latest rebate, including incentives and price reduction of Le Car, in a special radio campaign running in the top 100 markets.

Dealer assocaitions will further promote the program in print.

Philadelphia taxi firm orders 150 Peugeots

LYNDHURST, N. J. — The Yellow Cab Assn. in Philadelphia has ordered 150 Peugeot taxis for delivery in October, according to Peugeot Motors of America.

Peugeot said there are some 900 Peugeot diesel taxis in service in New York City.

Inflation plays havoc with sales

Argentine auto industry mired down

By Megan O'Reilly
Special Correspondent

BUENOS AIRES. — Argentina's automotive industry, reeling from the impact of successive monetary devaluations which began in April, is using the crisis to overcome structural flaws in the industry.

It is pressing the government for another phase of overprotective measures.

Car sales have fallen off drastically, down 45 percent in May from April, and 20 percent in June with respect to May. Light truck sales fell 28 percent and heavy truck sales dropped 50 percent in the second quarter.

Vehicle sales—59,000 units in the second quarter, down 30 percent from the same period last year — highlight the recessionary trend.

The devaluation's impact on the automotive industry can be found mainly in the inflation which followed the successive measures, in which the peso plummeted from 3,200 against the dollar on April 2, to 7,200 pesos by the first week of June, and the corresponding increase in the cost of imported components.

- Overall economic stagnation; annual interest rates of 120 percent, which have thwarted buying on credit, and the enormous increase in the cost of imported cars have turned usually noisy dealers' showrooms into mausoleums.

Said one car importer, "Undoubtedly, one year of production in stock is a situation which requires drastic measures."

In real value terms, domestic car prices fell by 20 percent during the last year. While inflation raged at 150 percent during the period, car prices rose between 81 and 94.5 percent. This may have been responsible for high car sales in 1980 and overly high expectations for 1981, which have led to high inventories.

During the second quarter, all of the automotive manufacturers moved to reduce production and this has affected 5,000 to 10,000 auto workers in Greater Buenos Aires and in the interior city of Cordoba. These workers have lost their jobs and source of income, as Argentina has no unemployment insurance.

- However, the auto makers are operating their own private welfare system. Ford is paying its suspended personnel full wages, while Renault is paying 70 percent and handing out interest-free loans to its workers.

Industry layoffs have made the military government extremely jumpy at a time when a mass civilian movement is making progress and gaining popularity. Hence, several weeks ago, the major auto makers and auto importers were invited to breakfast with the president, General Roberto Viola, to discuss industry needs and policy.

The automotive industry, over the last two decades, has been reduced to Mercedes-Benz, which makes heavy trucks, and four passenger-car makers: Renault; Ford, which also makes light trucks; Sevel (Fiat and Peugeot), and Volkswagen, which bought out Chrysler recently, and plans to manufacture its own cars at the end of this year.

During this period, the industry has gone through three successive and equally unsuccessful policy phases: National integration in local manufacturing; overprotection (which built up the national auto parts industry), and opening up to imports since 1979, with the latter grabbing a 28-percent share of the market.

- None of these policies, however, achieved the intended result of reducing costs to worldwide levels, which industry executives have determined to be their major goal in current industry restructuring.

The Fiat Europa 1300 CL, an average-sized and average-priced car here, sells for 68,839,428 pesos. That is about one-and-a-half times the average annual middle class salary of about 48 million pesos, according to reports, although hard statistics are not available from the government.

However, the imported Toyota Celica L/B-ST sells for 110,987,254 pesos, which puts it out of reach of most consumers.

With wages and purchasing power so low, having a new car in Argentina is a luxury, and the domestic industry is betting its future—and about one billion dollars of investments through 1982 — that a lower-priced car will increase the market from its current 350,000 units annually (imports and domestics) to a minimum 500,000 units annually and climb from there.

- With this in mind, domestic industry executives handed the president a list of demands which included a definition of import taxes; subsidies and reimbursements for re-industrializing plants with new equipment; scratching a forthcoming law which establishes a national highway fund and accompanying taxes on auto sales; the adoption of measures to promote exports, and extended terms on payment of other taxes.

Argentina's auto industry is among the highest-taxed in the world, with the government taking 41 percent of the sale price of each domestic car, and 300 percent above the real value of an imported car.

Thus, importers, who have suffered the greatest losses since the devaluation (especially the Japanese, who are heavily investing in Argentine development projects now), are demanding that the government reduce import taxes proportionate to the devaluation and end "discrimination" based on an internal tax scaled to fuel efficiency, in which imported cars are taxed at the maximum value, while domestic cars are taxed on the car's actual fuel efficiency.

Importers also want the government to extend the term of payment on imported cars, which now sits at 180 days, an "absurdly short term," snorted one importer.

"The only way to keep domestic car prices down is through competition with imports," he said.

- The government, however, is beset by demands from the parts manufacturers, who want to have policies which restrict imported cars and components, and a law which would establish that a set percentage of each car be locally manufactured, in addition to special credits, tax benefits and financing to aid industry development.

However, importers are unlikely to be winners, as economic experts predict that the devaluation will have long and lasting effects, introducing yet another phase of industrial overprotection, reducing imports to a marginal volume in the future.

"Right now we aren't importing anything," said Toyota's Argentine general manager, Sebastian Impelluso, who also heads the Argentine Chamber of Official Auto Importers and Distributors.

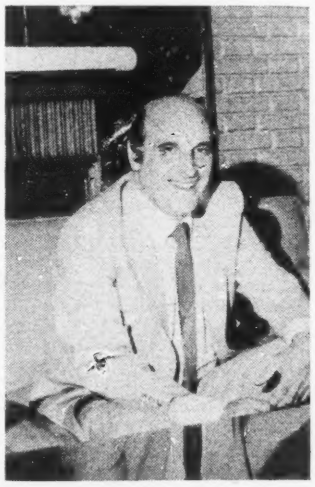
"The majority of dealers are selling at a dollar valued at 3,600 pesos. If they didn't, it would be impossible to sell off stocks," he said.

- Meanwhile, with the advantage clearly to export, the government boosted the morale of local manufacturers last week, when the foreign trade ministry announced that it is studying the promotion of auto exports to Ecuador, Guatemala and African countries.

For the time being, however, local manufacturers are concentrating on price cutting, which they believe can be achieved by reducing costs and increasing production.

A modern auto industry, however, requires at least 100,000 units for each model annually, and Argentina, at present, is nowhere near that figure.

Despite the industry's newborn approach and high hopes, the paralysis which accompanies 150 percent inflation, sky-high interest rates, and economic recession continues to take its toll on auto and truck sales. And the auto industry will continue to be dependent on government aid and special concessions to achieve its objectives.



No imports

Sebastian Impelluso, Toyota's general manager in Argentina and president of the importers' organization, says, "Right now we aren't importing anything."

C-P deal moves

ST. LOUIS. — After 31 years in Jennings, Goddard Motor Co. (Chrysler-Plymouth) has moved to suburban Florissant. The site was previously occupied by Paddock Chrysler-Plymouth.

Total new-car market climbs 17 pct.

Domestic sales rise, imports slide

Continued from Page 4

sales levels: AMC was down 13.46 percent, Chrysler was down 41.69 percent.

Leading the gainers was Plymouth, with a 68.81-percent sales increase. It was followed by Dodge, up 56.29 percent; Mercury, up 55.49 percent; Oldsmobile, up 40.68 percent; Pontiac, up 34.48 percent, and Lincoln, up 33.35 percent.

Cadillac was up 30.96 percent, Ford was up 20.16 percent, Buick was up 18.90 percent, Chevrolet was up 8.91 percent and VWoA was up 0.01 percent.

Top domestic nameplate for the month was Chevrolet Chevette with sales of 36,169 units. It was followed by Oldsmobile Cutlass Supreme at 29,097, Chevrolet Citation at 25,218, Buick Regal at 23,102 and Plymouth Reliant at 22,438. It was the first time Reliant made its way into the top five based on a full month of sales.

The domestic daily selling rate in August was 23,144, up 23.71 percent from 18,708 last year. There were 26 selling days both years.

- Import sales in August were a mixed bag. Top-seller Toyota was up 3.78 percent from 1980, while number-two Datsun was down 2.88 percent and third-place Honda was down 6.26 percent. Fourteen of the makes were up from their year-ago levels, 12 were down.

The European-built imports remained strong, with Volvo and Peugeot reporting record sales in August. Chrysler's four Mitsubishi makes were up, Volkswagen imports were up and Mercedes-Benz was down less than one percent — its first sales drop since February.

Considering the stiff competition offered by rebates, low-interest rates and special prices on so many of the U. S. makes, the fact the imports stayed at their year-ago level attests to their continuing popularity.

Although imports slipped to 24.85 percent of the market in August, they still accounted for the largest segment of the total. U. S. subcompacts were 18.62 percent of all sales, compacts were 20.70 percent, intermediates were 20.61 percent, standards were 10.53 percent and luxury models were 4.69 percent.

Of the domestics alone, 24.77 percent were subcompact, 27.54 percent were compacts, 27.43 percent were intermediates, 14.01 percent were standards and 6.25 percent were luxury cars.

Third-period domestic sales were up 25.66 percent, to 245,608 from 195,454 last year. The daily selling rate for the final 10 days in August was a healthy 27,290, up 25.66 percent from 21,717. There were nine selling days both years. This was the strongest 10-day selling rate since mid-March when it was 36,233.

Sales were up each period in August, and promise to continue at least as long as the domestic auto makers continue their sales incentives programs.

Jerome-Duncan's 25th

Ford dealer Richard J. Duncan, left, receives a plaque honoring the 25th anniversary of Jerome-Duncan, Inc., Sterling Heights, Mich., from C. S. (Bud) Kortler, sales manager of Ford Division's Detroit district.

Proctor plaque

Rexford Proctor, right, owner of Proctor Chevrolet, Findley Lake, N. Y., receives his 25-year dealer plaque award from Donald D. Campbell, Buffalo zone manager.

GMAC promotes Barrett

NEW YORK. — Jack R. Barrett Jr. has been promoted to control branch manager of the General Motors Acceptance Corp. office in Nashville. Barrett had been a member of the staff administration department in the company's headquarters here.

Mitsubishi hires California firm to design auto logo

PLAYA DEL REY, Calif. — Mitsubishi Motors continues paving the way for its future automotive marketing efforts and a separate distribution system with the selection of a logo designer.

Robert Miles Runyan & Associates here was commissioned to create a new corporate logo or trademark for the Automotive Division of Mitsubishi.

Robert Runyan, president of the agency, said he was contracted for the work by officials in Japan. He will make presentations of the new logo to officials there in mid October.

Runyan had no idea of Mitsubishi's plans, but said, "It's only the automotive division I'm working for . . . I have to make the assumption the (logo) will have to do with whatever their plans are in the U. S."

Normally, the design of such corporate logos, which can involve several thousand drawings, costs from $25,000 to $100,000, Runyan said. He did not reveal how much his fee from the Japanese car and truck importer would run.

Service contracts overlooked . . .

By Marc Stern
Staff Correspondent

The pressure for profitability has never been greater on the auto dealer. With interest rates holding at alltime highs, slow car sales and a profit margin that has stayed the same over the last few years, even though car prices have risen, a dealer has to look to every possible source of increasing revenue and profit.

Dealers have had to maximize the rate of return from their service and parts departments and have generally had to streamline their operations to keep profits up and the operation in business.

Try as they may, though, many dealers have still been unable to cope and have been forced out of business. Yet, one area of business that could possibly help dealers increase their profitability, service contracts, seems to have been overlooked by many.

Granted, this is not a subject without its share of controversy, but, with the proper precautions a dealer stands to make extra point-of-sale profit with very little effort.

"Look at the new-car (dealership) profit picture, it's interesting that F & I income contributes 25 percent, while new cars contribute 23 percent and the risk is greater," said Jerry Farrar, president of the recently founded General Warranty Corp., based in Marina del Ray, Calif.

With this picture in mind, he said that areas such as service contracts can contribute a great deal "at every little increase in overhead."

The reason the overhead increase is low is because a dealer already has the personnel on his staff or at hand and it can be made part of a new-car closing.

Of all dealer profit potentials, Farrar asserted, "service contracts lead the way. They have consumer acceptance and they impact the dealer in four profit areas — new cars, used cars, parts and service."

With new cars, he said, the dealer has the chance of generating plus profits; on used cars, one with a service contract becomes more valuable because that contract can be transferred; also on used cars, those that have been tended according to the contract are also in good mechanical shape and worth more, and the dealer also has the chance of a contract on that used vehicle.

On parts and service, Farrar said, the customer has to bring his car back to the dealership for further work and the dealer is paid at retail for the service and parts.

• Farrar is experienced in the service contract business. He was a co-founder of the Los Angeles-based American Warranty Corp. and served as its president until his controversial departure from that firm in March. He then formed General Warranty.

With his experience in this business, he is able to make some observations on how contracts can help a dealer and he had this to add on how there could be a further profit for a dealer:

"With dealer followup programs, the dealer retains the customer for service work and there is also the possibility of selling him his next new car." So, there are many potentials in a properly administered service contract program.

Depending on how a dealer positions the program, industry observers acknowledged, a dealer stands to make between 40 and 70 percent of gross on the service contract.

Jere Maudsley, recently appointed president of American Warranty, put this into figures: "Although you can't put this into retail rates, on the standard core program, it's (gross profit) 40 percent of the core rate of $300. The dealer makes $120."

On sales of 1,000 cars per year, a dealer can put an extra $120,000 into his pocket, he emphasized.

Both service contract executives were quite frank in acknowledging the failures and troubles that have plagued the service contract industry over the last couple of years. They both acknowledged the black marks those failures have put on the industry, too.

"It's the thing about this business," said Maudsley, "it's subject to people getting in and making quick bucks. But there are others who have been in business for a long time and I think they're going to be around."

Said Farrar: "This is a dynamic industry and sales will hit $800 million in 1982 and between 1982 and 1986 will hit $3 billion. But the industry will go through a shakeout. It's typical of a fast-growth industry" such as service contracts.

At present, there are 250 independent regional and national companies writing service policies and Farrar expects that number to drop. Of course, the factory-sponsored programs will survive and he expects the current "Big Three" independents — American, Minnihoma and General — to survive this shakeout.

However, for the dealer it's a confusing situation. And both executives had caveats for dealers who are considering adding service contracts. They and other observers agreed on all the essential points.

First, a dealer should look for a company backed by an insurance company, one that is backed also by the particular state's insurance department.

Second, a dealer should also look at the administrator of the program quite closely. This look should include closely checking into the track record and reputation of the administrator.

The key point, though, is the financial condition of the company. A dealer should look at not only the profitability of the company, but also its financial reserves. This will ensure that the company has enough money to cover its policies in force.

• At this time, American Warwanty is the largest independent with nearly 800,000 policies in force. It is about the same size as the General Motors Continuous Protection Plan, but smaller than the 1.5 million-policy-issued Ford program.

Once the dealer has established with whom he would like to do business, Maudsley had this advice: Look into the company's references. Check with any state organizations and then ask for some third-party references and check with those references.

One last warning comes from Farrar who advises dealers to avoid programs with a structured service contract program involving stop-loss. Dealers should consider only fully insured programs. "This means a dealer will receive first dealer benefits," he emphasized.

Both executives and other knowledgeable observers agreed there is a great deal of profit potential in this field.

It is estimated that only 12 percent of car owners are now buying service contracts. However, this figure is likely to rise, observers note, especially as people decide to keep their cars longer. And as cars age, they tend to break down more often and require more repairs.

This fact alone can be one of the selling points during a new-car sale. It can be pointed out, both Farrar and Maudsley said, that the service contract is a bargain as a percentage of the car's sale price.

Comparing this situation to the appliance industry, both observed that a service contract may run as much as 25 percent of the price of the item, while an automotive service contract makes up only 5 or 6 percent. This percentage they expect, is likely to remain flat over the next few years, an attractive selling point.

Maudsely believes the auto

(a) Independently administered programs are non-manufacturer programs.

. . . but it's a big, growing industry

By Marc Stern
Staff Correspondent

The service contract industry is fairly young and unregulated. It had its birth in the late 1960s as the auto makers moved away from their extended warranties plans and began supplying limited coverage.

It is also a fast-growth industry. According to a recent study of the industry, it has been estimated that from 1976 to 1986, sales of contracts would grow from 250,000 to 5.2 million. Industry sales in 1976 were $55 million, while in 1986 it is estimated they will rise to $2.7 billion. Private insurer penetration, though, is likely to drop, the study estimates.

In 1976, private insurers had 95 percent of the market to themselves. However, this is expected to shrink to 55 percent by 1986.

The average price of a policy is expected to climb to about $510 by 1986, but the percentage of the total price of a vehicle is expected to remain rather flat in the 5 to 6 percent range.

Growth in this industry has been marked by both success and dramatic failures and has been marked by different types of service contracts.

There are basically three types of coverage. First is the factory-backed program, where the factory offers coverage for a specified period. These programs can range from a 12-month/12,000-mile plan, to the 5-year/50,000-mile plan. Longer plans tend to come under a factory's special service contract coverage.

The second type of program is the self-administered plan that is both run and financed by the dealership itself. Thus, the dealership bears all the risks.

The third type of program is the insurance-backed program, such as those run by American Warranty Corp. and General Warranty Corp.

In these, the dealer acts as the middleman in providing the customer with the opportunity to purchase the insurance. The general agent and his insurance company then bear all the risk.

• A dealer considering any type of insurance or warranty program, should also be familiar with the Magnuson-Moss Act and its implications on implied and full warranties and the requirements of the act.

There are different forms of coverage in service contracts, too. One is mechanical breakdown insurance, which is a policy of insurance between both the insurance company and the insurer, according to background information supplied by American Warranty.

This type of protection eliminates the dealer's liability in connection with implied warranties of fitness and merchantability. But, there are several faults which limit its acceptability, the material claims. Specifically, the problems of licensing, diminished return and excessive state regulation are cited.

A service contract, on the other hand, provides higher compensation levels and can be sold without licensing requirements because it is considered a collateral sale in connection with the sale of the automobile.

The final form of extended coverage is the limited extended warranty. This type of insurance must be made available to all vehicles purchased as opposed to a consumer option and the price must not be disclosed.

"In other words," American Warranty says, "it cannot be added as an option."

One note on the self-administered plan: Both General Warranty and American Warranty note that banks are making it increasingly difficult for a dealer to begin one.

And there are other considerations, too. There are the possible tax consequences, the possibility of future loss of revenue and holder-in-due course regulations.

Also, dealers might be subject to mingling the money generated by the insurance program with regular dealer funds. Also, with the high interest rates, many banks have been rejecting self-administered programs and have demanded that, in order to approve financing, service contracts must be backed by insurance.

The service contract industry is one marked with both potential profits and pitfalls. It is one that looks as if it has barely been tapped. And, with the proper safeguards, it looks like one that can be highly profitable for the dealer.

Dealers overlooking profit in service contracts

Continued from Page E-4

industry, as a whole, has only touched on the surface of the service-contract phenomenon.

"The market is not even tapped with only 10 to 12 percent of the buyers," he said." If consumers were exposed to it at the time of the sale, they would buy."

He said that dealers should point out the many benefits that can come from a service contract.

"Show him he can buy 'major medical insurance' for his car for only $275 with only a $25 deductible," he said. Compare this with the rapidly accelerating cost of repairs to help convince the customer.

Farrar pointed to the added value of the vehicle at the time of a tradein, saying it can add as much as $200 or $300 to the value. This can also prove attractive to a customer because of the built-in value is also adds to the car.

But who would sell this type of contract — the salesman, the finance and insurance manager or a specialist? Farrar has some very definite ideas about this.

First, he believes that everyone on a dealer's staff should have a knowledge of the service contract plan the dealer offers. This is so a salesperson can talk intelligently with a potential customer about the benefits of the contract.

Once the deal heads toward closing, the emphasis should shift to a specialist in the service contract field. This could be either a specially trained manager of a representative of the contract's general agent in the area.

Farrar urged dealers to make use of this feature. This way a dealer can add a specialist, more or less, to his staff, but doesn't have to worry about the extra expense of another employe. This specialist can talk with the customer in depth about the advantages of a service contract. If the specialist is to be on the staff, the F & I man can handle it, too, at closing.

• The very nature of the service contract business makes it advantageous to the car dealer. Granted, these entrepreneurs—Farrar and Maudsely — are trying to sell their own particular lines of service insurance, but, as are most companies in this business, theirs are set up along similar lines.

Generally, the way the business works is that a company will set up a liaison with a major insurer and act as the general agent. The insuring companies usually guarantee that the policies will be paid.

The general agent then sets up a network of subsidiary agents across the country, whose job is to work with the dealers that have signed up for the program.

The dealer's job is to act as the middleman, signing up the clients for the service contract agent. The dealer reaps the profit of that deal and subsequent deals and he knows he is going to be paid at retail rates. He also knows that service contract customers will be returning at specified intervals for routine service and so he gains profit from this work, too.

It's the general agent, his representatives and their insurer that take the risk in this.

In reality, this scenario doesn't always work out. It is fair to say that while there are many attractive parts to these plans, there is also the possibility a service contract supplier can go out of business, as happened with North American Dealers Group.

According to reports, when this happened, some dealers thought they had valid contracts, but those contracts were never submitted to the insurer. The insurer, for its part, has tried to honor the contracts it has.

This is the crux of the controversy in the service contract market. Failures have been dramatic and have touched many dealers.

In fact, to try and bring more credibility to the industry, American Warranty recently chose to take over responsibility for the 16,500 extended service contracts that were issued by Warranty Management Corp. of Florida. Warranty Management had earlier gone into receivership.

Paying out $220,000 in claims, Maudsely, at the time of the liability takeover said, "The failure of Warranty Management could have severely affected the whole image of the extended vehicle service contract industry. As a responsible company within this industry, we decided to assume the outstanding liabilities in order to reduce the impact of this failure.

"We realized at the time if consumers were left with scraps of paper that mean absolutely nothing to them, the industry would suffer a tremendous setback. On the other hand, we also felt if a . . . company like American Warranty were to step in and prove the industry was secure, we could bolster confidence at the consumer level with new cars. So we decided to go ahead."

Not altogether an altruistic act, this move was apparently made to help protect the image of an industry that had been tarnished by failures over the last several years.

Neither American Warranty nor General Warranty are lightweights in this industry.

American, which was launched in 1974, became a wholly owned subsidiary of United Equitable Corp. in 1976. United Equitable now has assets in excess of $80 million. American has 6,000 dealers signed up for its program and is available in 46 states.

General, on the other hand, is the "new kid on the block." Formed earlier this year by Farrar, it has the insurance backing of Imperial Insurance, a subsidiary of Standard Oil of Indiana, a $20 billion company.

A slow, controlled growth had been planned, but dealer interest has been such that it has moved its expansion timetable ahead. And, as a result, it has been moving quickly around the country establishing its agents network.

Dealer interest has been such, Farrar said, that upwards of 200 California dealers signed on with General in the first 30 days the firm was in business.

William J. Wink Jr., right, owner of Wink Chevrolet Co., Dearborn, receives Chevrolet's 25-year dealer award from Richard P. Loughman, Chevrolet's Detroit zone manager.

BATTERY STORAGE MADE EASY

Easy access, quick selection and visual inventory control make the new King-Way battery rack ideal wherever auto batteries are sold in volume. And you can fit more batteries in less space than any other method of storage. The King-Way rack holds 360 average size auto batteries — 36 different kinds, 10 to a row. It is built specifically to withstand the severe abuse of loading and unloading batteries. Loaded from the rear, they roll to the front by gravity, assuring first-in-first-out turnover.
It's a natural for use by warehouse distributors, jobbers, high volume automotive supply outlets, new car dealers and large repair shops. Phone or write for details.

Aftermarket, factory radio makers battle for big autosound market

By Marjorie Sorge

Aftermarket and factory radio manufacturers continue to do battle for the $1.3 billion a year autosound market, with Detroit still winning the way.

Aftermarket manufacturers have charged factories with using aggressive promotional and marketing programs and techniques that tie radio sales to new cars.

In 1979, the Custom Automotive Sound Assn. (CASA) filed a lawsuit against General Motors, charging that standard radios in cars violated antitrust laws. The suit, settled out of court, required GM to make radios delete options in nine models. That expanded to 13 with introduction of J-cars and the Pontiac T-1000.

CASA also filed lawsuits against Toyota and Volkswagen, while Chrysler Corp. and Subaru voluntarily changed their radio standardization status. Ford Motor Co., American Honda Motor Co. and American Isuzu Motor Co. also offer radios as delete options.

Jack Doyle, president, Pioneer Electronics of America, said CASA has helped the aftermarket industry by keeping the market steady, although its share of sales remains the same as it was before the lawsuits. He said without CASA, the market would have shifted the other way.

Jack Doyle: CASA helps keep the market steady.

The aftermarket is most worried about GM's tough advertising push, which it characterized as "well planned" and "reaching an enormous audience through a very effective print and radio advertising campaign."

James E. Cain, assistant general sales manager, marketing, Delco Electronics, said the GM division does not plan to change its advertising campaign for the 1982 model year. He said the 1981 campaign proved successful and sales are improving.

James E. Cain: No advertising changes for GM radios.

- The 1981 program differentiated car sound from home sound and was used for both print and radio campaigns. According to Cain, it is directed at the high end of the product line and the 18-45 age group.

He said the CASA decision requiring delete options did not affect Delco sales and they are "as good as they have been in years and will accelerate."

A study by the aftermarket seems to back up Cain's forecast. It said GM had radios installed in 89.7 percent of its cars in the 1980 model year; Ford, 73.5 percent; Chrysler, 75.5 percent, and AMC/Renault, 74.7 percent, giving the domestic industry 85.2 percent factory installation. Imports had factory-installed radios in 44 percent of their vehicles in the 1980 model year.

In 1971 model year, GM had 98.3 percent installation; Ford, 100 percent; Chrysler, 92.4 percent, and AMC 60.8 percent, giving the domestic industry 96.3 percent factory installation.

By 1976 the trend had changed. GM was installing radios in only 85 percent of its vehicles; Ford, 72.7 percent; Chrysler, 89.5 percent and AMC, 73.4 percent. Total domestic factory installation was 81.8 percent.

Once again, however, the trend is reversing and more cars are leaving dealerships with factory-installed radios. The study said if the move continues, 94 percent of the domestic cars and 87 percent of the imports will have factory installed equipment by 1990.

To counter the move, some aftermarketers will have to present a more professional image and introduce more sophisticated sales techniques, according to Ned Grant, Texas-Oklahoma Auto Sound. He said one problem is that some dealers don't believe in the viability of aftermarket companies "due to the type of products and abuses of some, which have tarnished the industry's reputation in the eyes of some dealers."

- Original-equipment manufacturers also have upgraded their equipment over the past five or six years and are making it more difficult for the aftermarket to sell to automobile dealers.

"Detroit has shown by introduction of the new J-body radios that it is attempting to upgrade the quality of factory sound systems, because the auto makers recognize the profitability of sound equipment sales and are aware that the industry represents over $1 billion in value to them," Grant said.

"Profits that accrue to the manufacturer through accessory sales represent a significant amount of money to vehicle manufacturers, which Detroit does not intend to relinquish."

He said Detroit's desire to retain its market results in dealer coercion, and allocation threats employed by some field personnel to influence dealers to purchase factory sound equipment. OEM manufacturers emphatically deny this.

Grant said lower factory-pricing also can entice new-car dealers to purchase factory equipment.

GM's new J-car radio is causing a great deal of commotion among aftermarket manufacturers, who say its size presents challenges to the custom sector of the market.

"GM has reduced the radio chassis size by approximately one-third compared with its other radios, and the new equipment is designed to mount in any number of configurations," said John Badiali, Audiovox Corp.

Judy Steele, center, Jim Weston Pontiac-GMC, Inc., Gresham, Ore., has been named honorary president of Pontiac's Northwest Zone Sales Guild Silver Chapter, and is presented an award for her achievement as a top performing zone salesperson in 1980. With her are, from left: Dave Kleine, Pontiac district manager; Bob Hawley, Pontiac's Northwest zone assistant manager, and Larry Poe and Don Forni, sales managers for the dealership.

"The most formidable challenge faces the retail aftermarket which must fit existing radios to the new J-bodies. On the average, existing aftermarket chassis protrude from the dashboard by about 2½ inches and in some cases by 3½ inches including the knobs. We don't know whether consumers will accept the appearance of existing aftermarket radios on the new cars."

Cain said the J-car radio will be used in other future models. That means the aftermarket will have to retool to design a radio to fit the J-bodies, because 12 new models are expected to be introduced this fall with the new radio design.

According to some reports, by 1983 or 1984, 100 percent of GM's vehicles will use the J-body radio design.

In the near term, Badiali said, a new supply of kit materials will be needed to accommodate existing equipment on the J-cars. Retail suppliers also may find those materials necessary.

"Without careful attention to installation, existing aftermarket radios may experience inferior sound reproduction because of the design of the front dash speakers included in the J-body cars," Badiali said, emphasizing that the new radios will put demands on the installation sector of the market. Also, materials installed in certain models could inhibit high-frequency speaker performance, reducing performance of coaxial and triaxial aftermarket speakers.

While some aftermarket manufacturers see the J-car as an in-road to improved sales, others, such as David Robin, Jensen Sound Laboratories, see it as presenting the kind of competition the aftermarket had not experienced before.

Robin said that throughout the OEM industry it is difficult for the aftermarket to exercise delete-option policies, often because dealers and customers are not aware of the possibility.

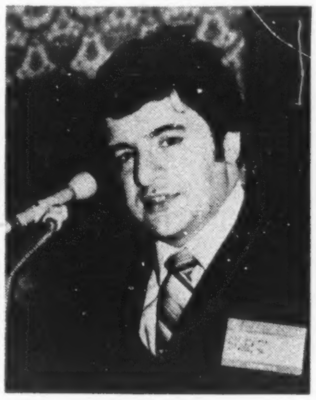
Also, he said, because it is easier to finance an entire package, radio and car, customers may favor factory radios.

Since the OEM manufacturers seem to have the upper hand with their advertising campaigns, CASA has decided to counter their media attack with ads of its own.

According to Cheryl Hollins, CASA executive director, the organization is looking for a public relations firm to help with the ad campaign. She said

Continued on Page E-22, Col. 3

Ned Grant: Aftermarket needs more professional image.



John Badiali: Fitting radios in J-cars a challenge.

David Robin: J-car may improve aftermarket sales.

A Total Marketing Service for Dealerships

Auto Ad is a full service, full media marketing company. Established in 1975, Auto Ad has concentrated it's marketing efforts towards automobile dealerships, and as the record shows, efforts that get results!
The total marketing report we prepare for you is based upon accurate data. The analysis and recommendations we make let you know exactly where the strengths and weaknesses of your dealership are, with the objective of making every marketing dollar spent worth even more. And, Auto Ad has In-House production facilities to put together the most effective advertising for T.V., Radio, and every type of print from Direct Mail to Brochures and Newspaper Advertising.

Battling for big autosound market

Continued from Page E-16

it will include drop-in ads for use in aftermarket manufacturers' ads which refer to delete-option possibilities. Those ads will be available sometime in the 1982 model year, she said.

Also being considered are CASA ads pushing delete options which would appear in major consumer and trade magazines and newspapers. These ads may or may not be part of the '82 campaign.

In addition, CASA is making an effort to inform members of the consumer press about delete options and what they mean to consumers. The program is underway and Hollins said it will pick up speed as the model year progresses.

"We want to get the idea to the consumer that they have the choice of equipment to match their tastes," she said.

• The battle between the aftermarket and factories is not limited to GM. Ford Motor Co. also has developed new techniques to improve its radio market.

While most of Ford's 1982 programs are awaiting official approval, Don Duncan, planning manager, Electrical and Electronics Division, said the company has set up a new exchange plan for its dealers.

Ford is working with a distributor, General Mobil Electronics, Los Angeles, which sells factory radios to its local Ford dealers. According to Duncan, it gives dealers flexibility if they exxchange a radio when customers change their minds or the wrong radio is ordered. He said using the distributors is solely for the purpose of changing a radio, not for distribution of all factory equipment.

"The bottom line is to offer the dealer greater flexibility and service to match the aftermarket," he said.

One complaint by dealers over the years has been that it takes longer to get a replacement radio from the factory, than from aftermarket retail shops.

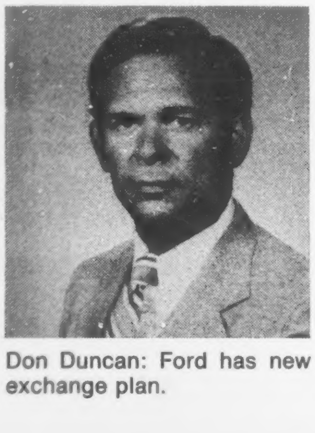
Dealers trading radios through the distributor will pay a slight premium, Duncan said.

GM introduced a similar program about three years ago, called Sound Selling.

Ford may increase the program after test results are in, Duncan said. Future programs would be used in high-volume vehicle markets with substantial radio installation rates, he said.

Ford also is using incentive programs, giving prizes to dealers who improve their radio sales. Duncan said he hopes to continue this program in 1982, but plans are not yet firm. There already is a 10 percent year-to-date improvement in car radio sales, he said.

Cheryl Hollins: CASA will begin an ad campaign.



Don Duncan: Ford has new exchange plan.

Beuhrig backs replica of original Cord he designed

LARGO, Fla. — Southeastern Replicars, Inc., announced that Gordon Beuhrig, designer of the 1936 and 1937 810 and 812 Cord autos, has been signed as an associate for a low-volume edition of Cord replicas.

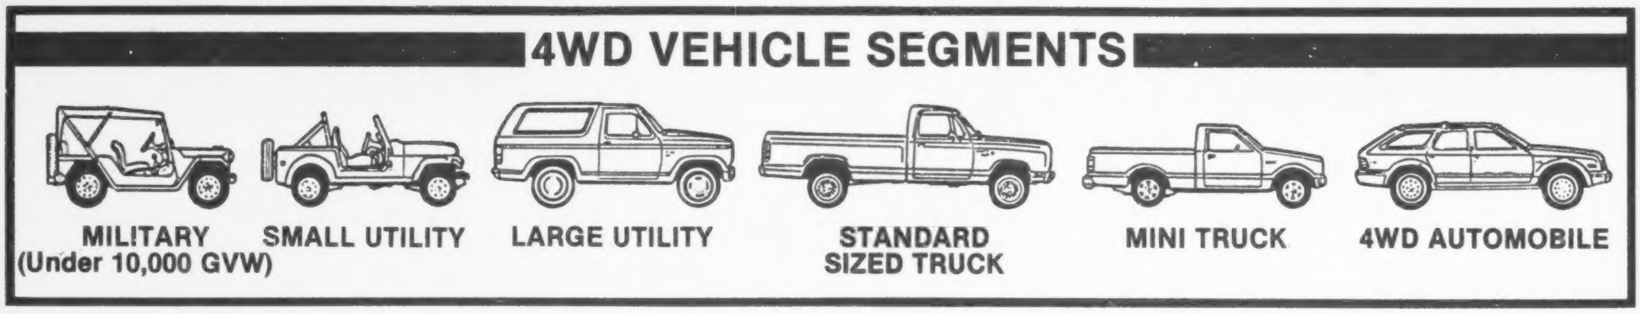
Each Gordon Beuhrig Signature Series Cord 815 SE Replica is to include an engraved dashboard plaque with Beuhrig's signature, the owner's name and vehicle serial number.

Annual production of the fiberglass-bodied convertible is anticipated to be 24 units. Retail price is $65,000, including automatic transmission, power accessories, air conditioning, full instrumentation and Connelley leather interior.

Buehrig is considered to be the father of the 1935-36 Auburn Boattail Speedster and is credited with more than half the classic-era Duesenberg body designs.

The SAE recently included him among the 30 most influential men in automotive history. He lives in Grosse Pointe, Mich.

Southeastern Replicars is a major producer of Auburn Speedster replicas. It introduced its 815 SE Replica in September, 1980, inspired by the 1937 Cord 812. It is powered by a 350-CID Oldsmobile engine.



Can 4WD market get unstuck, return to profit highroad?

The evolution of four-wheel-drive (4WD) goes back to the early part of the century when unpaved roads generated the need for traction. The newly invented automobiles churned those early streets into seas of mud whenever there was moisture in the ground.

Like those early cars stuck up to their axles in mud, modern 4WD vehicles have been spinning their wheels since 1978, when petroleum prices turned the U. S. market to mush.

From a world production peak of 1.44 million 4WD vehicles in 1978 (including about 1.0 million units built in the U. S.), annual volume has dropped to approximately 1.1 million units worldwide. The entire decline is in the U. S. market, since sales outside the U. S. have increased the past three years.

What about the future of 4WD?

Roy C. Lunn, vice president of product engineering for American Motors, considered that question at this year's Automotive News World Congress.

His qualifications to tackle the subject are considerable. Since joining AMC in 1971, he's been responsible for substantial innovation of the company's product lines, particularly three important new vehicles: Jeep Cherokee and CJ-7 models in the 1970s and the Eagle, first U. S.-produced 4WD automobile, introduced in the '80 model year.

"Where's the market going?" mused Lunn. There is no single 4WD market, he said, but it is comprised of segments — military, small utility, large utility, standard-size truck, mini-truck and automobile.

- The military segment, with its many unique requirements, has played a major role in the evolution of 4WD and will continue to be a major user.

"However, it's likely that strategic vehicles will become more complex and specialized," Lunn said, "While general transport vehicles may become derivatives of commercially available models. Unless something terrible happens, the volume of vehicles produced for military application will remain relatively low."

The small utility vehicle will continue as a major volume segment of the non-U. S. market, although there will be some competition from mini trucks, according to Lunn: "A new segment of the downsized large utility vehicles has yet to emerge. This usage will be mainly utilitarian.

"In the U. S.," Lunn added, "there are the ongoing utilitarian applications, including snowbelt usage, and demand for a go-anywhere vehicle for recreational enjoyment is likely to continue. There will be ongoing development to make these vehicles more energy efficient."

Large utility vehicles continue to play a major role in the 4WD market, even though they originally were created in a period of different priorities: Functional capabilities were the top requirement and fuel-efficiency was secondary before the mid-1970s.

Large utility vehicles have become quite sophisticated in recent years, and have undergone weight reduction and other steps to improve fuel-efficiency.

"However, this segment will progressively be supplanted by smaller, more efficient vehicles which are more in keeping with current priorities," said Lunn. "New downsized vehicles are likely to find a wide range of acceptance both in the U. S. and elsewhere."

The standard-size truck has been the largest single volume segment of the 4WD market. Its use is essentially utilitarian in the international market and a mixture of utilitarian, recreational and general transportation in the U. S.

"These vehicles will continue to be a segment of the market, but at reduced volumes as mini-truck penetration continues," Lunn said. "The eventual residue market for standard-size trucks will be for users requiring large space and carrying capacity that these trucks provide.

"This type of truck has been the workhorse for transporting light-duty goods and equipment. Farmers, plumbers, electricians and the construction industry have been traditional users. If they can scale their payload requirements down below 1,500 pounds, they now may elect for a mini-truck," Lunn added.

Lunn: 'Volume can be substantially increased.'

Mini-trucks, mainly Japanese, are one of the new segments of the 4WD market. They are growing rapidly in popularity as a fuel-efficient alternative to larger trucks for light-utilitarian users. Although mainly imported until now, mini trucks will be produced by major U. S. companies starting with 1982 models.

- Automobiles that offer full-time 4WD capability and respond to situations automatically, are a potential key to the 4WD market's future, according to Lunn, "because their driveline principles are the basis for true multi-purpose vehicle usage."

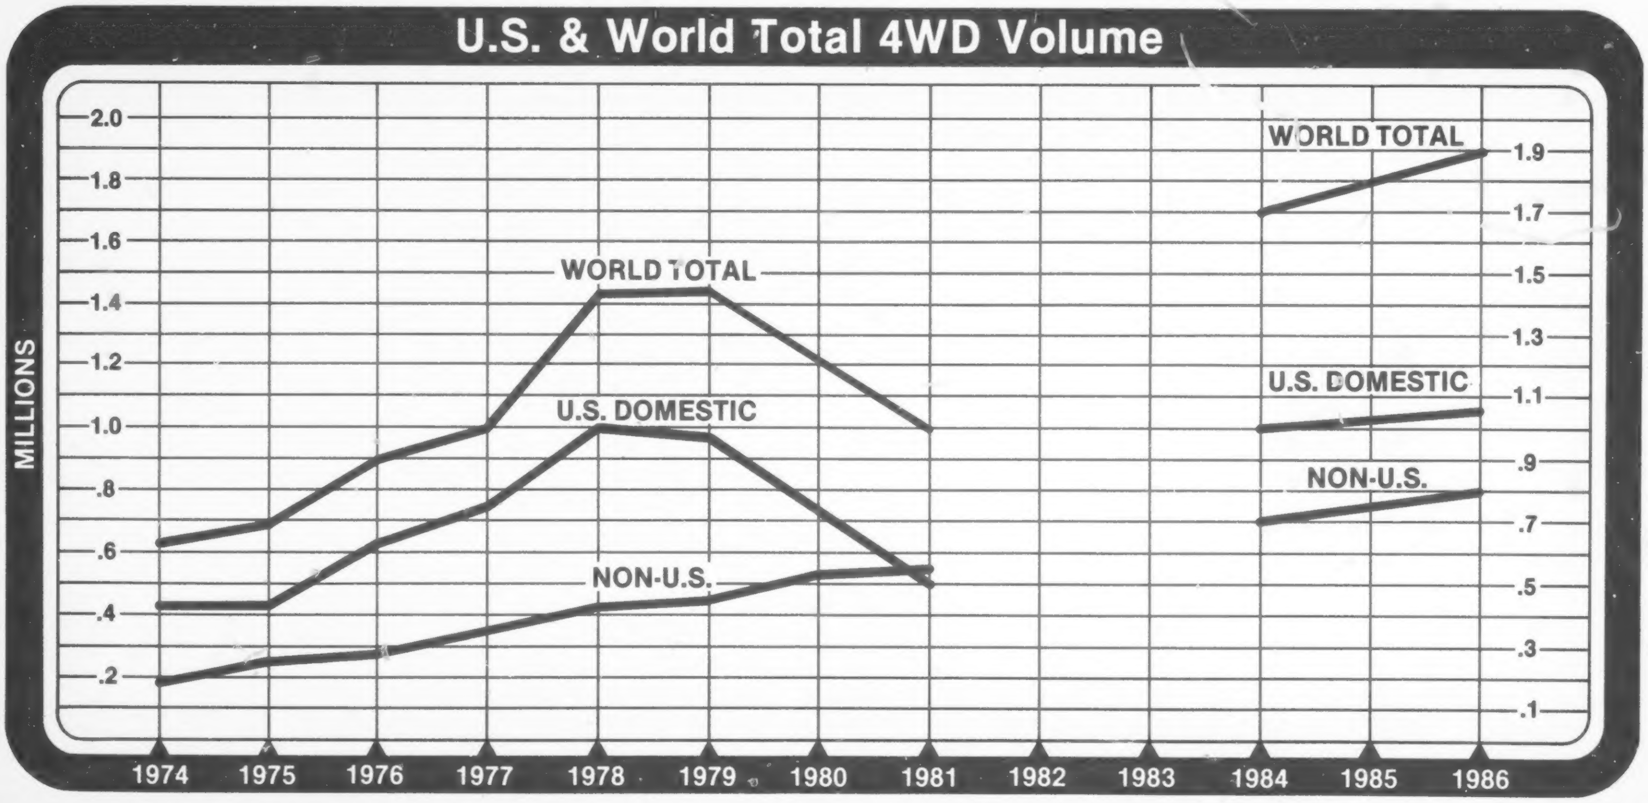
"They are passenger-car-body derivatives, and as their 2WD counterparts improve in efficiency, they should also gain. It is also important to note that, as passenger cars are downsized, the need for 4WD to meet adverse situations will increase," Lunn said.

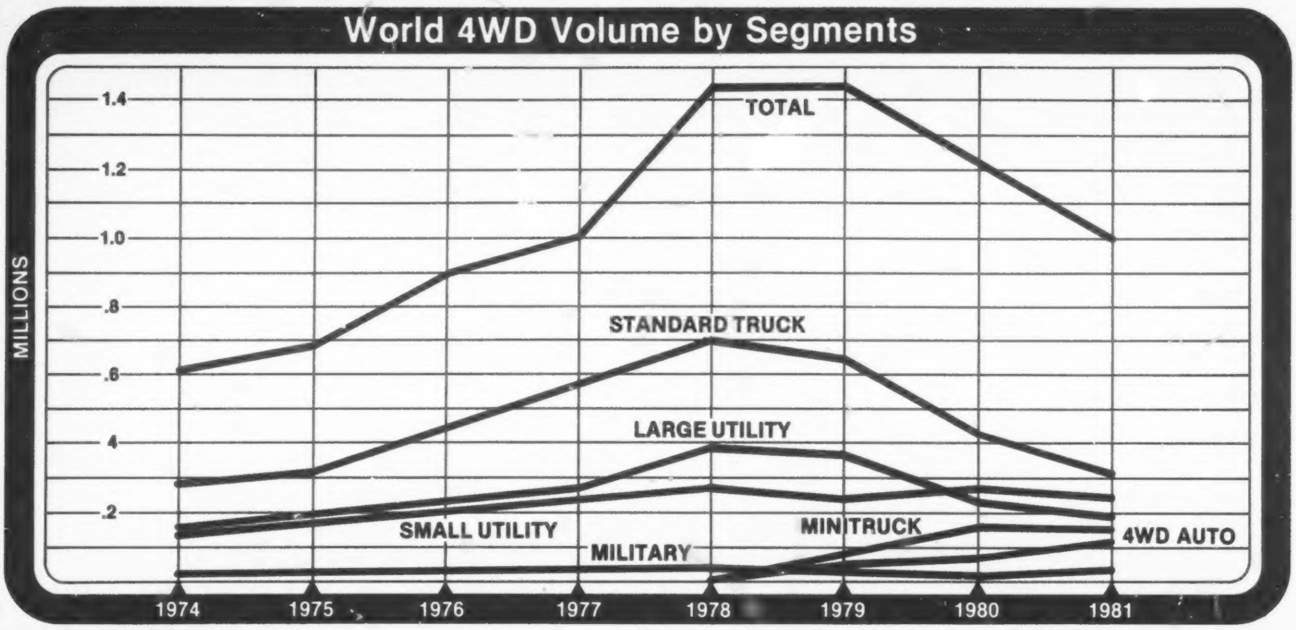
Because 4WD vehicles are now going through a product transition period similar to that of passenger cars, with design responding to fuel economy, Lunn sees new segments emerging, with some segments progressively replaced by downsized units, such as mini-trucks.

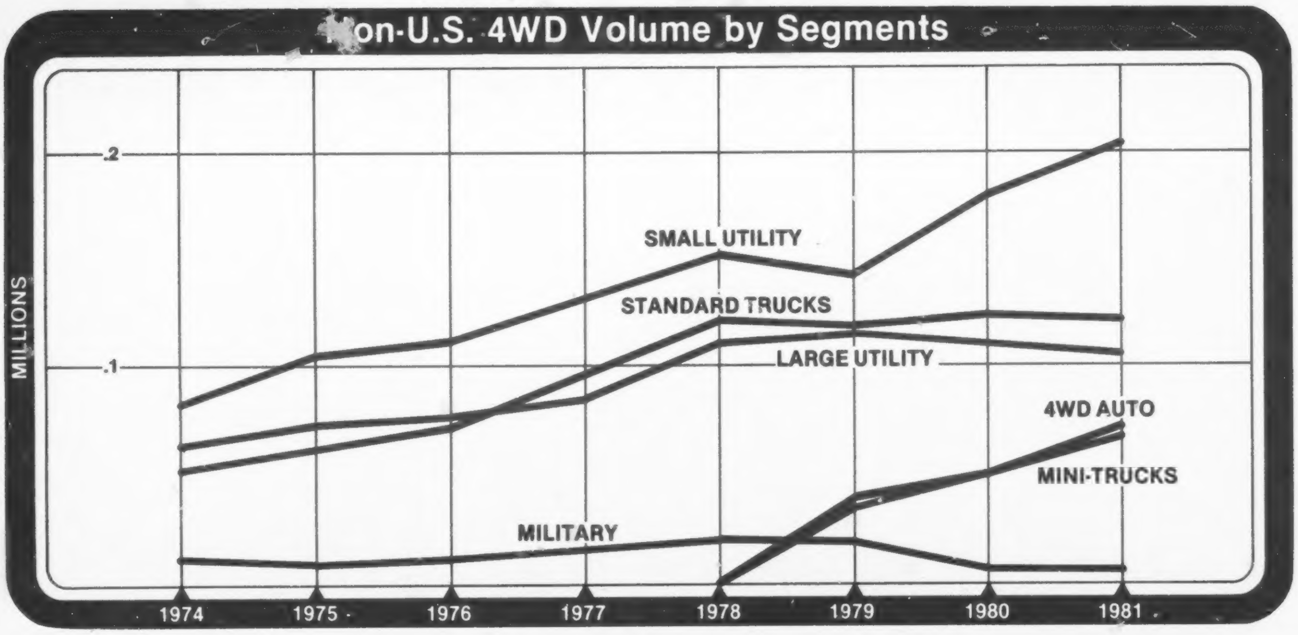
The AMC official said the U. S. market for 4WD will continue as predominantly multipurpose, varying between utilitarian, recreational and general transportation, while non-U. S. will be highly utilitarian and an essential form of transportation.

The multipurpose aspects of

Continued on Page E-46, Col. 1







Can 4WD market stop spinning its wheels?

Continued from Page E-42

4WD, he added, are also likely to find expanding appeal in the international market.

"Fundamentally, the success of 4WD in the future will depend largely on product creativity," he said. "4WD vehicles are more complex, heavier, less fuel-efficient and more expensive than their 2WD counterparts, so to be competitive, they need outstanding functional capabilities."

The new vehicles that are emerging have to offer a wide range of capabilities and options to be an attractive choice to the purchaser, Lunn said.

"Marketing will be most important in re-establishing the U. S. 4WD market," he said. "Understanding these advantages and application in a simple form is vital from the level of the manufacturer right through to the salesman on the showroom floor."

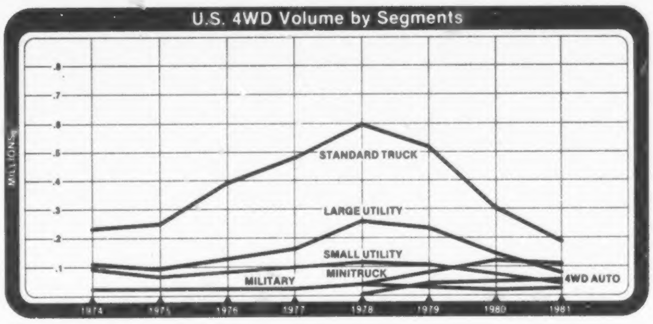
In predicting future markets, Lunn said that "short of a major happening, it can be assumed that the non-U.S. volumes will steadily increase.'

"The U. S. market is somewhat more difficult to predict," he said. "The drastic reduction in volume in the last two years, a result of economic and energy factors, has diminished the 'drive-a-truck' fad and caused many people to choose alternative products. It is anticipated that as more-efficient models emerge, the market will be re-established. If the U. S. market can be re-established at the 1978 level by 1984, a total market of between 1.5 and 2.0 million vehicles is possible by the mid to late '80s."

Tansky expands, adds Ford line

LOGAN, O.—John P. Tansky, owner of Tansky Motors, Inc., has added a Ford Division franchise to his dealership. Tansky already handles Toyota, Chrysler, Plymouth, Dodge and Dodge Truck here.

Tansky owns a Toyota-Honda-Chrysler-Plymouth outlet in Zanesville, O., and a Toyota operation in Columbus. His first dealership was a Chrysler facility established in Logan in 1946.



DANDY deadline Nov. 25

BIRMINGHAM, Mich.—Entry deadline for the 9th annual Dealer Automotive Newspaper Display Advertising competition (DANDY) awards is Nov. 25, 1981, according to the Newspaper Advertising Bureau.

The DANDY awards are designed to recognize outstanding newspaper advertising by dealers and dealer associations.

Awards for the best campaign and best single ad will be given in three categories: For dealer associations, for individual dealers in large metropolitan markets and for individual dealers in smaller markets.

In addition, there are special awards for the best use of color and for the best ad or campaign by a dealer trade association or multi-line group.

Val Corradi, the bureau's vice president for automotive sales, said the special color award has attracted great interest recently because many dealers now use color on a regular basis.

"Our color entries doubled last year," he reported. Overall, Corradi expects more than 1,000 DANDY entries.

Entries may be on any phase of the dealer's business—new or used cars and trucks, leasing, service, dealer image, special promotions, or model cleanup—and must have run in any section of a daily or Sunday newspaper from Jan. 1 through Dec. 31, 1981. This includes 1982 announcement advertising.

The DANDY awards will be presented at the NADA convention in Atlanta, Feb. 20-23, 1982.

Women buyers should be sold as men are

Continued from Page E-8

views about women buyers, which are complicated and reinforced by the fact that women bring to the showroom their own self-doubts about buying, pricing and financing.

In interviewing women, the majority express a feeling that it's more difficult for a woman to buy a new car, that dealers treat women differently than they do men. Strangely enough, 76 percent of dealers say women are treated the same, although only 52 percent of women perceive it to be the case. Obviously, men aren't even aware of how they treat women customers. Research also shows that salesmen who treat women as serious buyers are more likely to make the sale.

Are there other dealer misconceptions about women buyers?

While dealers estimate that a mere 9 percent of single women shopping alone have a household income over $20,000, the truth is that 35 percent of these women have such household incomes, and more. In general, dealers appear to underestimate the influence of women on the car purchase decision.

Dealers say that 52 percent of purchases involve women and men shopping together. But women claim involvement in 85 percent of new-car purchases, a wide discrepancy.

This attitude also is reflected by comments from 37 percent of the women shopping with men: That dealers spend most of the time speaking to the male half of the buying team. Women deeply resent this.

Dealers, for the most part, still try to sell women on looks, color and comfort. When speaking to men, salesmen emphasize resale value, quality and mileage—things never mentioned to women.

The fact is that women buy cars for the same basic reasons men do. Durability, reliability, gas mileage, quality and price are the most important considerations. Things ranked much higher by women include dealer service, warranty and safety features.

Are showrooms themselves inviting to women?

A basic problem is that the showroom always has been a very male place; men's magazines lie around, calendars frequently have pictures of sexy women on them and all sorts of things are clearly directed to men.

What is being done to improve the art of selling to women?

Educational programs, including films on the subject, are starting for salespeople. Above all, the showroom image must change so women don't feel shut out by the obsessive masculinity that often permeates the place.

The important clue is to treat women as serious customers, which they are, and with the same degree of respect, helpfulness and common sense that would be applied to a male prospect. The best advice is: Don't be patronizing, don't assume her ignorance about cars, which is probably a false assumption. In a single sentence: Sell to women as you sell to men.

Virginia suit names Toyota

WASHINGTON.—Virginia has joined four other East Coast states and the District of Columbia in filing its own class-action suit aimed at forcing eastern Toyota dealers and Mid-Atlantic Toyota to reimburse Toyota buyers allegedly "forced" to pay for "protective packages" they did not necessarily want.

The suit names all the Toyota automobile dealers in Virginia and seeks restitution for about 12,000 Virginians who paid about $6 million for the undercoating package.

As in the suits filed by the Attorneys General of Pennsylvania, Delaware, Maryland, West Virginia and the District of Columbia, the Virginia suit alleges that as a result of a series of meetings between Mid-Atlantic Toyota, the distributor, and East Coast Toyota dealers, special rustproofing, soundproofing and a special exterior protective finish was applied on "substantially all" Toyotas handled by the distributor and dealers.

Customers were thereby forced to accept the $500 package even though they might not want it, the suit alleges.

The Virginia suit is expected to be consolidated with the others.

Domestic makers build 396,393

August car output tops year-ago

By Patricia Hoffman
Staff Writer

With several assembly points down for model changeover last month, U. S. auto production in August was the lowest for any month since the comparable period last year.

Domestic auto production in August was 396,393 units, up 26.74 percent above the 312,758 units completed in the comparable month last year. It was, however, well below the 445,349 cars built in August, 1979.

The shortened work week last week due to the Labor Day holiday brought production down 27.60 percent from the 125,699 units completed in the previous week to 91,002. The total was also 27.61 percent below the 125,716 cars built in the comparable 1980 week.

Breakdown for August by company is: General Motors, 56.82 percent; Ford Motor, 27.86 percent; Chrysler Corp., 10.32 percent; Volkswagen of America, 3.73 percent; American Motors, 1.24 percent and Checker Motor, 0.03 percent.

Year-to-date output for the auto manufacturers is 4,713,857 units, up 7.38 percent from 4,389,977 in the comparable period last year.

Cadillac's Detroit home plant returned to two-shift operations last week (Sept. 8).

Ford's Dearborn assembly point, down one week for inventory adjustment, resumed work last week.

VW's Westmoreland facility, down for changeover/inventory adjustment since Aug. 28, will remain down this week with operations resuming Sept. 21.

Saturday overtime was scheduled last week (Sept. 12) at Fords Metuchen point.

GM's Janesville facility resumed operations last week (Sept. 8) following model changeover. The point closed Aug. 7.

Chrysler's Jefferson assembly point has scheduled downtime beginning today (Sept. 14). The plant is slated to resume operations Sept. 21, with production of the Plymouth Reliant, Dodge Aries and the new front-wheel-drive Chrysler LeBaron.

Truck production tops 1980 with 88,693 for month

Domestic truck production in August exceeded that of last year, but the total was the lowest for any month since August of 1980.

The truck makers completed 88,693 units in August, a 13.04 percent gain over the 78,464 trucks completed in the comparable 1980 month, and the most for the month since 138,846 units were completed in August, 1979. The total, however, feeling the affects of the 1982 model changeover period, was the lowest for any month in the past 12.

Despite the shortened work week due to the Labor Day holiday, truck production last week rose slightly above the previous week's output.

Truck production last week was targeted at 27,328 units, up 1.16 percent above the 27,014 trucks in the previous week, but down 12.75 percent from the 31,322 units in the comparable week last year.

Year-to-date output for the truck makers is 1,194,764 units, up 13.21 percent from 1,055,374 in the comparable period last year.

GM's Flint facility (lines one and two) resume today (Sept. 14) after being down Sept. 2 due to a parts shortage.

Chrysler's Warren truck facility will close today (Sept. 14) for inventory adjustment. The plant is scheduled to resume operations Sept. 21.

August a month of contrasts for Canadian makers

Canadian auto production in August was the highest for the month since 1978, but it was also the lowest for any month since January of this year.

The Canadian manufacturers produced 48,056 cars in August, a gain of 33.32 percent from the 36,046 assembled in the comparable month last year, and the most for the month since 67,354 in August of 1978.

Auto production last week was scheduled at 11,958 units, up 15.28 percent from 10,373 the previous week, due to the reopening of General Motors' Oshawa No. 1 car facility.

The total for the week, however, fell 20.16 percent below the 14,977 units in the comparable week last year.

Year-to-date output for the auto manufacturers is 586,992 units, up 2.68 percent above 571,657 units in the comparable period last year.

Canadian truck production in August was 31,319 units, the most for the month since 31,930 in 1976, and the total was 18.53 percent above the 26,422 built in the comparable month last year.

Last week, the truck makers scheduled 9,757 units, down 3.04 percent from 10,063 the previous week, and down 5.97 percent from 10,377 in the comparable week last year.

Year-to-date output for the makers was 366,946 units, a gain of 4.76 percent over the 350,288 units in the comparable period last year.

General Motors again delays on-again-off-again P-car

Continued from Page 2

are a painful step for GM. "Once they plant the flag, they like to go," he said.

Arthur Davis, Prescott, Ball & Turben auto analyst, agreed that GM is moving to conserve capital and cash-flow in the face of lagging sales, but also said he believes GM is re-evaluating its market strategy.

"The X-car is dead, the J-car is dying and I think GM is looking to play it safe," Davis said. "GM must find profitability in big numbers," he said referring to high-volume models.

Davis, who believes the 1983 U. S. auto market will be a "shootout" among domestic and imported small cars, said GM may be more inclined to put a little into the Camaro/Firebird line rather than a lot into a new line which will face overwhelming competition.

"It looks like the P-car would have to be priced at $12,000, particularly if they put a little engine technology into it to give it performance," he said.

Davis said the EXP/LN7 cars from Ford are in the same "econobox - sports car" market segment and have probably given GM a little education because they are underpowered and have not sold as well as originally anticiapted.

General Motors said it does not discuss product plans that far in advance and had no comment.

MacDonald named

DEARBORN. — Malcolm S. MacDonald has been named an assistant treasurer for Ford Motor Co., succeeding Ben H. Vanden Belt Jr., who has retired. MacDonald formerly was assistant controller of Ford International Automotive Operations financial analysis.

Ford of the future

Frankfurt preview

Ford of Europe unveiled this dream car, the Probe, at the Frankfurt Auto Show. Insiders say it is actually the prototype of a car that will be put into production in 1982. It will be named Ford Sierra and will replace the Taunus on the Continent and the Cortina in Great Britain.

The sleek shape of the Ford Sierra is expected to touch off a new wave of styling as other cars are changed in the early 1980s. It is seen succeeding the two and three-box school of auto design.

Job guarantees, possible shorter contract listed

Fraser maps '82 auto-talk issues

By Marjorie Sorge
Labor Editor

One year before contracts with the auto makers expire, UAW President Douglas A. Fraser has labeled job guarantees and the possibility of a shorter contract as major issues in the 1982 auto talks.

"I believe the UAW will seek a guaranteed right of employment in the 1982 contract," Fraser told the Economic Club of Detroit last week.

While declining to elaborate on ways of guaranteeing jobs, he said the UAW "has some notions, but I don't think we're quite ready to publicize them." He did, however, mention the "Golden Handshake" used in Germany to reduce the workforce. That program pays people to retire and has a lot of takers in Europe, he said.

The union was willing to publicize its desire for a shorter contract because "the economy is so volatile no one wants to get locked into three years," Fraser said.

He said the union is not willing to agree to another three-year pact unless it has some "reasonable assurance on certain subjects."

The auto makers have indicated a desire to move to a longer contract in 1982.

In the past the union has pushed for changes in the economic structure of the contract, or for issues like the four-day workweek, leaving job security as a secondary issue. While Fraser still maintains the four-day workweek is just a matter of time, he placed job security ahead of all other issues.

"Perhaps in the past we should have taken guaranteed jobs rather than guaranteed pay," he said.

The push toward job security has grown out of the union's experience in the last two years with heavy layoffs in the auto industry. Fraser said this "depression" is "child's play" compared to the 1974-75 slump and noted this is the 21st consecutive month there have been 150,000 people laid off in the industry.

- Off-shore sourcing, too, has been a problem for the union as both Ford Motor Co. and General Motors have threatened to send jobs overseas unless labor costs are cut. At Ford, decisions involving 17,000 people, or 14 percent of the workforce, will be made before negotiations begin next year.

According to Donald F. Ephlin, UAW vice president and director of the Ford Department, the major decisions have not yet been made and the union is doing everything in its power to keep the jobs in the U. S.

Fraser sees the threat of off-shore sourcing as a bargaining ploy the auto makers have hanging over the union's head for 1982 negotiations. He said the union must now analyze how much is factual and how much is threat.

"GM and Ford will be hard pressed to explain to the American people why they are abandoning these shores in these economic times," he said.

While heavy layoffs and off-shore sourcing are major reasons for the drive toward guaranteed jobs, another may be new technology. According to Fraser, the U. S. auto industry is "on the threshold of a technological breakthrough."

While the UAW has always supported new technology, the mold seems to be changing. A year ago, Raymond Majerus, UAW secretary-treasurer, issued the first warning to the auto companies that the union might not support technological ad-

Import stockpile cut to skeleton; good for 43 days

By Richard A. Wright
Assistant Managing Editor

New imported-car inventories dropped to bare-pantry levels during August and dealer, importer and port stocks amounted to only a 43-day supply on Sept. 1. This compared with a domestic stockpile good for 64 days.

The inventory of new imported cars and pickup trucks Sept. 1 totaled 380,600 units, down from 414,700 a month earlier.

The effects of the continuing shortage can be seen in the fact that the days-supply level fell only one day — it was 44 days Aug. 1 — while the unit count was off 34,100, a reflection of the decreasing daily selling rate caused by the shortage-riddled stock situation.

Toyota opened September with an emaciated 16-day supply of new cars and pickup trucks, down from 18 days a month earlier. The leading importer had fewer imported cars in stock than Chrysler Corp., which had a 94-day supply of Mitsubishi-built vehicles.

Not much better off than Toyota was Honda, which had a 21-day supply Sept. 1. Adding to Honda's woes was the going up in smoke of a potential 4½-day supply of cars when a boatload of 5,100 Hondas burned in the Pacific 600 miles off San Francisco.

Honda put the loss at $30 million. The car-carrying ship Blue Hawk, under contract to Honda, caught fire en route from Japan to the eastern U. S. Its first port of call was Jacksonville, Fla. It was also to unload cars at Portsmouth, Va., and New York.

- Since a 60-day supply is considered normal in the import business, both Toyota and Honda were perilously close to being out of cars as September opened.

Datsun's supply of new cars and pickups was also on the lean side at 49 days, off from 51 a month earlier. Mazda had a 51-day supply, up slightly from 47 days a month ago and Subaru had a 43½-day supply Sept. 1, up from 42 days. Isuzu had a 70-day supply Sept. 1, down from 75 days. (Mazda and Isuzu inventory figures include pickups.)

The total inventory of Japanese cars and pickup trucks was good for 37 days, compared with a 64-day supply of German cars and a 94-day stock from other countries.

Volkswagen had a 75-day supply of imported cars, down from 92 days a month earlier and almost the same as its 76-day stock of U. S.-built cars. Audi was in 60-day supply and Porsche, 69 days.

Mercedes-Benz had an estimated 52½-day supply, while BMW's estimated stock was 59 days.

Other estimates of European line stockpiles were, Volvo, 65 days; Peugeot, 82; Jaguar Rover Triumph, 86; Renault, 106; Saab, 114, and Fiat, 131.

breaking news

Ford to import Toyo Kogyo minicar

SOUTHFIELD, Mich. — Ford Motor Co. will import a Toyo Kogyo-built minicar with 50-MPG capability in 1984 to be sold as a 1985 model. The four-passenger, front-wheel-drive, 1.2-liter car will be a bit smaller than a Fiesta. A source inside the company told AUTOMOTIVE NEWS that 125,000 to 150,000 of the minicars will be brought in by Ford the first year. Ford believes the total mini market in the U. S. could rise to 500,000 or 600,000 a year, depending on fuel price and availability.

Convertible Mustang due for '83

SOUTHFIELD, Mich. — Ford Motor Co. plans to introduce convertible versions of its 1983-model Mustang (and possibly the '83 Capri) as early as December, 1982. Both Cars & Concepts and American Sunroof are submitting proposals, according to sources at Ford. These sources say that targa-topped versions of the EXP and LN7 are scheduled to bow during the 1983 model year and that convertible versions of those two-seaters are also under consideration.

Peck rules out 'pass' and 'fail'

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The words "pass" and "fail" are no longer to be used by the government when it releases data on high-speed crash tests. Multiple tests will be run on the models that are tested, and the test procedures themselves will be scrutinized to be sure of their validity.

NHTSA Chief Raymond A. Peck made these decisions after discovering that one of two pieces of tape failed to come loose during the 35-MPH test on the Ford EXP and data on the passenger dummy registered 2668 — well above the head injury criteria (HIC) of 1,000 believed to protect the head from serious injury or fatality.

The tape is used to hold the belt load sensor to the roof liner at the start of the test. It weighs about two pounds and the belt loads register about 2,200 pounds. Some companies use tape and some do not.

The weekend after the data became public, Peck was viewing the three-month-old film on the Escort for the first time and noticed the piece of tape.

He thereupon invalidated the Escort results as published in last week's AUTOMOTIVE NEWS.

Later, he also invalidated the

Keys to be sent congressmen

NADA details program to 'unlock economy'

WASHINGTON. — The nation's auto dealers, home builders and realtors, representatives of the three sectors of the U. S. economy hit hardest by continuing high interest rates, think it's high time for lower interest rates and have decided to join together and see if they can't do something about it.

Billed as a program to "unlock the U. S. economy," their joint effort will center on convincing Congress and the Administration that something must be done to ease the dramatic effects high interest rates are having on the auto and home-building industries.

NADA President Wendell Miller gave details of the program last week at the dealers' annual Washington Conference.

Miller said symbolic keys will be sent out to every Congressman on Oct. 6, along with details of a four-point economic program the dealers, homebuilders and realtors believe will bring down interest rates.

It calls for:

1. The President and Congress to take whatever steps necessary to hold the budget deficit to $42.5 billion in fiscal 1982, and to balance the budget in fiscal year 1984.
2. The President to urge the Federal Reserve Board not to let the restraint of money supply become its exclusive goal.
3. The Fed to consider the need for a general economic recovery and financial marketplace stability in a consistent program of monetary growth within the target ranges reported to Congress for 1981.
4. The President to appoint a non-banking, small-business representative to the Federal Reserve Board.

Miller said it is the group's feeling that Congress will be receptive to the interest-rate pitch once they are convinced of the effect high interest rates are having. It is critical to dealers that rates come down, he said, especially in light of the higher 1982 model prices.

A lot of dealers are just hanging on, he said. If interest rates stay high for another six months, a lot of them will be going out of business, he added.

Miller said the dealers could live with a 15-percent interest rate, but not with anything higher.

More than 2,500 dealers have gone out of business over the last 30 months, largely due to high interest rates which have not only dampened consumer demand for new automobiles, but have added significantly to dealer operating and floor-planning costs.

NADA estimates that floor-planning costs for all dealers are averaging about $400 million per month at this time.

Through cost cutting, layoffs and trimmed inventories, dealer attrition over the last couple of months has been stemmed, Miller said, but if high interest rates keep up much longer, shops will again be closing at a fast rate.

Just what the dealers, realtors and home builders will be able to do about interest rates — when no one else has managed to do anything — is open to speculation.

But it is a sure thing that they will be listened to when they come to call ~~on~~ Congressmen over the Columbus Day recess. The auto dealers and the realtors run two of the top three top-spending political action committees in the country.

Sleight-of-hand at NHTSA

Petitions on rule that doesn't exist

WASHINGTON. — What is surely the most magical trick in the short annals of NHTSA is now taking place.

NHTSA is allowing petitions for reconsideration for a standard that does not exist and even allowing an extra period of time for comments on those comments. It is like disinterring a body, but without a chance of breathing life into it. The real money says that Standard 128 — fields of direct view — is an absolute goner.

After an 11-year gestation period, the standard was born on Jan. 2, 1981 — over the vigorous protests of industry. Nine petitions were filed, including strongly worded opposition by General Motors, Ford, Chrysler, Volkswagen and American Motors.

The idea had been to prevent overly large A and C pillars and overly low inside rear-view mirrors. But the companies claimed that the standard would interfere outrageously with design of their aerodynamic and more fuel efficient 1985 models and cost a mint — $100 million for GM alone and some $40 million for Ford.

On April 6, when the famous Reagan Administration Bluebook described the proposed deregulation of the auto industry, Standard 128 was one of the items. Due date for the slaughter was given as "on or about July 1." Reason and explanation: No significant safety problem and auto makers might have lead-time and costly redesign problems.

On June 17, NHTSA revoked the standard, effective upon printing in the Federal Register June 22. The explanation was that costs far outweighed benefits. To deal with any problem of rear view, perhaps NHTSA would consider suggesting in another standard the use of convex right-hand rear-view mirrors.

But, on Aug. 13, the Center for Auto Safety petitioned the U. S. Court of Appeals for the District of Columbia to review the revocation of the standard on the procedural grounds that NHTSA failed to provide the public with notice and an opportunity to comment on the intent to revoke the standard.

Although NHTSA still thinks it gave actual notice of the issues when it extended the time for petitions on Feb. 5, it has chosen to use its "administrative discretion" rather than battle it out in court.

But since there have been already 11 years of comments, NHTSA is not about to start another rulemaking. But even though the center has not participated, its knowledge and notice "should not lightly be presumed," and therefore a period is being allowed for it to participate.

The center has 30 days to file its comments and interested parties have 15 days to respond to it. This time — shortly after Nov. 5, 1981 — when NHTSA buries that body a second time, there will be no resurrection.

Porsche's Frankfurt surprise

A preliminary drawing of the design study Porsche showed at the Frankfurt auto show. The roadster features four-wheel drive and turbocharged power. The company is noncommittal about possible production, preferring to wait for public reaction. It does say, though, that each feature is feasible.

Frankfurt stage for VW's Polo

The new Volkswagen Polo is one of the stars at the International Motor Show at Frankfurt, West Germany. Styled like a wagon rather than a hatchback, the Polo features better aerodynamics and a new high-compression engine. The car goes on sale in Europe immediately, followed in early '82 by a sedan version known as Derby.

54 brand-name tires ranked for efficiency

WASHINGTON. — A ranking of 54 brand-name tires by their fuel efficiency has been made by the Environmental Policy Institute.

It was done by William U. Chandler for EPI, using data acquired under a Freedom of Information request to EPA, which measured the rolling resistance of 106 passenger-car tires. EPA's technical report is dated August, 1981.

EPI's analysis of the EPA tests reveal that a consumer's choice of replacement tires can save him — or cost him — as much as $60 per year in gasoline. Put another way, his choice can save him — over the life of the tires — enough to completely pay for two to three tires.

Fuel efficiency, says EPI, bears no direct relationship to price, safety or tread wear. Tires should be labeled for fuel efficiency, Chandler concludes, as well as for the three requirements under Uniform Tire Quality Grading.

Although Chandler and EPI are making the case primarily for the best consumer choice in replacement tires, the point could also be made for vehicle makers equipping their tires not only with radials — admittedly the ones with the least rolling resistance, hence most fuel efficiency — but with the particular radials with the greatest efficiency.

The OE tires — more than 90 percent radials — have much higher efficiency than replacement tires since only six out of 10 buy radials as replacements. But gasoline savings could be even higher if vehicle makers chose only the most efficient radials and a single informational program — perhaps with advertising — could get the aftermarket to follow.

Chandler figures the cost for mandatory labeling for fuel efficiency of tires would be modest — perhaps only $25,000 per company using EPA's test procedures. The government's role would be only random sampling to "assure compliance and prevent cheating."

Using letter grades — perhaps A through F — would make the program comprehensible to buyers.

EPI's analysis of the EPA data shows the manufacturers (or marketers) having the highest average fuel efficiency ratings are Goodyear, Michelin, Delta, Uniroyal and Montgomery Ward. (EPA, like NHTSA, uses marketers as manufacturers of record even though some of these are private brands of tire makers.) But, Chandler warns, buying one of these brands does not necessarily mean the consumer will be getting an efficient tire. (One of Montgomery Ward's tires is 32nd on the list and the maker of the second most efficient tire — B.F. Goodrich — is not even on the list of five.)

- Instead, EPI lists the ten most fuel efficient tires by using EPA's rolling resistance numbers and converting a set of four with its price into annual savings and showing the MPG improvement for a 25-MPG car.

The winners are:

Goodyear Arriva — $62.60 annual savings — 2.9-MPG gain.

B.F. Goodrich Lifesaver XLM — $57.40 annual savings — 2.7-MPG gain.

Goodyear Viva — $56.40 annual savings — 2.6-MPG gain.

Sears Guardsman (Armstrong) — $56.10 annual savings — 2.4-MPG gain.

Firestone Deluxe Champion Radial — $49.20 annual savings — 2.3-MPG gain.

Uniroyal Royal Seal — $47.10 annual savings — 2.2-MPG gain.

Delta Sierra GBR (Armstrong) — $45.00 annual savings — 2.1-MPG gain.

Discount Arizonian (Goodrich) — $45.00 annual savings— 2.1-MPG gain.

Montgomery Ward Gas Miser (Firestone) — $45.00 annual savings — 2.1-MPG gain.

Michelin XZX — $43.90 annual savings — 2.0-MPG gain.

The annual savings are relative to the least efficient bias ply tire. The improvement in fuel economy also strongly depends on the fuel economy of the car used and the estimate is used for reference only. But the annual savings apply to the average U. S. auto.

She's 21 and head of Buick dealership

COLLINSVILLE, Ill. — Laura Beuckman, 21, has taken over McMackin Buick. She is believed to be the youngest woman in the U. S. to head a dealership.

Her father, Fred J. (Bo) Beuckman, owns a Ford dealership nearby.

Depreciation lower on economy cars

Good MPG can boost value of used car

There's evidence that the value of fuel economy is being reflected in the used-car market.

The accompanying table lists 20 popular cars ranked according to EPA combined city/highway fuel economy ratings. Also shown are their 1977 purchase prices, according to AUTOMOTIVE NEWS, and their September, 1980, average retail values, according to the NADA Official Used Car Guide.

The table indicates a close correlation between price depreciation and fuel consumption rates, ranging from a $76, or 2.2 percent, three-year appreciation for a 34-MPG Volkswagen Rabbit to declines of 57.6 percent for Ford and $4,810 for Cadillac Coupe deVille.

In terms of absolute dollar depreciation (excluding Cadillac, which is way out of line), the data show that every 0.01 improvement in gallons per mile (GPM) is accompanied by a $737.28 decrease in three-year depreciation. Over a remaining average life of 60,000 miles, an improvement of 0.01 GPM would net a gasoline savings of 600 gallons.

Perhaps not so curiously, when that $737.28 is divided by 600 gallons, the result comes to $1.23 per gallon, which is close to today's average gasoline price.

As for percentage of depreciation, the data indicates that the three-year depreciation is 14 percentage points less for every 0.01 GPM improvement in fuel consumption.

Another example helps illustrate that the market is putting a fairly rational value on fuel economy. Here's a comparison of two cars with average statistics, but differing in fuel economy.

	Car A	Car B
Purchase price	$8,000	$8,000
MPG (GPM)	20 (.05)	25 (.04)
3-year mileage	40,000	40,000
Lifetime mileage	100,000	100,000

Using the derived relationship between depreciation and fuel consumption, it should be expected that Car B will be worth $1,133 more than Car A after three years (i.e., 1.417 percent depreciation per GPM, times 0.01 GPM, times $8,000).

Alternatively, if Car A depreciated 40 percent, or $3,200, in three years, Car B would be expected to depreciate 25.8 percent or $2,067, a difference of $1,133.

The difference in market valuation of the two cars compares favorably to the anticipated fuel cost savings to be realized by Car B, assuming an average lifetime gas price of $1.50 per gallon. Lifetime gas cost would be $4,500 for Car A, or $900 more than Car B's $3,600 fuel bill.

FUEL ECONOMY AND PRICE DATA ON 20 POPULAR VEHICLES

Model	Combined city/highway MPG (GPM)		1977 $ purchase	1980 $ avg. retail	3-year $ depreciation	3-year % depreciation

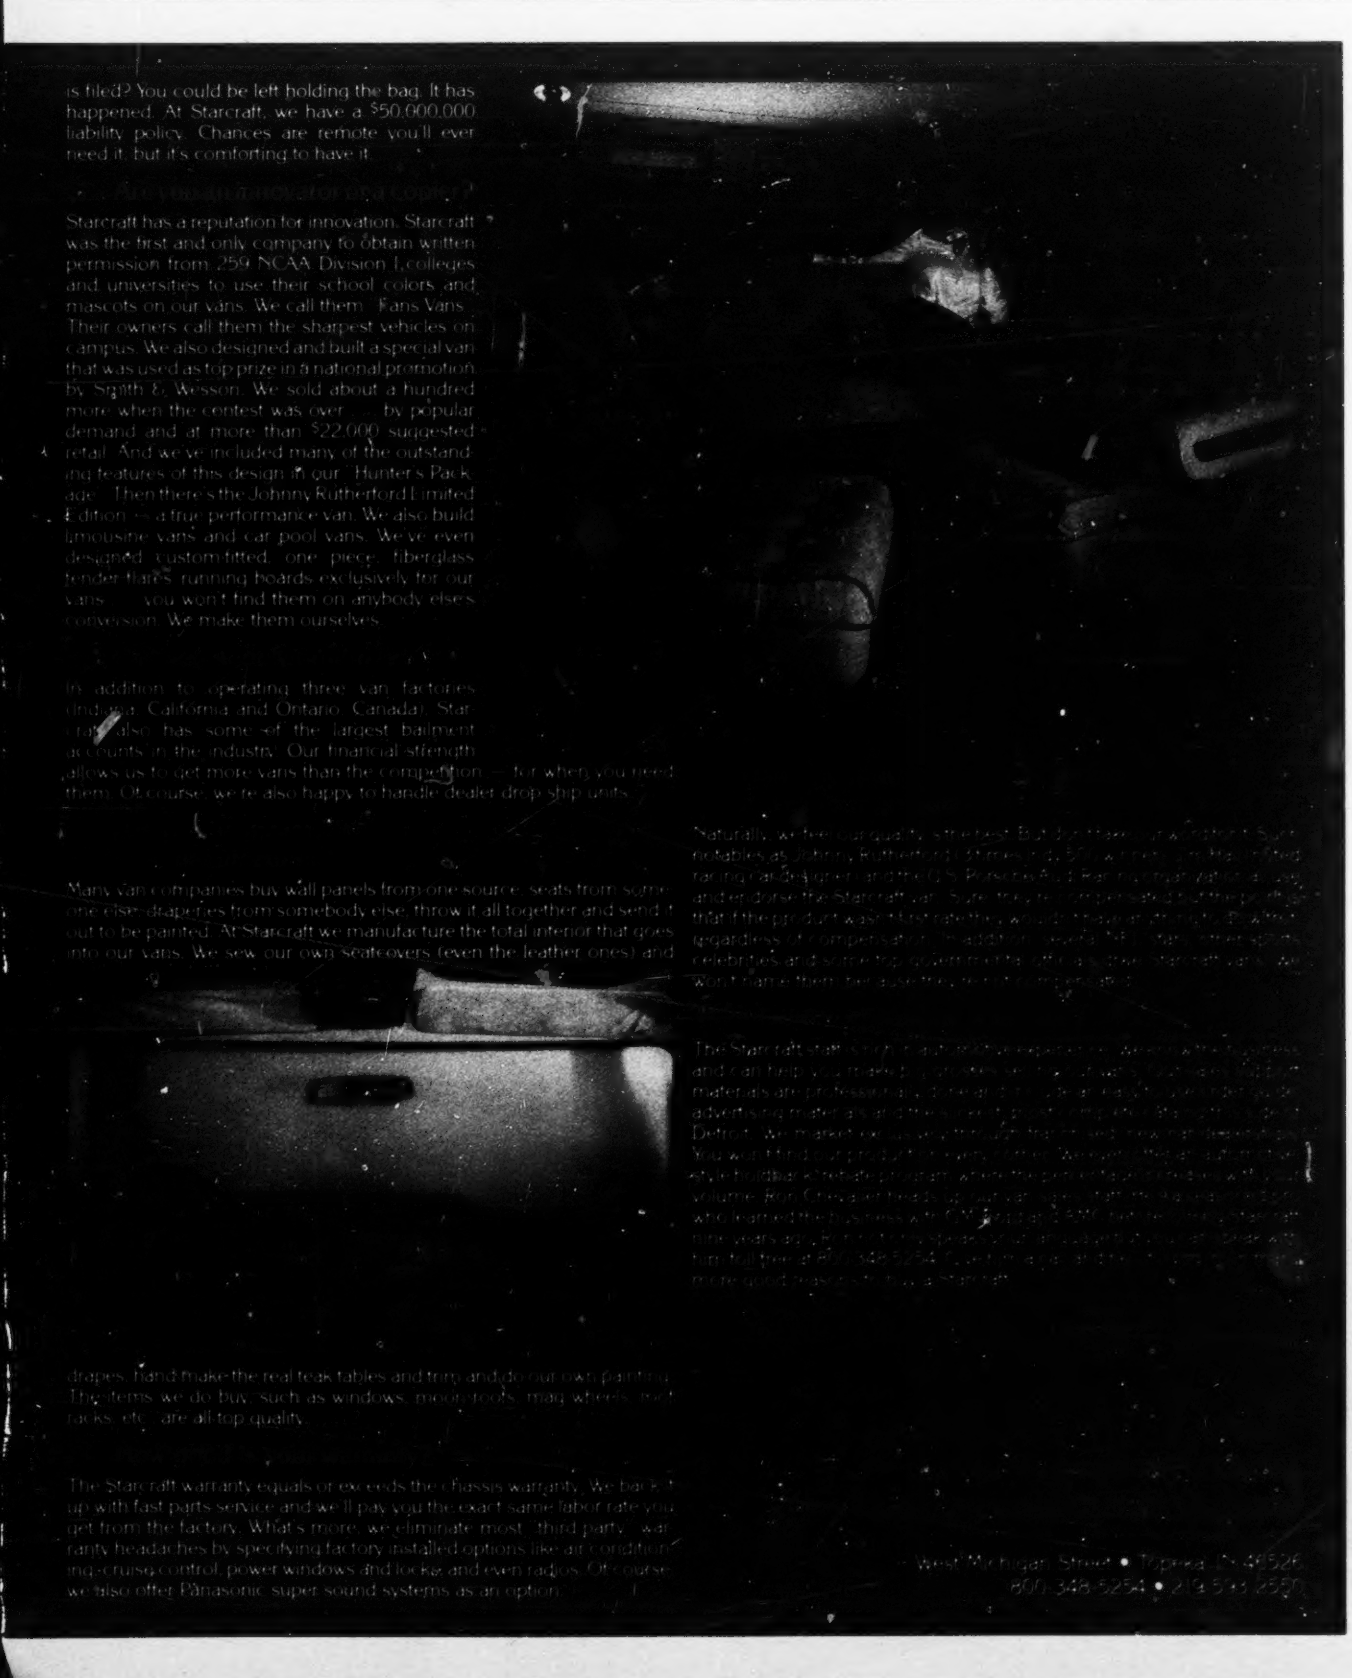
Chrysler plans more clear coats

DETROIT. — Owner response to Chrysler Corp.'s clear-coat paint process applied to some 1981 cars has been enthusiastic. The process will be used on more cars in the '82 model year.

A larger number of Imperials and Miradas plus Dodge 400s and some Aries and Reliant models get the paint in '82.

Chrysler describes the process this way: The clear-coat technique involves first applying a color coat. Then an additional clear top coat is painted on while the base coat is still wet.



is filed? You could be left holding the bag. It has happened. At Starcraft, we have a $50,000,000 liability policy. Chances are remote you'll ever need it, but it's comforting to have it.

Are you an innovator or a copier?

Starcraft has a reputation for innovation. Starcraft was the first and only company to obtain written permission from 259 NCAA Division I colleges and universities to use their school colors and mascots on our vans. We call them "Fans Vans." Their owners call them the sharpest vehicles on campus. We also designed and built a special van that was used as top prize in a national promotion by Smith & Wesson. We sold about a hundred more when the contest was over … by popular demand and at more than $22,000 suggested retail. And we've included many of the outstanding features of this design in our "Hunter's Package." Then there's the Johnny Rutherford Limited Edition — a true performance van. We also build limousine vans and car pool vans. We've even designed custom-fitted, one piece, fiberglass fender flares running boards exclusively for our vans … you won't find them on anybody else's conversion. We make them ourselves.

In addition to operating three van factories (Indiana, California and Ontario, Canada), Starcraft also has some of the largest bailment accounts in the industry. Our financial strength allows us to get more vans than the competition — for when you need them. Of course, we're also happy to handle dealer drop ship units.

Many van companies buy wall panels from one source, seats from someone else, draperies from somebody else, throw it all together and send it out to be painted. At Starcraft we manufacture the total interior that goes into our vans. We sew our own seatcovers (even the leather ones) and drapes, hand-make the real teak tables and trim and do our own painting. The items we do buy, such as windows, moonroofs, mag wheels, roof racks, etc., are all top quality.

Naturally, we feel our quality is the best. But [illegible] notables as Johnny Rutherford [illegible] racing car designer [illegible] and endorse the Starcraft van. Sure, they're compensated [illegible] that if the product wasn't first rate they wouldn't [illegible] regardless of compensation. In addition, several NFL stars, other sports celebrities and some top governmental officials drive Starcraft vans. We won't name them because they're not compensated.

The Starcraft staff is rich in automotive experience [illegible] and can help you make [illegible] materials are professionally done [illegible] advertising materials [illegible] Detroit. We market [illegible] You won't find our product [illegible] style holdback rebate program [illegible] volume. Ron Chevalier heads up our van sales staff [illegible] who learned the business with GM [illegible] nine years ago. [illegible] him toll free at 800-348-5254 [illegible] more good reasons to buy a Starcraft.

The Starcraft warranty equals or exceeds the chassis warranty. We back it up with fast parts service and we'll pay you the exact same labor rate you get from the factory. What's more, we eliminate most "third party" warranty headaches by specifying factory installed options like air conditioning, cruise control, power windows and locks, and even radios. Of course, we also offer Panasonic super sound systems as an option.

Owner faithful to corporation for 53 years

Iacocca cites 50-Chrysler buyer

ORLANDO, Fla. — John H. Schrieffer, 81, Eustis, Fla., bought his first Chrysler, one of the first manufactured, in 1928 and has continued to buy Chrysler cars for himself and his family for the last 53 years.

He recently purchased his 50th Chrysler (his ninth Imperial), this one from Clark Chrysler-Plymouth, Casselberry, Fla.

"I know of no one else in the country who has bought 50 Chrysler products . . . your continuing loyalty and support is deeply appreciated," stated Chrysler Corp. Chairman Lee Iacocca in a recent letter to Schrieffer.

Schrieffer has written Iacocca on several occasions, expressing satisfaction with his Chryslers.

He is listed in "The First Three Thousand," a Chrysler Corp. register containing the names of the first 3,000 Chrysler Airflow owners.

"Your 50 years of loyalty . . . is wonderful testimony to the efforts of our Chrysler personnel to design, engineer, manufacture and distribute fine automobiles," Iacocca said.

• Schrieffer said the 1981 Imperial is his favorite. He said his first Chrysler, a four-door sedan, had 83,000 miles on it when he traded it for a new Chrysler.

"I believe in being faithful—I find something I like and I stick with it," said Schrieffer, who has been married to his wife, Louise, for 55 years.

Schrieffer, a realtor specializing in citrus groves, continuously purchases Chrysler cars for himself, his children and his six grandchildren.

When their son Bob was awarded the Nobel Prize for Physics in 1972, the Schrieffers bought him a Chrysler Imperial to congratulate him. Also, each time one of his grandchildren passes the driving test at age 16, Schrieffer gives them a Chrysler. Sometimes his cars are traded in for new Chryslers and sometimes they are passed along to another family member.

Schrieffer has kept records of the cars he has bought over the years and says he hopes to live long enough to have great-grandchildren and give them Chrysler cars, too.

Schrieffer co-founded the Golden Gem Citrus Co-op in Umatilla, Fla., the largest nonprofit grower-owned citrus co-op in the world, operating since 1947. He is vice president and director for the co-op.

Prior to his "retirement," Schrieffer worked in the drug and cosmetic business on Long Island, N.Y., with sales throughout the United States.

auto personnel

Oldsmobile

Oldsmobile has appointed new managers for two of its sales regions.

Fred J. Hauswirth has been named Pacific regional manager, and **Ted J. Madzia** has succeeded him as manager of the Central region. Hauswirth replaces **Robert R. Neville,** who has retired after 31 years with Oldsmobile.

Hauswirth joined the division in 1955 and was zone manager in Jacksonville, Washington, New York and Houston before becoming Central regional manager.

Madzia returns to Oldsmobile after serving as director of dealer organization for the General Motors Marketing Staff since last October. Prior to that, he had been with Oldsmobile 20 years. His assignments included advertising manager and manager of the Pittsburgh and Chicago zones.

Fred J. Hauswirth

Ted J. Madzia

Chrysler Corp.

Thomas R. Gibson has been appointed general manager of Import Operations for Chrysler Corp.

He succeeds **John K. Givins,** who had held the post since it was established early this summer. Givens recently was named executive director of marketing for Chrysler Corp.

Thomas R. Gibson

Gibson, 39, has been director of sales operations since joining Chrysler in November, 1980. Prior to that, he was with Ford Motor Co. for 14 years.

In his new post, Gibson is responsible for import sales planning, distribution, market planning and port operations and for coordinating California marketing programs related to import and domestic sales.

General Motors

General Motors has announced five appointments to its Quality and Reliability Staff. They are:

Richard H. Roden, former director of quality control at Buick, as director, corporate quality audit.

Robert E. Drake, former director of quality control for the GM Assembly Division, as director of corporate quality and reliability.

Thomas J. Hosea, former director of research and development for Fisher Body, as director of corporate quality and reliability.

Richard A. Monkaba, former director of reliability engineering at Oldsmobile, as director of corporate quality and reliability.

Oskar Reitz, former manager of production planning/press at Opel, as director of corporate quality and reliability.

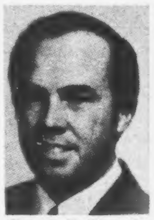
Drake, Hosea, Monkaba and Reitz will be responsible for working with GM's divisions and staffs to develop systems, procedures, policies and measurements to improve the quality and reliability of GM products. They will report to C. R. Davis, general director of quality and reliability.

Edwin R. Carbin has been appointed director of dealer organization on the General Motors Sales and Marketing Staff. He replaces **Ted J. Madzia,** who has been named Central Regional manager for Oldsmobile.

Carbin has been Tarrytown (N.Y.) zone manager for Chevrolet since April, 1980, and before that was national merchandising manager—passenger cars for Chevrolet. He joined Chevrolet in 1950.

Ford Division

Thomas B. Ryan Jr. has been appointed manager of Ford Division's Houston district sales office. He previously was assistant district manager-general operations for the division's Jacksonville (Fla.) district.



Thomas B. Ryan Jr.

Ryan joined Lincoln - Mercury in 1966 and moved to Ford Division in 1976 as general field manager in the Seattle district sales office. He held merchandising and advertising positions in the division's general sales office before being assigned to Jacksonville.

U.S. truck sales in August climb 5 percent from '80

Continued from Page 12

119,735 units, a decline of 26.2 percent from the year-ago 162,134.

For the seven-month period, industry sales were off in all three market segments.

The light-truck count was down 9.2 percent through August, from 1,583,304 in 1980 to 1,438,141. Sales of the imported compacts totaled 336,485 units, off 8.4 percent from last year's 367,387.

Medium-truck sales for the seven months were down 15.6 percent from last year, 54,782 versus 64,888. Heavies totaled 105,280 units, a decline of 14.4 percent from the 122,916 retailed in 1980.

Going into September, the number of unsold trucks in retailers' inventories was approximately the same as a year ago. The total this year was 480,306, compared with 479,298 in 1980.

There were 418,571 light trucks on hand at the start of the month, an increase of 5.4 percent over last year's 397,123 units.

Stocks of medium and heavy trucks showed significant declines. On Sept. 1, there were 21,973 unsold mediums, down 30 percent from last year's 31,314. Heavies were off 21.8 percent, from 50,861 units a year ago to 39,762.

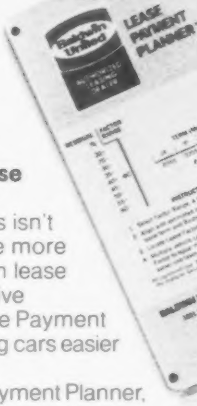
NOW IT'S EASIER THAN EVER TO MOVE MORE CARS WITHOUT SELLING MORE CARS.



Introducing the Baldwin-United Lease Payment Planner.™

Selling more cars isn't the only way to move more cars. Instead you can lease cars. And the exclusive Baldwin-United Lease Payment Planner makes leasing cars easier than ever.

With the Lease Payment Planner, you'll be able to show your customers, in just seconds, how they save money when they lease. With direct comparisons between the monthly payments for leasing and for financing. Over a wide range of car prices, terms, and interest rates.

Your customers will see that they can drive the new car they want without making a big down payment, without worrying about depreciation, without paying heavy interest charges.

What's more, you get your complete profit up front on every car you lease through Baldwin-United. Plus freedom from administrative expense, insurance liability and collection/repossession problems. Not to mention guaranteed 3-hour turnaround time for credit approval.

And now that we've put together the Baldwin-United Lease Payment Planner, you'll find that selling leasing is really very simple.

Call or write us for your lease payment planner. Moving more cars has never been easier.

Or more profitable.

But top last year at 151,281

Early-month car sales lose some momentum

By Jenny L. King
Staff Writer

Domestic new-car sales in early September lost some of their August momentum in spite of the fact that incentives, rebates and special interest rates continued.

The five major U. S. auto makers reported sales of 151,281 units, up 8.29 percent from 139,703 for the period Sept. 1-10, 1980.

There were eight selling days in the period both years, so the daily selling rate likewise was up 8.29 percent, to 18,910 from 17,463. It was the lowest daily rate since the 16,052 average July 1-10.

General Motors, Ford Motor Co. and Chrysler Corp. reported early-September sales gains, while Volkswagen of America and American Motors were down. GM sales were 94,505, up 6.03 percent from 89,134 last year. Ford enjoyed a 26.59-percent increase, to 33,081 from 26,133. Chrysler was up 2.00 percent, to 18,321 from 17,961.

VWoA Rabbit sedan sales totaled 2,974, down 9.19 percent from 3,275 in 1980, while estimated sales of American Motors passenger cars were 2,400, down 25.00 percent from 3,200.

Ford Motor Co. was the only auto maker to increase its share of the market compared with a year ago. Ford earned 21.87 percent, up from 18.71 percent. GM dipped to 62.47 percent from 63.80 percent. Chrysler stood at 12.11 percent, down from 12.86 percent. VWoA earned 1.96 percent, down from 2.34 percent, and AMC captured an estimated 1.59 percent, down from 2.29 percent.

Nine makes enjoyed sales increases in early September, compared with a year ago. Cadillac was up 49.48 percent; Mercury was up 45.18 percent; Lincoln was up 27.26 percent; Ford was up 21.55 percent; Buick was up 20.49 percent; Plymouth was up 16.89 percent; Oldsmobile was up 10.53 percent; Dodge was up 5.79 percent, and Pontiac was up 1.40 percent.

In addition to AMC and VW, sales declines were reported by Chrysler, down 35.88 percent, and Chevrolet, down 5.99 percent.

Chevrolet's Chevette was the best-selling nameplate in early September, with sales of 8,302 units. Second was Oldsmobile Cutlass Supreme at 7,165, followed by Buick Regal at 6,892, Chevrolet Citation at 5,895 and Ford Fairmont at 5,682.

A year ago the top five were: Chevette, Cutlass Supreme, Citation, Chevrolet Malibu and standard Chevrolet.

Year-to-date sales totaled 4,558,642, down 0.20 percent from 4,567,662 in 1980.

† Estimate

Toyota's price boost on '82s averages $499 or 7.5 pct.

TORRANCE, Calif. — Toyota's car prices in the U. S. will rise considerably for the 1982 model year. The company has announced an increase averaging $499, or 7.5 percent.

On a percentage basis, Toyota's hike is more than General Motors' 5.8 percent and about the same as Chrysler Corp.'s 7.7 percent. From a dollar standpoint, Toyota's $499 is less than GM's $617 and Chrysler's $622.

Ford Motor Co., which figures its prices on a different basis (AUTOMOTIVE NEWS, Sept. 14), has announced a boost of $430, or 4.8 percent, on 1982 models.

Toyota is the top-selling imported car in the U. S. It attributed its '82 increase to "continuing upward cost pressures and increased product content in some models."

Not mentioned was the dollar-yen relationship, which has often been cited in Japanese price hikes in recent years. Since March, when Toyota last raised prices, the value of the yen has declined 12 percent against the dollar.

In an editorial in the Sept. 7 issue, AUTOMOTIVE NEWS called on all auto importers to reflect the strengthened dollar in their pricing practices. "If you raise prices when the currency hurts, you should lower prices when the currency helps," the editorial said.

Some observers see Toyota's price hike as an effort to make more profit on fewer cars, following the voluntary restrictions on exports to the U. S. which the Japanese makers agreed to earlier this year.

- Toyota said the Celica line accounts for a good portion of the increase. Celica models have been "completely re-engineered" for 1982, Toyota said, and have an increased level of standard equipment.

The company said that, excluding Celica, its price hike averages $407, or 6.4 percent.

Toyota truck prices are up an average of $268, or 3.9 percent, for 1982. The combined car-truck boost averages $451, or 6.8 percent.

On its '81 cars, Toyota had three price increases totaling $738. The $499 on the '82s means that Toyota car prices have jumped an average of $1,237 since the end of the 1980 model year.

Destination charges also have risen for 1982. They're up $10 in the East and Midwest and $15 in the West. The new figures are $172 in the East and Midwest and $157 in the West.

This is less than the Big Three boosts which averaged $28 for Chrysler, $39 for Ford and $45 for GM.

Toyota's lowest-priced car, the Corolla Tercel front-wheel-drive two-door sedan, has an '82 sticker of $4,998, up $250. The Starlet liftback with five-speed transmission is $5,578, up $430.

In the regular Corolla line, the price leader is the four-speed two-door at $5,448, a hike of $270. The Corolla Deluxe two-door (five-speed) is $6,018, a rise of $330, and that model with automatic transmission is $6,318, up $340.

Increases were greater on the new Celica. The ST coupe (five-speed) is $7,159, up $460, and the GT liftback, also a five-speed model, is $8,389, an increase of $730. The top-of-the-line Celica, the Supra liftback (five-speed), is $13,598, up $2,300 from last year's $11,298.

The Cressida four-door sedan is $12,649 for '82, a boost of $650.

Pickup truck prices start at $6,298 for the short-bed model with four-speed transmission. It's up $150. The increase is $340 on SR-5 standard-bed (five-speed) pickup, which is tagged at $7,458.

Toyota's diesel pickup is $7,478 for '82, an increase of $260.

Optional equipment prices also are up. A few examples: Air conditioning for the Corolla is $610, a boost of $20; aluminum wheels for the Tercel are $255, up $10, and cruise control for the Corona is $120, up $5.

HQ of Mardikian in Newport Beach

WASHINGTON. — In a story appearing in the Sept. 14 issue of AUTOMOTIVE NEWS, Al Mardikian, of Trend Imports Sales, Inc., was incorrectly reported as being located in Hermosa Beach, Calif.

Mardikian did operate there at one time, but now runs Trend Import Sales, Inc., and Albert Mardikian Engineering in Newport Beach, Calif.

obituaries

Chris E. Andrews

LEONIA, N. J.—Chris E. Andrews, 64, administration vice president of Jaguar Rover Triumph, Inc., died Sept. 9. Mr. Andrews had been associated with the auto industry all his life, having joined Daimler Co. in 1933 and moving to Standard-Triumph in 1947. He came to the U. S. in 1954 to set up U. S. headquarters of Standard-Triumph. After serving as president of Standard-Triumph Motors, Inc., and executive vice-president of Leyland Motor Corp. of North America, he was made a director of British Leyland Motors, Inc. (later JRT, Inc.).

Bernard Weinstock

DETROIT.—Bernard Weinstock, 63, manager of the chemistry department of Ford Motor Co.'s Engineering and Research Staff, died Sept. 12. He had been with Ford 21 years. During World War II, he worked with the scientific team that developed the first atomic bomb.

Chester F. Schwall Jr.

GUILFORD, Conn. — Chester F. Schwall Jr., 61, vice president, research and development for Armstrong Rubber Co., and president-elect of the Tire and Rim Assn. died Aug. 29. He joined Armstrong in 1966 after 26 years with General Tire & Rubber Co.

Robert N. Falge

ANDERSON, Ind.—Robert N. Falge, chief engineer for Guide Division of General Motors from 1936 until he retired in 1957, died Aug. 7. He was 88.

VOLVO
OWNER'S PICNIC

Land-cruising Volvo

Jaffarian Services President Richard Jaffarian helps Tom Dube, a customer of the Haverhill (Mass.) dealership, pull his 1976 Volvo (the drive train is from a 1971 Toyota Land Cruiser) into the parking area at the Volvo Owner's Picnic in North Conway, N. H., in conjunction with the opening of the Volvo International Tennis Tournament. Nearly 1,000 Volvo owners attended the picnic.

Peck rules out 'pass,' 'fail' in high-speed crash tests

Continued from Page 1

test made on an Audi 5000 which showed HIC values of 1288 and 1583 for driver and passenger dummies. Currently, films of other high-speed crash tests are being examined for telltale signs of tape adhesion.

Roger Maugh, director of Ford Motor Co.'s Automotive Safety Office, told AUTOMOTIVE NEWS he could not say whether the tape affected the results, although "it's not the kind of thing you want to see."

He said he was 'not convinced" the tape was the problem, but he was convinced there was something wrong with the test because of the wide difference between results for the driver dummy and the passenger dummy. Maugh said Ford tests run at 30 MPH—for compliance with Standard 208—had readings on both sides well below the critical 1000.

Maugh added that the cursory look at the film he had over the weekend showed good vehicle integrity and good performance of the driver belt. There should not have been so great a difference with the passenger side, he said.

Some NHTSA engineers said the failure of a piece of tape to loosen is common and irrelevant to head impact ratings. One indicated the tests would have been rerun if compliance matters were involved.

Peck, however, feels the tape was an important consideration. He said he could "see no alternative but to invalidate the results of that aspect of the test" and study the entire series of tests.

- The position taken by Ford, Volkswagen of America and, in fact, all companies, is that single high-speed crash tests are meaningless.

VWoA has said testing one car produces irrelevant results; two — and maybe more — should be tested so they can be averaged and used to develop some degree of certainty to project results.

Likewise, Ford has said the high-speed tests are so variable as to be useless for comparisons of crashworthiness, although they may be useful in designing cars.

The test on the Audi 5000 was invalidated without anyone from VWoA visiting NHTSA over the weekend to view the film. No other company whose products scored poorly in the crash tests was invited.

The 1982 Toyota Cressida is to be retested at 30 MPH because it also exceeded the 1000 HIC at 35 MPH.

This will be done because cars with passive belts are required to pass dynamic tests, even though an active-belt 1981 Cressida of the same design passed earlier 30-MPH crash tests and a 1980 Corona with the same motorized belt passed at 30 MPH.

- Peck has not yet decided whether NHTSA will retest the Ford EXP and the Audi 5000 or any other cars with HIC numbers higher than 1000.

Ford, for one, would like to watch any repeat of the test. Peck has announced he wants to open a series of tests for the public to view.

Peck said the results from even single tests "can be a valuable tool for developing safety-related information for both the public and the industry."

Making multiple tests on identical models, he said, "will give us additional data and help us distinguish between variations in results due to the test procedure and variations in the cars that are being tested."

He also said safety is NHTSA's "top priority."

Five more 1981 models are scheduled for testing or have been tested: A two-door hatchback Chevrolet Cavalier; a two-door Dodge Challenger; a two-door Isuzu I-Mark; a four-door Datsun 810, and a four-door Mazda GLC.

High marks given to European tires

AKRON.—For the second year in a row, a Goodyear auto tire earned a top performance rating in comparison tests by the German auto publication Auto Motor and Sport.

Both the European-built Goodyear Grand Prix S and the Uniroyal Rally 80/70 received the highest ranking in tests published in the June issue.

Last year, the Grand Prix S shared the top spot with the Fulda Rasant, made by a wholly owned Goodyear subsidiary. The Grand Prix S is imported to the U. S. on the Volkswagen Scirocco S; the Rasant is on some Audis.

Higher than Labor Day week, but lower than last year

U. S. car output climbs to 106,797

By Patricia Hoffman
Staff Writer

U. S. auto production last week showed a substantial gain from the previous holiday week's output, but the total remained below that of the comparable 1980 period.

The auto makers projected 106,797 units last week, up 20.88 percent from 88,347 units completed during four days of assembly in the Labor Day week, but the total fell 17.23 percent below the 129,021 units in the comparable week last year.

Breakdown for the week by company is: General Motors, 57.58 percent; Ford Motors, 29.80 percent; Chrysler Corp., 10.72 percent; American Motors, 1.87 percent, and Checker Motors, 0.03 percent.

Volkswagen of America's Westmoreland plant remained idle last week due to changeover and inventory adjustments. The facility, which closed Aug. 28, is scheduled to resume operations today (Sept. 21).

Checker Motors' Kalamazoo plant resumed production last week (Sept. 14) after being idle since Sept. 8 for inventory control.

Daily overtime was scheduled last week at three Ford assembly points. The Metuchen, St. Louis and Wayne facilities all worked 10-hour shifts.

Also at Ford, the Lorain assembly point was idle last week for inventory control. The point is slated to resume operations today.

GM's Oklahoma City facility, down for model changeover since Sept. 8, is slated to return Oct. 5. GM's Tarrytown point, also down since Sept. 8, is scheduled to resume production next Monday (Sept. 28).

Swedish money devaluation to affect Volvo, Saab prices

By Edward Lapham
Financial Editor

The Swedish Government's decision to devalue the krona 9 percent in relation to the dollar will affect the prices of Volvo and Saab vehicles sold in the U. S.

However, officials from the two companies apparently were surprised by the move and at presstime last week were not yet precisely certain of the total impact.

Volvo, which held dealer meetings to preview its 1982 models last week, will this week announce a sales-weighted average retail price increase of 2 percent, with prices ranging from $9,785 for the two-door DL to $16,390 for the 6-cylinder GLE model.

"The devaluation helped us to keep the price increase to an absolute minimum," a Volvo spokesman said.

The company, which will reinstate its sport wagon concept in a new GLT Turbo 5-door wagon for 1982, said that part of the price increase reflects product improvements, like a standard four-speed automatic overdrive transmission and lower-rolling-resistance tires.

A spokesman for Saab, which also held product introduction dealer meetings last week, said his company was surprised by the devaluation, and officials had yet to sort out the impact.

While the devaluation would at first blush suggest that the Swedish car makers could cut their U. S. prices by a rather substantial amount, there are some offsetting effects.

Both Saab and Volvo use imported parts and componentry for their vehicles. The cost of producing will rise in real terms because the devaluation of the krona means the imported parts, largely from Germany and Britain, will be more expensive, offsetting some of the price advantage.

The final impact could well be different for the two Swedish car makers, depending on the percentage of imported componentry used on Volvo and Saab vehicles. Both U. S. subsidiaries, however, do pay the parent companies for the vehicles in dollars rather than kronor.

Sweden's vehicle industry has been one of the most affected by swings in the value of currencies. Although the krona has strengthened against the German D-mark by more than 10 percent in the past year as German economic difficulties grew, the Swedish currency had been closely tied to the D-mark.

Truck production rises as plants work full week

U. S. truck production last week jumped 11.83 percent above the holiday-shortened previous week, but output remained down from the comparable 1980 figure.

Last week, truck assembly was targeted at 29,695 units, up considerably from 26,554 completed during four days of production in the previous week, but a decline of 8.19 percent from 32,345 built in the comparable week last year.

The truck manufacturers have completed 1,223,685 units so far this year, up 12.68 percent from the 1,086,010 trucks in the comparable 1980 period.

Volkswagen of America's Westmoreland facility is scheduled to resume operations today (Sept. 21). The point has been idle since Aug. 28 for inventory control and model changeover.

Car, truck output in Canada trails year-ago week

Canadian auto production rose substantially last week over that of the holiday-shortened previous week, but output trailed the total for the comparable year-ago period.

The auto makers scheduled 14,795 units last week, a gain of 39.27 percent from the 10,623 cars completed during four days of production the previous week, but a drop of 29.23 percent below the 20,907 units in the comparable week last year.

So far this year, the auto manufacturers have assembled 600,452 units, up 1.58 percent above the 591,134 in the comparable 1980 period.

The Canadian truck makers also saw a gain last week with production planned at 7,663 units, up 6.85 percent from 7,172 trucks in the shortened previous week, but down a considerable 38.43 percent from the 12,459 units in the comparable 1980 week.

Year-to-date, the truck makers have built 372,024 units, 2.65 percent above the 362,425 in the same period last year.

General Motors' Oshawa (No. Two) car facility was idle last week (Sept. 14) due to model changeover. The plant, which closed Aug. 6, is scheduled to resume operations Nov. 8.

Ford Motor's St. Thomas car point will continue down this week (Sept. 21) for the fourth consecutive week. The facility was idled Aug. 31 for inventory control and model changeover and is slated to remain closed until some time in October.

Chrysler Corp.'s Windsor truck facility has scheduled downtime beginning next week (Sept 28). The plant is slated to remain idle until Oct. 5 for inventory adjustment.

GM's Oshawa truck facility was idle last week due to a material shortage as a result of the startup of '82 trucks. The plant is scheduled to resume with new model production today.

Innovation and slippery shapes predominate

Cars of tomorrow add spice to Frankfurt show

By Richard Feast
European Editor

FRANKFURT, West Germany. —Never before has the motor industry been so frank about projects in the pipeline.

The centers of attraction at the Frankfurt Auto Show were the cars of tomorrow. The new cars of today — from such heavyweights as Renault, the Volkswagen group, Daimler-Benz and General Motors — seemed almost of secondary interest.

There were the four cars that resulted from the West German Ministry of Research and Technology funding into the car of the year 2000. They were bristling with innovation, light weight and slippery shapes.

Above all, they were said to be real gas misers. If the designers are right, 34 MPG will be commonplace for big cars and 57 MPG will be possible from some.

Other projects provided a clear picture of the more immediate future for another trio of makers.

Ford did everything but spell out that the Probe III on its stand was a glimpse of the car that will replace its mid-size Taunus/Cortina a year from now.

Opel effectively called its Tech 1 a mid-'80s model and Citroen did the same with its more futuristic Xenia—a model that could herald Citroen's return to the U. S.

Porsche showed some experimental models, including a four-wheel drive, and both Daimler-Benz and Volvo put forward gas turbines as alternatives to gasoline or diesel power.

• All told, and with a few exceptions, it was a display of might by the domestic makers. Other manufacturers and other nations are investing heavily in the same areas, but Germany's impressed by its scale. And by the fact that it was visible.

It was a flag-waving exercise to demonstrate to reluctant customers that there is a future for the motor car, for in spite of its strength and significance, Germany's motor industry is still under frequent attack.

It comes from groups which want tighter exhaust emissions, less noise, less speed, less spending on road systems and a lot more on public transport. A protest demonstration was called to clog this city on the occasion of the auto show by cyclists from all over the country.

If the industry felt under attack, it was positively stunned by the announcement by Research and Technology Secretary Andreas von Buelow that the ministry is cutting off the cash support for the Car 2000 projects by the auto companies.

Ernst Fiala, Volkswagen board member, spoke for others when he said they had been left in the lurch. "It is deplorable," he said.

Just how significant this government contribution is toward the Car 2000 projects developed by VW, Audi, Daimler-Benz and a consortium of four universities is not widely known.

One source said it amounted to 33 million Deutschemarks, or around $14 million at today's rates. Another car maker said it represented only a small proportion of the costs involved in bringing the car from a mere idea in 1978 to the finished models seen at Frankfurt, although VW freely reported 50 percent.

Whatever, the auto makers are now on their own, although the university machine will be funded for a further 12 months to allow each of the four to have its own prototype rather than sharing one.

Making the cars was only

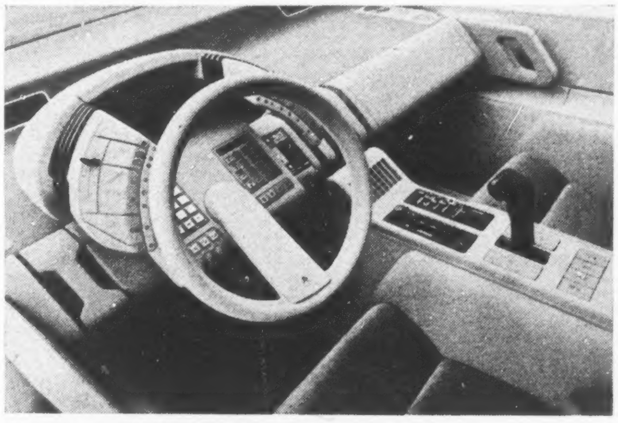
Electronic panel on Probe III

Interior of Ford Probe III, displayed at the Frankfurt Auto Show, is highlighted by an electronic instrument panel. Colored luminous signals inform the driver of current driving conditions and vehicle functions. Features include an on-board computer driver guidance and information system, control lights to monitor components and service reminders.



The French do it differently

Citroen Xenia, unveiled at the Frankfurt Auto Show, uses Citroen's unique single-spoke steering wheel, but then radically departs from the ordinary. The control center makes extensive use of digital readouts, warning lights and pushbuttons.

Mitsubishi wins right to form U. S. network

HIGHLAND PARK, Mich. — Chrysler Corp. Chairman Lee Iacocca and Dr. Tomio Kubo, chairman of Mitsubishi Motors Corp., signed an agreement here late last week which allows the Japanese maker to set up its own distribution network in the U. S. starting in the 1983 model year.

Mitsubishi will continue to supply Chrysler with vehicles for its dealers.

The agreement stipulates Mitsubishi's lineup will not conflict with Chrysler's.

The stipulation is an important concession to Chrysler, since one of the models Mitsubishi is strongly considering for the U. S. is the front-wheel-drive replacement for the Lancer — about the same size and market range as the Omni/Horizon.

Japanese sources indicate Mitsubishi will initially market two cars and a truck in the U. S. under its own name. The Sigma — imported here several years ago in station wagon form as the Dodge Colt wagon — is another strong contender, as is a minipickup truck.

Sources in Japan expect Mitsubishi to be able to sell no more than 20,000 vehicles in its first year because of the voluntary import quotas. Initial dealer network is expected to number 110.

Mitsubishi is expected to announce during the next few weeks the officers and details on its U. S. subsidiary.

Beginning in mid-1982, Mit-

Clean Air hearings stir another ruckus

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — In the 12-year history of the Clean Air Act, there has probably never been a hearing on the subject that has been without its controversy, its political posturing, its endless arguing, profusion of conflicting data and ultimate doubt about whether to go in this direction or that.

The latest round of hearings relating to amending the auto emissions provisions of the landmark piece of legislation were no exception.

This time around, however, the question was whether, after having achieved the ability to meet the ultimate tailpipe emission standards with production vehicles, the U. S. should now go back to a less-stringent standard.

As they have before, the auto companies and some of their political allies say yes.

They say that we can meet the ambient air quality standards for carbon monoxide and oxides of nitrogen even by rolling back the tailpipe standards from 3.4 grams per mile CO to 7 grams per mile and 1 gram per mile oxides of nitrogen to 2 grams per mile.

They say there is no reason not to do it and that consumers could save from $80 to $360 per car by going ahead. They say that it could even go a long way toward helping the U. S. auto industry out of its present slump.

Countering them are the environmental and health groups, their political allies and a long list of doubting Thomases who,

breaking news

Datsun car prices up $424 for '82

CARSON, Calif. — Datsun has increased its car prices in the U. S. an average of $424, or 5 percent, for 1982. The boost is less than the $499 hike posted earlier by Toyota. Datsun trucks will rise an average of $213, or 2.8 percent, and the combined car-truck increase is $378, or 4.6 percent. Datsun's lowest-priced model, the 210 two-door sedan, is up $200 to $4,799, and the 310 hatchback also rose $200 to $5,689. There's an increase of $150 on the lowest-priced pickup truck, which now is $6,149.

2,400 'consignment' '82s offered Chrysler dealers

HIGHLAND PARK, Mich. — Chrysler Corp. is offering three '82 model cars "on consignment" to each of its top 800 dealers. Essentially, the company retains ownership of the

NEWSPAPER

EPA aids GM, 5 other makers

NOx waivers granted on many diesel engines

WASHINGTON.—General Motors and five other diesel makers last week received waivers from the 1983 and 1984 oxides of nitrogen standards that should permit them to market new diesel engines.

Given by EPA on the grounds that technology does not yet, and will not exist until 1985, to meet a 1.0 NOx standard, the waivers were available under provisions of the Clean Air Act.

GM received waivers through the 1984 model year for its 1.8-liter, 4.3-liter, 5.7-liter and a new 3.2-liter diesel engines. The 1.8-liter it buys from Isuzu, its Japanese partner. The 4.3-liter it will introduce this year.

The 3.2-liter is a smaller version of this engine and will be introduced by GM in the 1983 model year. The 5.7-liter is the company workhorse and powers most of GM's big cars. Two other GM diesels, a V-5 and a three-cylinder version of this engine have been put on the shelf by the company.

Mercedes-Benz, a leader in diesel-engine technology, received waivers through the 1984 model year for a new 2-liter diesel it plans to introduce in 1984 and a turbocharged version of its 2.4-liter engine that it will make available in 1983.

The 2.4-liter turbo will replace the 3-liter naturally aspirated diesel in the 1983 model year, the new 2-liter will power Mercedes-Benz's new small car.

Mercedes also received waivers for its 2.4-liter naturally aspirated diesel and its 3-liter turbo. The waiver is only to 1.25 grams per mile for the 2.4-liter engine, however. All of the other diesel engines received waivers to the allowable 1.5 gpm level.

Nissan received a waiver for its 2.8-liter diesel through the 1984 model as did Isuzu for the 1.8-liter engine it sells to GM and uses in its I Mark series.

Renault received a waiver for a 2-liter diesel it will use in the R-18 this spring. Jaguar got waivers for a 2.4-liter and 3.6-liter turbocharged diesel it will buy from VM, an Italian manufacturer, effective for the 1983 model year.

Another set of waivers is expected later this year for engines being produced by VW, BMW, Peugeot and Toyota. The BMW engine will be used by Ford and the Peugeot engine by Chrysler. Volvo is also expected to receive a waiver for a 2.4-liter diesel it buys from Volkswagen.

The NOx standard is a particularly difficult standard for diesel engines to meet because of their high compression and high combustion temperature characteristics. Diesel makers have sought to use EGR in counteracting this characteristic but have run into problems with engine durability and EGR timing control, which must be very precise.

Some also assert that controlling NOx will increase diesel particulate levels, although this is in dispute. Nonetheless, the EPA agreed with the makers that technology does not exist to meet the standard and the diesel particulate standard of .6 grams per mile in 1983, and given that the agency is more concerned about particulates, the waivers should be granted.

Meanwhile, GM will market its 4.3-liter diesel in California in 1983 with electronically controlled EGR and injection timing to standards of 1 gram per mile NOx and .6 grams per mile particulate. The other makers are pursuing similar technologies and are expected to follow suit.

VW to pay for repair of oil-leaking diesels

WASHINGTON. — Volkswagen of America last week agreed to reimburse owners of as many as 400,000 late-model VW and Audi diesel models for engine damage caused by oil filter leaks.

The consent agreement with the FTC covers 1977-81 diesel models—Rabbits, pickup trucks, Jettas and Audi 5000s.

FTC said owners who followed instructions in their owner's manuals and hand-tightened replacement oil filters could end up with cars which leak oil and have extensive engine damage costing up to $2,000 per car.

That could put the bill for VWoA as high as $800 million—the highest price tag ever for a recall—although the actual cost to VW is likely to be much lower, since not all the vehicles have experienced engine damage. FTC said it did not know the exact number of engines damaged.

A VWoA spokesman called the $800 million estimate—published in several newspapers—"totally and absolutely absurd" and said VW expects the costs of the consent order to be $50,000.

"We estimate that, as a result of the consent agreement, the surrounding publicity of the agreement and the mailing of letters to customers, that that will generate about 100 additional claimants," the spokesman said.

"We have already, since 1977, handled about 1,000 claims (relating to diesel engine damage caused by oil loss) which have been covered under the VW parts and service warranty and those claims have averaged between $400 and $500."

The consent agreement is separate from an FTC complaint filed in April over excessive oil consumption in certain VW and Audi water-cooled engines — a complaint which VWoA and its German parent are fighting.

The FTC charged that VWoA knew of the diesels' problem and told dealers to use special wrenches to tighten replacement filters, but failed to notify owners of the potential problem.

Under the proposed order, VWoA will offer to reimburse current or past owners of the diesel models for engine repairs from leaking oil filters. If the replacement filter was a VW brand, the reimbursement is absolute.

To qualify, repairs must have occurred prior to or 60 days after the VW notification of the problem.

Paris from American

American Custom Coachworks, Beverly Hills, Calif., shortens the Cadillac Eldorado roof 15 inches and the rear end 12 inches, lengthens the front end 18 inches, and comes up with the two-seat Paris Eldorado Coupe. Complete with refrigerator, crystal and laquered paint, the cars have been retailing for upwards of $60,000. Conversion is said to take 8 to 10 weeks.

Ford offers 'bargains' on '82 options

Taking the sting out of price hikes

By Joseph Bohn
Marketing Editor

Ford Division is bridging the gap from rebate reduced '81s to the higher-priced '82 models with a slew of special value packages, offering discounts on equipment for every one of its car and truck lines.

On Escort, for example, there are 11 packages, with one to five options offered at no extra cost. Available savings range up to $390, according to a "Product Value Programs" booklet, issued for dealers.

On the Escort L series, for example, if a customer orders power brakes (standard on wagons), vinyl insert bodyside molding and power steering, he receives deluxe seat belts and bumper rub strips worth $65. Similarly, there are savings of $131, $213, $82, $239 and $390 available for different option packages on Escort L and GL.

On the Escort GLX and GT series, there are savings of $190, $272, $332, $139 and $290 available, if certain options are ordered.

There is a base Escort two-door hatchback, priced at $5,518 (below the L series at $6,046). There is also a specially equipped "Pacific States" Escort, featuring added free items, to fight imports in California, Oregon, Washington, Alaska and Hawaii.

On the EXP, there is a Bonus Option Program in effect on vehicles produced from Sept. 14 through Dec. 31. If two or more options are ordered from a list that includes speed control ($151), power steering ($190), TR Performance suspension package ($204) and AM/FM stereo radio with premium sound system ($211)—the most expensive option is free.

- The new Mustang GL two-door sedan has been re-equipped so that comparison with a comparably equipped '81 Mustang produced only a $151 increase.

In its Mustang "Pacific States" program, Ford added power disk brakes ($93) and AM/FM stereo radio ($106) as standard at no additional charge on GL, GLX, and GT series to fight imports in five key states.

Mustang also has a special value option program, in effect throughout the U. S. It offers two to four popular options at no extra cost, when purchased with certain kinds of equipment.

There are savings of $212, $263, $307 and $462 on Mustang L 2-door, Mustang GL 2/3 door, Mustang GLX 2/3 door and Mustang GT 3-door models.

The Fairmont Futura offers a choice of four packages—two for sedans, two for the coupes.

Each package includes either three or five options at no extra charge, with savings of $223 or $320.

The Granada features a "Value Improvement Program" (VIP) which offers savings of $357. If the '82 Granada is ordered with power steering, there is no extra charge for split bench seats, tilt steering wheel and electric clock.

(A flight bench seat can be substituted for the split bench seats—savings reduced to $127.)

There is also a Granada value option program. Sedan buyers get a choice of six money-saving packages, five for wagon buyers. Each includes two to four popular options at no cost, with savings up to $318.

Specific savings on the Gra-

AMC increases prices by $473 or 5.6 pct.

American Motors has increased prices of its domestic cars an average of $473, or 5.6 percent, for 1982. The new models went on sale last week.

The AMC boost compares with announced hikes of $622 for Chrysler Corp., $617 for General Motors and $430 for Ford Motor Co.

AMC's introductory increase follows an active 1981 model year which saw the company post five price hikes totaling $897. The latest $473 means that AMC car prices have risen an average of $1,370 since the end of the 1980 model year.

On the import side, Toyota has raised car prices an average of $499 for 1982, and Datsun is up $424.

Like its domestic rivals, AMC also has boosted destination charges. The average is $42 on cars and Jeeps, which works out to $32 on cars and $62 on Jeeps. For the Big Three, destination charges are up an average of $45 at GM, $39 at Ford and $28 at Chrysler. AMC said there are no changes in its dealer discounts for 1982.

AMC's pricing action covered a wide range. The base Concord two-door sedan is unchanged for '82, carrying a sticker of $5,954. The largest increase was applied to the four-wheel-drive Eagle wagons, which rose $805.

Contributing to the increase on all Eagles (Spirit-size and Concord-size) was the addition of Select Drive as standard equipment. This feature, which was $199 extra for '81, permits the driver to switch from full-time four-wheel drive to two-wheel drive by flipping a switch inside the car.

AMC prices start at $5,476 for the base Spirit two-door sedan. It's up $361 from last year's $5,115. The Spirit two-door liftback is up $266 at $5,576, and the DL version of those body styles are up $200.

In the compact Concord line, the base two-door sedan is unchanged at $5,954. Other sedans went up $200 to $313, and Concord wagons climbed $555.

Eagle Kammback sedans jumped $655, and Eagle SX/4 liftbacks rose $485. Starting prices are $6,799 for the Kammback and $7,451 for the SX/4. These Eagles are Spirit derivatives.

The "senior" Eagles, based on the Concord, show increases of $512 on four-door sedans, $612 on two-door sedans and $805 on four-door wagons. Eagle prices start at $8,719.

In the option field, automatic transmission is $411 on all cars, a rise of $41, and the six-cylinder engine is $150, up $14. Air conditioning is $609 (up $39) for Spirit and the junior Eagle and $679 (up $49) for Concord and the senior Eagle.

AMC said that Jeep prices have been increased an average of $498, or 4.7 percent, for 1982.

For its full line of vehicles—domestic cars, Jeeps and Renaults — AMC said its 1982 introductory increase averages $332, or 3.8 percent. Earlier, the company had announced price reductions of $505 to $705 on Renault Le Car models.

Registrations total 690,025

July car market lowest for that month since '62

By Richard A. Wright
Assistant Managing Editor

New-car registrations in the U. S. in July were the lowest for that month since 1962, according to figures compiled by R. L. Polk & Co.

New-car registrations in July totaled 690,025, down 3.65 percent from 716,145 a year earlier. It was the lowest July total since 613,599 were registered in 1962.

July registrations were off 7.66 percent from June, when 747,305 new cars were registered.

The July figures reversed a trend in that imports were down more from the preceding year than domestic lines. The import total of 206,653 was down 4.18 percent from 215,677 in July a year earlier, while domestic registrations of 483,372 were off 3.42 percent from 500,468.

Table on Page 35

For the first seven months of 1981, new-car registrations totaled 5,080,733, down 1.67 percent from 5,167,283 last year.

Domestic registrations in the first seven months totaled 3,599,909, down 2.60 percent from 3,695,995 last year, while import registrations for the same period totaled 1,480,824, up 0.65 percent from 1,471,288.

Only Chrysler Corp. managed to increase its share of the market in July compared with a year ago, accounting for 8.20 percent of registrations, up 1.76 percentage points.

Biggest loser was General Motors, which saw its share slip 1.02 points to 44.64 percent. Ford Motor Co.'s share dipped 0.37 of a point to 15.91 percent, while American Motors took 1.26 percent, off 0.22 of a point.

Imports accounted for 29.95 percent of the July registrations, down 0.17 of a point. Miscellaneous domestic lines accounted for 0.04 percent of the total, up 0.02 of a point.

Excluding imports, July domestic registrations were divided as follows: GM, 63.72 percent, down 1.62 percentage points; Ford Motor Co., 22.72 percent, off 0.58 of a point; Chrysler Corp., 11.71 percent, up 2.50 points; AMC, 1.79 percent, off 0.33 of a point, and miscellaneous, 0.06 percent, up 0.03 of a point.

- By size segments, subcompacts and luxury units increased their shares in July compared with a year earlier. Most of the market shift went to the subcompact segment, which accounted for 15.72 percent of July registrations, up 3.25 percentage points. Luxury cars accounted for 4.39 percent, up 0.15 of a point.

Biggest loss was that of the compact segment, which took 19.54 percent, off 1.64 points. Intermediates were down 1.32 points to 19.64 percent, while standards dipped 0.27 of a point to 10.76 percent and imports were off 0.17 of a point to 29.95 percent.

Registrations by market class in July were: Subcompact, 108,481; Compact, 134,828; intermediate, 135,551; standard, 74,249; luxury, 30,263, and import, 206,653.

Chevrolet Citation moved into the top spot among nameplates in July, a position it has been rotating with Chevette and Ford Escort. Escort, which held the No. 1 position in June, dropped into third place, which is where Citation had been, while Chevette held steady in second.

Standard Ford fell out of the top 20 nameplates in July, replaced by Pontiac Grand Prix.

The top 20 domestic nameplates in July registrations were:

1—Chevrolet Citation	25,553
2—Chevrolet Chevette	24,626
3—Ford Escort	24,130
4—Olds Cutlass Supreme	21,350
5—Standard Oldsmobile	20,372

Renault official joining AMC as executive VP

SOUTHFIELD, Mich.—Jose J. Dedeurwaerder, a former Renault official, has been named to the newly created post of executive vice president of American Motors and has been elected to the AMC board of directors.

Jose J. Dedeurwaerder

He is the second former Renault executive named to a high post at AMC. The other is Jean-Marc Lepeu, who became financial affairs vice president last year.

Dedeurwaerder is also the sixth member of the AMC board with present or former ties to Renault. The French firm owns 46.4 percent of AMC.

In his new post, Dedeurwaerder will have overall responsibility for three of AMC's major operations — Manufacturing Operations, Product Operations and Diversified Operations and Supply Group. He will report to AMC President W. Paul Tippett Jr.

Dedeurwaerder has been director of Renault's auto plant at Douai, France, since 1976. He has also served as chief executive of Renault Mexico, industrial director of Renault Argentina and manufacturing director of Renault Belgium.

Teamsters eye early bargaining on labor pact

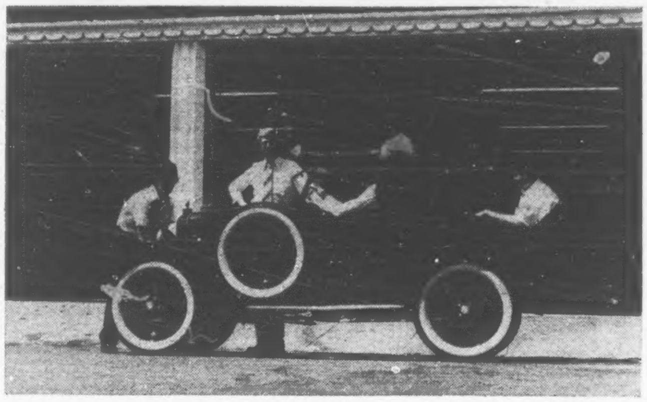
CHICAGO. — The Teamsters may begin early-bird bargaining with the trucking industry to grant some type of relief from the current contract.

At a meeting of the executive board and bargaining committee here earlier this month, local union leaders were instructed to get the views of the rank and file on possibly early negotiations and concessions and were told to formulate their contract demands by Oct. 5.

The trucking industry has asked for wage and work-rule concessions from the current contract because of a slump in the industry. Deregulating that industry on July 1, 1981, made it more competitive than it has been since 1935.

Now smaller, non-union companies and independent operators are able to charge lower rates and are not controlled by contractual work rules.

The current agreement expires March 31, 1982, and covers 260,000 truck drivers and warehousemen.



Ready for road and raffle

This 1928 Peugeot sports coupe recently visited Peugeot dealer Division Imports, Glendale, Calif., for a few adjustments. Using off-the-shelf parts, service manager Dennis Widbrew, left, and sales manager Chuck Allred, left center, had the vintage one-door Peugeot Type 172 RE running smoothly for dealership owner Ken Martin and his son, Mike. The coupe is owned by the Braille Institute and is to be raffled at its Golf Classic at Mission Hills Country Club, Palm Springs, in December.

Nissan to invest $20 million to produce VWs in Japan

By John Hartley
Staff Correspondent

TOKYO. — Following Volkswagen's announcement in Frankfurt that Nissan would build the Santana version of the new Dasher in Japan, Takashi Ishihara, Nissan president, also made a statement in Tokyo.

He confirmed the basic plan, and said that Nissan would invest some $20 million in new equipment to modify its Zama factory to produce the car.

He also expects Nissan's suppliers — especially those making instruments, lamps and small components — to invest some $6 million in equipment for the new car. Although that is peanuts to Nissan, it is still quite a substantial sum for such low volume — 50,000 to 60,000 units a year.

Ishihara admitted that the main difficulty in the negotiations had been the job of convincing VW that its idea of selling 120,000 Santanas a year in Asia was unrealistic. Most Japanese cars in this class sell in lower volume than that, the exception being the Datsun 810, which sells at around 180,000 units a year.

Ishihara said that the Santanas built in Japan would be less expensive than those imported, but not significantly so.

In other words, he sees no likelihood of the Santana competing on cost with any Japanese cars of similar size. This is another reason why Nissan insists that it can sell only about 50,000 units in Japan. VW is to buy another 12,000 or so a year for sale in Southeast Asia.

However, Ishihara did confirm that the Santana would be sold as a VW, with engines, transmissions and suspension parts all coming from Germany.

Significantly, he said: "We would not have signed the deal unless we thought we could make profits from the car."

Whether VW will make any profits from the car is another matter, though.

Ishihara was cautious about any future cooperation with VW, although he confirmed that this would be discussed later.

Expanding a theme he has developed recently, Ishihara said, "We cannot continue to export full built-up cars that are not welcome. So we decided to give foreign auto companies a helping hand to sell in Japan.

"It is not only good for Nissan, it is also good for the Japanese auto industry."

These remarks clearly intended for the ears of Toyota management as much as for anyone else.

New firm to sell Fords in Japan, Tokyo press says

According to reports published in Tokyo, a new company is to be formed by Toyo Kogyo: a trading firm, Sumitomo Corp., and several smaller Japanese firms to handle Japanese sales of Ford cars and Ford-brand cars built by TK.

In Dearborn, a Ford Motor Co. spokesman said, "We are involved in all sorts of discussions with Toyo Kogyo, including a possible distribution arrangement in Japan. However, we have no agreement to announce at this time."

The Tokyo report said Ford will not invest in the new company because of political considerations.

It said the new company will sell the TK-built Ford Laser, Escort, Mustang and TK's upcoming new Capella under the Ford brand.

Doubles capacity of classes for dealer technicians

GM zeroes in on service training

Continued from Page 20

lected courses in college locations, based on local needs, Grosse said.

As a further convenience to dealers and their personnel, and when the need exists, some colleges will have the potential of offering evening and Saturday classes, Grosse said.

The expanded technical program, according to Vorhes, will include the following:

1. Expanded service training capacity to provide more training for large numbers of service technicians on new products.
2. Service training at more locations to reduce travel time, resulting expense, and time away from dealership to minimize loss of technician productivity.
3. Expanded and improved job entry for new service technicians at dealerships.
4. An analysis of technician skills for each dealership to help do a more efficient job of determining training needs.
5. Testing of technicians during training courses to be sure the right people were sent and that they learned.
6. Increased technician recognition through certificates and wallet cards.

Under the new training program, GM will provide all its dealers with a computer printout that includes an inventory of the technical skill of each technician in their service operations.

The Dealer Skills Inventory lists all training center courses completed by each technician during the past three years. Also listed is each technician's job specialty or specialties, and each technician's National Institute of Automotive Service Excellence certification by component category.

Another "piloted" program offered to dealers is pre- and post-training tests for training center students.

Pre-training tests determine how well qualified, by previous training and/or experience, the student is to benefit from the course he is about to take.

It also allows the instructor to tailor the course more precisely to the student's needs, and provides a "benchmark" from which his post-training test score will reveal how much and how well he learned.

Testing also will emphasize the need to select the right personnel for training on a particular course.

"We will turn away some students if we find they come from the wash racks and don't know much about mechanics," Vorhes said. "We will turn them away to protect the integrity of the program."

• Vorhes said GM's new products and technology are creating an unprecedented need for a higher skill level of dealership technicians. "If GM froze its product program and didn't develop new technology for years, we still would have a long way to go to raise the average level of technical competence in shops," Vorhes said.

"We have to look past the eager technician who does it on his own to other technicians and satisfy their appetites for knowledge," he added.

Vorhes said that if GM continued in the traditional way, it would have to double the number of its training centers from 31 to 62.

In the past year, GM dealer technician training consisted of 1,000,000 manhours of instruction and 150,000 class days. With class sizes numbering eight to 10, GM trained 90,000 technicians.

With the class size remaining the same, GM projects dealer technician training needs at 2,000,000 manhours, 300,000 class days and 180,000 students.

• Because it had a growing awareness of the importance of community colleges, Vorhes said GM initiated a co-op service training program two years ago at Delta College, University City, Mich.

Sponsored by GM dealers, 12 students, the first graduates in GM's new Automotive Service Education Program (ASEP), have received their associate degree in automotive technology from Delta.

On the heels of the successful pilot project at Delta, a similar entry-level technician program is completing its first year of classes at Bookhaven College near Dallas.

GM will sponsor additional colleges in offering ASEP curriculum, including one now opening at Triton College in the Chicago area.

Further expansion to other areas in the nation, according to Vorhes, will depend upon dealer interest and participation.

Dealers who have participated in ASEP, Vorhes said, find that their students begin pulling their weight and earning their way in the dealership in their second semester.

Vorhes said GM has a deep commitment to ASEP. This commitment includes pre-training all college instructors at GM Training Centers, furnishing colleges with GM product components and providing the schools with all essential training materials, including training center handout pieces.

The administrative cost of the training program is being paid by GM while dealers are expected to cover incidental costs, such as lodging, travel and allowances.

The program will be pilot-tested during the coming year. Assuming a successful pilot, the expanded program will become permanent on Sept. 1, 1982. At that time, dealers will share the cost of the program with GM through an enrollment fee of $50 per student per day for service technical training.

Industry's mid-month tally is 134,595

Only GM reports a sales increase

By Jenny L. King
Staff Writer

Domestic new-car sales climbed 9.87 percent on a daily-rate basis in mid-September, although total sales were down slightly from last year's modest level and only one of the major manufacturers reported a year-to-year increase.

Sept. 11-20 sales numbered 134,595, down 2.34 percent from 137,813 a year ago. With eight selling days this year, the current rate was 16,824, up 9.87 percent from the 15,313 rate for nine days in 1980. It was the lowest daily average since early-July's 16,052 rate.

General Motors, which had extended its 13.8 percent interest rate program through Sept. 23, reported a sales increase of 3.94 percent (16.93 percent on a daily-rate basis), to 86,291 from 83,017. Chrysler Corp. was up on a daily-rate basis by a modest 2.91 percent, but off 8.53 percent year-to-year. Its sales totaled 11,017 this year compared with 12,044 in 1980.

Ford Motor Co. dealers sold 31,722 new cars, down 11.75 percent from 35,456 (up 0.63 percent daily rate). Volkswagen of America reported sales of 3,465 Rabbit sedans, down 19.34 percent from 4,296 (down 9.22 percent daily rate). Estimated sales for AMC were 2,100 units, down 30.00 percent from 3,000 (down 21.12 percent daily rate).

GM earned 64.11 percent of the mid-month domestic market, up four percentage points from 60.24 a year earlier. Ford slipped to 23.57 percent from 25.73 percent. Chrysler stood at 8.19 percent, compared with 8.73 percent in 1980. It was the corporation's smallest share so far this calendar year, and the first time it has slipped below 10 percent.

VWoA captured 2.57 percent, down from 3.12 percent, and AMC sales accounted for 1.56 percent, down from 2.18 percent.

On a year-to-year basis, five of the U. S. makes were up. Cadillac enjoyed a 75.99-percent increase in sales, climbing to 5,945 from 3,378. Oldsmobile was up 14.67 percent, to 18,342 from 15,995. Plymouth was up 12.17 percent, to 5,244 from 4,675. Buick climbed 10.27 percent, to 16,056 from 14,560, and Dodge rose 7.26 percent, to 5,081 from 4,737.

Chrysler was down 76.14 percent, AMC was down 30.00 percent, VWoA was down 19.34 percent, Ford was down 12.56 percent, Chevrolet was down 7.30 percent, Mercury was down 6.47 percent, Pontiac was down 3.98 percent and Lincoln was down 0.80 percent.

Chevrolet Chevette was the top-selling nameplate Sept. 11-20, with sales of 8,605. Second was Oldsmobile Cutlass Supreme at 6,348, followed by Buick Regal at 6,081, Chevrolet Citation at 5,775 and Ford Escort at 4,989.

Ford combines auto assembly, stamping units

DEARBORN. — Ford Motor Co. has combined its Automotive Assembly and Metal Stamping divisions.

William E. Scollard, vice president-body and assembly operations, said the reorganization will enable Ford "to apply greater managerial and technical direction to the achievement of higher product quality in stamping and assembly operations."

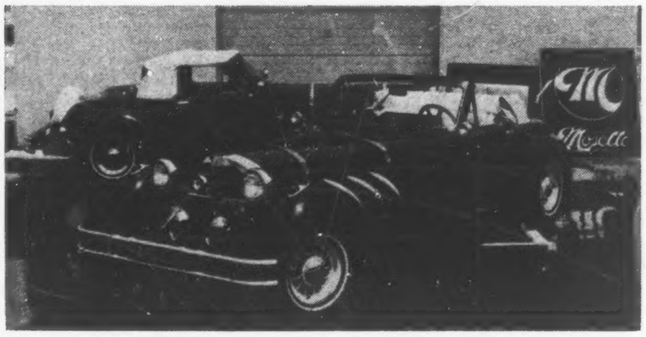
"It also will give us a stronger manufacturing technical group to interface with vehicle engineering and design on future programs," he said.

"It provides an atmosphere more conducive to the making of vehicle-oriented decisions; it provides a more efficient organization structure, and it improves our abilities to better develop the key personnel in our quality effort."

The reorganization will be completed by January, 1982.

Roderick M. Sherwood Jr. is the new general manager—body and assembly, reporting to Scollard. He had been general manager of the Automotive Assembly Division. H. A. Nida will be general manager — engineering and operations, for the new division. He had been general manager of the Metal Stamping Division.

A Ford spokesman said no personnel layoffs, retirements or plant closedowns will result from the reorganization.



The last of the first

The last 1981 Moselle sits before its home in Chatsworth, Calif., before delivery to its first owner, in Amarillo, Tex., and the company gears up for its 1982 run. The $34,000 Ford-powered car features metal center section, roll-up windows, rumble seat and personalized options for each customer. Moselle Specialty Cars, Ltd., marked its first anniversary by opening a new Beverly Hills sales showroom.

vehicles for the first 30 days after which dealers take them over under the regular floor-plan arrangement. The cars are price leaders, Omni and Horizon Misers and stripped Ks, which Chrysler says it wants in showrooms for display.

AMC paying rebates on '82 Jeeps

SOUTHFIELD, Mich.—All Detroit auto makers are having trouble getting '82 orders from wary dealers, and special merchandising programs are by no means over. American Motors, for example, has started a new Sept. 24-Nov. 25 consumer rebate on '82 Cherokee and Wagoneer ($750) and J-series pickups ($500). Dealers contribute $250 of the $750 and $200 of the $500. In Ohio and Texas rebates are reduced to $500 and $300 because of state laws banning dealer participation.

Mitsubishi wins right to set up own U.S. network

Continued from Page 1

subishi is to supply Chrysler with four-door versions of the Dodge Colt and Plymouth Champ, plus a four-wheel-drive truck.

The terms of the agreement are subject to approval of the Japanese and U. S. governments. In the U. S., Chrysler will need approval from the Department of Justice and the Loan Guarantee Board.

The Loan Board has been kept abreast of negotiations and is expected to approve the plan, a knowledgeable source told AUTOMOTIVE NEWS.

The agreement does not deal with joint production in the U. S. — an on-again, off-again subject of discussion between the makers.

Although Chrysler declined to elaborate on the details of the agreement, sources have indicated Mitsubishi is required to continue to finance its Chrysler-badged vehicles during the transit.

News roundup

AMC recalls 15,500 '82 cars

SOUTHFIELD, Mich.—American Motors is recalling 15,500 of its 1982 Spirit, Concord and Eagle autos with six-cylinder engines to correct an underhood wiring harness routing problem that could result in an electrical short circuit and ensuing component damage. The recall was announced six days before the '82 models officially went on sale. AMC said fewer than 3,000 had been sold to retail customers. Vehicles in dealers' stock will be serviced before being sold, AMC said.

Ford said to seek electronics help from Japan

TOKYO.—Ford Motor Co. has asked Sharp Corp. to develop electronic engine-control systems, according to reports published here. These reports say Sharp has not yet decided whether to accept Ford's request for a wide range of systems. Sharp has no business ties with Japan's major auto makers.

NHTSA endorses belt-up campaign

WASHINGTON.—The Department of Transportation last week endorsed the National Safety Council's "Make It Click" campaign to encourage motorists to use seat belts. "No other traffic-safety measure offers so much lifesaving promise," said NHTSA Chief Raymond A. Peck Jr.

Peugeot ends Argentine deal with Fiat

BUENOS AIRES.—Peugeot is terminating a joint venture with Fiat for auto production in Argentina. Peugeot said it would give up its 50-percent share in Sevel Argentina, but that Peugeots would continue to be made and sold in Argentina under a licensing agreement with Fiat. Peugeot had suffered losses in the joint venture ever since it was set up, less than a year ago.

New cars due from Russia in 1983

LONDON.—Three automobile manufacturers in the Soviet Union plan to launch new cars in 1983 that will be designed to meet standards of the U. S. and the Common Market, according to Automotive Products, a components manufacturer in the UK which has signed a parts agreement with the Russians. AP said the firms involved are Lada, Zaz and Moskvich. The cars to be introduced by Lada reportedly are front-drive models developed by Porsche. The Russians reportedly are negotiating with other component suppliers in the West

Northwood show set for Oct. 16-18

MIDLAND, Mich. — Northwood Institute's 18th annual Automobile, Truck and Automotive Parts Show will be held on the campus here Oct. 16-18. This year's theme is "On the Road Again in '81." The show is organized by Northwood Institute students. More than 450 domestic and imported cars will be displayed. There is no charge for admission.

Ford recalls Mustangs, Capris, Lincolns

DEARBORN.—Ford Motor Co. is recalling 6,700 '81 Ford Mustangs and Mercury Capris to correct front-seatback recliner plates that do not meet prescribed strength capabilities. The plates may become distorted, resulting in disengagement of the recliner mechanism and permitting the seatback to pivot into its recliner position. The cars were built at the Dearborn assembly plant from July 30 to Aug. 7. Ford also is recalling some 600 '82 Lincoln and Mark VI models with automatic headlight dimmers that could malfunction after a short time. Ford said few, if any, of the cars have been delivered to customers.

Toyota, Datsun step up small-truck marketing

LOS ANGELES.—Detroit is in for a real dogfight in the small pickup market where it is launching new entries this year. The Japanese, notably Datsun and Toyota, are stepping up marketing efforts via $10 million ad budgets each for their '82 pickup lines. "From one tough customer to another" is Datsun's new truck theme, backed with 25 percent more TV and print money than last year. Toyota's budget is up about 10 percent. Mazda plans to increase support for its newly redesigned gas and diesel minitruck series. Pickup trucks are not under the same import restriction as cars.

Renault hikes share of Volvo to 15 pct.

PARIS.—Renault has increased its 10-percent interest in AB Volvo to 15 percent, under terms of the original agreement signed in December, 1979.

'82 GMC line emphasizes fuel economy

GMC's line of light, medium and heavy trucks for 1982 is the most comprehensive and fuel-efficient ever offered, according to Robert W. Truxell, the division's general manager.

New to the line are the U. S.-built compact pickup, the first such model in the GMC line; the all-new 6.2-liter light-truck diesel and more fuel-efficient powertrains in medium and heavy trucks.

The 6.2 diesel, a naturally aspirated V-8 with four-cylinder design, is available in two-wheel and four-wheel-drive half, three-quarter and one-ton models except the 4x2 Jimmy and S-15. An optional diesel-equipment package is required.

A four-speed manual overdrive transmission is required on half and three-quarter-ton pickups under 8,500 pounds GVW when equipped with the 6.2 diesel.

A four-speed automatic overdrive transmission is standard on the 4x2 Suburban wagon and optional is the Jimmy, 4x4 Suburban and pickup models under 8,500 pounds GVW.

Optional automatic speed control with the resume feature is now available with both manual and automatic transmissions for Jimmys, Suburbans, pickups, cab/chassis and vans.

- Use of automatic locking front hubs is extended to one-ton 4x4 models, making the fea-

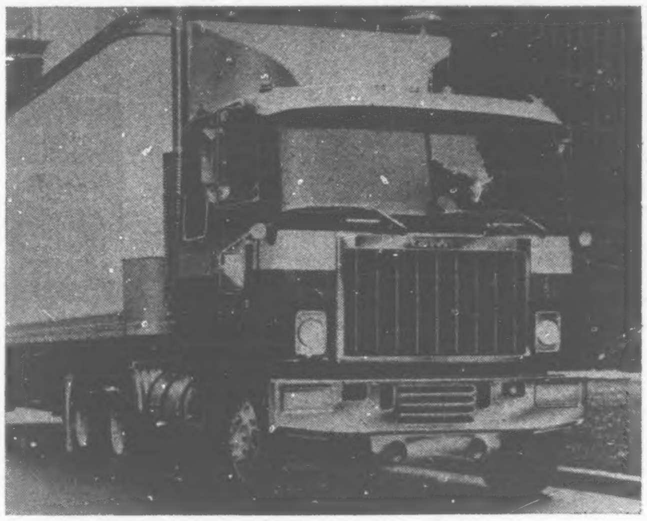
Mack to cut output to 81 trucks a day

ALLENTOWN, Pa. — Mack Trucks, Inc., plans to cut production from 100 trucks a day to 81 a day, effective Nov. 2. The company attributed the cutback to economic conditions and high interest rates which it said have caused an extended recession in the North American truck market.

The expected improvement in the economy in the last quarter of 1981 is not likely, a spokesman said. The cutback will affect operations in Allentown; Hagerstown, Md., and Oakville, Ont., Canada.



All '82 Astros turbocharged

All diesel engines for 1982 Astro models are turbocharged and most are teamed with aftercooling systems to help increase fuel economy and thermal efficiency.

GMC turning to TV to increase ad reach

By Joseph Bohn
Marketing Editor

PONTIAC, Mich.—GMC Truck & Coach is back in the big time—big-time TV, that is.

The division is going for reach, although it will continue to target against special buying groups like farm, construction and fleet markets.

Generally, though, multi-product-line commercials have replaced a lot of vocational magazine advertising done last year, and TV has cut into both magazine and radio, noted Jim Wenzel, ad manager.

GMC's first commercials, which appeared Sept. 20, call attention to its 75 years as a truck maker. It features old and new trucks, going back to World War I, as well as the '82s.

The message is: "At GMC we've been all about trucks for over 75 years . . . It seems whenever a truck job comes along, there's a GMC dealer with a truck to do it. Big, small and in between size, GMC . . . shouldering the load and keeping an eye on costs . . ."

This commercial introduces the new 6.2-liter diesel and models it's available in.

A full-blown diesel commercial draws specific attention to the engine's cargo and trailer pulling capabilities. Three models, a Jimmy pulling a boat, a Suburban towing an Airstream trailer and a pickup carrying a large outboard motor, are featured.

The commercial focuses on the diesels available in these various models, its design exclusively created for the truck lines and its economy.

"The new light duty GMC diesel trucks. Even when we think small, we think big. At GMC, trucks are what we're all about" ends the commercial, using the familiar tagline.

Overall, TV news shows and NFL Sunday afternoon football on CBS are the prime properties, although a mix of cable TV (ESPN's "Sports Center") and a syndicated TV show, "Backstage at the Grand Old Opry," running in 131 markets, round out the schedule.

The mix is 55 percent TV, 45 percent magazine. Radio and

Continued on Page 41, Col. 1

ONE SIZE FITS ALL.
GMC INTRODUCES THE 6.2 LITER DIESEL.
GMC

One size fits all

GMC is getting ad mileage from multi-product-line ads, such as this one, featuring a pickup, Suburban and Jimmy. Fewer vocational magazines are being used, but business, farming, fleet and construction buyers are still being singled out for special print targeting. The new diesel engine gets its own print and TV effort.

New Deutz diesel will be produced at plant in Canada

By Jack Walsh
Truck Editor

MONTREAL. — A new series of diesel engines called the Deutz 610 AirDiesel will be produced in a plant to be built in the Montreal metropolitan area, with initial deliveries planned by mid-1983.

Plans were announced by officials of Klockner-Humboldt-Deutz AG, Cologne, West Germany, and KHD Canada, Inc., a subsidiary which developed the engine and will manufacture them.

Initially, the air-cooled engine will be produced in a V-8 configuration, and will deliver up to 220 HP at 3,200 RPM. Later, V-6 and four-cylinder versions will be offered.

Wilhelm Vossmeyer, KHD Canada research and development vice president, said data from both static and on-road testing indicate that the 610 will consume about 15 percent less fuel than current comparable diesel engines, and about 50 percent of the fuel used by a gasoline engine of comparable power.

"One reason for this economy

truck industry news

All market segments weaker

Registrations of trucks down in July, 7 months

Seven-month registrations of new trucks of all types in the U. S. totaled 1,275,595, according to R. L. Polk & Co., a decline of 16.3 percent from the year-ago 1,524,391 units.

The July total was down 14.7 percent, from 189,680 in 1980 to 222,249.

See Table on Page 38

Registrations for the January-July period and the month were off in all three market segments, with only one of the eight classifications showing an increase over the previous year.

Through July, there were 1,152,274 light-truck tallies, a decline of 16.1 percent of last year's 1,373,018 units. Imported non-captive light trucks, on the other hand, were down only 0.7 percent, from 177,021 a year ago to 175,717.

Group 3 registrations for the seven months totaled 7,901, an increase of 69.5 percent over the year earlier 4,661.

The Group 1 count, with a big assist from the imports, totaled 634,563, a drop of 6.6 percent from last year's 679,150. Group 2 was down 26 percent to 509,810 units, compared with 689,207 a year ago.

Registrations of medium trucks fell 16.8 percent in the first seven months, from 35,705 units in 1980 to 29,706.

Over the seven-month span, only nine Group 4 trucks were registered in the U. S., a decline of 95.3 percent from last year's 193 units.

Group 5 tallies were off 19.7 percent, from 1,373 units a year ago to 1,102, while the Group 6 count skidded to 28,595 units, a decrease of 16.2 percent from last year's 34,139.

Heavy-truck registrations

Continued on Page 17, Col. 1

International ups lead over Ford in HD registrations

International increased its lead over Ford in heavy-truck registrations by 900 units in July, and its share of total industry tallies for the first seven months was slightly higher than the six-month figure.

In July, 3,780 Group 7 and 8 International vehicles were registered, bringing the seven-month total to 25,308 units. Ford had 2,880 tallies during the month, boosting its year-to-date total to 19,465.

The industry count for the seven months, according to R. L. Polk & Co. statistics, was 93,615, down 19.1 percent from last year's 115,668. The July total of 14,213 units was off 9.5 percent from the year-earlier 15,699.

Through August, International registrations accounted for

Illinois announces settlement with dealers, ad agency

Dealers to halt phony recalls

CHICAGO.—Seven local dealerships and an advertising agency have agreed to end a misleading campaign which used phony factory recall notices as an ad gimmick, according to Illinois Attorney General Ty Fahner.

Fahner said the agreement also requires each of the dealerships to pay the state $4,000 and the advertising company, $6,000.

The agreement was signed by the ad agency House of Words, Inc., Chicago, and dealerships Al Johnson Cadillac, Tinley Park; Arrow Chevrolet, Midlothian; Highland Park Ford, Highland Park; Keystone Chevrolet, Chicago; Shepard Chevrolet, Lake Bluff; Sondag Chevrolet, Des Plaines, and Sondag Datsun, Schaumburg.

The attorney general said the firms, which have signed assurances of voluntary compliance, used deceptive advertising entitled "Safety Notification" when, in fact, no defect or other safety problems existed.

The attorney general contends the notices violate the Illinois Consumer Fraud and Deceptive Business Practices Act because the advertising is designed to lure customers into dealership repair shops and showrooms under false pretenses.

• The attorney general's investigation was prompted by consumers who questioned the authenticity of the mailings.

Fahner said the investigation revealed that House of Words had contacted the auto dealers regarding the use of the safety notification mailing as an advertising promotion.

The wording of the notices is similar to legitimate factory recall, Fahner said. The notices read:

"SAFETY NOTIFICATION! This is to inform you of (auto dealer's name) safety notification. This notification pertains to the RADIATOR HOSE CLAMPS on (specified make) automobiles produced in 1974 through 1980.

"WE ARE THE ONLY AUTHORIZED CENTER IN YOUR AREA FOR THIS PROGRAM. Please call the Safety/Service Administrator at (auto dealer's name) for your appointment to have your vehicle scheduled for IMMEDIATE inspection. This inspection and repair to the RADIATOR HOSE CLAMPS will be done at no charge to you."

Although the inspection and repair of the clamps were offered at no charge, the attorney general objected to the likelihood of auto dealers soliciting additional repair work and potential sales from consumers under false pretenses.

International ups lead over Ford in HD registrations

Continued from Page 16

25.96 percent of the industry total, up 9.27 percentage points from last year's 16.70 percent on 19,311 tallies.

For the first six months, International's share of the total was 25.55 percent. Ford took 20.89 percent of the January-July count, and 20.79 percent of the seven-month count.

Through August, there were 53,822 Group 8 registrations, a decline of 21.4 percent from last year's 68,508. Group 7 was down 15.6 percent from a year ago, 37,793 versus 47,160.

International was No. 1 in Group 8 registrations with 12,651, compared with 10,079 for second-place Mack. Ford was the leader in Group 7 with 14,525 tallies, and International was No. 2 with 11,657.

Declines posted in registrations of trucks in July

Continued from Page 16

were down 19.1 percent, from 115,668 units in 1980 to 93,615.

Group 7 tallies through July totaled 39,793, down 15.6 percent from the year-earlier 47,508. The count for Group 8 trucks was 53,822 units, a decline of 21.4 percent from last year's 68,508.

In July, there were 170,924 light-truck registrations, off 15 percent from the year-ago 201,0[illegible]3. But light non-captive imports were up 7.2 percent, from 26,113 in 1980 to 27,996 units.

During the month, there were 4,543 medium-truck registrations, a decline of 16.9 percent from the year-earlier 5,467 units, while the heavies were off 9.5 percent, from 15,699 last year to 14,213.

The miscellaneous group increased its share of total industry registrations for the seven months by 2.19 percentage points. Dodge was the biggest loser in penetration with a decline of 1.59 points.

Delco
Freedom II

DELUXE
INTERIOR.

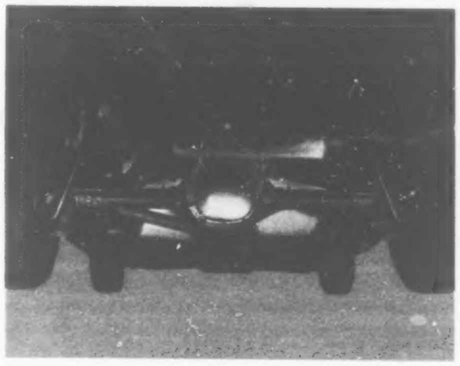
Here's the inside story on the battery that's even tougher than the original Freedom —The Delco Freedom II Battery.

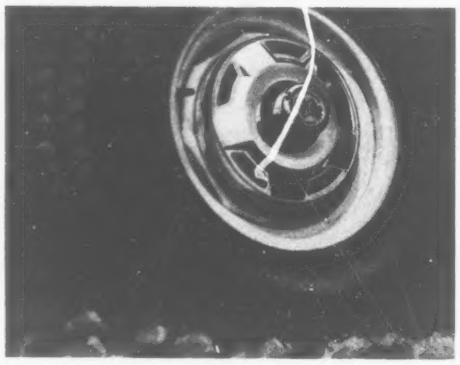
A new plate design for ready cranking power and reserve capacity. New grid guards and other features resist road shock and vibration.

Delco deluxe interiors are standard equipment in a variety of sizes and shapes for passenger cars and light trucks.

GM
Delco Remy

The leader under the hood





Attention Dealers:
Selling the advantages of spin-resistant differentials and automatic locking hubs from Borg-Warner can improve your 1982 dollar volume.

Whether your customers are looking for the ultimate performance package or better traction in sand, mud, and snow, the Borg-Warner spin-resistant differential should be part of your stock units.

Performance and traction can be improved with no sacrifice in fuel economy by this time-tested option. It's available at low cost on these vehicles:

AMC
- Concord
- Spirit

Ford
- Mustang
- Fairmont
- Granada
- Thunderbird
- Capri
- Zephyr
- Cougar

GM
- Camaro
- Z28
- Firebird
- Trans Am
- El Camino
- Monte Carlo
- Grand Prix
- Regal
- Cutlass Supreme

Chrysler
- Cordoba
- Gran Fury
- New Yorker
- Imperial
- Ram Series Trucks

The powerful performance of 4-wheel drive and fuel-efficiency of free-wheeling 2-wheel drive have never been easier to demonstrate and sell. Now, with vehicles equipped with automatic locking hubs, the driver can shift from 2WD to 4WD and back again automatically without leaving the comfort and security of his vehicle.

It's standard equipment on:

GM
- K10/K15
- K20/K25
- K30/K35
- Blazer
- Jimmy
- Suburban

Chrysler
- Ram Series Trucks
- Trailduster
- Ramcharger

A low cost option on:

Ford
- Bronco
- F150
- F250

Could total $2.5 billion in 1982, Jensen executive says

Aftermarket stereo rise predicted

SCHILLER PARK, Ill.—Aftermarket sales of car stereo equipment will top $2.2 billion in 1981 and can be expected to exceed $2.5 billion in 1982 if projected industry growth of eight percent to 10 percent can be achieved, according to Pete Fredriksen, vice president and general manager of the Car Audio Division, Jensen Sound Laboratories.

"The pace of growth in the aftermarket car audio business has slowed from the heyday of the mid-'70s, but the base of business has grown to enormous proportions so that a 10 percent sales gain today represents a very healthy dollar increase," Fredriksen said.

"In addition, while there are signs that the industry is moving into the early stages of maturity, consumers are becoming more knowledgeable and sophisticated in terms of quality car audio and this is spurring increases in the average system ticket, which we see moving from a $250-$350 range in 1981 to about $450 and perhaps even $550 won't be unusual in 1982," he said.

Fredriksen projects 1982 aftermarket electronics sales at $1.8 - $1.9 billion, with speaker sales in the aftermarket totaling $500 - $600 million. He said the higher range of the market can be expected to grow faster than the promotional end of the business.

Also, the number of manufacturers in the market will diminish in 1982, particularly in terms of those manufacturers who fail to position themselves properly in terms of targeting the part of the market they're after, according to Fredriksen. "I think retailers will also have to specialize in order to survive," he said. "They no longer can assume everyone in the world is their customer but will have to determine which segment of the market they can best serve and do so accordingly."

- Fredriksen sees no product or technological revolutions in 1982. He said the market will develop in a stable fashion, with a lot of emphasis on quality and reliability of product rather than achieving performance breakthroughs. More digital technology will be incorporated into car stereo electronics with a continuing but gradual proliferation of programmable units versus conventional pushbutton systems, he said.

Further downsizing in the auto industry represented by the "coming" commuter car, a three-cylinder mini from Honda in 1982, will intensify profit pressures on Detroit, he said. This will lead to greater competition from Detroit in the car stereo market.

It is also expected that General Motors and other auto makers will have a commuter car in 1983 or 1984.

"There's no question that Detroit has already found c about the aftermarket car audi business, and they are gettin more sophisticated in attackin it," Fredriksen said.

"However, I doubt Detroit wi ever catch up with the top bra name suppliers in this business We can react faster to marke trends; we're a lot more flexib —I don't see Detroit really ab to profitably offer more tha two or three units, but in 19 and beyond you can expect the to put more and more emphas on car stereo."

In other areas, Fredriksen expects further solidification the cassette's dominance in c audio, especially in-dash systems and expects to see more manufacturers eliminate eight-track in their lines as that configuration continues to lose favor with consumer buyers.

North American car sales decline again in Canada

New-car and truck sales plunged in Canada during August. It was the eighth consecutive month of depressed sales for North American-built passenger cars and the seventh time in eight months that truck sales declined.

New-car sales totaled 44,834, down 21.74 percent from 57,288 a year earlier. Truck sales collapsed to 15,426 from 22,887, a difference of 32.60 percent.

Of the five major car makers, only Volvo reported a sales gain. Its sales of 762 were up 7.17 percent from 711. General Motors dropped 20.08 percent, to 27,989 from last year's record 35,021.

Ford reported sales of 8,448 new cars, down 21.22 percent from 10.723. Chrysler dropped 28.17 percent, to 6,631 from 9,232. American Motors sales numbered 1,004, down 37.29 percent from 1.601.

GM earned 62.43 percent of the August market, up from 61.13 percent in 1980. Ford sales accounted for 18.84 percent, up from 18.72 percent. Chryslcr dropped to 14.79 percent from 16.12 percent. AMC cornered 2.24 percent, down from 2.79 percent, and Volvo crept to 1.70 percent from 1.24 percent.

Car sales through August 31 totaled 457,433, down 12.20 percent from 520,967 last year.

Truck sales, including captive imports, totaled 15,426 in August, down 32.60 percent from 22,887 a year ago.

GM dropped 32.81 percent, to 8,066 from 12,004. Ford truck sales totaled 5,142, down 33.89 percent from 7,778. Chrysler reported sales of 1,916 new trucks, down 27.83 percent from 2,655, and AMC Jeep sales numbered 302, down 32.89 percent from 450 a year earlier.

Truck sales for the first eight months of the calendar year reached 176,526, down 14.83 percent from 207,255.

Domestic makers schedule 111,925 cars

Auto production up 7 pct. for week

By Patricia Hoffman
Staff Writer

Domestic auto production showed a slight gain last week from the previous week's output as assembly plants continued their gradual return from changeover/inventory control closings but the total remained below that of the comparable 1980 figure.

Production was targeted last week at 111,925 units, up 7.39 percent above the 104,223 cars completed in the previous week, but a drop of 17.76 percent below the 136,099 in the comparable 1980 week.

Year-to-date output for the auto makers reached 4,927,350 units, a gain of 5.92 percent above the 4,651,925 cars completed in the same period last year.

General Motors' continued to lead the way last week with 56.42 percent of the week's total. Ford Motor followed with 29.42 percent; then Chrysler with 8.76 percent; Volkswagen of America, 3.59 percent; American Motors, 1.79 percent and Checker Motors, 0.02 percent.

VWoA's Westmoreland facility returned last week with '82 production after being idle three weeks for a combination of changeover and inventory control.

Chrysler's Jefferson assembly point also returned last week with production of the '82 Aries, Reliant and LeBaron models. The plant was idle the week of Sept. 14.

GM's Willow Run facility resumed work last week with assembly of '82 Oldsmobile Omegas and Buick Skylarks.

GM's Tarrytown facility, originally scheduled to resume operations today (Sept. 28) with production of '82 models, has extended its downtime until Oct. 5 due to plant construction. The plant was idled Sept. 8 for model changeover.

Also at GM, Doraville returns today with production of '82 models.

According to GM, the Detroit (Cadillac) home plant is planning to cut the assembly line rate from 53 an hour on two shifts to 45 an hour on two shifts in order to balance inventories. The rate adjustment is slated to take place in either late October or early November. An estimated 600 workers will be put on temporary layoff as a result.

Canadian car output drops but truck production climbs

The return of General Motor's Oshawa truck facility helped boost Canadian truck production last week by a substantial 44.21 percent, but the scheduled downtime at Chrysler's Windsor car point dragged Canadian auto output down 11.34 percent below that of the previous week.

Auto production last week was targeted at 12,318 units, down from the 13,894 units completed the previous week, and down 41.91 percent below the 21,204 cars in the comparable 1980 week.

The truck makers estimated production last week at 9,943 units, up substantially from 6,895 trucks in the previous week, but down 17.11 percent below the 11,995 in the comparable week last year.

Year-to-date output for the truck manufacturers was 381,199 units, a gain of 1.78 percent above the 374,528 trucks in the comparable 1980 period.

Chrysler's Windsor car point was idle last week for inventory control. The plant is slated to resume today (Sept. 28).

GM's Oshawa (No. Two) car facility remained down last week for '82 model changeover. The point closed Aug. 6 and is scheduled to resume production Nov. 11.

Ford Motor's St. Thomas car plant will be down for the fifth consecutive week this year. It closed Aug. 31 for inventory control and model changeover.

GM's Oshawa truck facility resumed last week after being idle a week due to a material shortage.

Downtime is slated this week at Ford's Oakville and Chrysler's Windsor truck points. Both plants closed today for inventory adjustments and are slated to resume operations Oct. 5.

American Motors' Brampton car facility will begin operation of a second shift on Oct. 19, as a result of increased demand for the Concord compacts and Eagle four-wheel-drive station wagons being built at the plant.

With the addition of the second shift, production will be increased to 192 vehicles a day from 120, with an output of 96 cars on each of the two shifts. The new shift will also add an additional 500 workers to the current work force of 900 at the Brampton facility.

Week's truck output rises as Volkswagen resumes

Despite continued downtime at several truck plants last week, the return of Volkswagen of America's Westmoreland point helped boost U. S. truck production slightly from the previous week's total.

The truck manufacturers targeted production last week at 29,703 units, a gain of 3.33 percent from 28,746 trucks in the previous week, but a drop of 7.53 percent below the 31,941 in the comparable 1980 week.

So far this year, the truck makers have assembled 1,252,439 units, up 12.31 percent above the 1,115,174 trucks in the same period last year.

Downtime was scheduled last week at General Motors' St. Louis and Janesville facilities due to a parts shortage.

Also down last week was GM Flint, idle for inventory control.

GMC's Pontiac (truck and coach) plant, idle since Sept. 7 for inventory adjustments, resumes production today (Sept. 28).

Chrysler scheduled downtime last week at its Warren truck plant. The plant, which was down for inventory control, is slated to resume today.

VWoA's Westmoreland plant resumed production last week after being idle since Aug. 28 for inventory control and model changeover.

Clarion opens N.Y. warehouse

LAWNDALE, Calif.—Clarion Corp. of America has opened a new distribution center in Central Long Island to serve the warehousing and ordering needs of car stereo dealers and distributors in 14 Eastern states.

The 47,000-square-foot facility is in Ronkonkama, N. Y. Clarion said it will cut the current 10-days-to-two-weeks delivery schedule from its California headquarters to overnight-to-two-day delivery for Eastern dealers and distributors.

The new facility will service Maine, Vermont, New Hampshire, Connecticut, Rhode Island, Massachusetts, New York, New Jersey, Delaware, Pennsylvania, Maryland, Ohio, Virginia and West Virginia, plus Washington, D. C.

Tigers for sale

Alternative Motors offers Ford-based roadster

Alternative Motors, Ltd., Mt. Clemens, Mich., a franchised dealer of Thoroughbred Motor Cars, now offers the Tiger Roadster, a fiberglass two-seater based on Ford componentry. The car is offered as a kit ($5,995) or fully assembled ($16,500). Assembled cars carry a 12-month/12,000-mile warranty. Alternative Motors will also sell Thoroughbred's Mercedes 540K replicar, powered by a Ford 302-CID V-8 engine.

Service Index shows slower growth again

By Francis J. Gawronski
Service Editor

Service and parts business in new-car dealerships continued on the upswing in August, but for the second consecutive month the rate of growth dipped a little from that achieved in the previous month.

Acording to the Automotive News Service Index, shop volume in August was 105.7 percent of the amount recorded in the same month in 1980. In July service and parts business had been 109.8 percent and in June it was 116.6 percent of the volume for the same months the year before.

August marked the sixth consecutive month in which dealers' shop business has shown an increase over the comparable year-earlier period.

The top gainer among the five Service Index indicators in August was gross profit on all labor, parts and P&A sales — the most vital indicator from the dealers' viewpoint — which was up 9.7 percent.

In the runnerup spot in August was sales of all parts and accessories, up 9.1 percent over the year-ago figure, followed by shop parts sales (those used on customer-paid and warranty repairs) up 4.5 percent.

Total labor sales (customer-paid and warranty) registered an increase of 3.7 percent, while repair orders written accounted for the only decline in August —down 1.6 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

Service and parts business in the January-August period amounted to 105.3 percent of the volume done in the same period of 1980.

Gross profit was the leading indicator, up 9.6 percent, followed closely by sales of all parts and accessories which increased 9.5 percent.

Shop parts sales climbed 5.5 percent during the eight-month period, while total labor advanced 3.1 percent. Repair orders written dipped 3.2 percent below the year ago figure.

SERVICE INDEX
105.7*

→	Aug., '81 vs. Aug., '80	8 mos., '81 vs. 8 mos., '80
Gross Profit on All Labor and P&A Sales	+ 9.7%	+ 9.6%
Repair Orders Written	— 1.6%	— 3.2%
Total Labor Sales (Customer & Warranty)	+ 3.7%	+ 3.1%
Shop Parts Sales (Customer & Warranty)	+ 4.5%	+ 5.5%
Sales of All P&A	+ 9.1%	+ 9.5%

*—Survey by Automotive News shows that dealers' service and parts business in Aug., 1981, was 105.7 percent of business in Aug., 1980. Service business in the eight months of 1981 was 105.3 percent of business in the corresponding period in 1980.

Prospects awash in apathy

'82s off to a quiet start

By Kathleen Hamilton and Joseph Bohn

Public reaction to the launch of the '82 models has amounted to little more than a yawn, dealers across the country told AUTOMOTIVE NEWS.

General Motors, Ford Motor Co. and American Motors dealers put their "new" models on the showroom floors Sept. 24, but there wasn't a truly new car to be seen — just carryover models, tagged with higher prices than the '81s carried.

(Chrysler Corp. models and the all-new Lincoln Continental bowed Oct. 1 — too recently to gauge their reception.)

Apathy toward the '82 models can be traced to sources other than the lack of new sheet metal, according to dealers.

Ford dealers recognized symptoms of a post-rebate slump, and several expect it to last another month.

Preselling is another factor for the ho-hum reaction.

Dealers for the Big Two indicated that factory advertising focused on cleaning out '81 stocks more than on the launch of the '82s. As a result, the public seems to be unaware that the new automotive year has begun, dealers said.

Staggered introduction dates have exacerbated the problem. Car buyers — and even dealership employes in some cases — are confused about which cars were launched when.

And the really new stuff — GM's A-cars and Firebird/Camaro and Lincoln's Continental, for example — weren't around to generate enthusiasm for the carryover models.

The GM X-cars debut in November, and the A and Firebird-Camaro arrive in January; Oldsmobile and Buick J-cars are due in February or March.

Dealers for the divisions which already carry the J-cars — Cadillac, Chevy and Pontiac — reported the almost-new little cars weren't drawing the traffic off the streets, either.

Add to all that the fact that the staggered intro dates increased advertising and showroom-trimming costs for dealers, and it comes as no surprise that dealers surveyed by AUTOMOTIVE NEWS generally expressed emotions that ranged from lukewarm enthusiasm to anger over that factory policy.

Two of the more interesting trends revealed by the survey: A modest recovery of the big-car market, and a polarization of the marketplace, so that customers are looking either for loaded luxury automobiles or for nearly stripped commuter cars. The middle ground seems to be disappearing, many dealers said.

That split in the marketplace may be one reason that many Chevrolet dealers reported that the end of the low-interest retail loan program severely hurt, but Cadillac and Oldsmobile dealers said they felt little impact.

David Patota, sales manager of Union Chevrolet, East Providence, R.I., voiced a reaction typical among Chevy dealers: "When the 13.8 was in, it was great. Now it looks like somebody pulled the shades . . ."

Several Cadillac dealers said their customers may be more aware than others that auto loans run well below the prime interest rate, and that the 13.8-

Continued on Page 45, Col. 4

breaking news

GM revives 13.8-percent interest

DETROIT.—General Motors revived the 13.8 percent interest program on '81 X-body cars and '82 J-car lines. It runs from Oct. 1-Nov. 11, the day before '82 X-cars are introduced. The program does not cover fleet or lease sales. Dealers contribute as before. GMAC will advertise on spot and multi-network radio, top 50-markets newspaper and NCAA and NFL football buys it has.

GM is also giving cash incentives on X-bodies, with objectives based on each dealer's total X-car stock. If a dealer sells 75 percent of it, he gets $200 a car; 100 percent, he gets $400. GM still has X-cars to sell to dealers, which is why the 100-percent dealer inventory level was chosen.

AMC rolls back prices 10 percent

DETROIT.—American Motors launched an Oct. 1-Nov. 30 price rollback of 10 percent on '81 and '82 Jeep CJ and Scrambler models and the Renault R-18i. There is a 50/50 dealer contribution on CJ and Scrambler, and a 60 (factory)/40 (dealer) contribution on R-18i. AMC also changed its Wagoneer/Cherokee rebate (running Sept. 24-Nov. 25) to allow cars ordered during the period — and not necessarily sold and delivered — to be eligible.

Chevy's push for exclusives won't rule out others, Burger says

GM duals called good for business

By Joseph Bohn
Marketing Editor

Chevrolet did a study on dual dealers and how they have affected Chevrolet sales.

There was some feeling that dealers dualed with Oldsmobile or Buick, for example, were inclined to take the line of least resistance — perhaps being more inclined to stock and promote a Cutlass over a Monte Carlo in the anticipation of its selling more quickly.

Chevrolet felt that such inclinations may have hurt its sales.

But does that portend fewer duals and more single Chevrolet points in the future?

Robert D. Burger, vice president in charge of General Motors Sales and Marketing Staff, doesn't foresee any big changes in the offing.

"I think what Chevrolet is saying is that as the market comes back and gets into the higher numbers (10 million-plus car sales), they'd like to see their policy of single-line dealers remaining firm, and that they have as many as they can get," he said.

"Now with those dealers that have been dualed over the years, they've lost some business in those dealerships simply because the mood of the market changed . . . Cutlass Supreme has come out of nowhere the last several years and become a very popular car and so in many of those dealerships the Monte Carlo has suffered by comparison. People have switched, and that bothers them (Chevrolet).

"I say that while . . . their research or any research would show the B-O-P divisions have strengthened their sales as a result of many of the duals, the bottom line for General Motors and the success of Chevrolet and all of our divisions down the road is that we maintain a good dualing posture, and that we stay single line where it is in the best interests of the division, GM and the dealers," Burger said.

"Chevrolet is saying — the same thing I'm saying — they want to retain as many single-line points as they can, but there is no design to go out and start eliminating duals because it just doesn't make good business sense," he said. "Any time you start eliminating duals, you're fragmenting the market."

What about past Chevrolet dealer complaints that loss of a significant price edge/product

It talks of new front-drive luxury cars

GM maps future for new plant

DETROIT. — General Motors last week announced its production timetable for several U. S. assembly plants, including plans to build an "all-new generation" of front-drive luxury and luxury specialty cars at the new Orion Township (Mich.) and Detroit/Hamtramck plants.

The announcement was made, GM said, to silence recent speculation that the company may not compete in all segments of the U. S. car market in the future, a rumor that has caused job-security worries among many GM employes.

"The simple fact remains that General Motors will be a full-line car producer," said President F. James McDonald. He added, "Now, GM and the UAW at the local and international level can work out the transfer provision of who will work in which plants."

The GM announcement said the Orion Township plant, which is being built just outside of Pontiac, will start up in spring of 1983 assembling a "new generation of front-drive luxury cars, including some Cadillac models."

This, according to a source, will be GM's new front-drive C-body line — Cadillac deVille and Fleetwood, as well as Buick Electra and Oldsmobile Ninety-Eight.

The old Pontiac home plant and adjacent Fisher Body facility in Pontiac, will continue building rear-wheel-drive mid-size cars through the '82 model year, the GM announcement said. That plant builds the Pontiac Grand Prix and Benneville G models.

- The company did not say what would happen to the Pontiac facility after the '82 model run, but sources say it may become the assembly point for Pontiac's sporty two-passenger P-car, tentatively scheduled to bow in early 1983 as an '84 model.

In addition, GM announced that its new Detroit/Hamtramck plant will start up in fall of 1984 building front-drive luxury sedans and coupes, "including Cadillac Eldorados and Sevilles." Those cars are known as E/K bodies and include Buick Riviera and Oldsmobile Toronado.

Currently, the E/K bodies are built at the GM Assembly Division plant in Linden, N.J. That plant, GM said, will be converted to production of a "new line of mid-size models." Those models could be the downsized front-drive replacements for the current two-door G-body line — Monte Carlo, Cutlass Supreme, Grand Prix and Buick Regal.

Finally, GM said its Cadillac home plant and nearby Fisher Fleetwood plant in Detroit will continue building regular Cadillacs "into 1983." After that, GM said, those plants will be converted to building rear-drive mid-size cars "for other GM divisions" until the startup of the new Detroit/Hamtramck plant.

The company did not announce what would happen to the old Detroit and Fleetwood factories after the new Detroit/Hamtramck plant starts up in late 1984.

Competition heats up in small-truck market

By Joseph Bohn
Marketing Editor

New consumer rebates, dealer incentives and heavier ad expenditures have already set the stage for this year's hot competition in the small-truck market.

Ford last week threw some rebate money behind Courier (see Breaking News), and Datsun recently expanded and extended its dealer truck incentives.

Toyota and Mazda have been running incentives, with more expected, while Chrysler is eying special action on its Arrow and D-50 pickups.

All this comes at a time when Chevrolet and GMC are preparing to launch their new smaller S-pickups, and competition will heat up further when Ford and Dodge come onstream with new pickups later this model year.

Currently, import truck sales are off, and inventories are rising. Datsun's truck inventory, despite ongoing incentives, rose to 89 days at Sept. 20, up from 57.9 days a month earlier. Chrysler had about 115 days' supply of Arrows and D-50 pickups on Sept. 20, and Ford over 100 days' supply of Couriers.

During Sept. 1-20, total truck (domestic and import) sales were off 7 percent from the comparable year-ago period, according to industry sources, but within that framework import truck sales, including captives, were off 23 percent.

The drop in import truck sales is attributable to special rebate/interest reduction programs by Detroit's major manufacturers. But it still comes at a time when the Japanese have been marketing aggressively.

- Datsun, which had been running heavy saturation advertising on pickups in the Los Angeles area, for example, has also been giving dealers up to $500 in incentive money under its "4X4 and more" and "4X4 and more . . . plus bucks" programs.

Most recently, Datsun extended these two programs, due to end Sept. 30, to Oct. 4 and allowed dealers to include '82s in with '81s and '80s previously eligible for payments.

Datsun also launched a bonus truck program, paying a flat $200 additional on every truck dealers sell from Sept. 21 to Oct. 4.

Datsun and Toyota reportedly increased their ad budgets on pickups for 1982 to $10 million each, in Datsun's case nearly 25 percent more than '81 and in Toyota's, up about 10 percent.

The Datsun truck effort is the largest cash outlay for any of its individual lines. Nissan spent about $70 million in total U. S. advertising in 1980, according to Advertising Age.

As previously reported, Datsun continues the "We are driven" general ad theme for its vehicle lines, but also created a special "From one tough customer to another" for trucks.

Toyota is likewise making a bigger effort on trucks, with about 10 percent of its total ad dollars. Its budget similarly is up 10 percent from 1981 levels. Toyota spent about $87 million in 1980.

Mazda is running a Sept. 1-Oct. 30 incentive in 18 eastern states offering dealers a $500 prize for attaining 100 percent of a sales objective on pickups.

Import-car problem? No such thing in Japan

DETROIT. — The influx of Japanese cars has become a major problem in many countries, but Japan itself has no difficulties with imported autos.

In August, imports numbered 2,800, or 1.85 percent of total registrations in Japan. For the first eight months of this year, the total was 26,149, or 1.41 percent. In the U. S., import penetration (Japanese and others) was 24.85 percent for August and 27.63 percent for eight months.

Peck a punster on seat-belt ads

ANN ARBOR, Mich.—Raymond A. Peck Jr., NHTSA administrator, showed his sense of humor by telling a group of engineers here about the new seat-belt campaign representing "the best thing my public relations people could come up with."

Peck proceeded to write on a chalkboard: "Don't Put Your * Buckle Up." For those who may have forgotten, this — * — is called an "asterisk."

Made in Japan . . . and Ohio

The new Accord which Honda has introduced in Japan and which will be built in Marysville, O., is a longer, smoother version that maintains traditional Accord styling. Suspension has been reworked and the engine modified for extra torque.

Bigger Honda Accord slated for Ohio plant

By John Hartley
Staff Correspondent

TOKYO. — Honda has announced details of the car it will build in its Marysville (O.) plant — the new Accord.

Introduced in Tokyo, with a U. S. launch to follow soon, the rebodied Accord is very similar to the old model — both in appearance and mechanically.

This trend follows the theme set with the current Civic, which although larger than the old model, had a striking resemblance to it. Honda management has clearly decided that, like Mercedes and BMW, it should maintain a family likeness between succeeding models in the same range.

For all that, Honda engineers have been successful in making the new Accords — three-door hatchback and four-door sedan as before — look lower and more modern.

One reason for this longer look is that the wheelbases and overall lengths have been increased by 2.75 inches. Wheelbases, which are now 96.4 inches, are still a little short for a car in the 1.8-liter (110-CID) class. Overall length of the three-door is now 166 inches, and that of the four-door is up to 174 inches.

Honda claims a drag coefficient of 0.37 for the sleeker, more angular bodies, both of which have tiny spoilers on their tails. To provide more interior space, the cars have also been widened slightly; yet, Honda claims a weight saving of around 90 pounds per car.

A number of minor changes have been made to the engine, and together these give slightly better torque and fuel consumption. A lot of work has gone into improving the suspension so that the ride should be improved and cornering "more European."

Thus, there are two-stage dampers, which give soft damping over small bumps, and lower roll center heights with anti-roll bars front and rear.

For the Japanese market only, self-leveling suspension is fitted to some models, this being a combination of conventional coil springs with small air springs which are used to maintain the correct ride height.

Also, an extra model, called Vigor, has been introduced for the Japanese Verno dealer network. The Verno dealers currently sell the Prelude, Ballade four-door sedan and Quintet five-door hatchback.

The Vigor will to some extent be an alternative to the Prelude, which has never been a success in Japan.

Two top firms named to roles at World Expo

Services of two top-level firms have been secured to mount the upcoming Automotive News World Expo.

United Exposition Service Co., Inc., will be the show contractor and George P. Johnson Co. will be design consultant. Both firms are nationally known for their show expertise.

Automotive News World Expo will be held Aug. 24-27, 1982, in Detroit's Cobo Hall.

"Appointment of United Exposition Service and George P. Johnson underscores our commitment to bring the highest level of professionalism to Automotive News World Expo," said Tony Merpi, managing director of the event.

"Those two firms are acknowledged to be among the leaders in their field," Merpi said. "Combined with our own efforts, they will make this show a blue-ribbon affair."

George P. Johnson will assist in design and decoration of the show and handle floor plans, the registration area and the theme center. It will also have responsibility for the show manual.

United Exposition Service will be responsible for drayage, assembly of exhibits, show services and customs assistance for overseas exhibitors.

Mazda increase averages $242 on '82 cars

LOS ANGELES.—Mazda has raised U. S. prices an average of $242, or 3.7 percent, on its 1982 cars. The boosts range from $200 to $500. The $242 is on a sales-weighted basis.

The increase is considerably less than the $499 hike posted by Toyota for its cars and the $424 increase announced on Datsun cars for '82.

Mazda prices start at $5,295 for the base GLC three-door hatchback. This model and the Custom and Custom L three-door hatchbacks are up $200.

Other GLC units and all Mazda 626 models have been raised $250, and the increases amount to $300 to $500 on the RX-7 sport coupes.

New prices include $5,995 for the GLC Custom station wagon, $6,245 for the GLC Custom four-door sedan, $7,245 for the 626 Sport four-door sedan and $7,545 for the 626 Sport coupe.

RX-7 prices start at $9,695 for the S coupe. The GS is $10,295 and the luxury GLS is $11,895.

Diesels big in Belgium

BRUSSELS. — Diesels took 12.4 percent of the Belgian new-car market in 1980, compared with 4.3 percent in the U. S., according to International Business Reports.

Fraud squad zeroes in on European car pricing

By Richard Feast
European Editor

An ugly row is simmering in Europe over what could amount to $300 million worth of new-car sales each year.

It has been coming to a boil since spring, when the sudden disappearance of a con man attracted the attention of the Scotland Yard fraud squad in London.

It brought into the open once more the sensitive question of comparative car pricing in various European countries, and led to an accusation of cartel-fixing between the United Kingdom government and industry.

The affair revolves around the fact that new-car prices in the UK are a lot higher than in most European countries, and Belgium and West Germany in particular.

Part of the reason can be attributed to different specifications in various countries. A GL model, for instance, may have a tachometer as standard in one country and an extra in another.

National taxes differ, too. In Germany the Value Added Tax (V.A.T.) is 13 percent. In Belgium it is 25 percent, and in France a whopping 33.3. In the UK and Holland, it is 15 percent.

Other purchase price levies may be made as well. In the UK, there is a special car tax of 10 percent. In Belgium, there is an additional 10 percent on cars over 2.5 liters or with engines producing more than 155-HP. Holland levies an extra 18 percent on cars up to $8,000 and 19.5 percent over that figure.

As a result, comparing like for like in various countries, especially when exchange rates are constantly changing, is fraught with pitfalls.

• Nevertheless, a recent survey found that in the UK a Volvo 244GL — a nice "neutral" car — cost the equivalent of $15,000. In France it was $11,000, in Switzerland $9,800, in Austria [illegible] and in Germany $8,150.

At the cheaper end, one of Ford's Escort XR3s cost $10,400 in the UK, $7,800 in Austria, $7,750 in France, $7,350 in Switzerland and $6,500 in Germany.

The more expensive the car, the bigger the differences: A Mercedes-Benz 380-SE goes for $33,700 in the UK, $28,300 in France, $26,200 in Austria, $22,500 in Switzerland and $19,200 in Germany.

Even bearing in mind the variables about exchange rates, taxes and specifications, the customer bargains were self-evident.

None of this was new. The general level of pricing was established long ago by the dominant domestic manufacturers. In the UK, because the makers were inefficient, they needed to charge high prices.

In neutral countries like Belgium and Switzerland, where the competition among importers was strong, prices were held back. They also were in countries which had efficient industries, such as Germany.

It was one of the reasons why manufacturers were keen to start exports to the UK, because they knew the rewards could be high. As a result, it was one of the contributing factors in the high level of import penetration in the country — recently running at 60 percent, more lately at 55 percent.

The country is unique in Europe in having extraordinarily high levels of sales to company fleet operators. There are no official figures, but 70 percent is a widely accepted proportion.

Company car operators are able to offset their purchase against tax. Thus, if liquidity is good, paying $12,000 for a car is not a great deal more painful than paying $10,000. It was a state of affairs which exaggerated the differences in prices between the UK and the rest of Europe.

But under Common Market regulations there is a loophole. It is perfectly legal for a UK buyer to buy a right-hand drive car in Brussels — the center of much of this activity — drive it to a channel port, pay all the UK taxes and subsequently re-register it for use in the UK.

A person doing all that, for instance, would end up paying the equivalent of $15,750 for a Rover 3500 sourced from Belgium. The list price for the model at a UK dealer is $20,650.

A Renault 20TX bought in the same manner would cost $11,350 compared with $14,000. A Mercedes-Benz 280 would be $23,200 compared with $28,000.

• Working in favor of such action recently was the rise of sterling against other European currencies in exchange rates.

The recent lifting of exchange controls, making movement of capital around the world possible once more, was another factor in the rise of this traffic, estimated to amount to around 30,000 units annually.

The affair was brought to a head earlier this year when a West German businessman established an office in London and offered to bring in cars for UK customers from Belgium and Germany. It was all perfectly legal and above board.

What was less legitimate was the practice of taking lots of deposits from customers eager to save a few pounds — and promptly doing a bunk with them. The fraud squad is now investigating.

But it did serve to bring the business to public attention, much to the chagrin of UK dealers, official importers and domestic manufacturers. As far as they were concerned, it meant lost business.

They are now lobbying for a tightening of the regulations. One suggestion is that a car bought in, say, Belgium, would have to be used there for six months before being allowed into the UK.

The suggestion upset a group of Brussels dealers, who tried to establish, through lawyers, whether the practice would be against Common Market rules.

No dealer in the Common Market can refuse to take an order for a car from a citizen of a member state. A UK customer could order a car in Cologne rather than from the local dealer in Coventry, pay all the dues, import it legally and still make a saving.

But car makers are anxious to maintain the status quo. The UK is profitable for everyone except the customer, from maker to importer to retailer. It is better to have that order coming through where profits are greatest.

One result is that, all of a sudden, right-hand-drive models ordered on the continent are carrying a premium price over regular left-hand-drive ones.

One UK member of the European Parliament calls moves to tighten regulations as "an unholy alliance of British car manufacturers and distributors."

Lots of Ladas flow from River Volga plant

The six-millionth Lada recently was produced at the Volzhsky Motor Works in Togliatti, reputed to be the largest auto plant in Europe.

The factory — constructed 11 years ago on a greenfield site on the banks of the River Volga 600 miles southeast of Moscow — produces more than 2,500 cars a day. That amounts to one every 20 seconds.

Two-thirds of production goes for sale inside the Soviet Union, and the remainder is exported to 75 countries throughout the world.

Last year's output was reported to be 750,000 vehicles. The average age of the 100,000 workers is put at 26 years. One-third of them are women, all working a 41-hour, five-day week in two shifts.

Lada sedans and wagons are based on the old 124 model designed by Fiat, which was responsible for erecting the Togliatti factory.

Though now an old design, the Lada sells in reasonable quantities in western Europe, thanks mainly to its competitive pricing. It accounts for between half and one percent of new car sales in large national markets like West Germany, France and the UK.

Strada Corp. of the U. S. holds the concession in West Germany and the UK.

The front-wheel-drive replacement, which seems continually to be just around the corner, is now believed to be scheduled for a 1983 launch.

Code-numbered 2108, the hatchback is reputed to have been developed with the aid of Porsche's R&D facility at Weissach. Porsche will not comment, but such an association would bring enormous kudos to a company like Lada that makes technically second-class products.

Recent reports from western component manufacturers suggest that the Soviet Union is gearing up for a major export push using a whole series of new generation front-wheel-drive autos.

If true, their arrival in the mid-1980 will give western manufacturers additional problems maintaining market shares. Cars from the Communist bloc share one thing in common with those of their Japanese counterparts—they are competitively priced, though not for the same reasons.

In addition to vehicles built at Togliatti (ranging in capacity from 1.1 to 1.5 liters), sources say a 1-liter will be made at Zaz in the Ukraine and a 1.6-liter-plus will be made at Azlk, Moscow.

DETROIT

The heartland's pulse starts pumping

By Roger Rowand

A sunny Dayton skyline symbolizes a bright turning point in the industrial fortunes of mid-Ohio and the U. S. automotive industry.

"Frigidaire built its first truck last Tuesday."

That's not the raving of a wild-eyed wacko. Nor is it the muttering of some would-be Charles Kettering who's crossed a refrigerator with a pickup.

Actually, it's a perfectly rational comment by the Honorable Harold L. Johnson, mayor of Moraine, O., a small Midwestern town that sounds like a sick-headache, but is a remedy for what's ailing America's automotive industry.

Mayor Johnson's reference to a Frigidaire truck, facetious as it may sound, is more fact than fancy. He was referring to the production on Aug. 25 of the first small S10 truck turned out by Chevrolet, at the site of what once was a huge Frigidaire facility just southeast of Dayton.

In 1979, White Consolidated Industries agreed to buy the Frigidaire operations, but GM decided to retain the vacated appliance-manufacturing property and put it to automotive use.

One section of the former Frigidaire complex is now a pickup truck assembly plant. Just across the street is a busy engine plant where spanking-new six-cylinder, 6.2-liter diesels are being machined, assembled, tested, crated and shipped for installation in GM vehicles.

Moraine's move out of appliances and into trucks and engines represents more than a product switch by GM. It is a symbol of the rapidly changing worldwide automotive scene.

Robert D. Lund, Chevrolet general manager, put it this way at the 1981 Automotive News World Congress in Detroit: "If there's a symbolic turning point in our battle against foreign competition, it's Moraine in the summer of 1981.

"With a population of 5,001, the Dayton suburb epitomizes our battle against foreign competition, our drive to keep jobs in this country."

In building a case for that observation, Lund traced the history of "the rich and fertile land of Ohio, the very heart of America, that first attracted the pioneers."

In the early part of the century, he pointed out, the area became a technological leader of the industrial revolution. Later it housed the laboratory of the great automotive inventor, Charles Kettering, became the home of National Cash Register and the center of aviation.

During World War II, Lund noted, "we beat the enemy with goods made in the industrial heart of Ohio, and the Ohio Valley — but then some of the plants grew old."

• As Lund tells it, eventually some of the goods made in mid-Ohio could be produced less expensively elsewhere, even on the other side of the globe. Dayton and Moraine, like Detroit, Flint and other parts of the Midwest, suffered from production cutbacks and high unemployment.

"But now we're witnessing a turning point," says Chevrolet's general manager. "As part of GM's $40 billion product and plant investment program, we made an important decision—to continue to use the tools and skills of mid-Ohio and bring out a brand new small truck for Chevrolet, produced in Moraine."

Called the S10, the compact-sized pickup enters the marketplace in November. Notes Lund: "It will provide better value than the imports, not just because of the millions of dollars worth of sophisticated manufacturing and assembly technology we've got, or because it's a superior design, which it is, but because of the values and ethics of the thousands of Chevrolet people who are building it."

Lund describes what's happening in Moraine as "a kind of common purpose — a coming together of labor, management, government and community, all pulling toward a common goal."

He declares: "It's happening throughout the heartland of our industrial Midwest."

That may sound like typical rah-rah bluster by Lund, Detroit's resident automotive cheerleader. Still, the new Chevy pickup seems destined to be one of those rare "right products at the right time."

Chase Econometrics, economic forecasting subsidiary of Chase Manhattan Bank, predicts big things in the market for domestically produced trucks such as the S10 and its GMC Truck and Coach Division running mate, the S15.

That pair will be followed soon after by Chrysler Corp.'s little Rampage. Ford Motor Co.'s entry, the Ranger, goes into production in January and on sale in March.

In November, 1979, Volkswagen of America began building a Rabbit-based pickup, which went on sale in significant numbers early in 1980 as an '80 model.

Chase contends American-made products will capture over 21 percent of the total U. S. pickup market in the '82 model year, whacking the share of imports in half, from 30 to 15 percent.

About 400,000 American units are expected to be sold in the '82 model year and more than 600,000 in model year 1983, thereby adding 12,000 jobs in 1982 and 19,000 jobs in 1983 to U. S. employment rolls.

• "Our forecasts indicate the new small pickups will be the most effective import fighters Detroit has ever developed, as measured by recapture of market share," says William Pochiluk, vice president of automotive services at Chase.

"They will begin to be introduced this fall, when the automotive market in general and the light-truck market in particular will be on the road to recovery. They will be positioned in the small segment of the light truck market. That segment has shown the most rapid growth in the last five years, but has so far been the exclusive domain of overseas manufacturers," Pochiluk says.

The small truck market originally was created by sales drawn from both passenger cars and full-size pickups. Although future movement from full-size pickups will accelerate, further draw from passenger cars is unlikely, it is believed.

"Primary objectives of the new domestic small trucks are to recapture truck sales lost to imports and to provide an insurance policy against future energy disruptions," observes Pochiluk.

"Our analyses indicate the new American small pickups will compete successfully against imported small trucks and will win acceptance based on product design and the distribution and service network.

Heartland

Continued from Page E-2

The Japanese are expected to react with low prices, with domestic manufacturers ultimately to follow suit."

Moraine and the Frigidaire plant made their first big mark in the industrial world with output of the famed DeHavilland bomber-observation plane in World War I. A total of 4,846 of those Liberty-engine-powered aircraft were built and 3,106 of them flew out of Moraine.

Today, Moraine is a healthy, steadily growing little town of about 350 small businesses and 6,000 residents. Mayor Johnson and other leaders had to move mountains of red tape and governmental Catch 22s to raise the $12.5 million Moraine needed to meet its part of a deal with GM.

Moraine's movers and shakers, led by Johnson, crammed into two years clearances, environmental impact statements and departmental approvals that government people say normally would take six to eight years.

GM was granted local [illegible] abatement for 12 years on its thoroughly rebuilt and modernized Moraine property. The return to Moraine and the greater Dayton area should be tremendous.

"We'll be at the front end of technology, at the cutting edge with trucks and diesel engines — not building 1940 small cars. There's pride and excitement here. It's been years since this community had final assembly," gushes C. R. (Chuck) Wiesman, executive vice president and general manager of the Dayton Area Chamber of Commerce.

- Says Mayor Johnson:

"The plant was closed down, inoperative, no action of any kind at all for over a year. Now there's 2 million square feet in the truck assembly plant and 900,000 square feet in the engine plant. Both are partly new construction, with the rest reconstructed. A second floor was added to the assembly plant.

"Our major concession was to agree to build a highway support system to accommodate employe traffic and incoming and outgoing freight traffic, truck and rail.

"That also meant making land available, building bridges, a new exit on Interstate 75 and new roads to it," he says.

"It was estimated that with two full shifts, about four miles of rail cars would be coming or going every day," notes Johnson, who stands for reelection next month.

"A drainage system also was very expensive, a major expense," he says. A lot of work was funded by the Economic Development Administration, the Economic Recovery Administration and Ohio Department of Transportation."

The industrial morsel those agencies were attempting to put on Moraine's platter is a tasty one. At a total cost of $1 billion, it was the largest GM investment for a single project—a new plant or renovation.

It is bringing work for 3,000 employes — 600 of them white collar — who will turn out 800 trucks and 480 engines a day on one shift. Most employes are recalled Frigidaire workers, and most are represented by the International Union of Electrical, Radio and Machine Workers (IUE).

Diesel engines built in Moraine won't go in the small pickups, which have four-cylinder gasoline power, but are shipped to other assembly plants for installation in other GM vehicles.

Moraine, after the tax abatement, expects $1.3 million a year in payroll taxes and $1.1 million in corporate income taxes to flow from the reconstruction.

Manager of the engine plant is Wallace G. Uren, 48, a graduate of Michigan Technological University, Houghton. He served with Chevrolet as a college graduate in training at Bay City, Mich., and worked in St. Louis, at the Chevy central office and in Massena, N.Y., and the Tonawanda casting plant before moving to Dayton in 1980.

The truck assembly plant is managed by Richard E. Acosta, 49, who had been at Chevy operations in Detroit, Tonawanda, Massena and Buffalo. Acosta attended Clarkston College of Technology, Erie County Technical Institute and the University of Michigan.

Crew cab version of Chevy's small truck prepares for '82 introduction.

Switch from appliances to trucks takes training

MORAINE, O. — When Chevrolet dedicates its new engine and assembly plants here Oct. 14, Chevrolet General Manager Robert D. Lund will share ribbon-cutting honors with James A. Rhodes, governor of Ohio.

Rhodes' presence at the event is more than a formality, since the State of Ohio assisted Chevrolet in developing a unique training program for all recalled employes.

"We think this special training is the way to get from the appliance business to the small truck and diesel engine business," says George B. Albrecht, personnel director for the plant complex. "Because of the complete changeover, people are doing very different jobs than when they left, and we wanted to prepare them for the jobs ahead of them."

With both plants now working one full shift, 3,000 employes—about half the number left jobless when Frigidaire stopped production in mid-1979—are back on the payroll. Before ever setting foot on the plant floor, they all report to their respective plant's training center, where they complete a comprehensive training program.

In developing this program, the plants entered into a cooperative arrangement with Ohio's Department of Vocational Education and Department of Economic and Community Development.

Under this arrangement, the state provides the services of a full-time on-site consultant and loans the plants classroom furniture and audio-visual equipment. State assistance also helped defray the costs of preparing training manuals and video tapes.

- Training at both plants consists of a combination of textbook and video tape instruction, "hands-on" demonstrations and training in communications and inter-personal skills. Each plant developed its own curriculum, and each has a different emphasis.

Employes at the assembly plant, for example, complete their training in one 40-hour week, 20 hours of team-building skills training and 20 hours of "how to assemble a truck."

"Since we use the team-building philosophy throughout the plant, we decided to use our training time to emphasize the skills needed to make this management style a success," says Richard E. Acosta, plant manager.

Richard E. Acosta

Wally G. Uren

For the "how to" instruction, employes use training manuals and view video tapes showing various operations at other assembly plants. This classroom instruction is supplemented with instruction in demonstration rooms, where employes try out a particular operation. Each demonstration room is furnished with the necessary truck parts and equipment needed for a particular job, such as trim, chassis or paint.

At the engine plant, the instruction—80 hours of it—concentrates on specific assembly operations supplemented with an orientation about the various plant departments and their responsibilities.

"We decided to emphasize machining and assembly operations, since diesel engines require a lot of precision work," says Wally G. Uren, plant manager. "So our employes study subjects like metrics, tool sharpening, geometric tolerancing and cutter grinding."

As at the assembly plant, textbook and video tape instruction is supplemented with hands-on instruction. Employes assemble and tear down engines to learn about the various components and assembly operations.

At the end of the program, each employe completes a vocational questionnaire, detailing their skills and previous experiences, as well as their preference for work assignment. The questionnaire, employes' performance, and plant needs determine where a person is assigned.

"Instead of a diploma, each employe leaves the training center with a more durable reward — a new job," Albrecht says.

Microwave technology helps build Moraine diesel engine

The new 6.2-liter V-8 diesel engine built in Moraine, O., will be offered in 1982 model Chevrolet light-duty pickups, Suburbans, Blazers and forward-control chassis.

"The new engine — developed by Chevrolet specifically for GM truck use — is designed to deliver the pulling power typically associated with comparable-size gasoline engines and the fuel economy and service life inherent in the diesel concept," says Robert D. Lund, Chevrolet general manager.

"This is a heavy-duty diesel engine," Lund adds. "It will provide our customers with the power and load-hauling capability of Chevrolet's gasoline-powered trucks with the diesel's traditional fuel economy advantage. The engine is ideal for city delivery, stop-and-go work with considerable idle time, extended highway driving and trailering of up to 13,500 pounds."

EPA estimates — in different applications — rate the engine from 18 MPG city to 31 highway.

- The diesel is built at Chevrolet's new Moraine engine plant, where microwave technology is incorporated for the first time in the ignition timing procedure of every diesel engine produced.

The procedure assures precision and consistency of the combustion process and helps the engine meet stringent federal and California emissions regulations, Chevrolet says.

The engine features a Stanadyne mechanical fuel injection system with Bosch pintle-type injector nozzles and a Ricardo-type pre-combustion chamber. Compression ratio is 21.5:1.

Other design features include: Forged steel connecting rods, forged steel camshaft, roller hydraulic valve lifters, dual strand chain camshaft drive, cast iron cylinder heads, nodular iron crankshaft and torsional damper, four-bolt main bearing caps and nodular iron exhaust manifolds.

Seventeen bolts (five per bore) secure the cylinder heads. A fast-action glow plug and a block heater are standard equipment.

Oil and filter changes are required each 5,000 miles for engines in vehicles of less than 8,500 pounds gross vehicle weight, or each 3,000 miles for heavier-duty applications.

The bright red engine with its distinctive barrel-shaped air intake is available in all two and four-wheel-drive half-ton, three-quarter-ton and one-ton pickups; Suburbans; one-ton chassis cabs, and four-wheel-drive Blazers.

Later in the 1982 model year, the engine will be available in step vans, and commercial and motor home chassis.

Economist sees benefits for U. S. auto makers

Janeway touts tax-loss swapping

By Edward Lapham
Financial Editor

DETROIT. — There is even more potential benefit in swapping tax losses than management of loss-ridden U. S. auto makers realizes, economist Eliot Janeway told the Economic Club of Detroit.

Janeway, president of Janeway Publishing and Research Corp., said a provision originally suggested by him and then included in the Economic Recovery Tax Act allows corporations with tax losses to swap them to profitable corporations which can use tax credits.

He said that although Ford, Chrysler and General Motors have lawyers pursuing the matter, they should be more aggressive.

Chrysler, for example, should require profitable customers which acquire their tax loss credits to make fleet purchases at premium costs and suppliers should be required to sell components at a reduced rate as well as delay billing for six months, he said.

"Washington's budget crisis is offering Detroit a business opportunity to renegotiate the auto industry's terms of trade with its more profitable suppliers, customers and bankers."

He predicted Congress will reopen the tax act to reduce tax cuts to reduce a looming deficit. At that time, he said, Congress should add these stiffer requirements to the law.

"We have the 'quid' but not the 'quo'," he told the press.

The general tone of the speech blasted Reaganomics in general, and specifically the ideas and policies of budget director David Stockman.

Janeway called Stockman a "crackpot" and referred to his tax-cut/budget-cut programs as "crazy" and "loony."

The economist also attacked other figures. He blamed the administration of former President Jimmy Carter, whom he called a "nut," for much of Detroit's trouble.

At the press conference, he also blasted former GM chairman Thomas A. Murphy, calling him "Dumbbell Tom," and saying he "rolled over" and went along with Carter's "design of these enclosed motorcycles which were supposed to fight the oil shortage."

Janeway said the U. S. should mobilize its economy. He said that Wall Street had already judged Reganomics a failure and that it is time to make the necessary changes.

"I believe in the emancipation proclamation," he said. "I want to free my president from Stockmanism."

Aguire's Auto Auction opening in California

NORWALK, Calif. — Aquire Corp. has formed Aguire's Auto Auction, which will conduct sales for dealers on Thursdays beginning in mid-October.

Hal Schneider will be manager of the auction. He formerly was assistant manager and vice president of the Los Angeles Dealer Auto Auction. Aguire will continue its sealed bid auction for dealers on Tuesdays.

Makers schedule 1.5 million cars, down 12 pct.

4th-quarter production to trail 1980

By Patricia Hoffman
Staff Writer

There are rough waters ahead for the U. S. auto makers during the final three months of 1981 with four-quarter production forecasts showing a decline of almost 12 percent from the comparable 1980 period.

A drop in output is expected by all the domestic auto manufacturers this quarter. Production is slated at only 1,508,081 units, a drop of 11.87 percent from the 1,711,145 completed in the same period last year.

General Motors has forecasted 975,000 units for the fourth quarter, a drop of 6.66 percent from 1,044,548 cars completed in the comparable 1980 period. Ford Motor expects to build 343,000 cars, down 9.86 percent from 380,531; Chrysler Corp., 125,000, down 36.76 percent from 197,666; Volkswagen of America, 43,616, down 15.55 percent from 51,648; American Motors, 21,200, down 40.94 percent from 35,895, and Checker Motors, 265, down 69.08 percent from 857 completed in the final three months last year.

The auto makers are also expecting a decline for October, slating only 539,629 units. This is 20.06 percent below the 675,001 cars completed in the comparable 1980 month.

Breakdown for the October forecast is: GM, 330,000, down 17.71 percent from 401,018 last year; Ford, 130,000, down 10.03 percent from 144,499; Chrysler, 55,000, down 41.17 percent from 94,356; VWoA, 16,544, down 18.55 percent from 20,311, AMC, 8,000, down 44.48 percent from 14,408, and Checker Motors, 85, down 79.22 percent from 409.

- Year-to-date output last week reached the 5-million point, two week's earlier than in 1980. The domestic auto makers completed their 5-millionth car on Oct. 1. In 1980, the total wasn't reached until Oct. 14.

To date, the makers have assembled 5,041,674 units this year, up 5.28 percent from the 4,788,661 cars completed in the comparable period of 1980.

Last week's production was estimated at 113,615 units, up a fraction from 112,634 the previous week, but down 16 percent from 135,250 in the comparable 1980 week.

Breakdown for the week by company is: GM, 63.36 percent; Ford, 22.21 percent; Chrysler, 11.09 percent; VWoA, 3.31 percent and Checker Motors, 0.03 percent.

AMC's Kenosha assembly point was idle last week (Sept. 28) for inventory control. The plant is slated to resume operations today (Oct. 5).

GM's Framingham, Tarrytown and Oklahoma City facilities all resume production today after being idle for changeover.

Downtime was scheduled last week at GM's Fremont, Leeds and Van Nuys facilities. The plants are slated to remain idle this week.

Saturday overtime was scheduled last week (Oct. 3) at GM's Lansing (full size car) point. The plant had two shifts working overtime.

Chrysler's Belvidere assembly plant resumed operations last week. The facility was idle one week for inventory control.

Chrysler's Newark point returns today. The plant was down last week for inventory adjustments.

Daily overtime was scheduled last week at Ford's Wayne and Metuchen facilities. Both plants worked two-10 hour shifts.

Also at Ford, downtime was scheduled last week at the Kansas City and Chicago facilities.

Truck production increases as Chrysler plants resume

The return of Chrysler's Warren plant last week helped U. S. truck output stay slightly above that of the previous week, despite the scheduled downtime at three Ford and one General Motors assembly points.

Last week's truck assembly was targeted at 29,808 units, a gain of 1.76 percent from the 29,293 trucks in the previous week, but down 26.16 percent from 40,368 in the comparable week last year.

So far this year, the truck manufacturers have assembled 1,281,837 units, up 10.90 percent from 1,155,847 in the comparable period last year.

Three Ford truck facilities were down last week (Sept. 28) for inventory control. They were Kansas City, Norfolk and Twin Cities.

General Motor's Pontiac (truck and coach) point remained idle last week for inventory adjustment. The plant went down Sept. 7.

Chrysler's Warren truck plant returned last week after being idle a week for inventory control.

American Motors' Toledo (Jeep) facility will be idle this week to balance inventories. The point is scheduled to resume operations Oct. 12.

Canadian output for year drops below 1980 total

For the first time in 14 weeks, the year-to-date output for the Canadian auto makers has dropped below that of the comparable 1980 period. The auto manufacturers assembled 627,900 cars through Oct. 3, a decline of 0.55 percent from the 631,392 units completed through Oct. 4, 1980.

The last time the makers were below the 1980 year-to-date output was the week ended June 27.

Auto production last week was targeted at 15,129 units, 14.44 percent above the 13,220 cars completed in the previous week, but a drop of 28.63 percent below the 21,198 cars in the comparable 1980 week.

Truck production last week was estimated at 6,685 units, down 33.86 percent from 10,108 the previous week, and a substantial decline of 47.81 percent from the 12,810 built in the comparable 1980 week.

So far this year, the truck manufacturers have assembled 388,049 units, up a fraction from 386,760 in the comparable period last year.

General Motors' Oshawa (No. Two) car facility remained idle last week for model changeover. The point, which closed Aug. 6, is slated to resume operations Nov. 9.

Ford Motor's St. Thomas car point was also idle last week. It was the fifth consecutive week of downtime for the facility. The plant closed Aug. 28 for changeover and inventory control.

Also at Ford, the Oakville (LTD) assembly point is completing preparations for the addition of a second shift which is to begin Oct. 13. There have been 1,200 workers called back from temporary layoff to operate the additional shift.

Chrysler's Windsor car facility returned last week (Sept. 28) after being idle for inventory adjustments. The point went down Sept. 21.

Ford's Ontario truck facility will remain idle this week (Oct. 5) for inventory control. The plant closed Sept. 28.

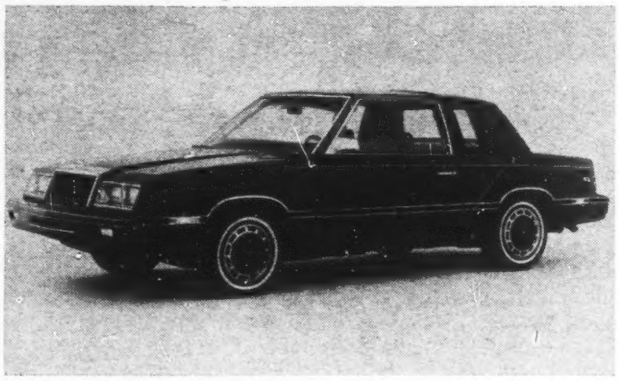
Chrysler's newest



LeBaron and Dodge 400 for 1982

Two all-new Chrysler Corp. midsize cars, the front-drive Chrysler LeBaron, above, and the Dodge 400, go on sale Oct. 29, featuring a long list of normally optional equipment as standard. The new LeBaron is completely different from the larger, heavier, rear-drive predecessor of the same name. Story on Page 38.

GM will seek to roll back union's fringe benefits

By Marjorie Sorge
Labor Editor

(Copyright, 1981, Automotive News)

General Motors is almost certainly going to demand a reduction in certain fringe benefits in next year's contract talks with the UAW.

The cost-cutting program is part of a new game plan for the 1980s outlined recently in an AUTOMOTIVE NEWS interview with Kenneth E. Olthoff, general manager, worldwide employe benefits, GM industrial relations. He said GM wants more benefit bang for its buck and is planning a restructuring of its benefit programs to cut costs.

Kenneth E. Olthoff

However, UAW President Douglas A. Fraser has already gone on record against giving the auto makers special favors in the next round of negotiations. He has said the UAW has no intention of giving the companies back anything it has already won.

GM currently has an annual $4.4 billion benefit bill for all employes, hourly and salaried, not including the cost of time-off with pay, Olthoff said. That's an average of $10,000 per employe, based on the cost of benefits accrued on the number of current workers, he said.

Because of this high cost, GM is demanding cost containments and changes in the benefit plans. Those can include:

1. More co-pays, currently used only in the dental and vision coverage and in medical coverage not paid by the basic health policy. Co-pays would be required only when the insurance is used.

2. Phased-in benefits based on seniority. Currently, only starting wages are phased-in, being lower than the maximum wage for 60 days.

3. Different life and health insurance plans geared to individual needs some with cost-sharing by the workers.

4. In-house Independent Retirement Accounts (IRAs).

5. Changes in the early retirement program, currently 30-and-out.

6. Changes in the way the SUB is funded and the way the money is parceled out.

7. Workers paying the premi-

A million Oldsmobiles predicted for '82

SCOTTSDALE, Ariz.—Oldsmobile expects '82 model-year sales of 1,016,000 cars. That compares with 882,505 in '81, when sales were up 7 percent from the 825,000 of the 1980 model year. In '82, about 200,000 Oldsmobile sales will be diesels, compared with 155,000 in 1981, Robert J. Cook, general manager said.

Honda prices up $390 for '82

GARDENA, Calif. — Honda, the third highest selling import in the U. S., has increased prices an average of $390, or 5.5 percent, on 1982 models. This compares with hikes averaging $499 for Toyota and $424 for Datsun. Honda's lowest-priced model, the Civic 1300 hatchback, is $4,799, up $200

Sadat slaying clouds Egypt's auto outlook

By Al Fleming
Industry Editor

What impact will the assassination of Anwar Sadat have on Egypt's small but growing motor vehicle industry?

Automotive observers around the world are pondering that question following the slaying of the Mideast nation's 62-year-old president in Cairo last Tuesday.

"It's, of course, too early to speculate, but so far there's been nothing that gives us cause for immediate alarm," a spokesperson for American Motors International Operations told AUTOMOTIVE NEWS, as the world was awaiting the funeral Saturday of the controversial political figure.

AMC, smallest of the U.S.-based auto companies, has the largest presence of any American vehicle manufacturer in Egypt.

Said a General Motors Overseas Operations spokesperson, whose company had representatives in Egypt studying potential assembly facilities at the time of Sadat's death: "It's unfortunate, at this time, when he (Sadat) was trying to pull things together, that this had to happen."

GM, according to the spokesperson, had "two or three people" touring Egypt when Sadat's assassination occurred—"product planning and sales" officials.

After news of the incident was reported in the U. S., wives of the GM executives called the company, concerned about their husbands' safety. All was well.

"Reports from our people in Egypt were that everybody was safe and sound, there were no problems whatsoever and, in fact, things were relatively calm," the GM spokesperson said.

Sadat's death comes at a time when Egypt's automotive for-

NEWSPAPER

Friendly rivals come to rescue of flooded Pontiac dealer

FARMINGTON HILLS, Mich.—Pontiac Dealer Bob Sellers is a happy man and that's a pretty good trick when you consider that he recently lost more than $1 million worth of cars in a flood that struck this Detroit suburb.

Sellers' happiness stems from the help and cooperation of his fellow Pontiac dealers, who put him back in business. Quick action by his insurance company helped, too.

The saga began the night of Sept. 30 when torrential rains struck the Detroit area. By the next morning, the storage lot at Bob Sellers Pontiac was under five feet of water and 127 new cars and 36 used cars were ruined.

Completely ruined. They cannot be sold.

The dealership building was not damaged.

The Tri-County Pontiac Dealers Assn., a group of 20 dealers, came to the rescue. Sellers is a member of the organization.

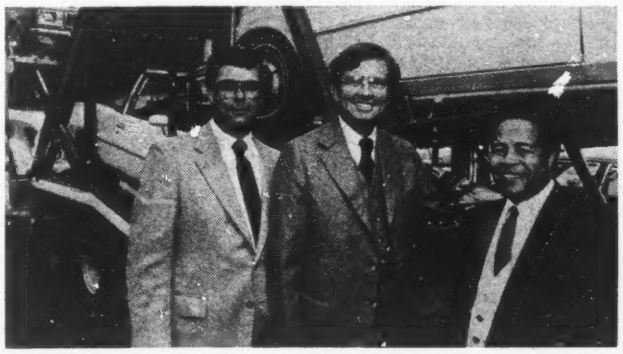
"They volunteered to restock my dealership," Sellers said. "And with the same models and the same mix as the cars I lost, both '81s and '82s."

A cynic might say that this is a good way for those dealers to reduce their inventories, but that's not the case.

Virtually all of the ruined cars were '81 models, and they are very saleable items right now because of the price hikes on '82s. And they can't be replaced. It's going to cost the dealers a good bit of money to give them up.

Also, Sellers pointed out, the other dealers have been floor-planning those cars, which is

Continued on Page 51, Col. 1



A helping hand

The other 19 members of the Detroit-area Tri-County Pontiac Dealers Assn. helped Bob Sellers restock his dealership after a flood destroyed 127 new cars at the suburban Farmington Hills outlet. At the initial shipment are, from left, Jim Fresard, Jim Fresard Pontiac, Royal Oak, president of the group; Sellers, and Porterfield Wilson, Porterfield Wilson Pontiac-GMC Truck, Detroit.

$50 million answer to competition

Ford offers rebates on small cars, Courier

By Joseph Bohn
Marketing Editor

Ford Motor Co.'s response to a soft car market—and competitive price freeze/interest subvention programs—is a new round of consumer rebates on its small-car lines, a program costed out at over $50 million.

Ford put its rebates on small cars because that's "where the greatest total potential is," said Lou Lataif, Ford Division general manager. He noted that the small-car segment as a whole was as strong in September as in the third quarter, which itself proved stronger for small cars than the second quarter.

Of course, Ford also reacted directly in response to GM's emphasis of its X-cars and J-cars in its interest subvention program.

Ford is using the term "up-front-money" in publicity and advertising to describe the latest program, which runs from Oct. 8 to Nov. 22 and covers '81 and '82 Mustang/Capri, EXP/LN7 and Escort/Lynx.

Terms of payments are as follows: $700 for EXP and LN7; $600 for Mustang and Capri; $500 for Escort GLX, SS and GT series; $500 for Lynx GS, LS and RS series; $400 for base Escort and L and GL series and Lynx base, L and GL series.

- Ford also announced a $500 rebate on '80 and '81 Couriers for customers who buy or lease during the Oct. 2-Dec. 2 period. There is no dealer participation in terms of shared costs in the Courier rebate.

However, in the car rebates, dealers pay roughly one-third. For example, dealers pay $125 of the $400, $175 of the $500, $225 of the $600 and $275 of the $700.

Customers receive the money on cars ordered—not necessarily delivered — during the contest period.

Ford Division and Lincoln-Mercury are running a joint advertising effort in which cars from both divisions will show up in the same ads.

Theme is "Up Front Money," with the subhead, "A better way to beat the high cost of financing."

Along with network TV and network radio, newspaper will run in the top 50 small-car markets, with three insertions. The first two-page spread ran Oct. 8 in evening editions and Oct. 9 in morning editions.

FDAFs and LMDAs are expected to supplement the campaign, along with individual dealers, with J. Walter Thompson and Young & Rubicam supplying separate TV commercials and advertising kits for dealers.

They're putting on a show in Dallas

Organizing the first Dallas Auto Show are show committee members, from left, Ralph Gaden, show Chairman Lee Maas and Tom Stephens. The March 17-21 show is sponsored by the New Car Dealers Assn. of Metropolitan Dallas. Dealers representing 26 makes of cars will exhibit in the 87,000-square-foot auto display area at Market Hall.

Savings put as high as $30 million

EPA slashes testing requirements

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — Somewhat later than promised but still being accepted gratefully by the auto industry, the EPA has issued a interim final rule that should substantially reduce the cost and complexity of EPA's program to insure that new cars and trucks meet tailpipe emissions standards.

Effective immediately, the deregulation package should result in significant reductions in emissions testing and reporting by the auto makers, saving $5 to $30 million annually "without a significant impact on air quality," the EPA said.

The EPA certification programs had been attacked by the auto industry as being overly complicated, duplicative and costly, and had been targets by the industry as a major area in need of deregulation.

Work at simplifying the procedures had begun under the Carter Administration with a program known as Abbreviated Certification Review. While this allowed manufacturers to take certain certification actions without prior EPA approval, it involved numerous vehicles and a substantial number of work hours.

EPA's new requirements will substantially lessen the number of vehicles involved in the certification program and reduce the number of work hours by as much as 35,000 per year, it said.

Specifically the new requirements call for a broadened definition of engine family so that manufacturers can add vehicles to a certified engine family and implement running changes without prior EPA approval.

Under the old system, the makers needed approval from the EPA before instituting a running change, a process that frequently delayed the introduction of new models.

EPA will retain the right to specify testing for any change, and the companies will be required to recall all vehicles not in compliance because of running changes.

This amendment should result in better production planning, translating into reduced cost, the EPA said.

There also will be a redefinition of "zero miles" from "no more than 10 miles or one hour of engine operation," to "no more than 100 miles and 3 hours of engine operation." Emissions at "zero miles" — e.g., the base emission levels from production vehicles — in combination with deterioration factors, determine whether vehicles are in compliance with emission standards.

Restricting the mileage on certification vehicles supposedly representative of the production vehicle has been viewed by EPA as being critical to making sure production vehicles do indeed meet the emission standards. But this limitation presents problems to the makers, which must get the vehicle to EPA's laboratory. Trailering was frequently the solution.

The less restrictive requirements should give the makers more flexibility to move their test vehicles between their facilities. It also is expected to ease slightly the difficulty of meeting the emission standards because the makers will now be allowed to certify a more broken-in vehicle and will be allowed to test it more than once to establish a zero-mile base emissions level.

Fuel specifications will be changed to be representative of the average fuel available. Previously, EPA had specified the fuel so that manufacturers did not attempt to bias their emission test data by using special fuels.

- The requirement that vehicles be tested with optional equipment will be dropped. Manufacturers will be given the option of determining their effects by way of an engineering evaluation or test data.

Previously, EPA had required that any option that was to be installed on more than 33 percent of any engine family was to be tested on the vehicle to ensure that the test vehicle represented production vehicles as accurately as possible.

EPA said it will still add the weight of the options for fuel-economy test purposes. It still intends to figure in a 10-percent increase in road-load horsepower for air conditioning.

EPA will eliminate the re-

686,413 deliveries up 2.3 percent from a year earlier

September new-car sales up a bit

By Jenny L. King
Staff Writer

New-car sales in September enjoyed a modest increase from year-ago levels, due largely to the attractive interest rates and price breaks offered by the domestic auto makers and due perhaps to the arrival of several of the 1982 domestic models.

Import sales were off. Inventories were very low, according to the companies, and their new models still are waiting in the wings. Nevertheless, imports accounted for a substantial segment of the total September market: 24.46 percent. Datsun moved into first place for the month, ahead of Toyota.

Tables on Page 54

Combined sales of new domestic and imported cars totaled 686,413, up 2.30 percent from 671,005 in September of 1980. Domestic sales of 518,522 were up 6.75 percent from 485,742, while imports reported sales of 167,891, down 9.38 percent from 185,263 a year earlier.

Domestic year-to-date sales through Sept. 30 pushed past 1980 levels for the first time this year. Sales at the end of nine months totaled 4,925,883, up 0.25 percent from 4,913,701 last year. Import sales through September numbered 1,850,776, down 1.02 percent from 1,869,801. Combined sales reached 6,776,659, down 0.10 percent from 6,783,502.

Four of the five U. S. makers moved ahead of their year-ago September sales totals, while American Motors stayed behind. Ford Motor Co. enjoyed the greatest growth, its sales up 24.15 percent, to 117,372 from 94,540 in 1980. General Motors reported sales of 326,089 new cars, up 2.72 percent from 317,450.

September marked the 12th consecutive month of increased new-car sales for Chrysler Corp. Chrysler was up 3.59 percent, to

Sales drop 2 pct. in '81 model year

The curtain rang down on the 1981 model year Sept. 30 with the domestic industry reporting a 3.01-percent decline from 1980 while the imports were up 0.02 percent.

U. S. auto makers retailed 6,590,451 new cars between Oct. 1, 1980, and the end of September this year, down from 6,794,775 in the preceding 12 months. Import sales for the period reached 2,379,714, up slightly from 2,379,193.

For domestics and imports combined, the total was 8,970,165, down 2.22 percent from 9,173,968 in the 1980 model year.

Chrysler Corp. was the only U. S. auto maker to top the preceding model year's sales. Chrysler was up 17.79 percent, to 764,535 from 649,043. General Motors dropped 4.78 percent, to 4,032,727 from 4,235,217.

Ford Motor Co. was off 4.42 percent, to 1,487,961 from 1,556,771. American Motors ended the 1981 model year 11.19 percent away from its 1980 level. AMC sold 145,206 units in the 1981 season, with 163,502 a year earlier.

Volkswagen of America's sales numbered 160,022, down 15.89 percent from 190,242.

Chrysler gained two percentage points in its share of the domestic market during the 1981 model year, climbing to 11.60 percent from 9.55 percent. GM earned 61.19 percent, down from 62.33 percent. Ford dipped to 22.58 percent from 22.91 percent. AMC earned 2.20 percent, down from 2.41 percent, and VWoA stood at 2.43 percent, down from 2.80 percent.

On a percentage basis, Plymouth was the most successful make during the 1981 model year, its sales soaring 46.81 percent, to 332,169 from 226,253. Dodge was up 23.37 percent, Buick was up 8.01 percent, Oldsmobile was up 6.90 percent and Mercury was up 5.67 percent.

Chrysler took the heaviest loss, its sales were down 34.52 percent. Lincoln was off 25.02 percent during the 1981 model year, VWoA was down 15.89 percent, Chevrolet was down 14.50 percent, AMC was off 11.19 percent, Ford was down 5.88 percent, Pontiac was down 5.86 percent and Cadillac was off 5.26 percent.

JENNY L. KING

VWoA to move most New Jersey work to Detroit

ENGLEWOOD CLIFFS, N. J. —Volkswagen of America announced last week it would relocate most of its operations here to Detroit, where VWoA has its headquarters.

The move is expected to take two to six years, and a VWoA spokesman said most of the 500 employes at the 17-acre facility here would be moved.

The spokesman said there is a great deal of duplication between the offices here and in Detroit. The move would consolidate those staffs. VWoA's 90,000-square foot building here is not for sale at this time. Operations here include advertising, marketing, service parts and banking.

Savings put as high as $30 million

EPA slashes testing requirements

Continued from Page 3

quirement that manufacturers tell it of the existence of all test vehicles with zero miles. Instead, EPA will require only that it be notified when the test vehicle generates data intended for use in the certification process.

EPA said this will relieve the manufacturers of some reporting requirements but admits it is at a cost to the agency. Without the knowledge of what test vehicles exist, there is a reduction in data on which to evaluate a maker's product, the EPA said. Marginal vehicles might well get by because of vehicle-to-vehicle or test-to-test variability, it admitted.

- EPA will allow any manufacturer, regardless of size, to use assigned emissions deterioration factors (DF) for low-sales-volume engine families, with the assigned DF applying only to entire engine families and limited to a combined total of 10,000 units per manufacturer for each model year.

Providing assigned DF's to all makers is expected to result in a wider variety of engines from the large domestic makers—a situation EPA expects will enhance their competitive position.

The agency estimated that if all makers take full advantage of this change, the increase in the number of vehicles and/or engines certified using the less-accurate assigned deterioration factors would be less than 250,000, or approximately 2 percent of total sales.

EPA will also ease its durability testing requirements to allow for excursions beyond the emission standards during testing, as long as the average emissions remain below the standard.

This change is expected to result in the makers having to run fewer durability vehicles.

Along this same line, makers will be given greater flexibility in when to test for emissions during durability runs and will be given permission to modify maintenance schedules.

Previously, EPA tightly regulated when emissions were tested during durability runs and permitted no changes in maintenance schedules once a durability test began. This was done to prevent manipulating the vehicle to get a favorable deterioration factor or to keep it from failing the test.

EPA said today's vehicles are a different breed, requiring less maintenance. The increased flexibility in the durability testing scheme is therefore in order, it said.

"The effect of this change is to allow the manufacturer to 'fine tune' its maintenance schedule without risking the disqualification of an expensive durability-data vehicle," the EPA said.

EPA said it will also allow manufacturers to group light-duty vehicles and light-duty truck designs into engine family groups for durability testing purposes on the grounds that the emission control systems are usually similar enough to allow carry-across of the emission deterioration data from one application to another.

- When choosing engine families for emissions testing purposes, EPA typically makes one vehicle selection based on highest projected sales and two or three selections based on expected "worst case" emissions.

In the future this will not be the case; instead, the agency will allow the manufacturer to choose and test a single vehicle for each engine family and satisfy any additional testing requirements for that engine family by reconfiguring and retesting that vehicle as long as only a single engine/emission control system combination is involved.

EPA said it will also lift its requirement that emission-data vehicles be tested after accumulating 4,000 miles and instead allow the makers to determine the appropriate mileage. However, for fuel-economy testing purposes, it will factor to compensate for any mileage beyond 6,200 miles. The reason is that as cars add mileage, their fuel economy generally improves.

The EPA is also considering whether to use additive rather than multiplicative exhaust emission deterioration factors, but because there are benefits and drawbacks for both approaches, it wants to hear comments before proceeding.

The multiplicative system is now in use by the agency.

EPA said that following the implementation of these changes and some other minor ones, along with stabilization of the emission standards, the total cost to the auto industry of the certification program will be approximately $50 million.

New-car sales gain slightly in September

Continued from Page 3

48,384 from 46,708 in 1980. Volkswagen of America climbed 6.69 percent, to 14,381 from 13,479, while AMC was down 9.35 percent, to 12,296 from 13,565.

GM earned 62,89 percent of the domestic market for the month, down from 65.35 percent last year. Ford earned 22.64 percent, up from 19.46 percent. Chrysler slipped to 9.33 percent from 9.62 percent. AMC stood at 2.37 percent compared with 2.79 percent a year earlier, and VWoA cornered 2.77 percent, down from 2.78 percent.

Ten of the 13 U. S. makes reporting sales in September, 1980, were on the upswing this year. Mercury was strongest, up 36.70 percent. Cadillac was up 31.70 percent, Plymouth was up 24.51 percent, Lincoln was up 22.43 percent and Ford was up 20.29 percent. Buick climbed 17.27 percent, Dodge was up 16.03 percent, Oldsmobile was up 16.03 percent, VWoA was up 6.69 percent and Pontiac was up 0.55 percent.

Chrysler plunged 59.30 percent, Chevrolet was off 11.88 percent and AMC was down 9.35 percent.

- With nearly exhausted stock levels, the imports continued to sell well in spite of the domestics' incentives and new models.

For the final 10 days of September, domestic sales were up 11.33 percent, to 228,850 from 205,561 in 1980. On a daily-rate basis they were down 1.04 percent, the nine days this year averaging 25,428 compared with 25,695 for eight a year ago.

NEW DATSUN "200 SX" CONVERTIBLES

"Newest and Fastest Selling Roadster"

American Custom Coachworks, Ltd. builds these sporty convertibles for Datsun Dealers. They have proven to be a successful and profitable answer to the Mercedes SL Roadster—the finest quality convertible for 1981 summer sales. This showroom traffic builder is superbly engineered and styled. Base units can be drop shipped to American Custom Coachworks, Ltd. plants or there are some open factory (pool cars) presently in build that are available.

Registrations for Oklahoma not available.

First year-to-year decline since January

Month's import registrations dip

By Richard A. Wright
Assistant Managing Editor

Registrations of new imported cars in July dropped from a year ago for the first month since January, according to figures compiled by R. L. Polk & Co.

July import registrations totaled 206,653, down 4.18 percent from 215,677 a year earlier. Record for the month is 219,717, set in 1979.

Imports took 29.95 percent of total U. S. registrations, compared with 29.77 percent the preceding month and 30.12 percent in July last year.

Import registrations for the first seven months of 1981 were 1,480,824, which was still running 0.65 percent ahead of last year's 1,471,288.

Imports accounted for 29.15 percent of total U. S. registrations in the first seven months, compared with 28.47 percent last year.

- Of the top 10 imports in July, Honda posted the biggest gain in market share compared with a year earlier, as it took 15.48 percent of import registrations, up 1.54 percentage points.

Also increasing their shares were Volvo, up 0.85 of a point to 3.00 percent; Subaru, up 0.75 of a point to 5.53 percent; Mazda, up 0.66 of a point to 6.85 percent; Toyota, up 0.54 of a point to 24.77 percent, and Mercedes-Benz, up 0.47 of a point to 2.52 percent.

The gains were at the expense of Volkswagen, which saw its share slip 2.15 points to 9.04 percent, and Datsun, which suffered a 2.07-point loss to 18.74 percent of import registrations.

The top 10 imports accounted for 89.46 percent of the July import total, compared with 89.13 percent a year earlier. In the first seven months, the top 10 accounted for 88.59 percent, compared with 88.97 percent last year.

Japanese nameplates accounted for 75.29 percent of July import registrations, up from 73.83 percent a year earlier.

Registrations by country of origin in July were:

	July, 1981	July, 1980
Japan	155,599	159,244
West Germany	34,761	40,874
Sweden	7,161	5,884
Italy	3,901	4,142
France	3,275	2,927
United Kingdom	1,956	3,596

Registrations by country of origin for the first seven months were:

	7 mos., 1981	7 mos., 1980
Japan	1,114,513	1,103,675
West Germany	257,928	268,181
Sweden	46,077	36,319
France	26,315	20,670
Italy	23,552	27,190
UK	12,439	15,253

Registrations of imported trucks in July totaled 39,795, down 11.28 percent from 44,854 a year earlier. Registrations of imported trucks in July were:

	July, 1981	July, 1980
Toyota	11,724	11,606
Datsun	9,266	9,469
Ford Courier	4,385	5,995
Chevrolet LUV	4,335	6,938
Others	10,085	10,846
TOTAL	39,795	44,854

The truck import total for the first seven months of 1981 was 283,370, down 9.34 percent from 312,571 last year. Registrations of imported trucks in the first seven months were:

	7 mos., 1981	7 mos., 1980
Toyota	71,169	80,731
Datsun	64,285	64,361
Chevrolet LUV	41,904	51,346
Ford Courier	38,241	44,875
Others	67,771	71,258
TOTAL	238,370	312,571

A-bomb inventor tries hand at talking computer for car

NORWALK, Conn. — John Aristotle Phillips, the Princeton undergraduate who designed a beachball-size atomic bomb several years ago, has entered the auto business with a computer with verbal warnings of car troubles.

Phillips, now 25, and his brother, Dean, a 23-year-old MIT graduate, have formed Aristotle, Inc., builder of the $200 aftermarket computer called Copilot.

The computer monitors 10 systems and warns the driver of low fuel, possible brake failure, engaged parking brake, doors that are ajar, headlights that are left on, low oil pressure, overheated engine, low battery voltage, unfastened seat belts, keys left in the ignition and, for diesels, engine that has not been properly warmed.

If the radio is on, the computer automatically lowers the volume, delivers the message in a female's voice, and returns the volume to its prior level, Phillips said. The warning voice also works when the radio is off.

The company said the paperback-book-sized computer is safe and easy to install under the dashboard. It is adaptable to any car, van or truck and weighs under one pound, the company said.

The company said the computer uses a chip developed by National Semiconductor Corp. and is assembled here at STAR, Inc., an association of handicapped workers.

In support of private enterprise

Robert P. Mallon, second from right, chairman of the board of trustees of the National Automobile Dealers Charitable Foundation (NADCF) presents a check for $20,000 to Dr. Michael A. McDowell, president, Joint Council on Economic Education, a group which provides materials and instructs teachers to help promote the private enterprise system among students. Also present were Charles J. Whittey, left, and Kenneth C. Kent, right, both NADCF trustees.

3/36 warranties announced for all models

Mercedes adds turbo diesel models

RYE, N. Y. — Mercedes-Benz of North America has added a three-year, 36,000-mile warranty for its 1982 models.

At the model introductions here, company executives said the warranty is an extension of the former 24-month, 24,000-mile warranty, and covers the entire car except tires.

For 1982 the company will offer two new turbocharged diesels, the 300-D sedan and the 300-CD coupe, as well as a new coupe, the 380SEC, which is a V-8, 3.8-liter model replacing the 330-SLC.

But there have been no major model changes for '82, and the company will continue to offer eight models in the U. S.

Walter Bodack, president of MBNA, stressed the new warranty is not a reaction to any forces.

"We believe this increased warranty coverage, coming when our sales are doing well, demonstrates the faith we have in our automobiles and will add to their total value from the customer's standpoint," he said.

MBNA said its pricing level will remain unchanged from '81, and Bodack said the company hopes to be able to maintain its pricing level throughout the '82 model year.

Hans Jordan, vice president of marketing, noted that the 1982 model year could be considered an end of a phase for the company, as well as the end of parallel model development.

This means the end to offering the same car with diesel and gasoline options.

The company offers five diesels and three gasoline-powered cars for '82.

Jordan noted that during the early 1970s, half the company's sales were V-8 models. Today the company sells nearly 80 percent diesels.

The energy crisis and U. S. CAFE standards prompted a massive development effort on the part of the parent company to eliminate the drawbacks of the diesel. It has led to the introduction of the turbo diesel.

According to Jordan, the company is aiming for 60,000 sales in 1982. Sales for 1981 were projected at 58,000, and 45,000 will be diesels.

NBNA had less than a month's supply of cars at all levels, when the new models went on sale Oct. 5, Jordan said.

The exchange rate was credited for the price restraint. Jordan said it has enabled the company to keep prices constant for the first time in years.

Jordan said the turbo diesels contributed to the anticipated 1982 fleet average of 26.1 MPG.

Prices for the models on the East Coast range from $20,989 for the 240-D to $49,827 for the 380-SEC. The 300-D turbo diesel sedan is priced at $28,483, and the 300-CD turbo diesel coupe at $31,541.

Special day in San Jose

California Gov. Jerry Brown and Ford Motor President Donald E. Petersen drove the first 1982 Ford Escort off the line at the company's San Jose assembly plant recently before 2,000 employes, dealers and guests. The event marked the beginning of California's production of a planned 100,000 Escort, Lynx, EXP and LN7 models during the 1982 model year.

EPA slashes testing requirements

Continued from Page 3

quirement that manufacturers tell it of the existence of all test vehicles with zero miles. Instead, EPA will require only that it be notified when the test vehicle generates data intended for use in the certification process.

EPA said this will relieve the manufacturers of some reporting requirements but admits it is at a cost to the agency. Without the knowledge of what test vehicles exist, there is a reduction in data on which to evaluate a maker's product, the EPA said. Marginal vehicles might well get by because of vehicle-to-vehicle or test-to-test variability, it admitted.

- EPA will allow any manufacturer, regardless of size, to use assigned emissions deterioration factors (DF) for low-sales-volume engine families, with the assigned DF applying only to entire engine families and limited to a combined total of 10,000 units per manufacturer for each model year.

Providing assigned DF's to all makers is expected to result in a wider variety of engines from the large domestic makers—a situation EPA expects will enhance their competitive position.

The agency estimated that if all makers take full advantage of this change, the increase in the number of vehicles and/or engines certified using the less-accurate assigned deterioration factors would be less than 250,000, or approximately 2 percent of total sales.

EPA will also ease its durability testing requirements to allow for excursions beyond the emission standards during testing, as long as the average emissions remain below the standard.

This change is expected to result in the makers having to run fewer durability vehicles.

Along this same line, makers will be given greater flexibility in when to test for emissions during durability runs and will be given permission to modify maintenance schedules.

Previously, EPA tightly regulated when emissions were tested during durability runs and permitted no changes in maintenance schedules once a durability test began. This was done to prevent manipulating the vehicle to get a favorable deterioration factor or to keep it from failing the test.

EPA said today's vehicles are a different breed, requiring less maintenance. The increased flexibility in the durability testing scheme is therefore in order, it said.

"The effect of this change is to allow the manufacturer to 'fine tune' its maintenance schedule without risking the disqualification of an expensive durability-data vehicle," the EPA said.

EPA said it will also allow manufacturers to group light-duty vehicles and light-duty truck designs into engine family groups for durability testing purposes on the grounds that the emission control systems are usually similar enough to allow carry-across of the emission deterioration data from one application to another.

- When choosing engine families for emissions testing purposes, EPA typically makes one vehicle selection based on highest projected sales and two or three selections based on expected "worst case" emissions.

In the future this will not be the case; instead, the agency will allow the manufacturer to choose and test a single vehicle for each engine family and satisfy any additional testing requirements for that engine family by reconfiguring and retesting that vehicle as long as only a single engine/emission control system combination is involved.

EPA said it will also lift its requirement that emission-data vehicles be tested after accumulating 4,000 miles and instead allow the makers to determine the appropriate mileage. However, for fuel-economy testing purposes, it will factor to compensate for any mileage beyond 6,200 miles. The reason is that as cars add mileage, their fuel economy generally improves.

The EPA is also considering whether to use additive rather than multiplicative exhaust emission deterioration factors, but because there are benefits and drawbacks for both approaches, it wants to hear comments before proceeding.

The multiplicative system is now in use by the agency.

EPA said that following the implementation of these changes and some other minor ones, along with stabilization of the emission standards, the total cost to the auto industry of the certification program will be approximately $50 million.

New-car sales gain slightly in September

Continued from Page 3

48,384 from 46,708 in 1980. Volkswagen of America climbed 6.69 percent, to 14,381 from 13,479, while AMC was down 9.35 percent, to 12,296 from 13,565.

GM earned 62,89 percent of the domestic market for the month, down from 65.35 percent last year. Ford earned 22.64 percent, up from 19.46 percent. Chrysler slipped to 9.33 percent from 9.62 percent. AMC stood at 2.37 percent compared with 2.79 percent a year earlier, and VWoA cornered 2.77 percent, down from 2.78 percent.

Ten of the 13 U. S. makes reporting sales in September, 1980, were on the upswing this year. Mercury was strongest, up 36.70 percent. Cadillac was up 31.70 percent, Plymouth was up 24.51 percent, Lincoln was up 22.43 percent and Ford was up 20.29 percent. Buick climbed 17.27 percent, Dodge was up 16.03 percent, Oldsmobile was up 16.03 percent, VWoA was up 6.69 percent and Pontiac was up 0.55 percent.

Chrysler plunged 59.30 percent, Chevrolet was off 11.88 percent and AMC was down 9.35 percent.

- With nearly exhausted stock levels, the imports continued to sell well in spite of the domestics' incentives and new models.

For the final 10 days of September, domestic sales were up 11.33 percent, to 228,850 from 205,561 in 1980. On a daily-rate basis they were down 1.04 percent, the nine days this year averaging 25,428 compared with 25,695 for eight a year ago.

Domestic-car total was 452,257

September output lowest since 1961

By Patricia Hoffman
Staff Writer

Domestic auto production in September was the lowest for that month in 20 years, with output marred by late and extended model-changeover schedules.

Despite a sluggish September, however, third-quarter production was 7.99 percent ahead of the comparable 1980 period, and the nine-month total showed a 5.58 percent gain over the comparable period last year.

The makers finished 452,257 units in September, a drop of 15.38 percent from the 534,480 cars completed in the comparable 1980 month, and the lowest for that month since 1961 when only 355,202 units were built because of a strike against General Motors.

Three of the auto makers showed improvement in September over last year, but the other three, including GM, suffered substantial declines.

GM assembled 250,999 cars in September, down 26.51 percent from 341,553 in the comparable 1980 month. Also down were American Motors, with an output of 10,252, off 30.48 percent from 14,746, and Checker Motors, down 7.36 percent to 340 from 367.

Ford Motor showed a 5.58 percent gain last month, to 55,540 from 52,903 last year, and Volkswagen of America which had 6,114 units, a substantial gain from 2,717 in 1980.

- Third-quarter output for the makers was 1,365,263 units, up 7.99 percent from the 1,264,276 completed in the comparable 1980 period, and the total for the first three quarters in 1981 was 4,968,136 units, up 5.58 percent above 4,705,704 completed during nine months of assembly last year.

Breakdown for September by company was: GM, 55.49 percent; Ford, 28.53 percent; Chrysler, 12.28 percent; AMC, 2.27 percent; VWoA, 1.35 and Checker Motors, 0.08 percent.

Last week's auto output was targeted at 115,669 units, a gain of 7.56 percent above 107,538 in the previous week, but down 19.15 percent from 143,067 in the comparable week last year.

Year-to-date output for the makers is 5,151,266, up 4.46 percent from the 4,931,243 cars completed in the comparable 1980 period.

Saturday overtime was scheduled last week at three GM assembly points. They were: Arlington, Lansing and Flint.

Chrysler's Newark and AMC's Kenosha points resumed operations last week (Oct. 5) after being idle one week for inventory control.

Ford's Kansas City and Dearborn facilities were idle last week for inventory adjustments.

Checker's Kalamazoo assembly point has slated downtime beginning Nov. 18 until sometime in January for model changeover.

Saab for Shelton

BURNSIDE, Ore. — Monte Shelton's Motor Co. here has been awarded a Saab franchise.

Sept. truck outlook slides but 3rd quarter is up

U. S. truck production in September was the lowest for the month in 14 years. But a gain in the July and August totals over the comparable 1980 months put third-quarter output above that of last year's period.

September output for the truck manufacturers was 123,622 units, a decline of 4.95 percent from 130,060 in the comparable 1980 month. The total was the lowest for that month since 106,937 in 1967.

The third-quarter total was 336,933 units, up 13.11 percent from the 297,877 trucks completed in the third quarter of 1980.

The domestic truck makers estimated production last week at 31,210 units, a gain of 17.60 percent above the 26,540 trucks in the previous week, but down 24.46 percent from 41,316 in the comparable week last year.

Year-to-date, the makers have assembled 1,309,779 trucks, up 9.43 percent from 1,196,955 in the same period last year.

American Motors' Toledo (Jeep) facility resumes operations today (Oct. 12) after being idle one week for inventory control.

Downtime was scheduled last week at Ford Motor's Norfolk, San Jose, St. Paul and Kansas City truck points. The facilities were idle for inventory adjustments.

Canadian output off for month, but tops '80 quarter

Canadian auto and truck production in September was substantially below that of the comparable 1980 month. But third-quarter totals surpassed those of last year.

In September, the auto makers completed 58,276 units, a drop of 21.72 percent from the 74,445 cars in the comparable 1980 month. Output was the lowest for the month since 1967 when 58,135 cars were assembled.

For third quarter, the auto manufacturers built 167,450 units, 2.33 percent above the 163,643 in the same period last year.

Truck production in September also declined, dropping 26 percent from the 49,336 trucks in the comparable 1980 month to 36,508, the lowest for the month since 32,909 in 1972.

For third quarter, the truck manufacturers completed 103,460 units, up 5.91 percent from 97,689 in the same period last year.

Last week's auto output was estimated at 12,133 units, down 13.47 percent from 14,021 the previous week, and a drop of 25.06 percent below the 16,190 in the comparable week last year.

Year-to-date, the auto makers have completed 638,925 units, down 1.37 percent from 647,823 in the comparable 1980 period.

Truck production last week was targeted at 8,640, a 31.49 percent increase over the 6,571 units in the previous week, but a drop of 32.21 percent from 12,745 in the comparable 1980 week.

Year-to-date output for the truck makers slid below that of the 1980 period for the first time since the period ended June 6.

The makers have completed 396,575 trucks so far this year, 1.03 percent less than the 400,710 trucks in the comparable period last year.

Three truck assembly points resumed operations last week (Oct. 5) after inventory-control closings. They were Chrysler Windsor, Ford Oakville, and International Harvester. Each was idle one week.

General Motors' Oshawa (No. Two) and Ford's Oakville car points will remain idle this week for changeover. The GM Oshawa plant, which closed Aug. 6, is slated to remain down until Nov. 9.

Ford's St. Thomas facility, which closed Aug. 31, is slated to return Nov. 10.

American Motors' Brampton car point will begin second-shift operations Oct. 19, and second-shift operations will begin Oct. 13 at Ford's Oakville car facility.

Downtime was scheduled last week at Ford's Ontario truck plant. It is slated to remain idle until Oct. 19 for inventory adjustments.

An Austrian dream

Scorpio—for $75,000

Heinz M. Riemer, of Gattendorf, Austria, is offering the Scorpio, a high-performance sports car with a fiberglass body and gull-wing doors. It is powered by a Chevrolet V-8 or other American engines. It's not for the bargain hunter—the price is about $75,000.

Lackluster new-car intros hike inventory to 69 days

By Richard A. Wright
Assistant Managing Editor

September was marked by a new-car introduction period that stirred little excitement among dealers or the public and no sales surge. One result: Domestic new-car inventories climbed during the month to 69 days, up from 64 a month earlier.

Another result: More rebates.

The domestic new-car inventory totaled 1,426,922 on Oct. 1, which was actually down from 1,485,692 on Sept. 1. But because of the lower sales rate in the past month, the stockpile grew in terms of days supply.

A year ago, the industry had 1,373,383 new cars in inventory, which was a 71-day supply, heaviest ever for an Oct. 1. So the situation has improved a bit in the past year.

A new sales pattern seems to be emerging, however, which could cause some changes in the way cars are marketed. The importance of new-model announcements has been declining in recent years and this year new-model time seemed dead, or at least seriously wounded.

Sales were better in August, when the industry was awash with various rebate schemes, and they may pick up in October as rebates return. It appears that price, not romance or hoopla, is firmly in the saddle.

Roughly half of the Oct. 1 domestic stockpile was made up of carryover '81 models.

Only American Motors and Volkswagen of America opened October with lighter supplies than a month earlier, although General Motors cut its unit count despite its higher days-supply figure. AMC had a 60-day supply Oct. 1, down from 79½ days, and VWoA had a 61-day stockpile, down from 76 days.

GM opened October with a 62-day supply, up from 60 days on Sept. 1, despite the fact that

Dealers must buy quota to qualify for retail payments

Chrysler launches $300-$1,000 push-pull rebate program

By Joseph Bohn
Marketing Editor

Chrysler Corp. uncorked a controversial push-pull type rebate last week, designed to drum up wholesale orders and spur retail activity. Payments to customers range from $300 to $1,000.

Meanwhile, Toyota and Datsun continued hammering at soft truck sales with new cash incentives of their own.

Under the Chrysler program, dealers are compelled to step up to their full allocation of fourth-quarter units to participate in the retail rebate.

They are required to submit 70 percent of their domestic vehicle and 30 percent of their import allocation orders by Oct. 23; 100 percent of their domestic and 70 percent of their import orders by Nov. 20 and 100 percent of the import orders by Dec. 11 to participate.

Dealers were waiting to see what their assigned purchase requirements were before assessing the program. They expected them to be pretty high.

Ray Cohen, executive vice president of the Independent Dealers Committee Dedicated to Action, expressed concern that the new Chrysler program "puts dealers who are economically unable to participate in a precarious position."

At presstime, dealers in the Detroit area were busily calling one another to get a reading on the numbers which weren't yet available.

One Detroit dealer said that dealers would decide as a group "more so than with other programs" whether to participate.

Company officials, who had previously sworn off push-pull programs, seemed to feel they had little choice this time around. Fourth-quarter orders have not been high enough to sustain production.

Payments under the retail portion of the program, which runs from Oct. 14 to Dec. 31,

Turnbull, Derrick also elected to offices

Lyles is NADA president for '82

COLORADO SPRINGS. — George W. Lyles, a Chevrolet and Rolls-Royce dealer in High Point, N.C., has been elected NADA president for 1982.

He was elected by NADA directors at a meeting here last week and will take office following the NADA convention in Atlanta next February.

George W. Lyles

As president, Lyles will succeed Wendell H. Miller, a Dodge - Honda - Lincoln - Mercury dealer in Binghamton, N. Y.

The board also elected William C. Turnbull Sr. first vice president and H. E. (Buddy) Derrick Jr. secretary. They also will take office next February. As first vice president, Turnbull will be NADA president-elect and will move into the top job in 1983. Lyles currently is first vice president.

Turnbull is a Buick-Subaru dealer in Huntington, W. Va., and Derrick handles Pontiac, Cadillac, GMC, AMC and Jeep in Lexington, Va.

Lyles is president of Lyles Chevrolet Co. and Transco, Inc. (Rolls-Royce), High Point, N.C. He has been a new-car dealer since 1946 and an NADA director since 1975.

He was chairman of the Industry Relations committee in 1978, NADA treasurer in 1979-80 and first vice president the past year. Lyles is a past president of the North Carolina Automobile Dealers Assn. and is a former chairman of the Chevrolet National Dealer Council.

Turnbull is owner-operator of Turnbull Buick-Subaru, Huntington, W. Va. He has been an NADA board member since 1976 and currently is treasurer

breaking news

Peugeot shuffles production setup

BELFORT, France. — Assembly of the Peugeot 305 is being transferred out of the giant Sochaux complex to the Mulhouse plant. At Mulhouse, which assembles the 104 at the rate of 1,290 cars a day, the 305 will add 103 cars a day. Industry sources believe freeing up capacity at Sochaux can only mean retooling for a new model.

Chrysler salaried workers to get profit-sharing

DETROIT.—Chrysler Corp. is setting up a profit-sharing program for non-union employes who made wage concessions.

See BREAKING NEWS, Page 8, Col. 1

Committee may ignore industry pleas to loosen up

Senate eyes even tougher emission controls

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A proposal to retain and even tighten emission controls on new cars is under active consideration and is slated for committee markup in the Senate, despite strong industry efforts to retreat from the present standards.

The draft developed by a Senate committee staff would not allow CO emissions to go from the statutory 3.4 gpm to 7 gpm (as in the industry-backed proposal now in the House of Representatives) but would require three years of waivers for an auto maker which showed actual savings to the customer.

It would make no change in NOx emissions — keeping them at 1.0 gpm instead of the House provision for loosening NOx to 2.0 gpm.

Further regulation under the Senate draft might be possible for diesel engines — requiring that no later than Jan. 1, 1984, EPA would have to decide whether sulfur emissions from diesels should be regulated.

The Senate draft would also set into legal concrete a diesel particulate standard of 0.2 gpm for cars and 0.26 gpm for light trucks and vans, effective no later than 1986 models.

But in the area of heavy-duty engines, both House and Senate bills are similar. The Senate draft would mandate a minimum leadtime of four years and a minimum stable period for emissions. The House bill would give EPA flexibility.

The Senate draft—scheduled for markup during the last week in October—would provide that high-altitude vehicles starting with '84 models meet national standards. But compliance could be determined by the test used by EPA for '82 and '83 models or by California. This is also different from the House "Traxler-Hillis" bill.

Finally, in the Senate draft bill, there is no mention of "averaging" or a "mobile bubble" which are included by way of a study in the House bill.

The Senate proposal also gives no consideration to controlling only reactive HC.

Calls Van de Water a 'union buster'

Fraser blasts Reagan's NLRB choice

By Marjorie Sorge
Labor Editor

DETROIT. — The Federal Reserve Board should be reconstructed and John R. Van de Water, President Reagan's nominee as chairman of the National Labor Relations Board, is a "union buster" and should not be confirmed, according to UAW President Douglas A. Fraser.

After speaking to the Graphic Arts International Union Convention here last week, Fraser said the NLRB would be tainted if Van de Water is confirmed.

He also said "it's time to end the dictatorship over this economy of Paul Volcker (current Fed chairman)." He said the U. S. will not have a healthy economy until Volcker is out, and he said the board chairman should be elected not appointed. According to Fraser, Volcker would have been put out of office if he had to stand for election.

Currently, the Fed chairman is appointed by the President for a four-year term. Volcker's expires in August, 1983. The appointment to the Fed is for 14 years. Volcker will be on the board until 1992 if he chooses.

"I question a democratic society where an appointee for 14 years has such power in a bureaucratic society," Fraser said.

He also predicted there would be another Reagan proposal to cut Social Security benefits, and he suggested borrowing money from the health and disability funds to help pump up general Social Security funds. He said 71 cents of every dollar paid into the fund goes to Social Security per se, 19 cents goes to health care and 10 cents is for disability.

- The union has long blamed the problems in the auto industry on tight money and high interest rates, policies of the Fed. Fraser said he "sees no light at the end of the tunnel until the interest rates come down substantially."

He said the industry will not show sales gains in the fourth quarter but said he is hopeful that the first quarter of 1982 will show some kind of upswing.

The union is hopeful for an upturn in the auto industry before negotiations begin next year. It already faces a difficult round of bargaining since the auto companies are threatening takeaways in benefits and more offshore sourcing to cut costs.

Since bargaining next year promises to be complicated, Fraser said the UAW will set up study teams "within a matter of days" to begin ironing out the more complicated issues with similar teams at Ford and General Motors.

Spokesmen for both Ford and GM said the companies have made no concrete plans for study groups and are waiting for the UAW to approach them on the subject.

While the complexity of next year's negotiations is plaguing the union, so is President Reagan's nominee as chairman of the NLRB. The UAW and the AFL-CIO say Van de Water is an anti-union labor lawyer hired by U. S. companies as a consultant to keep the unions out.

One AFL-CIO official said Van de Water's situation is of paramount importance in labor relations. He said the nominee's Los Angeles law firm, Van de Water and Associates, has been involved in anti-union practices and "management people have been paying his way for years now."

Both the AFL-CIO and the UAW want a neutral chairman

Mercedes 540-K by Sbarro

Sbarro, the Italian-Swiss car designer and builder, has developed a replica of the 1936 Mercedes-Benz 540-K sport roadster. It costs $100,000 and up, and five have been sold. The body is fiberglass and the mechanical parts are from today's Mercedes-Benz 500-SE, including 5-liter V-8 and four-speed automatic transmission. The top and rumble seat are electrically operated.

Domestic total is 147,366; all makers down

Early October sales lowest since '58

By Jenny L. King
Staff Writer

The 1982 domestic model year got underway in early October with one essential ingredient missing: Customers.

Early October new-car sales were at their lowest level since 1958, and stood at about one-half the number of passenger cars sold in 1968, the record for the period.

Oct. 1-10 sales this year totaled 147,366, down 34.56 percent from 225,202 in 1980 and worst since the pallid 88,254 sold back in 1958. Strongest sales for early October were in 1968 when 298,105 new cars were retailed by the U. S. auto dealers.

Not one sales increase—either by corporation or make — was notched during the period. Chrysler Corp., which had a long string of 10-day increases (based on daily-rate comparisons) stretching back to early February of this year, finally slipped back, its sales down 28.46 percent, to 19,932 from 27,860.

General Motors reported sales of 86,887 new cars, down 31.89 percent from 127,573 a year earlier. Ford Motor Co. plunged 43.28 percent, to 34,618 from 61,029. Volkswagen of America retailed 2,529 new Rabbit sedans, down 7.70 percent from 2,740. Sales of American Motors passenger cars were estimated at 3,400, down 43.33 percent from 6,000.

Market shares were redistributed in this fashion: GM was up to 58.96 percent from 56.65 percent last year. Ford dropped to 23.49 percent from 27.10 percent; Chrysler expanded to 13.52 percent from 12.37 percent; AMC dipped to 2.31 percent from 2.66 percent, and VWoA was up to 1.72 percent from 1.22 percent.

VWoA's 7.70-percent drop and Cadillac's 3.08-percent slip looked good compared with the declines suffered by the 12 competing makes. Imperial was down 84.77 percent, Chrysler was down 67.15 percent, Ford was down 45.46 percent, AMC was down 43.33 percent and Mercury was down 38.65 percent.

Buick was down 38.16 percent, Lincoln was down 33.17 percent, Oldsmobile was down 32.63 percent, Pontiac was down 32.19 percent, Chevrolet was down 32.17 percent, Plymouth was down 22.57 percent and Dodge was down 17.99 percent.

With nine selling days in the period both years, the daily rate of 16,374 for Oct. 1-10 was down 34.56 percent from the 25,022 average in 1980.

Oldsmobile Cutlass Supreme was the top nameplate in early October, with sales of 7,038. It was followed by Plymouth Reliant at 6,260, Ford Escort at 6,017, full-size Chevrolet at 5,377 and newcomer Dodge Aries at 5,108.

Scotland Yard investigation uncovers no wrongdoing

DeLorean files libel suits after financial probe

By Edward Lapham
Financial Editor

John Z. DeLorean last week filed libel suits in a London court against seven parties, including two former employes and the British Broadcasting Corp.

The suits were filed after British legal officials announced they had not uncovered any financial wrongdoing on the part of DeLorean or his organization.

The investigation by Scotland Yard was prompted when Marian Gibson, a former secretary in the New York office of DeLorean Motor Co., gave certain information to Nicholas Winterton, a member of Parliament. Winterton gave the information to legal officials who launched what was termed a routine investigation.

The investigation seemed to center on a memo from William Haddad, former DeLorean Motor Co. vice president, to DeLorean, warning the former GM executive of several possible financial irregularities in the company and other situations Haddad felt threatened the company.

DeLorean denied having received the memo and told British reporters it was "a forgery."

Haddad, the former executive director of corporate communications, said he and DeLorean began renegotiating his employment contract in September before any of this came to light. Haddad told Automotive News he had confirmed to Scotland Yard that it was a memo he had written last December.

In addition to the BBC, Haddad, Winterton and Gibson, the London libel writs also included British freelance writer John Lisners, who wrote a story about the alleged irregularities; Mirror Group Newspapers, Ltd., publisher of the Daily Mirror, which printed the article, and Independent Television News. London sources put the potential award value of the lawsuit at about $250 million.

DeLorean retained the services of Goodman, Derrick & Co., a respected London law firm headed by Lord Goodman, who filed the suits on behalf of DeLorean, DMC and the DeLorean Motor Cars, Ltd., unit.

The language of the British officials who announced the end of the investigation was quite explicit.

Sir Michael Havers, British attorney general, said that Scotland Yard had found "no grounds" for "continuing police inquiries into the firm's affairs." Havers was joined in halting the investigation by Sir Thomas Hetherington, director of public prosecutions.

Most observers were surprised by the libel writs.

One observer close to the situation said, "I would think that DeLorean would want to get this off the front page and just plain let it die down. He was already cleared by Scotland Yard."

A DMC spokesman in New York told Automotive News, "John's goal is to clear the company completely."

DeLorean, who went to Belfast for a press conference, told one newspaper he believed there might be a political or economic conspiracy to kill his company.

Assessments aimed at pedestrian protection

Cadavers used in NHTSA crash tests

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Cadavers are being used as surrogates for real people in research by Calspan in trying to assess the effectiveness of changes in the front ends of cars to reduce pedestrian deaths and injuries.

Some 8,000 pedestrians are killed each year and some 140,000 are injured annually in relatively low-speed auto crashes.

NHTSA said it uses bodies that have been willed to science and only after careful consultation with families. They are being used in this particular research project because anthropomorphic dummies have inadequate responses for legs and pelvic areas.

Some years ago, then-California Rep. John Moss raised questions about the use of cadavers which were used in the '70s for crash testing. At that time, NHTSA had no formal internal regulations or formal policies for using corpses. It relied on contractors and universities which abided by guidelines set by the Health, Education and Welfare Department.

After that Congressional hearing, NHTSA established its own program for justification and monitoring and went to the National Academy of Science for guidance. In reviewing its earlier uses for cadavers, NHTSA found the guidelines used by its contractors were essentially the same.

Its policy is to use cadavers only when dummies are clearly inadequate and where live volunteers are not available.

Live volunteers are commonly used for sled tests, but a NHTSA spokesman noted it is not possible to use volunteers for tests that could result in broken legs.

NHTSA, through three contractors, is using cadavers for frontal and side impact studies and to investigate possible changes to the dummy to make it more lifelike — areas such as the chest cavity.

- In the Calspan research — done as part of a pending proposal for pedestrian protection to see if a vehicle modified to produce a 700-pound weight (about 100 G-forces at 25 MPH) impacting a seven-pound leg can mitigate injuries.

A baseline Pontiac LeMans is used along with a modified LeMans. Eight cadavers are being used for each vehicle as the cadavers become available. Cal-

Cites peril of today's labor costs

Talk now or lose jobs, GM's Smith tells UAW

NEW YORK. — General Motors Chairman Roger B. Smith last week issued a strong call to the UAW to sit down now and discuss labor costs.

The alternative, he said, is more plant closings, more lost jobs and more domestic auto work going offshore.

"The lights in U. S. auto plants have been going out all over America — extinguished by high labor costs," Smith told the 50th international conference of the Financial Executives Institute.

"The price is too high for us," he said, "and it's too high for our employes. Remember, the ultimate cost of noncompetitive labor costs is jobs."

He said that figures compiled by the U. S. Department of Transportation show that in the last two years, domestic auto makers have closed or announced closing of more than 20 facilities affecting 50,000 workers.

In many cases, he said, those jobs were permanently lost, and there was a reduction in the community's economic base.

Smith said there is an urgent need for GM and the UAW to sit down now and discuss these labor costs.

"Unless we can get a handle on excessive labor costs in our industry, there will be more plants shutting down — and more auto industry jobs going offshore," he said.

"Because of our long lead times, important business decisions affecting General Motors' future — and our employes' future — are being made every day, based on present circumstances. We can't wait until next year to start our discussions. We need to address the labor cost differential now, before too many jobs are lost."

The "next year" was a reference to the Sept. 15, 1982 expiration date of the auto makers' present contracts with the UAW.

- Smith said GM's labor costs are currently 80 percent higher than those of Japanese auto makers and also about 80 percent higher than the average costs for all of American manufacturing.

Over the last decade, the situation has greatly deteriorated, he added. For example, he said, the premium in labor costs at GM was only some 50 percent higher than those in the rest of American manufacturing, but today, the premium has grown to 80 percent.

"If this sort of trend were to continue, becoming competitive would be not just difficult, but impossible," Smith said.

"All this adds up to one simple fact of life: If GM is to continue to have viable operations here in North America, and if we are to continue to maintain a high level of employment in the U. S., then we and the union are going to have to sit down together."

Any agreement that would help correct the labor-cost disparity could send positive signals throughout the economy — particularly at a critical time like this, according to Smith.

Such an agreement, he said, could have a beneficial influence on negotiations in other American industries, and it would represent an enormously important contribution to the welfare of the entire country.

Smith said that while plant

Z-Jag production begins

Automobili Intermeccanica has begun assembling the Z-Jag, a fiberglass reproduction of the Jaguar XK-120 with Datsun 240-Z engine, under contract to Coventry Classics, Santa Ana, Calif. Output of the $30,000 Z-Jag is put at one per week. At Intermeccanica's Fountain Valley (Calif.) plant are, from left, Tony Baumgartner, Intermeccanica president; Martin LeVan, Coventry Classics president; Howard Goldman, president of Z-Jag dealership Moss Motors, Santa Barbara, and Glen Adams, Moss Motors general manager.

EXP crash test data found to be invalid

WASHINGTON. — A reexamination of the 35 MPH crash test data run on a 1981 Ford EXP at a California lab known as AETL shows the head forces first reported for the passenger dummy were much too high.

Compared with a head injury criteria of 1,000 — intended to indicate a passenger would survive — the data was first reported as 2,260.

The reassessment shows 1,145 HIC. This is a number much closer to reality, since test cars must meet the 1,000-HIC mark at 30 MPH, and a crash at 35 MPH has some 36 percent more energy to be dissipated.

Ford and NHTSA examined the test data at AETL and found a malfunction in the electronic recording equipment, causing a signal from the passenger dummy's head to be misrecorded. This was compounded during playback of the magnetic tape to a paper chart by a technician who set the calibration wrong.

EPA Administrator Raymond A. Peck first suspected something might be awry with the EXP test when he spotted a piece of tape holding a belt load sensor that failed to come loose.

Although the tape turned out to be irrelevant, it was found that the accelerometer reading on the passenger dummy head was higher than expected before impact.

The AETL mistakes may also involve a high-speed crash of an Audi 5000 which Peck also declared invalid. NHTSA is checking data on other cars tested by that contractor.

CAS would prevent makers from exchanging emission-control data

Suit tries to revive 'conspiracy' ban

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The Center for Auto Safety has asked the federal district court in Los Angeles to intervene in the action allowing two key provisions of the "smog conspiracy" consent decree to lapse.

CAS asked that the Aug. 3 court order be set aside on grounds that the U. S. failed to comply with the Antitrust Procedures and Penalties Act by not affording the public the opportunity to comment on the proposed settlement.

The two provisions had been dropped by Judge Jesse Curtis at the request of the Justice Department. The provisions had forbidden companies from exchanging restricted information on emissions controls and had banned joint company filings on regulated matters through trade associations or other means.

Theoretically, at least, this ended the most onerous requirements of a 10-year-old consent settlement affecting the four domestic makers and the MVMA.

In January, 1969, the U. S. filed a civil antitrust case against the domestic auto industry, charging conspiracy to delay the installing of emission control devices in California.

Nine months later — Oct. 29, 1969 — agreement was reached in a consent decree. A year before the decree's two provisions were due to expire, the Justice Department moved in court for a 10-year extension, arguing it was needed to assure a "healthy competitive climate."

The court agreed but later, in response to a petition for reconsideration by Ford Motor Co., the court reversed itself and denied the government's motion.

On appeal, the Ninth Circuit Court reversed the district court and remanded the case to the lower court for further procedures. But last April, the Reagan Administration announced a change in position, and the Justice Department and the companies entered into a single-sentence stipulation dismissing the government's motion to extend the two provisions for another 10 years.

It is this lack of notice to the public that forms the basis for the challenge being mounted by the Center for Auto Safety.

If the court allows CAS to intervene, it would presumably then allow the Justice Department to give notice and explanation. If still convinced the provisions should lapse, the court could then make the stipulation. The court would then hear the opposing viewpoint of CAS and possibly others.

The center is invoking its right to be informed and heard — and issue closely linked to the act which was created in part, CAS said, because the settlement process (including stipulation) was often cloaked in secrecy, subject to political abuse and often without views of a third party.

Chrysler designers seek to decertify UAW

DETROIT. — Some Chrysler Corp. designers are seeking to decertify the UAW because the union forced the company to take away pay increases for those employes.

Five of the company's 650 designers, representing an unknown number of their fellow workers, have filed a decertification petition with the National Labor Relations Board in Detroit. Hearings have been held, and the regional director is expected to hand down a decision by the end of this month, according to an NLRB official.

It usually takes 30 percent of the employes in the bargaining unit to sign a petition before the process is begun. The designers would then decide in secret ballot if they want to decertify the UAW.

The Chrysler designers are angry with the UAW because the union voiced strong objections to a 12-percent raise for the designers last July while salaries of other workers remained unchanged. Chrysler used the raises to try to prevent a mass exodus of highly trained designers to other companies.

Other workers said the raise violated the "equality of sacrifice" provision made when the union gave Chrysler concessions to allow it to be eligible for federal loan guarantees.

UAW President Douglas A. Fraser said he doesn't like the decertification petition but understands it and doesn't think it will come to anything.

The designers were earning between $515 and $545 a week before the raise.

How Automotive News classifies 1982 models

Following are the AUTOMOTIVE NEWS market-class categories for the 1982 model year and the U.S.-built car lines in each segment:

SUBCOMPACT

American Motors: Eagle Kammback, Eagle SX/4 and Spirit.

Chrysler Corp.: Dodge Omni and 024; Plymouth Horizon and TC3.

Ford Motor Co.: Ford Escort and EXP; Mercury Lynx and LN7.

General Motors: Chevrolet Chevette and Cavalier; Pontiac T1000 and J2000.

Volkswagen of America: Volkswagen Rabbit.

COMPACT

American Motors: Concord and Eagle.

Chrysler Corp.: Dodge Aries; Plymouth Reliant.

Ford Motor Co.: Ford Fairmont and Mustang; Mercury Capri and Zephyr.

General Motors: Buick Skylark; Chevrolet Camaro and Citation; Oldsmobile Omega; Pontiac Phoenix and Firebird.

INTERMEDIATE

Chrysler Corp.: Chrysler Cordoba, LeBaron and New Yorker; Dodge Diplomat and 400; Plymouth Gran Fury.

Ford Motor Co.: Ford Granada and Thunderbird; Mercury Cougar and XR-7.

General Motors: Buick Century and Regal; Chevrolet Celebrity, Malibu and Monte Carlo; Oldsmobile Ciera, Cutlass and Cutlass Supreme; Pontiac Bonneville, Grand Prix and 6000.

STANDARD-SIZE

Ford Motor Co.: Ford LTD and Mercury Marquis.

General Motors: Buick LeSabre and Electra; Chevrolet Impala and Caprice Classic; Oldsmobile Eighty-Eight and Ninety-Eight.

LUXURY

Chrysler Corp.: Imperial.

Ford Motor Co.: Lincoln, Mark VI and Continental.

General Motors: Buick Riviera; Cadillac deVille, Fleetwood Brougham, Limousine, Cimarron, Eldorado and Seville; Chevrolet Corvette; Oldsmobile Toronado.

Despite dip in unit count

Lackluster intro hikes car stocks to 69 days

Continued from Page 1

it trimmed more than 70,000 units from its inventory during September.

Ford Motor Co. had a 79-day supply Oct. 1, up from 75 days. and Chrysler Corp. saw its inventory jump to 95 days from 62 days a month earlier. Chrysler's sharp rise was mainly the result of a lower sales rate, while Ford's increase was entirely due to a buildup in its unit count.

The Oct. 1 domestic inventory was divided this way: GM, 56.64 percent; Ford Motor Co., 26.00 percent; Chrysler Corp., 12.85 percent; VWoA, 2.45 percent, and AMC, 2.06 percent.

A month earlier, the inventory was divided as follows: GM, 59.65 percent; Ford Motor Co., 23.71 percent; Chrysler Corp., 11.61 percent; VWoA, 3.01 percent, and AMC, 2.02 percent.

- By size class, all segments were up in terms of days supply except intermediates. The industry had a 60-day supply of intermediates Oct. 1, down from a 63-day supply Sept. 1.

Subcompacts were in 78-day supply Oct. 1, up from 66 days a month earlier, and compacts were in 80-day stock, up from 67 days.

The industry had a 54-day supply of standard models, up from 50 days a month earlier, and a 64-day stock of luxury cars, up from 56 days.

The Oct. 1 inventory was divided this way by size segment: Subcompact, 27.86 percent; compact, 29.74 percent; intermediate, 24.90 percent; standard, 11.15 percent, and luxury, 6.35 percent.

A month earlier, the inventory was divided as follows: Subcompact, 25.58 percent; compact, 31.08 percent; intermediate, 26.92 percent; standard, 10.93 percent, and luxury, 5.49 percent.

Several new models had inventories Oct. 1 but had not been on the market long enough to establish a selling rate. These included the intermediate Plymouth Gran Fury and Chrysler New Yorker.

- The Oct. 1 days-supply figures by market class were:

Subcompact — Chevette, 46; Spirit, 58; J2000, 60; Cavalier, 61; Rabbit, 61; T1000, 76; Dodge 024, 85; Eagle SX/4, 102; Horizon, 102; Plymouth TC3, 102½; Escort, 104; LN7, 111; Lynx, 115; Omni, 115½, and EXP, 118.

Compact — Concord, 48; Camaro, 49; Zephyr, 50; Fairmont, 52; Firebird, 58; Omega, 66; Capri, 69; Eagle, 71; Mustang, 82; Aries, 88; Citation, 89; Reliant, 90; Skylark, 101, and Phoenix, 117.

Intermediate — Century, 32; Cutlass, 32; Supreme, 41; LeBaron, 44½; Cougar, 56; Regal, 61½; Grand Prix, 65; Malibu, 70; Monte Carlo, 71; Thunderbird, 75; XR-7, 75; Bonneville/LeMans, 75; Granada, 90; Cordoba, 92; Diplomat, 95, and Mirada, 103.

Standard — Olds 98, 39; Pontiac, 41½; Olds 88, 42; LeSabre, 53; Mercury, 58; Ford, 61; Electra, 67, and Chevrolet, 72.

Luxury — Lincoln, 40; Toronado, 41; Riviera, 50; Mark VI, 53; Corvette, 55; Eldorado, 57; Cadillac, 59; Cimarron, 89; Seville, 96, and Imperial, 149.

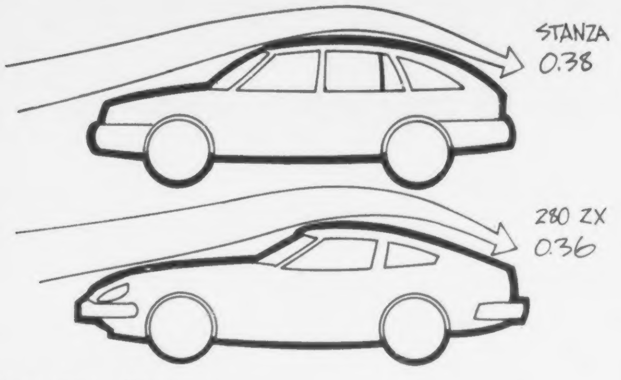
Elgin wins award

ELGIN, Ill.—Elgin Chrysler-Plymouth, Inc., has received the Five Star quality service award from Chrysler Corp.



Low-drag Stanza

Nissan has come up with an air-drag coefficient of 0.38 for its new five-passenger Stanza. The figure approaches the 0.36 coefficient achieved by the Datsun 280-ZX Nissan builds.

Name change big topic as Datsun unveils '82s

By John A. Russell
New York Staff Writer

NEW YORK.—The first move in the biggest product name change of an automobile in modern U. S. history began last week with the introduction of the Nissan Stanza, a "global car" from the Japanese maker.

This step is to be followed in the spring with a massive advertising campaign, being prepared in Japan, to change the nameplate of Datsun to Nissan.

Company officials at the press introduction here said they did not know the precise form the campaign would take, nor did they have any estimate of the costs for the entire name change down to the dealer level.

While the purpose of the meeting was to introduce the '82 model lineup for Datsun in the U. S., the question of the name change became dominant.

Datsun announced the impending change several months ago, and C. P. (Chuck) King, vice president and general manager of sales for the U. S. company, said last week that the move, ordered by the Japanese parent company, was an effort to bring all the parent company's operations under a single corporate identity.

He noted that Nissan is not only a manufacturer of cars and trucks, but is a diverse manufacturing company whose operations include electronics and other products. The goal of the parent company is to create a single identity for all its operations, he said.

But Nissan has spent millions developing and promoting the Datsun nameplate in the U. S. over the past 21 years. Now it will begin the process again.

- Corporate officials, including King, said that the cost estimates, down to the dealer level are being prepared as the parent company readies the corporate advertising campaign.

These officials also said that dealers attending meetings here before the press preview expressed concern over the nameplate change. While the dealers were enthusiastic about the product, they still wanted to know the exact extent of their contribution in the name change.

Nissan officials have not, as yet, worked out the details. For dealers, one of the largest expenses will be signs at the dealerships. Nissan has not decided whether it will replace all the signs at a dealership or only the major ones and the dealer, if he added more, would have to replace the remainder at his expense.

One company official said a survey is now being taken of all 1,100 Datsun dealerships across the country to discover the exact number of signs involved. Then a decision will be made.

King was optimistic about next year for Nissan USA, predicting sales of 500,000 cars and 130,000 trucks. This figure includes what he anticipates will be a 16 percent increase in the import quotas levied against Japanese car makers this year.

- He noted that the quotas have not had the desired result of increasing domestic auto sales. Instead, he said, "what is unfortunate about those limitations is that, as we and other importers predicted, the restrictions merely resulted in higher retail prices and increased demand for our cars."

"New-car inventories for importers are down, and Detroit is still suffering," he said.

King said he expected tough competition from the domestic auto makers in the small-car segment of the market and to illustrate this drive he noted that the recent rebates, special financing offers and price holds for 1982 by the domestic manufacturers are on their small cars.

He also said he expected stiffer competition from the European importers who are not confronted with restrictions.

But King still remained optimistic about the new model year, predicting sales of 10 million cars and 3 million trucks, an increase of 1.6 million units from 1981. King said he anticipated that import sales will remain about the same and the gains will be made by the domestic manufacturers.

Prices of the new front-wheel-drive Nissan Stanza start at $6,799 for the Deluxe two-door hatchback. The Deluxe four-door hatchback is $6,999. Stanza XE prices are $7,799 for the two-door and $7,999 for the four-door.

The company also priced its 280-ZX sports cars. The 2-seat coupe is $14,499, and the 2+2 coupe is $15,499. Both are up $550. The increase is $300 on the 2-seat Turbo coupe, now $17,299, and the new-for-'82 2+2 Turbo is $18,299. Last year's base 280-ZX coupe has been dropped, and the new prices compare with the '81 GL units.

U. S. cars up 5 pct., imports down 4 pct. in August

Domestics gain registration ground

By Richard A. Wright
Assistant Managing Editor

New-car registrations in the U. S. in August were up compared with both the preceding month and August last year, according to figures compiled by R. L. Polk & Co.

New-car registrations in August totaled 720,804, up 2.40 percent from 703,923 a year earlier. August registrations were up 4.46 percent from the July total of 690,025.

Registration table on Page 12

The record registration total for August is 1,060,588, set in 1978.

Domestic registrations totaled 515,297, up 5.34 percent from 489,181 a year earlier, while registrations of new imported cars totaled 205,507, down 4.30 percent from 214,742 a year earlier.

For the first eight months of 1981, new-car registrations totaled 5,801,537, down 1.19 percent from 5,871,206 last year.

Domestic registrations for the first eight months totaled 4,115,206, down 1.67 percent from 4,185,176 last year, while import registrations of 1,686,331 were still running 0.02 percent ahead of last year's eight-month total of 1,686,030.

- General Motors, Ford Motor Co. and Chrysler Corp. all increased their market shares in August compared with a year earlier, mainly at the expense of the imports.

General Motors took 47.48 percent of U. S. registrations in August, up 0.11 of a percentage point from a year earlier, while Ford Motor Co. accounted for 14.05 percent, up 0.55 of a point.

Biggest gainer was Chrysler Corp., which boosted its market share 1.61 points to 8.86 percent.

Imports took 28.51 percent of August registrations, down 2.00 points from a year earlier, and American Motors was off 0.26 of a point to 1.06 percent. Miscellaneous domestics accounted for 0.04 percent, down 0.01.

Among the divisions, Oldsmobile moved into second place behind Chevrolet in August registrations, elbowing Ford into third place.

Excluding imports, August domestic registrations were divided as follows: GM, 66.42 percent; Ford Motor Co., 19.64 percent; Chrysler Corp., 12.39 percent; AMC, 1.49 percent, and miscellaneous, 0.06 percent.

- By size segments, subcompacts, standards and luxury cars showed increases over August of last year. Subcompacts posted the biggest gain, up 2.93 percentage points to 16.21 percent of total registrations.

The luxury segment was up 0.50 of a point to 4.75 percent, while standard gained 0.08 of a point to 10.85 percent.

Biggest losers were imports, which dropped 2.00 points to 28.51 percent, and intermediates, off 1.40 points to 20.11 percent. Compacts dipped 0.11 of a point to 19.57 percent.

Registrations by market class in August were: Subcompact, 116,877; compact, 141,026; intermediate, 144,961; standard, 78,220; luxury, 34,213, and import, 205,507.

Chevrolet Chevette moved back into the top spot among the leading nameplates and Oldsmobile Cutlass Supreme took second, pushing the July leader, Ford Escort, down into third.

The top 20 nameplates in August registrations were.

1—Chevrolet Chevette	30,375
2—Olds Cutless Supreme	25,038
3—Chevrolet Citation	24,557
4—Standard Oldsmobile	21,715
5—Buick Regal	19,265
6—Ford Escort	19,096
7—Standard Chevrolet	19,070
8—Plymouth Reliant	18,363
9—Chevrolet Malibu	17,535
10—Buick Skylark	17,402
11—Chevrolet Monte Carlo	14,537
12—Olds Cutlass	14,352

15—Pontiac Grand Prix	12,444
16—Standard Buick	11,868
17—Cadillac	11,370
18—Chevrolet Cavalier	10,887
19—Plymouth Horizon	10,799
20—Dodge Omni	10,160

NHTSA rejects bid to toughen post-1985 CAFE

WASHINGTON. — NHTSA has rejected the Center for Auto Safety's petition aimed at requiring CAFE improvements for cars and light trucks after 1985.

The consumer group argued that rulemaking (abandoned by NHTSA in April) should continue because improvements in fuel efficiency . . . "particularly in view of limited improvements achieved prior to the establishment of a fuel-economy standards program."

NHTSA countered that the market has changed since the early 1970s "in light of major gasoline-price increases and threats to continued gasoline supply occurring over the past three years."

It added that it would "continue to monitor the efforts of the vehicle manufacturers to achieve fuel-economy improvements consistent with national energy needs."

Lund sees 20 pct. rise in '82 Chevy car sales

By Roger Rowand
Engineering Editor

SCOTTSDALE, Ariz. — Chevrolet is targeting a 20-percent sales increase in cars in the 1982-model year and a truck sales increase of about 30 percent, Robert D. Lund, general manager said.

In 1981, Chevrolet sold 1,566,391 cars and 698,100 trucks. Lund's 1982 estimate would indicate car sales of about 1.88 million and truck sales of about 900,000.

In a state-of-the-business speech at a technical press conference, Lund ticked off the reasons for his optimism:

1. Pent-up demand is high.
2. The prime rate should drop to 16 or 17 percent during the model year.
3. Gasoline is plentiful with prices stable or declining in some parts of the country.
4. The tax cut will put $54 billion in the hands of the consumers.
5. The inflation rate should be in the single-digit range during '82.
6. Real disposable income is high.
7. The scrappage rate is increasing more rapidly than the selling rate.

Lund called his final reason the biggest of them all: "Chevrolet has the products to capture more sales as buyers come back to the market."

Makers must balance imports with exports during 1982

Mexico toughens its auto trade rules

By Letitia Baldwin
Crain News Service

Mexico's early-1981 vehicle sales boom has been flattened by a new round of government measures meant to deflate the industry's trade deficit.

First-quarter auto sales had registered a 22.6-percent gain over year-earlier totals, and trucks were up 35.5 percent.

But the vehicle industry's trade deficit also widened — nearly 50 percent during the first half of the year, compared with the first half of 1980.

The government's answer was to reissue a 1977 decree meant to strengthen the domestic industry, but this time with more force. Foreign exchange budgets of Mexican auto and truck makers must balance as of the 1982 model year.

Production quotas have been set for each company and for the entire industry. Unless a maker's exports exceed its imports, its output is not allowed to exceed the quota.

Meanwhile, the government has published an expanded list of optional accessories that are subject to import licenses. The list includes such items as tinted glass, remote-control mirrors, leather upholstery, electric antennas, acoustic alarms, digital clocks, air conditioning units and FM stereos.

The government measures come at a time when the Mexican auto makers have been expanding to increase their production capacity, as well as to step up their export of au parts and components.

About $2.5 billion has been invested by the auto makers over the last three years.

General Motors and Chrysler are building plants in Saltillo, in the state of Coahuila, which will make engines for export. Ford has a plant under construction in Chihuahua, in which it will build engines for export.

It will likely take a year to 18 months to begin manufacturing some of the accessories on the government list.

GM and Chrysler officials say their engine plants could begin exporting in six months; Ford expects to begin exporting engines by the middle of 1983.

It may be possible for the auto industry to balance its trade as mandated by the end of 1982, or early in 1983.

One reason for the government crackdown is apparently to take pressure off the peso by reducing the trade deficit, to which the auto industry has been a sizeable contributor.

For the first half of the year, its deficit made up 40 percent of the total trade deficit of Mexico's entire manufacturing sector. Forty percent of all parts in Mexican-built autos are imported.

The government has been particularly worried since its income this year from petroleum is slightly lower than last year.

The companies most affected by the measures are luxury-model manufacturers such as Ford, Chrysler, GM and the American Motors subsidiary Vam.

According to the Mexican Auto Industry Assn., luxury cars accounted for 13.7 percent of the total market in July, 1981, compared with 12.13 percent in July, 1980.

The companies least affected by the measures are Volkswagen, Renault and Datsun, since they use few imported accessories in their models.

Luxury accessories are highly lucrative, therefore, it would seem only logical that the measures would have some impact on the profits of Ford, Chrysler, GM and Vam.

However, a Ford spokesman didn't seem to think so. He said Ford does not anticipate any major reduction in profits during the 12-month period beginning Nov. 1.

He also said Ford does not foresee any difficulty in balancing its trade in the 1982 model year.

The auto industry on the whole, has responded to the government measures by claiming that exports cannot be increased sufficiently to compensate for imports, because 50 percent of all Mexican auto industry's exports come from the parts industry.

The makers say it has been difficult to provide even enough cars for the domestic market. Another factor has been the state of the U. S. economy. The Mexican industry's biggest customer, the U. S., has bought less because of its depressed market.

GM dashboards warp in Florida; lawsuit brewing

MIAMI. — A class-action law suit against General Motors may be shaping up here as the number of complaints about warping dashboards mounts.

Eileen Lipp, administrative assistant to Dade County Consumer Advocate Walter T. Dartland, said well over 1,000 complaints have been received.

She said the most complaints have involved Pontiac Firebirds and Chevrolet Camaros, model years 1970 through 1978.

The cars affected have cracked, sagging or wavy dashes. In some cases the plastic has pulled away from surrounding body structure, she said.

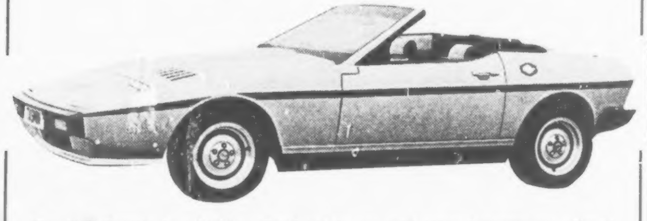
A spokesman for Pontiac said, "It is not a chronic problem. It affects a low volume of cars. It is not widespread and the problems are handled on an individual basis."

The advocate's office here brought suit against Ford Motor Co. in 1977 over 1969 through 1974 cars and light trucks heavily damaged by premature rust. That case ended in March with Ford agreeing to repair vehicles or to make a tradein assistance payment of $300 to $400 per vehicle.

TVR Tasmin Coupe, Tasmin +2
Tasmin Convertible

ONE OF THE MOST TALKED ABOUT ALL NEW SPORTS CARS IN RECENT YEARS

U. S. INTRODUCTION SCHEDULED FOR SPRING 1982
WITH FULL 50 STATE CERTIFICATION
APPROXIMATELY $25,000 RETAIL WITH
BETTER THAN AVERAGE MARKUP



The TVR Tasmin is a highly refined sports car with many features not offered in other exotic vehicles. It is completely hand built, featuring a fiberglass body, impervious to rust, mounted on a reinforced tubular chassis with fully independent suspension and disc brakes at all four corners — inboard at the rear. A powerful V-6 (Ford) engine with fuel injection and electronic ignition.

All market segments down as total sags to 2.3 million units

Truck sales dip 15 pct. in model year

Continued from Page 10

were up over a year ago for the second month in a row.

Retailers sold 177,225 units during the month, an increase of 2.2 percent over the year-earlier 173,427.

For the first nine months of the calendar year, however, sales were off 8.7 percent, from 1,947,171 units in 1980 to 1,778,052.

• September sales of the compact pickups were down 5.3 percent from a year ago to 41,848 units, compared with 44,176 in 1980. The drop was due to the lingering slump in the sale of captive imports.

The non-captives were up 24.8 percent in September, from 21,548 units a year ago to 26,900. The captives were down 40.7 percent for the month, from 20,723 units last year to 12,294.

For the nine-month period, sales of the compact pickups were down 8.1 percent to 378,203 units, compared with 411,613 a year ago.

Again, the non-captive imports showed a gain for the January-September period, from 208,821 to 220,546 units, an increase of 5.6 percent. The captives were off 27.8 percent, from 182,857 in 1980 to 132,029 units.

The Motor Vehicle Manufacturers Assn. reported that domestic dealers retailed an estimated 149,860 units in September, off one percent from last year's 151,443 units.

For the nine months, the total was 1,554,545 units, a decline of 10.4 percent from the 1,735,328 trucks retailed in the same period in 1980.

The Big Three trucks producers reported that their dealers sold 131,738 vehicles in September, off 0.7 percent from last year's 130,884. The nine-month total of 1,383,222 units was 10.6 percent lower than the 1,548,014 sold a year ago.

September sales by Ford dealers totaled 60,574 units, an increase of 24.4 percent over last year's 48,676. Included were 5,341 Courier sales, compared with 6,470 a year earlier.

Through September, there were 532,580 Ford sales, a decline of 5.6 percent from last year's 606.771. The nine-month Courier total was 49,860 units, down almost 12,000 units from the year-ago 61,080.

Chevrolet said its dealers retailed 48,293 vehicles during the month, down 5.3 percent from last year's 50,996. The total included 5,113 LUV compacts, down considerably from the year-earlier 8,178.

Nine-month deliveries totaled 532,580 units, a decline of 9.9 percent from the 590,971 sold in the same period in 1980. LUV sales dropped from 70,532 units last year to 54,137.

Ford once again was No. 1 in retail sales in the 1981 model year with 760,302 units, 8.9 per-

Mercedes-Benz to introduce American-made diesel van

Continued from Page 10

liability and good fuel economy."

He added that the van chassis will be available in two wheelbases to accommodate the six most popular sizes of Grumman Olson aluminum bodies, which range from 12 to 17 feet in length.

"This will allow traditional walk-in van customers to select complete units that fit their needs," Meyer said, "with the added advantage of having a chassis that will have durability close to the life of the body."

The L613D will have a gross vehicle weight rating of between 13,500 and 14,330 pounds, depending on wheelbase and body application.

The company expects the new vans to be used in a variety of businesses which require route deliveries, such as bakeries, newspapers and magazines, laundry and linen services and package deliveries.

Mercedes-Benz has produced five prototype models of the L613D for field testing with major delivery fleets. One of the first units placed in service with a major baking firm is used on a route which covers more than 100 miles daily, making between 30 and 40 stops. The vehicle is averaging more than 14 MPG, Meyer said.

Another test van, he added, has been placed with a major New York suburban newspaper, which is reporting 20 percent greater carrying capacity and averaging nearly 18 MPG, compared between 6 and 7 MPG for gasoline vans.

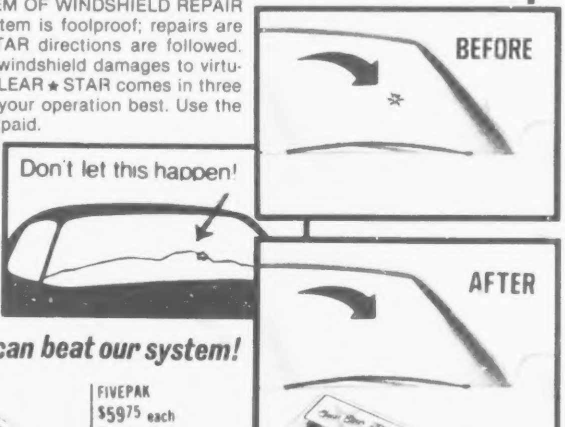
The Hampton truck facility currently produces four medium-truck models from components manufactured by Mercedes-Benz do Brasil. These range from 22,000 to 30,000 pounds GVW.

GREAT NEW WAY TO REPAIR DAMAGED WINDSHIELDS...
increase the re-sale value of used cars!

THE Clear Star® SYSTEM OF WINDSHIELD REPAIR

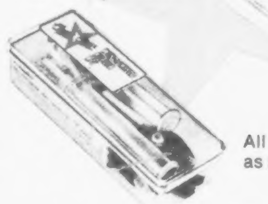
It's easy! It's permanent! It's profitable! Now you can repair damaged windshields like a professional without sending your cars to high-priced specialists and technicians. Now you don't have to depend on outside sources, haphazard delivery because those sources are out of repair resins. The CLEAR★STAR SYSTEM OF WINDSHIELD REPAIR does not require special skills. The system is foolproof; repairs are practically automatic when CLEAR★STAR directions are followed. CLEAR★STAR repairs a wide range of windshield damages to virtually new, full range unimpaired vision. CLEAR★STAR comes in three popular-size kits. Order the kit that fits your operation best. Use the handy Order Form below; we'll ship postpaid.

The CLEAR★STAR SYSTEM OF WINDSHIELD REPAIR, when used as directed, hardens and bonds the chip crevices, prevents radial cracks from "traveling" as shown. This is caused by excessive heat, cold and road vibration making it necessary to replace the entire windshield.

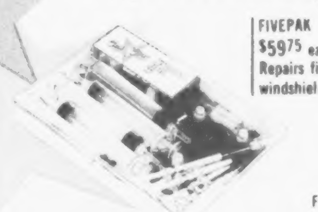


Clear Star®

Nobody can beat our system!



ECONOPAK $12⁹⁵ each | Repairs one windshield



FIVEPAK $59⁷⁵ each Repairs five windshields

FLEETPAK $99⁰⁰ each | Repairs ten windshields at less than $10.00 each!

All kits come in clear plastic containers suitable for re-use such as small parts. Full instructions in each kit, of course! Successfully used by hundreds of car dealers everywhere!

CLEAR★STAR IS THE REGISTERED TRADE MARK OF CLEAR STAR PRODUCTS, INC

SAVE MONEY! COMPLETE THIS ORDER FORM AND MAIL WITH YOUR CHECK! We ship immediately.

sion shaft out the rear of the transaxle that meets with a differential to the rear independently sprung wheels. With a simple in-out lever for selective engagement, the low-cost, high-mileage car goes from 4WD to FWD at the pull of a lever.

The concept was offered initially as a four-door station wagon; and later as the BRAT, an El Camino-like utility vehicle that seats four people in spite of its truckish appearance (two rearward-facing jump seats are located in what would be the cargo bed in a pickup).

BRAT was the source of confusion with customs people shortly after its introduction; a few misguided souls considered it a pickup truck, which would be subject to the 25 percent duty. As things turned out, the government agreed that BRAT is a multipurpose vehicle, not a truck.

Since the first FWD Subaru, the FF-1, was introduced, there have been only two major changes of body-shell—strange for Japanese, where change is a way of life. The last change was introduction of the 1980 models, which serve as the basis for the 1982s.

Subaru currently offers a choice of five body styles (three-door hatchback, four-door sedan, four-door wagon, two-door hardtop and BRAT, which is to be totally restyled for 1982 (the present BRAT is based on the pre-1980 Subaru passenger-car body shell).

Subaru offers four interior/exterior trim variations (base, offered only on the three-door hatchback; DX; GL and GLF). Four-wheel-drive is available in three-door hatchbacks, four-door wagons and BRAT, all of which will have a high/low-range transmission in 1982.

Since SoA's top management is composed only of Americans, there are no "musical president" shenanigans that other Japanese importers often experience. In the case of Nissan, for example, the president inevitably is appointed for a U. S. "tour of duty" of three to six years, whereupon he returns to Japan, and is replaced.

At Subaru, Harvey H. Lamm has been president and chief executive officer since 1974, longer than any Japanese executive now serving with an importer. Lamm, who helped form SoA, initially was executive vice president and director, becoming vice chairman of the board and chief operating officer (while retaining the executive veep position) in 1970, following the successful launch of the company's FWD cars. He became president in 1974.

●

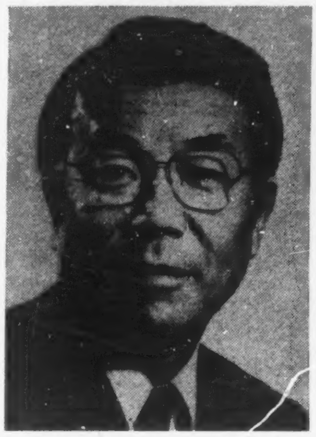
Isuzu

There is always a late starter in every group, right?

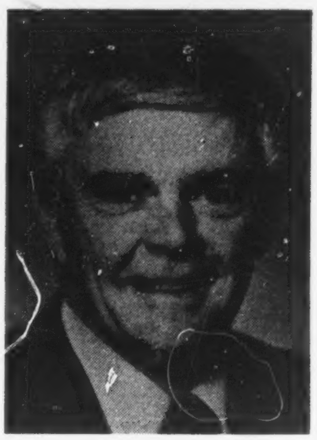
Well, the late (but not latest—that honor will belong to Mitsubishi) starter among Japanese vehicle marketers is Isuzu Motors with its U. S. distributor/importer, American Isuzu Motors, Inc.

Founded in 1980, the Southern California-based company, in the cleverly named city of Industry, began selling passenger cars and trucks last January.

This is not, however, the first try at selling Isuzus in the States. In the mid-1960s a few Bellel and Bellett passenger cars were sold in California and the Pacific Northwest, as well as a number of Elf light- and TX medium-duty diesel trucks that Isuzu distributed in the Southern California area in the late '60s and early '70s.



Itagaki: With Isuzu since '52.



Reilly: Began at Buick.

GM's purchase of 34.2 percent of Isuzu Motors stock put an end to the Japanese company's plan to market passenger cars in the U. S.—for a while.

Isuzu's 1981 car-model range ('82 models won't be around until Nov. 19) consists of the I-Mark, a Chevrolet Chevette-sized subcompact offered in coupe and four-door sedan body styles. Three trim levels are available (standard, Deluxe and LS), as well as gasoline or diesel 1,817-cc, single overhead camshaft, four-cylinder engines.

Isuzu also sells the P'up mini pickup truck in diesel or gas two- and four-wheel-drive versions, the former with a choice of long or short bed.

Isuzu presently sells the I-Mark in 22 states in the U. S. (mainly in Western and sunbelt states), while P'up is available in 33 states (the same 22 states as I-Mark, plus 11 other states which have only P'up dealerships).

In the states where I-Mark is not yet available, as well as the states that are P'up-less, there are authorized service points.

This strange marketing arrangement was brought about by the Japanese Ministry of International Trade and Industry (MITI) passenger-car shipment quotas.

In Isuzu's original plan, the company expected to sell about 22,000 I-Marks in the 22-state area during 1981, with gradual expansion into all 48 contiguous states by 1983. Under this program, 1982 passenger-car sales in an expanded marketing territory were to be somewhat in excess of 40,000 I-Marks.

With MITI's quota for Isuzu during fiscal years 1981-82 and 1982-83 set at approximately 17,000 passenger cars, Isuzu's master plan went out the window.

Isuzu truck-only dealers are being set up to soften the blow of the "voluntary" quotas, since trucks—although strapped with a 25 percent import duty—have no restrictions on numbers that can be imported. This increased emphasis upon trucks is shared by all of the Japanese except Honda, which doesn't market trucks in the U. S. at this time.

American Isuzu Motors, Inc. (AIMI) is a joint venture between Isuzu Motors, Ltd., which owns 80 percent of the operation, and the C. Itoh trading company, which has 20 percent.

AIMI President Yukio Itagaki has been with Isuzu since 1952, and has been assigned to posts in the personnel administration and export sales sections. From 1961 to 1965, Itagaki headed the Los Angeles office, which was selling trucks at that time. Prior to joining AIMI, he was general manager of the export department of Isuzu Motors, a position he had held since his return to Tokyo from Los Angeles.

The top-ranking American at Isuzu's U. S. import company is John E. Reilly, senior vice president and general manager. Reilly started in the automobile business with Buick in 1957, staying with the GM division until 1965 when he joined Volkswagen of America as general manager. Three years later Reilly was made a vice president of VWoA and given the task of setting the wheels in motion to establish the Porsche Audi sales network. He subsequently was named the first general manager of the Porsche Audi Division.

Reilly then moved to New England Toyota Distributors, and later to Mid-Atlantic Toyota, one of Toyota's larger independent distributors. He joined AIMI at the time of its founding in June, 1980.

AIMI has two other senior vice presidents, Sadao Matsumura and Ralph Yamagiwa. Matsumura, formerly with C. Itoh, is chief financial officer; Yamagiwa, who previously worked in Isuzu's export department, is in charge of manufacturer relations.

New horizons for Japanese exports

Japanese vehicle exports rose nearly 10 percent in the first half of 1981 compared with the same period last year.

But statistics released by the Japanese Automobile Manufacturers Assn. (JAMA) indicate a back-pedaling in shipments to North America, Europe and the Middle East — which accounted in the past for more than three-quarters of Japanese vehicles—and particularly strong growth in South America, Africa, Oceania and southeast Asia.

This switch in emphasis results from growing restrictions on Japanese trade in many industrialized nations, as well as the unpredictability of the oil-rich markets of the Middle East.

Total Japanese shipments for the six-month period amounted to 3,195,823, a rise of 9.1 percent over the 2,929,500 recorded in the same period a year ago.

The number dispatched to the vital North American markets slipped 1.6 percent. This was entirely on account of U. S.-bound vehicles, for Canada recorded one of the largest national growth rates of all.

Shipments to European countries rose by 9.8 percent, much in line with the overall trend. But at 40.9 percent and 21.5 percent, respectively, North America and Europe remained the most vital geographic locations for Japanese exports.

The Middle East, on the other hand, went down by 20.6 percent, dropping it behind southeast Asia and Africa as export destinations. War between Iraq and Iran affected business, but there was also a big drop in shipments to the vital Saudi Arabian market.

As a result, Saudi became sixth in the league of top Japanese export destinations, having been in a strong third or second place for many years.

The biggest expansion, though, involved South American countries. Exports more than doubled — up 106 percent to nearly 145,000 — to take the area above Central America in importance.

On a country-by-country basis, the U. S. remained firmly on top (1.17 million).

But shipments to West Germany rose by nearly 49 percent to more than 172,000 to make that country No. 2. It thus displaced the U.K. (down 17 percent to 132,000) and Saudi Arabia (down 19 percent to 115,000).

At the same time, Canada and Australia moved rapidly up the ratings—up 63 percent to 131,000 and up 29 percent to 127,000, respectively.

Other countries singled out for notably strong rises were Chile, Nigeria, South Africa and Indonesia. Each has now become a highly important Japanese export area.

Subaru reports quarterly profits

PENNSAUKEN, N. J.—Subaru of America, Inc., said its net income for its third fiscal quarter ended July 31 rose 41.6 percent to $6.863 million ($1.14 a share) from $4.847 million (81 cents a share) in the same period last year.

Net sales in the May-July period rose 32.9 percent to $262.1 million from $197.2 million last year.

For the first nine months of the company's fiscal year, net income rose 56.8 percent to $19.135 million ($3.18 a share) from $12.206 million ($2.04 a share).

Net sales for the first three quarters were up 30.6 percent.

Calls Van de Water a 'union buster'

Fraser blasts Reagan's NLRB choice

Continued from Page 2

on the NLRB. Anything else could be a major problem for the unions, given the number of elections they are protesting as unfair to labor and the number labor has lost in recent years. According to preliminary NLRB figures, more than 44,000 unfair-labor-practice complaints were filed in 1980 alone.

According to Stephen Cabot, another pro-employer labor lawyer, labor is in trouble and the decertification rate is up 400 to 500 percent since 1965, with a 75 percent success rate after the decertification petition is filed.

One AFL-CIO official conceded that the rate has increased in the past 12 to 15 years, but said it has been falling over the past four years.

Some labor observers say the unions can expect more decertification petitions, especially given the number of concessions management is asking from labor. The UAW is currently in the midst of a decertification petition filed by disgruntled Chrysler designers who are angry because the union had their raises revoked.

The union held that all Chrysler workers must sacrifice equally for the ailing auto company. All other wages are frozen.

- Any ideological change in the NLRB could have a serious impact as the unions say they are trying to keep from losing ground during the Reagan Administration, which labor has already labeled anti-union.

However, theoretically, Mr. Reagan could appoint all six members of the NLRB before his term expires in 1985.

The term of John H. Fanning, chairman of the NLRB under President Carter, will expire in December, 1982. He is a Democrat and has been a member since 1957. Business considers him pro-labor.

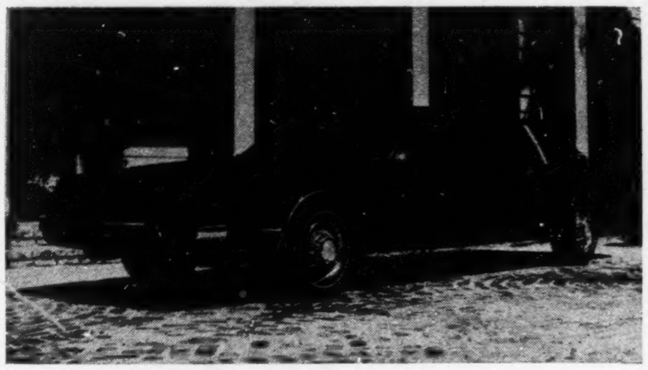
In 1983, Howard Jenkins Jr.'s term will expire. He is a liberal Republican and the first black member of the NLRB. Appointed in 1963, business considers him pro-labor.

William A. Lubbers, general counsel, is also considered pro-labor. His term expires in 1984.

Political Independent Don A. Zimmerman was appointed in 1980 and has so far voted with Fanning and Jenkins, leaving his politics open to question by business. His term expires in December, 1984.

The unions are also opposing Mr. Reagan's recent appointment of Robert P. Hunter, a former aide to conservative Senator Orrin G. Hatch, Utah Republican. They consider Hunter pro-management. He was an aide to Hatch when the senator led a successful campaign against labor law changes in 1977 and 1978 that would have made it more difficult for management to resist organization. Hunter's appointment has been confirmed by Congress.

All terms are for five years.



Imperial attains star status

This custom-built Chrysler Imperial limousine, stretched two feet and decorated with Mark Cross leather interior, privacy glass and Cartier crystal appointments, appeared in the recent film "Sharkey's Machine," with actor Burt Reynolds. It also will appear in a TV series with Rock Hudson scheduled to debut this fall.

GM's Smith calls for early start to negotiations

Talk now or lose jobs, UAW told

Continued from Page 3

closings are taking place regularly, GM is looking at alternatives to closing facilities completely.

GM, he said, is faced with a noncompetitive labor-cost situation at its New Departure-Hyatt plant at Clark, N.J. Rather than closing the plant and putting employes out of work, GM is planning to sell the plant to employes, most of whom are represented by the UAW.

"They (the employes) intend to run the plant themselves," Smith said. "But in order to make it competitive, they'll be paying themselves 30 percent less than they currently receive from General Motors."

Smith also pointed out the changes under consideration in the Clean Air Act as holding the potential for creating additional jobs in the auto industry and related supplier industries.

"The sooner Congress acts in revising the Clean Air Act, the sooner GM can begin to take some of the emission-control equipment off these cars," he said. "We can't take all of the equipment off, of course, nor would we want to. But we might be able to remove some $300 worth from our base cars."

According to preliminary studies, Smith said, GM estimates that every 1-percent reduction in prices made on an industrywide basis could result in a gain of up to 4,500 auto industry jobs. And in the supplier industries, there would be an additional gain of 9,500 jobs.

"A total of 14,000 jobs in all," he said, "and for every additional 1-percent cut in prices, another 14,000 jobs could be created."

Study projects 70,000 fatalities a year by 1990

NHTSA sees more traffic deaths

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — U. S. traffic fatalities, which have averaged around 54,000 yearly for the past several years, could increase to more than 70,000 per year by 1990, according to a new NHTSA study.

NHTSA said much of the projected fatality increase can be attributed to the downsizing of vehicles and to an expected increase in the number of licensed drivers.

The predictions by the safety agency comes at a time when it is considering abandoning an automatic protection standard and new guidelines for making seat belts easier to use.

Opponents of those actions — the insurance companies and safety groups like the Center for Auto Safety — have indicated they fully intend to use the new study to press their case for automatic protection, protection considered likely to reduce the yearly fatality rate by 9,000 per year.

Since the first recorded traffic fatality occurred in 1899, more than 2 million persons have died on the nation's highways. The NHTSA study, "Traffic Safety Trends and Forecasts," said the 3-millionth fatality could occur as early as 1990 — only 16 years after the 2-millionth fatality occurred — unless the current fatality rate is "significantly reduced."

It said the growing number of small cars and trucks and an increase in the number and mileage of heavy trucks will boost fatalities by 10,000 or more, it projected.

An increase in the miles traveled per driver is expected to boost fatalities by another 4,000. Increased use of motorcycles, mopeds and bicycles is expected to boost fatalities by 2,500, and repeal of the 55-MPH speed limit could account for as many as 5,000 more deaths, NHTSA said.

The only good thing the study has to report is that a decrease in the number of drivers under 25 years of age should lower traffic fatalities by about 3,000.

Not figured into the tally are the effects of many other serious traffic safety problems like alcohol use and the number of vehicle occupants who do not use seat belts.

NHTSA estimated previously that fewer than 1 in 9 persons uses a seat belt when driving in a car or truck. Were everyone to use the device all the time it estimates as many as 12,000 lives could be saved annually.

NHTSA is in the midst of preparing a massive "buckle up" campaign as its major initiative in auto safety. This program is expected to be launched over the Thanksgiving holiday.

Bodies simulate pedestrians in crash tests for NHTSA

Continued from Page 2

span is doing the work for Batelle Columbus Labs, the prime contractor in the amount of $381,560.

The work is scheduled to be completed by Jan. 1, 1982, although the date may be extended depending on the availability of corpses. Tests are also made with dummies — again with the purpose of trying to make the dummies more lifelike.

In this research, only adult cadavers are being used—hopefully both male and female. Of the willed bodies, only heart-attack victims' bodies are being used — not cancer victims, for example, because those bodies may show too much deterioration of tissues.

After the bodies are returned to the hospital for evaluation of the injuries, a test is taken to be sure bone strength is within the normal range. Cadavers are then returned to the families for appropriate disposal.

Another NHTSA contract is to Wayne State University, Detroit. It involves sled deceleration testing of chest response under distributed load conditions. An air-bag structure holding the lower torso to allow the chest to ride free is not a functioning system. Eight tests and eight cadavers will be used.

A parallel contract has been let to Heidelberg University in West Germany. This is also a sled test using belt systems, and will involve 45 cadavers over a five-year period.

These two research projects are intended to help NHTSA evaluate dummy performance in frontal crashes and to improve dummies.

Another contract to Wayne State University is using 21 cadavers in sled tests to test the dummy's femur-pelvic complex and knee bars in side impacts.

NHTSA proposes easing standards on lamp design

WASHINGTON. — Continuing its efforts to limit government intervention in the auto business, the NHTSA is proposing to amend two of its federal safety standards to permit more flexibility in the design of headlamps and taillamps.

In the first instance, the agency proposes to delete the dimensional requirements for all headlamp retaining rings under Safety Standard 108. In the second, it proposes to substitute SAE standard J594f for J594e as the referenced standard on reflex reflectors.

Toyota petitioned the agency for the first change and the Motor Vehicle Manufacturers Assn. requested the second.

Comments are due by Nov. 27.

But week's output trails 1980 total

Car production up, tops 120,000

By Patricia Hoffman
Staff Writer

U. S. auto production last week showed a slight gain from that of the previous week as assembly of the 1982 models began to pick up.

Last week's domestic auto output was targeted at 120,932 units, a gain of 4.28 percent from 115,963 in the previous week, but a drop of 19.02 percent from the comparable 1980 week's total of 149,339.

So far this year, the auto makers have completed 5,272,492 units, up 3.84 percent from 5,077,673 in the comparable period last year.

Breakdown for the week by auto company is: General Motors, 58.84 percent; Ford Motor, 23.06 percent; Chrysler Corp., 13.32 percent; Volkswagen of America, 3.11 percent; American Motors, 1.65 percent and Checker Motors, 0.02 percent.

Downtime was scheduled last week at Ford's Dearborn assembly point. The plant was idle for a second week of inventory adjustments.

Also down last week were GM's Fremont, Norwood, Van Nuys and Leeds facilities. These points were down for model changeover.

Fremont and Van Nuys plants returned to work today. The Janesville facility goes down today for conversion to the J-car and will not reopen until next spring. It had been building full-size Chevrolets.

GM also closes its Cadillac plant in Detroit and the adjoining Fleetwood facility for one week beginning today (Oct. 19) for plant rearrangement. When the operation returns the line speed will be reduced to 45 an hour on two shifts from 53 an hour also on two shifts.

Saturday overtime was scheduled last week (Oct. 17) at GM's Flint point.

GM plans to call back 2,000 laid-off Baltimore assembly plant workers early in 1982 to produce cars now built at the Arlington (Tex.) facility, according to GM sources.

The Arlington point is slated to shut down next April or May for retooling in preparation for a front-wheel-drive car. It currently builds two of the cars already made in Baltimore (the Chevrolet Monte Carlo and Malibu) and when it closes, the production is expected to shift to the Baltimore facility.

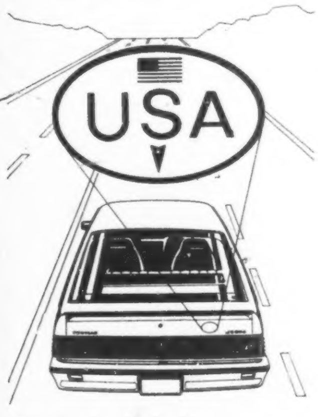
Arlington also assembles the Oldsmobile Cutlass, which could also be shifted to Baltimore.

The move would mean the reactivation of the second shift at the Baltimore point. Some of the workers on that shift have been on layoff for more than a year and a half.

Walter J. Gregonis, manager of GM's Baltimore facility, said the plant is counting on the developments in Arlington to reactivate its second shift and call back about 2,000 workers.

He said the second shift, which has been out of work since January, 1980, could be called back in January, 1982.

The Arlington facility is expected to be shut down for four months for retooling.



Made in U.S.A.

Pontiac dealers now have available a USA rear deck lid emblem that proudly proclaims the car's country of origin. The sticker, in black and gold, features an American flag and Pontiac crest.

Holiday trims week's output of cars in Canada

Despite the addition of a second shift at Ford Motor's Oakville car assembly point, Canadian auto production last week dropped 10.28 percent below that of the previous week.

It was a short week because of Canada's Thanksgiving holiday (Oct. 12). In addition, one shift was dropped at Chrysler's Windsor car plant.

Although auto production was down as result of the four-day work week, the truck manufacturers showed an 8.13 percent gain with the return of Ford's Ontario truck facility.

Last week's auto output was estimated at 11,391 units, down from 12,696 the previous week, and down 33.72 percent from the comparable 1980 week's total of 17,185.

Year-to-date, car assembly remained below that of the comparable period last year with a total of 650,879 units, down 2.10 percent from 664,838.

Truck production last week was slated at 9,497 units, a gain from 8,783 the previous week, but down 11.57 percent from 10,740 in the comparable 1980 week.

So far this year, the truck manufacturers have assembled 406,215 units, down 1.14 percent from 410,913 in the comparable period last year.

Chrysler Corp.'s Windsor car facility dropped one of its two shifts last week, downscaling production from 560 units a day to 400 a day.

Ford's St. Thomas facility remained idle last week for changeover / inventory control. The point closed Aug. 31.

Also down last week was General Motors Oshawa (No. Two) car facility. The point has been idle since Aug. 6 for changeover and is slated to resume production Nov. 9.

American Motors' Brampton car point will begin second-shift operations today, (Oct. 19).

Truck production climbs 47 pct. as 4 plants return

The return of three Ford facilities and American Motors' Toledo Jeep point helped boost domestic truck output last week, up substantially from that of the previous week.

Last week's truck production was targeted at 37,767 units, a gain of 47.78 percent from 25,556 the previous week, but down slightly from the 37,974 trucks completed in the comparable 1980 week.

So far this year, the truck manufacturers have assembled 1,341,892 units, 8.78 percent above the 1,233,596 trucks in the same period last year.

Ford Motor's Norfolk, St. Paul and Kansas City points resumed operations last week (Oct. 12) after being idle one week for inventory control.

Ford's San Jose plant remained idle last week, also for inventory adjustments.

AMC's Toledo Jeep point, which went down Oct. 5, returned last week.

International Harvester's Ft. Wayne and Springfield facilities will be idle beginning next week (Oct. 26) for inventory control.

In BL's future

Allegro/Maxi replacement

Although embroiled in a labor crisis that could bring disaster (Story on Page 20), BL, Ltd., is continuing its new-model program. This car, which carries the internal code name LM-10, is scheduled to replace the Austin Allegro and Maxi. The LM-10 is about the size of the Opel Kadett and Renault 14. It has front-wheel drive and engines ranging from 1.3 to 2.0 liters are being tested. A notchback coupe and a sport coupe are expected later.

Chrysler rebate plan winning dealer support

By Joseph Bohn
Marketing Editor

Chrysler's latest rebate appears to be drawing enough dealer support to make it fly, though dealer reaction was extremely varied.

Meanwhile, General Motors beefed up its interest subvention program by dropping the rate a bit last week. The cars covered and the end date for the program, Nov. 11, remain the same.

GM's 13.8 percent finance program on '81 X-cars and '82 J-cars wasn't as effective this time as it had been earlier. The potential $500 savings also didn't line up with the $600 rebates Ford was offering on competitive small cars.

So GM dropped the rate to 12.9 percent, with Robert D. Burger, vice president in charge of sales and marketing, noting that consumers now have the potential to save $600.

GM dealers still subsidize part of the cost of the lower rate, however, whereas competitive Ford and Chrysler rebates are all factory-funded.

Chrysler's rebate program was heading toward the 70 percent participation needed to make it successful, according to a number of reports.

Tentative deadline for signing up was last Friday, and there was still a group of uncertain dealers at mid-week.

The Chrysler program requires dealers to purchase their quota of '82 cars and trucks in order to participate in the retail rebates which run from $300 to $1,000 (AUTOMOTIVE NEWS, Oct. 19).

Dealers who went for the program generally didn't have excessive inventory of '81s. They felt the numbers they were being asked to buy weren't overly high.

Some added that the 10 percent floor-plan assistance program, coupled with the fact that some of the cars involved would not be built until late December, would also allow them to "stretch out" their inventory to some degree.

Competition was also a factor.

"Forget the inventory, the floor-plan. You ask yourself, 'How can I stay out? How many sales will it cost me by not getting in?' " said a Detroit-area dealer.

- Undecided dealers questioned that low-line Ks, for example, weren't covered by the rebates, nor four-door Omnis/Horizons and the new LeBarons and Dodge 400s. They also wondered and worried about it being late October, with the cold winter months approaching.

"We recognize they (Chrysler) have gotta do something. We've got to think along those lines. But we've got to weigh

45-day supply includes very few Toyotas, Hondas

Import stockpile still thin

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars in the U. S. climbed slightly during September, but was still a very lean 45-day supply on Oct. 1. The industry had a 43-day stockpile of new imports on Sept. 1.

This skeletal 45-day stock of new imports Oct. 1 compared with a portly 69-day supply of domestic-built new cars.

The inventory of new imported cars Oct. 1 totaled 304,900 units, while the stockpile of imported pickup trucks was 90,500, a 47-day supply.

The combined car and truck total of 395,404, a 46-day supply, was actually down a bit from 403,400 a month earlier. But the days-supply figure gained because of a somewhat slower sales pace in September than in the previous month.

The slower sales pace, in turn, was almost undoubtedly due to the very short supplies of some nameplates, particularly Toyota and Honda. Toyota's emaciated 20-day supply of cars held the lid on that make's sales tightly enough that it relinquished the top import sales spot to Datsun, which had a healthy 51-day supply Oct. 1.

Honda sales were not hurt badly during September, but it opened October with a meager 13-day supply, lowest for any nameplate. With that kind of a stockpile—importers like to carry about a 60-day stock on the average—Honda dealers will be hard-pressed to sustain their sales levels this month.

Mazda had a slender 41-day supply of new cars, while Subaru had a 51-day stock and Isuzu had a 63-day supply. Chrysler Corp. had a 137-day supply of Mitsubishi-built cars.

Japanese-built pickup truck inventories were Toyota, 30 days; Chevrolet LUV, 50; Datsun, 55 days; Ford Courier, 59 days; Mitsubishi (Chrysler Corp.), 113 days, and Isuzu, 140 days.

The total inventory of Japanese cars and trucks Oct. 1 was good for 42 days, compared with a 56-day supply of German cars and trucks and a 92½-day stock of vehicles from other countries.

Volkswagen had a 57-day supply of imported cars, which was not far from its 61-day supply of U. S.-built cars. VWoA and its dealers also had a 48-day supply of Audis and a 57-day stock of Porsches.

BMW's stock estimate was healthy at 66 days, while Mercedes-Benz was a bit on the lean side with an estimated 51 days.

Other estimates of European line stockpiles were: Volvo, 76 days; Renault, 84½ days; Saab, 89 days; Jaguar Rover Triumph, 91 days; Fiat, 103 days, and Peugeot, 133 days.

DeLorean had an estimated 53-day supply in the U. S., which is not very many cars.

GM to push its spending programs despite hard times in Detroit

By Edward Lapham
Financial Editor

DETROIT. — General Motors has not materially altered its capital spending plans despite the lingering auto depression and is prepared to cut its common stock dividend and go to the U. S. debt market if necessary to accomplish its long-range goals.

GM Chairman Roger B. Smith told AUTOMOTIVE NEWS that GM's spending plans, previously put at $40 billion for the 1980-1984 period, had not been changed "materially," although the company has "done some pushing and pulling around, mainly as we watched the engineering load from our product programs."

Smith also said there has been some shift to overseas programs from domestic programs but declined to quantify or delineate the changes.

He said spending plans are fluid.

"They flow back and forth as programs develop," Smith said. "They aren't something that you chisel in stone in a wall and then mark them off as you go; they're all flexible.

"As we read the market differently from time to time we push one program up and another one back," he said.

Earlier in the year GM said it had delayed by one year the new Kansas City (Kans.) plant.

Recently, supplier industry sources have reported delayed and stretched-out GM purchase orders. In addition, the Pontiac two-seat P-car project plus the downsizing and conversion to front-drive of the standard B-body and C-body cars are said to have been stretched out.

In an exclusive interview, Smith told AUTOMOTIVE NEWS he doesn't know yet if GM will be able to accomplish most of the spending plans without going to the debt market in the U. S.

"That depends on how fast the economy recovers," he said. "You leave the borrowing to last because that's kind of your

Roger B. Smith: Confident . . .

. . . GM is no 'flash in the pan'

Makers detail tough bargaining positions toward UAW

GM, Ford want $8 an hour back

By Marjorie Sorge
Labor Editor

General Motors and Ford Motor Co. say they have an $8 per hour wage disadvantage with Japan and they are planning to get it all back from the UAW in 1982 negotiations.

"I need $8 and I'm not too queasy about where I get it," said Alfred S. Warren Jr., GM's vice president, labor relations. "We are looking at the fact that we need $8 per hour to get back in the ballgame. The only question in my mind is where do I get the $8 and I guess I'm saying I'd like the UAW to help me find it . . . I need $8 to be competitive.

Peter J. Pestillo, Ford vice president, labor relations, agrees with the $8 per hour difference. He said, "We are looking for a package (in 1982 bargaining) that involves one sum that will let us say, 'OK now we can go out and take on the world.'"

Now, he said, the domestic auto makers are at a competitive disadvantage with Japan and the companies and the UAW must work together to make the U. S. makers competitive.

However, while the union agrees there is a cost differential it contends the $8 per hour is an exaggeration and said the auto companies are not taking the cost of lifetime employment and other Japanese fringe benefits into consideration.

The UAW does say it is almost impossible to put a dollar figure on the cost of lifetime employment, usually only available in the Japanese assembly plants, and that it does not have an actual dollar-per-hour wage differential figure.

It has, however, made job security the Number One demand for next year's round of bargaining. The companies see job security as a takeaway for them, saying it will hamper flexibility.

There is no specific definition yet for job security, but both Pestillo and Warren agree any job guarantees should be earned through seniority. They also warn that the only secure job is one directed at selling a competitive product and, according to Pestillo, "we could never give any vitality (for job guarantees) if we can't sell the products competitively."

In order to do that, GM and Ford believe the labor cost differential between Japan and the U. S. must be recovered. Both Pestillo and Warren agree it can be done without cutting the hourly wage rates, but emphasize there must be some giveups or exchanges. But both agree that all costs must be analyzed

Distinctive transportation

The K-Roadster, from Contec, of Lake Geneva, Wis., features a heavy-gauge steel mechanism for the sailcloth convertible top, two-tone paint treatment, a reupholstered interior, leather steering-wheel cover and wire wheels.

Center for Auto Safety to appeal, says label is not a repair

Court upholds Ford-DOT transmission deal

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A federal district judge has upheld the settlement reached between Ford Motor Co. and the Department of Transportation in the case involving Ford transmissions which allegedly slip unexpectedly from Park to Reverse.

Judge Oliver Gasch, while upholding the right of the Center for Auto Safety to seek review for its members, said the Transportation Secretary acted within his discretion in settling the matter.

"We are gratified by the decision," said Roger E. Maugh, Ford director of auto safety. "Ford has always believed that its settlement with the Department of Transportation was proper."

Clarence Ditlow III, head of the Center for Auto Safety, said he will appeal the decision. He said that 10 additional deaths, alleged to be the result of slipping transmissions, have occurred since the settlement.

The center argued that allowing Ford to send warning labels for owners to affix to their cars was not a "repair" under the law and was not effective in preventing deaths and injuries.

The center has also argued that the history of the defect investigation involving some 16 million Ford vehicles and five types of transmissions had culminated in a "final" determination of defect by a memo sent by then NHTSA head Joan Claybrook to then Secretary Neil Goldschmidt. The government contended that the memo's notation, "subject to your approval," made it a recommendation only. The judge agreed with the government.

Judge Gasch found the settlement made by Thomas Allison, Acting Secretary in Goldschmidt's absence, was not "arbitrary and capricious." Affidavits from NHTSA officials support a settlement he said, because of the complexity of the investigation.

One of the unique features of this case was that some malfunctions were not caused by damaged parts; sometimes, the transmissions held and sometimes not, and the interaction between driver and vehicle was more important than in other investigations.

Faced with Ford's insistence that no defect existed, NHTSA, according to the judge, "faced a prolonged inquiry and difficult, if not insurmountable, problem of proving that a defect actually exists."

This was combined with the fact that most incidents could be prevented if drivers heeded the warning to use the parking brake and turn off the engine. The judge found "it was not irrational for the Secretary to conclude that agency resources could be better used in attending to other matters and to settle the Ford investigation in the way he did."

Thus the [illegible]ement was a "reasonable [illegible]" of the Secretary's disc[illegible]udge Gasch said.

Separately, a [illegible]s-action suit involving Ford transmissions that allegedly slip from Park to Reverse is pending in the District of Columbia federal court.

Quantum and restyled Scirocco unveiled

VW sees 16 pct. sales gain in '82

By John Russell
New York Staff Writer

BUCK HILL FALLS, Pa. — Projecting an upturn in the U. S. auto market, Volkswagen of America President James McLernon blamed its current depressed state squarely on high interest rates which, he said, have stifled buying in the middle price range, thereby cutting into VW sales.

Speaking at the introduction of Volkswagen's new models, the Quantum and the restyled Scirocco, McLernon forecast industry sales to reach 10.2 million in 1982 if the economy is strong. For Volkswagen, he forecast 337,500 sales in calendar 1982, a 16-percent increase from projected 1981 sales of 290,000 units.

McLernon said the startup of the new plant in Sterling Heights, Mich., originally scheduled for summer of 1982, is now planned for October, 1982.

He said the line rate—based on current sales projections — would be somewhat less than the Westmoreland (Pa.) plant and would likely be in the range of 800 vehicles per day. Westmoreland has a maximum capacity of 940 vehicles per day.

The Westmoreland operation is under the gun because the contract with the UAW expires Nov. 1. McLernon would not comment on the specific issues being negotiated, and would say only that the company is optimistic a settlement can be reached without a strike.

The purpose of the gathering here was to unveil the Quantum, which replaces the Dasher, along with the rest of the '82 VW line. The Quantum is available as a four-door wagon ($10,950), four-door notchback sedan ($10,550) and two-door coupe ($10,250).

The Scirocco has been restyled for '82 and lengthened 10 inches. Weight has been increased 60 pounds. Fuel economy has been improved 12 percent, to a city average of 29 MPG and a highway rating of 41 MPG. The Scirocco has been priced at $10,150.

Richard Mugg, vice president

Take pay cut, buy plant or lose jobs, employes told

Ford gives workers a tough choice

SHEFFIELD, Ala.—Ford Motor Co. has informed the UAW and salaried employes of its aluminum casting plant here that innovative steps will be required to keep the plant from closing.

William H. Gay, general manager of Ford's Casting Division, said employes were offered a choice of a profit-sharing plan with continued company ownership or employe purchase of the plant.

In either case, he said, employes will have to accept substantial cuts in base pay and fringe benefits beginning Jan. 1, in order to make the plant competitive. Otherwise, the plant will be phased out of production and the parts now made here obtained from other sources.

"The Sheffield plant has lost money for the last six years because its costs are too high," Gay said. "Sheffield is not competitive with most other aluminum die-casting plants and it must become so if it is to continue operating. The only way it can become competitive is with a substantial reduction in labor costs."

The 587,900-square-foot Sheffield plant began operations in 1957, and reached a peak output in 1977, when 138 million pounds of components were shipped. Peak employment was approximately 1,500 in 1978.

Currently, the plant employs about 940 persons in production and 166 salaried positions. In addition, 210 employes are on layoff.

Product liability bill under Senate scrutiny

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — A draft of a proposed federal product liability law now being circulated would preempt state liability laws and would presume a vehicle to be "reasonably safe" if it complied with standards set by NHTSA.

The draft is being circulated by Senator Robert W. Kasten, the Wisconsin Republican who chairs the Consumer Subcommittee of the Senate Commerce Committee.

It would not change jurisdiction of federal courts.

It is an attempt to put into one basket actions under theories of strict liability in tort, negligence, breach of warranty, failure to warn or instruct, or misrepresentation.

In the current draft, special treatment is accorded drugs and vehicles. Products covered by ordinary federal, state or local standards would have some shield; they could be challenged by consumers who could show by "clear and convincing evidence" that a "reasonable prudent" seller would have taken extra care, for example, in design, or that a safer design was available and practicable beyond existing standards.

For auto makers that could be a formidable burden of proof. But the language being considered makes the issue moot: A subsequent section specifies that compliance with a standard set by NHTSA or the Food and Drug Administration presumes that the product is "reasonably safe" as to design, warnings and instructions.

- This section is likely to become the most controversial. Clearly, the makers would welcome whatever shield NHTSA's minimum performance standards could give. Equally clearly, consumer groups and especially Ralph Nader and the Assn. of American Trial Lawyers will make strong objections.

Kasten sees a clear need to stabilize product liability law. He believes conflicts in state laws make it hard for consumers to know their legal rights and for producers to know their obligations.

This has meant "expensive and burdensome legal costs which are passed on to consumers," as well as "instability" in insurance costs, he said.

The draft is similar to a House bill introduced last year. It is open for comments until Nov. 15.

The bill covers manufacturers, wholesalers and retailers — including dealers that lease as well as sell — but its effect is

Continued on Page 57, Col. 1

Members sought but leaders still unnamed

Clandestine coalition again taps dealers

By Joseph Bohn
Marketing Editor

The Coalition of Auto Dealers, a dealer-rights group, claims to have received considerable dealer response, but it is still actively seeking new members.

The clandestine group, whose principals remain a mystery, sent letters to an indeterminate number of dealers, soliciting one-time $750 membership fee.

The letters were signed by Gerald Tattersal, and carried a Dearborn postoffice box number.

AUTOMOTIVE NEWS was unable to reach Tattersal, who is unlisted in the Dearborn area.

Efforts of the Coalition to organize an all-line dealer organization to fight the factories were first reported in a July 20, 1981, article in AUTOMOTIVE NEWS.

In its latest letter, the Coalition claimed it was "literally swamped with requests for participation from all over the country," following the article.

"This set us back a little on our program, and we apologize for the delay . . . the hundreds upon hundreds of letters and calls . . . though we were not prepared for this encouraging response, answering them was a pleasure," Tattersal said in the letter.

The group claims to have heard from dealers in 36 states, 31 associations and eight private groups, "but it isn't enough. Before they call a national press conference, they want it just that, a national organization . . . They know your problems and what you need . . . all they need . . . is you," the letter said.

Citing what it called the "arrogance of the factories . . . the inability of their associations or even newly formed alliances to accomplish anything" as the basis for starting the movement, Tattersal's letter added:

"If you are really an independent businessman, now is the time to stand up and be counted."

- The letter continued, "Not all dealers are needed and not all dealers will receive this letter. We have reasons for this which will be explained in the very near future."

It told dealers to "expect a barrage of denials from the factories, unfounded rumors, and some of your associations may even condemn the whole idea. They have manipulated the dealers for so long they consider them naive and pliable, and will offer a lot of lies, promises and extras to stop this movement."

It invited dealers to list their grievances — but not to discuss rebates, floor-plan assistance or price increases which are all past tense.

Commenting on the letter, Ray Cohen, executive vice president of the Independent Dealers Committee Dedicated to Action, said the "more dealers have going to represent them, the better off" they are.

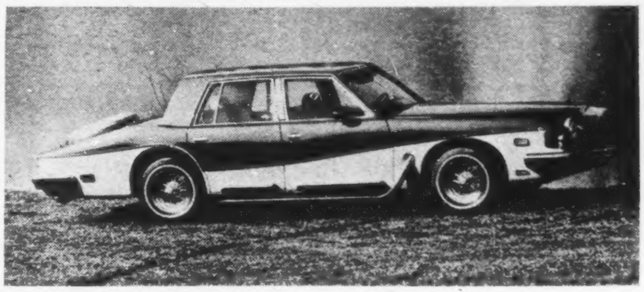
He thought the concept of the group was OK, but was disturbed by the timidity of its leadership.

"If the organizers of this (movement) are so frightened they do not want to be identified, then you have to question their capacity to accomplish anything," he said.

Cohen also noted that the letter was full of generalizations, with no specific solutions beyond getting negotiators to negotiate with the factories. The group, as previously reported, retained San Francisco lawyer Melvin Belli as its counsel.

Cohen thought that if the group ever succeeded in negotiating with the factories, then their $750 fee would be well worth the cost.

But, he cautioned, there have been other organizations through the years; and although they accomplished a lot in warranty and dealer protection, they never approached what "this organization intimates it can do."



New model from Stutz

The 1982 Stutz 4Porte from the New York-based company, Stutz, mixes technology with out-and-out luxury. It features an on-board computer system, 18K gold interior items and Connolly leather inside a hand-pounded body. With a price tag of $87,000, the 4Porte is produced at a rate of six a month.

Odometer regulation also slated for scrap pile

NHTSA to kill speedometer rule

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — As promised last April, NHTSA has moved to rescind the standard on speedometers and odometers.

In the notice of proposed rulemaking, NHTSA says it has tentatively concluded that the relationship to safety is tenuous. Although a 45-day comment period is allowed, the rescission is expected to follow and be effective immediately with publication.

The speedometer provisions, effective from '80 models on, required use of both miles and kilometers and highlighted 55—the national speed limit — and set 85 MPH or 140 km/h as the maximum speed listed. The theory was lives would be saved by calling attention to the speed limit and not tempting young drivers to test a car's speed beyond that listed. The use of MPH and km/h was because of planned use of metric measures on highway marking — now abandoned.

The odometer provisions — which the Reagan Administration has already delayed for a year — focused on discouraging tampering. The theory was that fewer vehicle buyers would be misled about the age of a vehicle or its condition and that proper preventive maintenance would be done on an accurate odometer reading.

NHTSA now believes that neither requirement is likely to have "measurable or significant safety benefits."

- The manufacturers are likely to continue to have both speedometers and odometers on cars because consumers want them. Since makers started to use 85 MPH as the top speed before the standard, they are likely to continue to use that. Spotlighting 55 MPH on the dial adds little to driver information that he cannot get from roadside markings.

Likewise, consumer pressure will insist that odometers remain in vehicles. Besides, odometers may not have the effect on safety NHTSA once thought because the study used dealing with maintenance also shows that the driver will be aware of the need for maintenance from "appearance or performance" rather than mileage.

But consumers may save a small amount by having cheaper odometers rather than tamper-resistant ones—but not as much as the $1.30 estimated earlier, since that included both capital costs and variable costs. Since some makers — like General Motors — have already spent the capital, consumers would save only on variable costs. Ford, on the other hand, might be able to save some $500,000 in investment costs and 75 cents per car in variable costs. This, however, may be offset by cancellation fees to contractors.

Odometer makers may be adversely affected if profits for more sophisticated odometers are higher than for usual ones, but this is also offset by receipt of cancellation payments from vehicle makers. Most of these equipment makers, however, are not small businesses and may be able to make up any difference in another area.

The proposed rescission would also affect a small change in the standard covering controls and displays — allowing use of only MPH, not km/h.

NOx control technology may not develop in time, National Research Council says

Study finds '86 HD emission rules unrealistic

By Jake Kelderman
Washington Staff Writer

WASHINGTON. — A National Research Council committee looking into emission-control possibilities for heavy-duty gasoline and diesel trucks is agreeing with the assessment of the Carter-era EPA that technology does not and may not exist to meet the 1986 NOx emission standard dictated by Congress.

In a 100-plus page report to the EPA, the committee said HD diesel engines will not be able to meet the 1986 NOx standard of 1.7 grams per brake horsepower per hour and that HD gasoline engines may not be able to, either.

The 1.7-gram NOx standard represents the 75-percent reduction from base-level tailpipe emissions that Congress ordered in its rewrite of the Clean Air Act in 1977.

Early in January of this year, EPA said in a notice of proposed rulemaking that it did not think heavy-duty diesel engines could meet the NOx standard by 1986 and that it was considering a standard that amounted to the maximum feasible reduction possible which, according to sources, would likely be 4.0 g/bhp/hr. for both diesel and gasoline-powered HD engines.

A public hearing was scheduled for this fall but was postponed until next year, pending review of this proposal by the new EPA administration. The EPA, under its program to relieve the regulatory burden on the auto industry, is presently finishing up work on easing the HC and CO standards for HD engines such that the gasoline-powered engines will not need catalysts.

Sources at the agency said its revision of the 1986 NOx standard would not result in the need for catalysts, either.

In its assessment of emission-control technology for HD engines, the National Research Council concluded that for diesel engines, all technology available for NOx control would likely result in an increase in HC and particulate emissions, in a loss of fuel economy and in a loss of engine performance.

In any case, this technology was not yet far enough along to ensure NOx control to the 1.7 g/bhp/hr. level required by Congress, the committee reported.

HD diesel engine makers are looking at modifications to fuel injection timing and pressure, cooling of the intake air charge and possibly exhaust gas recirculation (EGR) as means of controlling NOx emissions but, while these have been effective on passenger diesels they are not expected to produce similar results for heavy-duty diesels largely because the duty cycle and engine-life requirements are substantially different.

EGR, for example, is the prime candidate for NOx control in light-duty engines but it tends to lead to oil contamination and shorter engine life, a situation controllable in light-

80 pct. oppose easing of standards, House group told

Harris poll finds Clean-Air support

By Jake Kelderman
Washington Staff Writer

WASHINGTON.—As the U. S. auto companies lobby Congress to roll back auto and truck emission standards, ease the testing requirements under those standards and reduce their overall exposure to emissions-related recalls, a new Louis Harris poll shows the U. S public strongly opposes such action.

Harris presented the results of his latest survey before a House Environment and Health Subcommittee now reviewing the Clean Air Act amendments of 1977 which are up for reauthorization this year.

He said that by 80 to 17 percent, the U. S. public does not want to see any relaxation in existing federal regulations of air pollution and that a 54 percent to 42 percent majority opposes postponing "current deadlines for auto companies meeting auto pollution standards."

While the latter results "indicate some sympathy by the American people with the plight of the American automobile industry, a majority feels help for the industry will have to come from elsewhere," Harris said.

The results of this latest poll "add up to a powerful message to Congress to renew the Clean Air Act and not to do anything to it that would in any way make the air dirtier than it is now," Harris said.

Rep. Henry Waxman, California Democrat and chairman of the subcommittee, and one who favors just that approach, said he thought the poll results should give both Democrats and Republicans pause to consider their respective approaches to reconsideration of the Clean Air Act.

Others on the subcommittee, including Rep. John Dingell, Michigan Democrat, chairman of the House Energy and Commerce Committee and a leader in the auto industry's fight for relaxation of the emission standards, tried to pick the Harris Poll results apart but Harris said the facts speak for themselves.

"I am saying to you (Rep. Dingell) just as clear as can be

Makers detail tough bargaining positions toward UAW

GM, Ford want $8 an hour back

Continued from Page 2

and weighed before a new contract is negotiated and signed.

In next year's negotiations, the two companies will look at:

1. Eliminating some paid personal holidays (PPH) and paid personal absence (PPA) days. Auto workers now get 26 PPH days over the life of the current agreement and 5 PPA days.

2. Putting a cap on cost-of-living-adjustments (COLA).

3. Diverting money from COLA to pensions. This has a precedent in the 1979 agreement where one cent from each quarterly COLA payment for the first eight quarters of the contract was diverted to help pay the cost of fringes. During the final three quarters, 2 cents was diverted for a total of 14 COLA pennies. The diverted money is unrecoverable.

4. Either eliminating or drastically changing the 30-and-out program which both companies say is very expensive. This could include cutting the benefit payments.

5. Sliding wage scales based on seniority.

6. Decreasing the Annual Improvement Factor (AIF) currently set at 3 percent.

7. Cutting SUB fund benefits after an employe has been drawing for a certain amount of time.

8. Phased-in benefits on seniority.

9. Changes in the work rules to fewer job classifications or different scheduling or a restructuring in staffing.

10. Shortening the apprentice program and changing it to meet the demands of a quickened pace.

In exchange, the companies could offer profit-sharing or increases in the Employes Stock Option Program (ESOP).

Ford and GM are looking toward longer contracts, say five years, although UAW President Douglas A. Fraser has said he wants shorter agreements. Warren said any five-year agreement could have reopeners but Pestillo maintains reopeners constitute separate contracts and wants an iron-clad five-year agreement.

Absenteeism will also play a role in next year's bargaining, although perhaps more significantly at GM. Pestillo said absenteeism at Ford has dropped greatly, as much as 50 percent in some plants, since Employe Involvement was introduced.

GM, however, has not experienced much decline in its absenteeism rate and Warren said perhaps tying it in economically may help solve the problem.

"We must look at every single cost element of the agreement from actual cash outlay to benefit improvements, to basic costs, to increased costs of fixed benefits — that is the hospitalization type things that have escalated — to the mix of the package," Pestillo said. "We must look at the elements in the package that may not make it cost effective, such things as do we worry about chiropractry or podiatry, things of that kind.

"I'm not trying to single out anything but perhaps dental care is in need of refinement," he said. "We must recognize that we are dealing in a totally international climate in this country with a mentality of the past that led us to setting wages in isolation."

Both Ford and GM have blamed the higher U. S. labor costs for the loss of jobs to overseas sourcing and have threatened to send more jobs offshore if labor costs are not reduced immediately.

Ford has already opted to send the C-3 transmission for the company's new Ranger pickup truck to Bordeaux, France, where it is already being built, rather than retool in the U. S. That decision cost 250 jobs at Sharonsville, O., but production of the C-5 transmission continues.

But, Ford's big decision, where to build the new automatic overdrive transaxle, is still up in the air, and Pestillo said both the UAW and the company are working together to try and keep its production in the U. S., specifically at the Livonia (Mich.) transmission plant.

That operation is currently all rear-wheel-drive and losing the AXOD production would not only cost 4,000 jobs but would cripple the plant, Pestillo said. However, he said he is confident a compromise can be reached and the jobs will stay in the U. S.

GM, too, is making decisions now for two or three years down the road, Warren said, and jobs could be lost if it is more cost efficient to build overseas.

Pestillo and Warren again said they are ready now to begin negotiating a new contract. The UAW has said it will not reopen bargaining, but, according to Pestillo, the union has not indicated recently that Sept. 15 (the current contract expiration date) is as sacred as it was a year ago.

The union said it is setting up study groups to begin meeting with their counterparts at Ford and GM soon. And Warren and Pestillo said they are ready to set up their study groups as soon as the UAW contacts them. The union has not said it would not begin bargaining early and the study groups could be the beginning of formal negotiations.

If nothing else, the 1982 contract negotiations will be creative, Warren and Pestillo said. But the possibility of separate agreements for each of the Big Three still looms over the bargaining table.

Warren said separate agreements would add another tier to the two-tier wage structure, which GM said has given Chrysler a cost advantage per car over the other auto companies. Some analysts have said GM would rather take a strike than see separate agreements. Warren said he doesn't want to think strike but GM cannot afford a three-tier wage structure because it would weaken the entire domestic industry.

Pestillo said there are already many tiers in the auto industry, with separate agreements at American Motors and Volkswagen of America, and that the parts suppliers have created additional tiers.

"We will negotiate with the people they (UAW) send us and we'll do so in a vacuum if that be the case," he said.

Supreme Court declines to review odometer case

WASHINGTON. — The Supreme Court has upheld a lower appeals court decision in which a Georgia used-car dealer, Little Motors Co., was found guilty of defrauding a customer on an odometer reading. The high court denied a petition to review.

The case stems from Little's sale in 1977 of a '67 Chevrolet to Brenda Lee Suits, Inc. At the time, the car's odometer read 000,073 miles. Little Motors Co. put "unknown" on the customer's odometer disclosure statement.

Brenda Lee Suits sued Little Motors, claiming the dealer intended to cheat the company on the sale of the car. A Georgia district court ruled in favor of Little Motors but that decision was reversed by the Georgia Fifth Circuit Court of Appeals.

In its petition to the Supreme Court, Little Motors Co. argued the appeals court was "substituting its opinion of the evidence for that of the trial court judge and jury."

Detroit Diesel beefs up 92s for tough '80s

DETROIT. — General Motors' Detroit Diesel Allison Division has introduced an improved line of engines designed for better service in the "environment of the '80s," described by DDA as a period of declining fuel quality, changes in composition of lube oils and tougher emission regulations.

"All of these factors put additional stresses on a diesel engine, regardless of who manufactures it," said David F. Merrion, DDA product engineering director. "In addition, the user is demanding greater fuel economy and longer life."

He said DDA will meet these challenges with the new "Silver Series" diesels which feature a number of product improvements designed to increase fuel economy, durability and reliability. The engines are painted silver instead of the traditional green.

Merrion said fuel savings with the Silver 92 diesels—six and-eight-cylinder engines ranging from 270 to 445 HP — vary with the model, but "users can expect significant improvement in fuel economy compared with the previous Fuel Squeezer models."

He noted that virtually every component has been upgraded through extensive research by a special product team set up about three years ago to study every aspect of the engine's design, manufacture and application.

- "The team approach allowed us to take a broader view and accelerate the normal evolutionary process of diesel-engine development," Merrion explained. "Instead of taking one component at a time and improving it, we were able to take the entire engine and look at it with an eye to see what could be done better.

"It enabled us to incorporate new technology and employ new materials in a very short time," he said. "The team approach will continue to function, investigating future engine developments."

Improvements incorporated in the Silver 92 engine include:

A new piston fire ring with

Fruehauf's fuel-saving concept

Fruehauf Corp. unveiled this futuristic tractor-trailer combination at the recent World Truck Symposium & Exposition in Detroit. The company believes a combination like this could provide up to 40 percent fuel-economy improvement, 39 percent more cargo capacity and improved safety features.

Fruehauf concept unit has 3 main objectives

DETROIT. — Fruehauf Corp., the world's largest trailer manufacturer, has unveiled a concept tractor-trailer combination which it said could offer up to a 40 percent improvement in fuel economy, 39 percent greater cargo capacity, and more improved safety features than a current tractor-trailer combination (using a 45-foot dry freight van trailer).

This futuristic tractor-trailer combination, called the Fruehauf FEV2000, was introduced at the first World Truck Symposium and Exposition here in September.

Edward J. Hayes, Fruehauf research and development vice-president, said the FEV2000 prototype combines into one product, technology that has been in development at Fruehauf over the past few years.

The aerodynamically styled combination is 60 feet long, with the 102-inch wide trailer accounting for 50 feet of the length.

According to Hayes, the reduction of aerodynamic drag for the total rig was one of the primary considerations made in designing the FEV2000.

With its unique aerodynamic treatment, he said, the FEV2000 employs various elements to reduce aerodynamic drag by up to 57 percent over a standard tractor-trailer van combination.

To reduce the drag caused by the gap between a traditional tractor and trailer, the FEV2000 features a speed-actuated three-paneled gap seal, which Hayes said can help reduce aerodynamic drag by up to 16 percent at highway speeds while allowing maximum clearance for low-speed tight maneuvers.

Similarly, there are side skirts on the tractor and trailer to reduce air-drag losses underneath the combination for a reduction in aerodynamic drag of up to 18 percent.

Side skirts on the trailer are speed-actuated so that they go into action at highway speeds, but retract out of the way when greater clearance is needed, Hayes explained.

Other aerodynamic-improving features on the FEV2000 include:

A fairing on the cab roof to direct the air smoothly over the trailer roof.

An air dam to reduce underbody air-drag losses by direct-

Something new 'Down Under'

Ford Motor Co. of Australia, Ltd., calls the availability of its new Ford Cargo medium truck the most significant truck-product introduction in the firm's 56-year history. Cargo is offered in five basic 4x2 models and one 6x2 for a wide range of applications—city and short-haul delivery, general industry and construction and farm work.

Eaton producing 2 new 15-speed transmissions

GALESBURG, Mich. — Two 15-speed New Generation Fuller truck transmissions with multi-mesh gearing are now in production at Eaton Corp.'s Transmission Division.

The new models, RT-11615 and RT-14615, have higher torque capacity than the RT-915 and RT-12515 transmissions they replace, Eaton said.

The RT-11615 is designed for engines with up to 370 HP and 1,150 foot pounds of torque, while the RT-14615 is for engines with up to 450 HP and 1,400 foot pounds of torque. The latter model also can go with engines up to 600 HP with approval. Overdrive models are available in each capacity range.

The new 15-speed transmissions are basically 10-speed Fuller Roadrangers equipped with extra five-speed reduction ranges, a spokesman said. However, ratios have been changed in both transmissions so the low, or starting, gears now have even greater reduction than previous

Light trucks push up August registrations

August increases over 1980 in two of the three light-truck groups cut the rate of decline in U. S. registrations of new trucks of all types to its lowest level since October 1979.

During the month, according to R. L. Polk & Co., 194,175 vehicles were registered, down 0.8 percent from last year's 195,779. The eight-month total of 1,469,770 units, however, was 14.6 percent lower than the year-earlier 1,720,170.

Table on Page 56

Light-truck registrations in August were up 1.3 percent over the same month a year ago, 174,861 versus 172,577. Group 2 was the only one of the three to show a decline from the 1980 count.

There were 98,538 Group 1 tallies during the month, an increase of 6.3 percent over last year's 92,736 units. Registrations of imported light trucks were 8.5 percent higher, from 26,524 units in 1980 to 28,783.

The Group 3 total was almost quadruple the 1980 count, soaring to 808 units, a gain of 243.8 percent over last year's 235. Group 2 was down 5.1 percent, from 79,606 units a year ago to 75,515.

Medium-truck registrations during the month were off slightly from a year ago, but the decline in the count for the heavies was substantial.

The mediums' total was 6,108, down 6.2 perecnt from the year earlier 6,514. There were 193 Group 5 tallies, up 21.4 percent over last year's 159. Group 6 was down 6.9 percent, from 6,352 in 1980 to 5,913 units. Only two Group 4 vehicles were registered, compared with three a year ago.

Both heavy-truck groups suffered losses as the month's total sagged to 13,206 units in August, a decline of 20.9 percent from last year's 16,688.

The Group 7 count was off

HD registrations for eight months off 20 pct. from '80

Eight-month registrations of new heavy trucks in the U. S. topped the 100,000 mark in mid-August, about six weeks later than a year ago and fell almost 20 percent below the 1930 January-August count.

Through August, according to R. L. Polk & Co. statistics, there were 106,821 Groups 7 and 8 tallies, off 19.3 percent from the 132,356 units registered in the comparable period last year.

The August total of 13,206 units was down 20.9 percent

Honda Accord reshaped for '82

The Honda Accord line, which debuted in the U. S. in 1976, gets a major redesign for 1982. Front and rear styling has been altered, and front and rear spoilers and lower hood contribute to better aerodynamics.

Honda redesigns '82 Accord adds high-MPG Civic model

A redesigned Accord series plus a new high-mileage Civic model head the Honda offerings for 1982.

The Honda lineup is again comprised of three series—Civic, Accord and Prelude. There are six Civic models, three Accord models and one version of the sporty Prelude. All Hondas have front-wheel-drive and rack-and-pinion steering.

The new Accord models are wider and built on a longer wheelbase, thus expanding inside passenger and luggage space. A lower hood and front and rear spoilers heip improve aerodynamics and fuel efficiency. Front and rear styling has been changed also.

The Accord is offered in hatchback, LX hatchback and sedan models. All have a standard 1,751-cc engine and five-speed transmission, plus a new larger 15.8-gallon fuel tank. Cruise control is now standard on the four-door sedan.

A three-speed automatic transmission is optional on all Accord models. With five-speed transmission the Accord is rated by the EPA at 30 MPG city, 41 MPG highway.

Inside, the redesigned Accords feature a new four-spoke soft-grip steering wheel, a headlights-on warning function and new form-fitting seats.

The newest Civic model, the 1300 hatchback, took top honors in the EPA's 1982 gas-engine mileage rankings. It earned a rating of 41 MPG city and 55 MPG highway. Standard Civic FE (Fuel Economy) equipment includes a 1335-cc engine, five-speed transmission, steel-belted radial tires and tachometer.

Other 1982 Civic models are the 1300 hatchback, the 1500 DX hatchback, the 1500 GL hatchback, the Civic four-door Sedan and the Civic wagon. With an EPA rating of 35/46, the Civic wagon is the highest mileage wagon available in the U. S., Honda said.

Experimental Alfa engines operate on 2 or 4 cylinders

FRANKFURT. — Alfa Romeo is said to be 18 months away from production capability on a cutoff system which allows its four-cylinder Alfetta engine to run on two cylinders at idle, at constant speeds or when slow acceleration is sufficient.

A fleet of 10 taxis with the experimental engines has been in everyday use in Milan for several months, and the auto maker brought two here to drive around the city during the Frankfurt Auto Show.

The engine is said to provide a fuel savings of 20 to 30 percent in urban driving, partly because of the cutoff and partly because of an advanced electronic fuel injection system.

Filippo Surace, responsible for Alfa Romeo R&D, said the cutoff system is the result of four years of development sponsored by the Italian Research Agency and the ECE.

As far as the technical side is concerned, the so-called modular engine could be on the market in 18 months, he said. Whether that will actually happen will depend on other factors, he said.

Fuel economy of the two-liter engine has been improved 10 percent by the sophisticated electronic injection system. Another improvement of 16 to 18 percent comes from the microprocessor - controlled cylinder cutoff.

The engine runs on all four cylinders until it warms to 70 degrees Celsius (158 degrees Fahrenheit) or during quick acceleration, but Surace said the car can operate on two cylinders all the way from a standstill to 60 MPH in slow acceleration.

In its fuel-stingy mode, the car operates either on the inner two cylinders or the outer two, alternating every 200 cycles.

No modifications to the engine are needed once it is adapted for electronic fuel injection and electronic ignition, Alfa Romeo said.

Operators reporting record year

High new-car prices boost auction action

KANSAS CITY. — Auto auction operators are enjoying their most prosperous year ever and are looking forward to an unprecedented third year of strong sales and rising prices, according to Bob Gentle, president of the National Auto Auction Assn.

More than 500 NAAA members attended the group's annual meeting here recently.

At his own auction, the 33-acre, $3-million Metro Auto Auction in Kansas City, consignment sales volume is running about one-third higher than it was in 1980, Gentle said. Unlike factory sales, which generally are open only to a manufacturer's own dealers, consignment sales are open to all dealers.

Across the country, according to published reports, 68.2 percent of all the cars offered for sale at 1,256 auctions in 1981 were sold. That percentage was slightly higher than it was in 1980, and six percentage points higher than in 1979.

Wholesale used-car prices were said to be 37 percent higher in September, 1981, than they had been in February, 1980.

The market has slowed in recent weeks, as it does every year during new-car introductions, but is expected to regain steam in 1982, Gentle said.

He added that most auto-auction operators and observers expect the business to grow faster in the next 10 years than it did in the last 10.

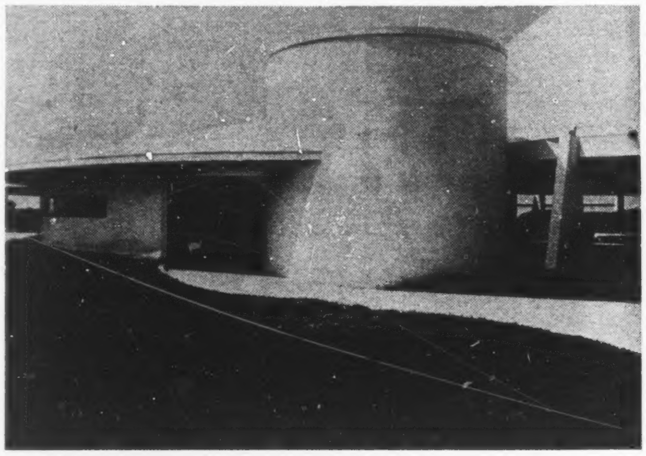
More new-car dealers will be resorting to the services of auto auctioneers, Gentle predicted. He cited a report which said 80 percent of the new-car dealerships which closed in the last year were ones which did not buy and sell at auctions.

Gentle said car rental agencies are turning more to auto auctioneers. He said Budget Rent a Car is contracting with 30 auction operators across the country for the disposal of used cars. He claimed Hertz, Avis and National Car Rental will follow suit.

The NAAA president said auto auction sales are being aided by steadily rising new-car prices. Instead of declining as the year goes along, wholesale used-car prices have risen in the past two years, Gentle said.

He said higher new-car prices are boosting demand for full-sized used cars.

"People know now they are going to be able to get gas. They know about what they're going to have to spend, and they're willing to pay extra for the luxury," he said.



Fantasy dealership

Kelly Chevrolet, Greenwood, Ind., has a showroom designed to resemble a big-top tent, complete with flag flying atop the dacron structure. Complementing the showroom are adjacent offices constructed of plywood panels, curved and applied with a stucco finish. Two 18-foot towers, like the one above, adjoin the 5,000-square-foot office building. One houses a private office, one contains public restrooms.

They're trying to get better response from owners

GM working with states on recalls

ATLANTA. — The problem of getting Pontiac and Buick owners to stop ignoring recall letters from General Motors and bring their cars in for inspection and repairs is being tackled by two GM divisions and the state department of consumer affairs here.

Letters will be mailed to consumers at the discretion of 100 dealers in the Georgia portion of the Atlanta GM zone.

The consumer affairs department was asked to send letters after a similar effort by state officials in Alabama stimulated consumer cooperation.

In Alabama, letters went out through the attorney general's office and response increased 25 percent, according to Frank Hayes, Atlanta zone service manager for Buick.

When a motorist gets a letter from a state agency, or official, it seems to attract immediate attention because it looks important and tends to offset paying little or no attention to recall letters sent by the manufacturers.

The plan in Alabama worked so well it may be tried in Tennessee, said Jim Freet, Pontiac's zone service manager.

The "official" letters are being mailed at no expense to taxpayers. Buick and Pontiac are paying for the paper, envelopes, printing, postage and manpower.

The project is a departure for the Georgia consumer affairs department.

"There is nothing paralleling this in our experience. We have done things on a case-by-case basis, but on an entire industry basis this is our first time," said Tim Ryles, head of the consumer affairs office.

In Alabama, the plan was quite successful. After six months and several notices by manufacturers, less than 50 percent of 1978, 1979 and 1980 Grand Prix and LeMans owners had brought their cars in to have rear suspension bolts replaced.

The Georgia consumer office said it is willing to cooperate with Chevrolet, Oldsmobile and Cadillac divisions if needed.

First test will likely come from a letter the consumer department is sending out on 1980 and 1981 models of Buick Skylark and Pontiac Phoenix equipped with four-speed transmission.

A slippage in the linkage of the self-adjusting clutch mechanism is the objective of the notices.

Chevy Celebrity output begins; 4-line total now 9,700

All GM A-cars in production

By Patricia Hoffman
Staff Writer

Domestic auto production last week was above the previous week's total but was below the comparable 1980 week.

After a delay in startup for the Chevrolet Celebrity, the new front-wheel-drive A-car began rolling off the assembly line last week. Production was estimated at 520 units.

The Pontiac 6000 slated 1,427 units last week, and output was targeted at 1,975 for the Oldsmobile Ciera and 1,489 for the Buick Century. It was the fourth week of assembly for the '82 General Motors A-cars, and production now stands at 9,701. The A-cars will go on sale Jan. 14.

Last week's auto production was targeted at 132,160 units, a gain of 1.59 percent over 122,842 the previous week, but a drop of 13.98 percent from 153,647 in the comparable 1980 week.

So far this year, the auto makers have completed 5,406,562 units, up 3.37 percent from 5,230,249 in the comparable period last year.

Breakdown for the week by company was: General Motors, 58.26 percent; Ford Motor, 24.16 percent; Chrysler Corp., 12.94 percent; Volkswagen of America, 3.11 percent; American Motors, 1.51 percent, and Checker Motors, 0.02 percent.

Downtime is scheduled for three weeks beginning today (Oct. 26) at Chrysler's Belvidere assembly point for partial conversion to produce the company's new front-wheel-drive Dodge Rampage pickup truck.

Assembly of the new truck will be integrated with the plant's line of 1982 passenger cars — Omni, Horizon, TC3 and 024.

When the plant resumes production the week of Nov. 16, it will be Chrysler's only North American automotive assembly point building both front-wheel-drive cars and trucks. The changeover period will put about 3,500 of 4,200 hourly workers on temporary layoff.

GM's Janesville assembly point was idle last week for changeover to the J-car. The facility discontinued assembly of the full-size Chevrolet Oct. 9, leaving Fairfax the sole North American assembly point producing the car. Janesville is slated to resume with J-car production some time next spring.

GM's Detroit (Cadillac) facility was idle last week for plant rearrangement. The point will resume operations today with one shift and a line rate reduction from 53 cars an hour to 45. The plant is scheduled to resume normal two-shift operations Nov. 2.

Also at GM, the Van Nuys and Fremont plants returned last week with '82 production. They were idle for changeover.

American Motors' Kenosha plant also returned last week after closing one week for inventory control.

Checker Motors' Kalamazoo facility is scheduled to close Nov. 18 for an extended changeover period. Production will resume in January.

Saturday overtime was scheduled last week (Oct. 24) at Ford's Wixom plant.

Truck output up from '80, but slides from week ago

For the first time in seven weeks, domestic truck production last week rose above the comparable 1980 period, but the total dropped 3.44 percent below the previous week's output.

Truck production last week was targeted at 35,913 units, down from the 37,191 trucks in the previous week, but the total showed a gain of 1.75 percent over the 35,297 units completed in the comparable 1980 week.

Year-to-date output for the truck makers was 1,377,229 units, up 8.71 percent above the 1,266,827 trucks in the comparable period last year.

Chrysler Corp. will halt car production at Belvidere for three weeks beginning today (Oct. 26) to convert part of the plant to produce the company's front-wheel-drive Dodge Rampage pickup truck.

During the conversion, the plant will integrate the assembly of the new truck with the plant's Omni Horizon, 024 and TC3 models.

During the changeover period, approximately 3,500 of 4,200 hourly workers will be on temporary layoff. The plant is scheduled to resume production the week of Nov. 16.

International Harvester's Ft. Wayne and Springfield facilities will be idle beginning today for inventory control.

American Motors' Toledo (Jeep) point resumes production today after one week of downtime for inventory control.

Nordic Ford and Toyota merged in Vermont

SOUTH BURLINGTON, Vt.—Nordic Ford has been merged with its sister firm, Nordic Toyota. Jan Rozendaal is corporate president.

The former Toyota building is being converted to a used-car showroom and will also house Nordic's leasing and rent-a-car businesses.

Car-truck output in Canada trails year-ago week

Canadian auto and truck production last week showed a substantial gain from the previous holiday week, but the totals remained below those of the comparable year-ago figures.

The auto manufacturers scheduled 14,602 units during five days of production last week, up 68.69 percent above the 8,656 units completed during four days of assembly the previous week, but the total was 31.17 percent below the 21,214 cars in the comparable 1980 week.

Year-to-date, the auto makers completed 662,746 units, down 3.48 percent from 686,625 in the comparable period last year.

Truck assembly was targeted at 11,782 units last week, a gain of 25.46 percent from 9,391 trucks completed the previous week, but a drop of 13.12 percent from 13,561 in the same week last year.

So far this year, the truck makers have assembled 417,891 units, down 1.12 percent from 422,618 in the comparable 1980 period.

American Motors added a second shift to operations at its Brampton car facility last week (Oct. 19). The line rate will eventually be increased to 960 units per week on two shifts from 730 units per week on one shift. The additional shift has called back 500 white-collar and blue-collar workers from temporary layoff.

Ford Motor's St. Thomas car assembly point will remain idle this week, marking the 11th consecutive week of downtime for the facility. The plant, which closed for model changeover/inventory control, is scheduled to resume operations Nov. 10.

Also down for an extended changeover period is General Motors' Oshawa (No. Two) car point. The facility was idled last Aug. 6, and isn't slated to resume until Nov. 9.
